In "Science and Health with Key to the Scriptures," page 583, we find this definition of church: "The structure of Truth and Love; whatever rests upon and proceeds from divine Principle." On page 92 of the Church Manual we read, "Healing the sick and the sinner with Truth demonstrates what we affirm of Christian Science, and nothing can substitute this demonstration. I recommend that each member of this church shall strive to demonstrate by his or her practise, that Christian Science heals the sick quickly and wholly, thus proving this Science to be all that we claim for it."

It is clear, therefore, that to build a Christian Science church involves the faithful effort to destroy in one's self and others the sense of sickness, sorrow, sin, and death, and to establish the true sense of God, and of man's relation to Him. In helping to free others from the bondage of material sense, rightful remuneration would enable the worker to contribute more largely toward defraying the cost of a church edifice, for church organization and buildings in which to hold services are at present necessary means by which to disseminate the truths of the Science of Christ. The thought was held that because it is right for man to do God's will, it is right for man to know God's will. God is all-knowing, hence man knows what to do, and when and how to do. Striving to hold these truths clearly in view, with no definite plans laid, the Scientist was led to spend her vacation in three different localities, in each of which opportunities for demonstrating the power of Truth over error presented themselves; and the results were most satisfactory.

One of these experiences was especially gratifying because it helped to establish the recognition of the truth of Christian Science in the minds of two who had not previously been interested in it. One morning, while at a little summer resort, the Scientist was in the company of three ladies, two of whom were not interested in Christian Sci-

Digitized by Google

ence, the third being so in a degree. One was suffering with neuralgia, and a second member of the party advised her to let the Scientist give her treatment. She replied that she had no objections, but the Scientist expressed the thought that one should desire help, and presently this lady said that she had endured the pain for several days and would be glad to have treatment, which of course was no less gladly given. In a little while she reported that the pain had disappeared, and expressed sincere gratitude.

The Scientist was just as grateful for the healing as was the one relieved, for before giving the treatment she had to overcome an anxious thought as to whether she would be able to destroy the sense of error manifested, feeling that the result of the effort might have a large influence for good or ill to the cause. She had to reason to herself that it was her part simply to declare the truth, deny the error, and leave the result with God.

It has been truly said that every loving purpose, every spirit of sacrifice, every denial of error, every sense of humility, every realization of the allness of God and the perfection of man, helps to build the church. Surely we may say with the psalmist, "Except the Lord build the house, they labor in vain that build it."

REDEEMING THE DESERT.

CHARLES T. ROOT.

In the various grand divisions of the earth there are found wide and barren expanses, supporting no valuable forms of life and perilous to the traveler. In western America, in northern Africa, and in the heart of Asia lie these forbidding regions, parched, empty, and silent. Yet it has been discovered that far underneath those sterile plains flow broad streams of living water, and also that at the touch of the vivifying fluid these seemingly dead sands will spring to life and bring forth flower and fruit in luxuriant abundance. The oases of the Sahara and of Arabia, and the irrigated tracts of southern California, illustrate the wonderful transformation from thirsty waste to garden luxuriance effected by water diverted through human effort from mountain stream or subterranean river to the surface of the desert.

Without pressing too far a comparison of things spiritual with things material, we may recognize the parallelism between the reclamation of the waste place through water drawn from the depths below it, and the process of piercing in thought the crust of illusion upon which material beliefs would retain us, and allowing the "pure river of water of life" which flows eternally beneath to well up and overspread what Mrs. Eddy has described as "the great desert of human hopes" (Science and Health, p. 566), and thus to fructify the whole region of our thought and activity.

It is no light task to bring the water from the deeps of the earth to the face of the desert. Artesian wells must be driven through crumbling soil and obdurate rock, often for many hundreds of feet before the inexhaustible stream is tapped. Persistent work and unflagging faith in the outcome are necessary to obtain the beneficent result. The driller never can foretell how far he has to go or how much labor he has before him, but he knows that the supply is there, that it is ample, and that he will reach it if he persists. Not less must be the confidence and perseverance of the individual man or woman who resolutely undertakes to penetrate the dense strata of tradition and sense testimony to the fountain of Truth and Love, and thus establish a permanent channel through which its waiting flood may pour out upon and refresh his thought and enrich and fructify his experience.

Mortal mind knows not of these hidden waters, but insists upon its own mirages of lake and grove which lure only to disappoint the fainting traveler. It confronts the seeker after the true God with discouragement, with false testimony, and with all the resistance with which the one lie would shut mankind away from the knowledge which can destroy that lie in all its manifestations. But to him that overcometh, that pushes on till his perceptions have reached the depths of divine Love, the water that Christ, Truth, shall give him, shall be in his consciousness "a well of water springing up into everlasting life."

"OUT OF EGYPT."

REV. WILLIAM G. SCHOPPE.

The children of Israel journeyed in the wilderness between Egypt and Canaan. In the Bible story the terms Egypt and Canaan symbolize bondage and spiritual freedom. The passage from one to the other meant deliverance and fulfilment of the divine purpose. The people were led without delay to the border of the promised land, then the spies were sent to learn the conditions. All agreed that it was a rich land, "flowing with milk and honey;" but a majority said that they could not take it, that walled cities and giants were in the way, and the obstacles were too great for them. At this report a great fear fell on the people. The leadership of Moses was rejected, Joshua and Caleb were stoned, and the question was raised whether it would not be better for them to return to Egypt. This action proved the people unworthy, and so they were disciplined forty years in the wilderness, until a more loyal generation appeared, who made the conquest. The craven-hearted never yet won a promised land.

In this story common currents of mortal experience appear, and there is also revealed the power which comes to men through obedience. Why should these people decide to return into Egypt? A fleshly appetite still clamored, and they were not equal to the increasing demands of Spirit. When they were given "bread from heaven," they said, "Our soul loatheth this light bread." "We remember the fish, which we did eat in Egypt freely; . . . the onions, and the garlic: but now . . . there is nothing at all, beside this manna." Such language indicates a reversion to the flesh through the demands of appetite. The spiritual purpose of the journey is lost. It is the old danger that shadows the journey of life,—error tries to defeat truth, belief in matter to clog spiritual unfoldment, false appetite to destroy pure aspiration. In Christian Science we get the victory over fleshly desire by annulment. This desire is not in divine Mind or in its manifestation, which is the sum of being, hence it is false and its pleasure is illusion. This fact must be learned either by suffering or by Science. It came to the Israelites after long discipline, but now "he that runs may read" and not turn back to bondage.

This story shows the influence of the "mixed multitude." It was they who "fell a lusting" and began to murmur, and their complaint spread. Discouragement and doubt touched the weaker members, and while mortality lasts this mixed multitude will be in evidence. They are attracted by every new forward movement, but unable to sacrifice self for its purpose. Unselfish devotion to the "high calling of God," which involves the general good, is the opposite of this false spirit, and when held by the faithful with steady, persistent mentality, it will cast out the mixed multitude and compel a return, not to materiality but to Spirit, to Principle. Each individual consciousness is a battle-ground, and when there is no longer response from within to error of self or a touch of kinship with its subtle appeal, then he is ready for the conquest; human influence passes, Truth alone is the guiding pillar of fire by night and cloud by day. Wilderness discipline continues until unmixed devotion is attained.

Doubtless the chief reason for the desire to turn back to Egypt was fear of appalling obstacles in the pathway. Great giants, sons of Anak, were said to be entrenched in

Digitized by Google

walled cities on the hilltops. "We were in our own sight as grasshoppers," they declared. Fear exaggerates the power of the enemy; the strength and resources of the sons of God are lost sight of in fear. Where now is memory? Let them recall the deliverance from Egypt, the passage of the Red sea, the water in the desert. The office of memory is to perpetuate the tokens of good. Thus the "lamp of experience" is a guide to faith. "He which hath begun a good work in you will perform it until the day of Jesus Christ." Reason should cast out fear. Bondage was behind them, the land of promise before them.

A noble conflict with error, under the divine command, supported by an all-conquering purpose, makes this life worth living. Browning tells of the judgment of heaven upon "the furled wing." Satisfaction is in achievement. All things are possible to a consciousness that derives its power from God. Two men stood out from the multitude and refused to follow the popular clamor. Joshua and Caleb were among the spies. They saw the conditions, but were not blinded by fear. To them the comparison was not between the people and the giants. The one reality was God and His purpose in this deliverance and journey. If we reflect God and cling to His purpose, the fear of giants will fade. Setting the mortal self over against the opposing evil means failure. These two men were made heroic because they saw as real power only God and His unfolding purpose. Obstacles, great or small, across the track of truth and right, will suffer defeat. They said, "If the Lord delight in us, then he will bring us into this land." They also said, respecting the people of the land: "Their defense is departed from them, . . . fear them not."

Man's work is to reflect the one Mind and obey the call; thus the conquest. Before the infinite purpose all error must fall. Christ, Truth, makes one condition only,—"If ye abide in me." Caleb shows a striking consistency when forty years after he requests that Joshua allot to him and his tribe these same walled cities. This stanch faith in the supremacy of Spirit conquered the strongholds and destroyed the giants. Christian Science interprets the spiritual meaning of the human experience. This stirring tale of struggle and deliverance is symbolic of larger achievement. Mrs. Eddy wonderfully caught its idea and stated its spiritual meaning when she wrote: "As the children of Israel were guided triumphantly through the Red sea, the dark ebbing and flowing tides of human fear,—as they were led through the wilderness, walking wearily through the great desert of human hopes, and anticipating the promised joy,—so shall the spiritual idea guide all right desires in their passage from sense to Soul, from a material sense of existence to the spiritual, up to the glory prepared for them who love God. Stately Science pauses not, but moves before them, a pillar of cloud by day and of fire by night, leading to divine heights" (Science and Health, p. 566).

DEATH UNREAL.

GERTRUDE GOODE.

A CHRISTIAN SCIENTIST was asked by a friend who had but recently entered upon the study of Christian Science, and who had not yet been able to solve some of the problems that seemed to be stumbling-blocks to his progress, to explain certain things. "I wish you would answer one question for me," said he, "for so far I have been unable to receive an answer which is satisfactory, although I have asked several Christian Scientists for an explanation, and it is a matter of much concern to me, as it seems to present itself repeatedly for solution,—What is death?"

The one who had been thus addressed sat thoughtfully a moment, feeling that her answer meant much to her friend; then, realizing the ever-presence of the divine Mind, the Mind that was in Christ Jesus, the all-knowing, all-hearing, divine intelligence, and relying solely upon this Mind, the answer came immediately and spontaneously, and in a manner that seemed to carry conviction to her listener, she slowly repeated the significant words of St. Paul, "To be carnally minded is death."

She then called attention to the word "is" and said, "Do you realize the significance of that word 'is'? 'To be carnally minded is death,'—not shall be; not that it will result in death, but that it is death. This carnal mind assumes many different phases and clothes itself in many different forms, but of any manifestation of the carnal mind, whether it be lying in the grave or walking on the street, St. Paul has said, in those words that have resounded through the centuries, 'To be carnally minded is death,' and will continue to be death, until 'death is swallowed up in victory;' that is, until the mortal mind yields to the divine. And whether we be here or there, whether it be on this plane or another, it matters not: so long as we remain in the beliefs of the carnal mind, we shall know nothing of Life as demonstrated by Christ Jesus and as understood in Christian Science. The carnal mind 'is not subject to the law of God,' of Life, 'neither indeed can be,' for it can take no cognizance of Life, which is God."

As she continued to explain this passage of Scripture, the true and vital importance of its meaning seemed to dawn upon her listener, and he at once saw the answer to his question in those words of St. Paul in his epistle to the Romans, "To be carnally minded is death; but to be spiritually minded is life and peace."

UNLOOSED.

EVA C. HAMMOND.

THOUGH the body of Lazarus had lain four days in the tomb, and it might be supposed that, as Martha declared, it would be in a state of decomposition, in his restoration there was no painful and prolonged period of reconstruction, no convalescence according to a *materia medica* program. When in answer to Jesus' call (not to return to life, but to awaken from sleep) he stepped from the tomb, and there followed the command addressed to the outsiders, "Loose him, and let him go," the bindings and swathings of false beliefs fell from him, and he stood forth whole.

We should never bow down to the ignorant teachings of fear or superstition that there need be any painful symptoms manifested in the coming of health to us. Mrs. Eddy says, "To the Christian Science healer, sickness is a dream from which the patient needs to be awakened," and also, "Keep in mind the verity of being,—that man is the image and likeness of God, in whom all being is painless and permanent" (Science and Health, pp. 417, 414).

We must not become discouraged if, when the call of Truth comes to us and we rise from our long sleep in the material sense of life, we are not immediately loosed from all our fetters. We may be awake to the fact that in Christian Science we have found the "tree of life," but we may not seem able to free ourselves at once from all fear of disease, and other results of wrong teaching; for it is according to our understanding of divine Truth that we are enabled to do this. If we persist in our course, however, these bindings and swathings of false belief will one by one fall from us, and we shall be free, for divine Love is omnipotent.

To the hopeless invalid, looking at his crippled, deformed, or diseased body with despair in his heart that there can possibly be any power on earth to make it whole, to the Martha thought with its "ifs" and "buts" of medical laws and limitations, there comes as of old that comforting and authoritative answer, "Said I not unto thee, that, if thou wouldest believe [be firm in the truth] thou shouldest see the glory of God?"

SELECTED ARTICLES.

[Frederick Dixon in *Evening Despatch*, Birmingham, England.]

The reference to Christian Science under the heading "Success Makes Health," in a recent issue, is distinctly interesting, as it shows that in the opinion of two eminent medical men the effect of the mind upon sickness is beginning to be understood, and they are not alone in insisting on this. Only recently, to take one other single case, a well-known doctor has been insisting upon the efficacy of Christian Science healing, and he quoted a case of the healing of locomotor ataxia which came under his own notice. At the same time Christian Science healing is a great deal more scientific than the average reader or writer has any suspicion. Optimism is an excellent thing, and the temperament of Mark Tapley is always more healthy than that of Mrs. Gummidge. Nevertheless, optimism, as understood in Christian Science, is not the mere hopefulness of the one who is waiting "for something to turn up," but the result of a scientific understanding of the allness and omnipotence of God. The statement that God is good, repeated as a mere theological dogma, amounts to very little, and in the minds of those who rely upon it, is vitiated by the perpetual reminder of the hospital and the prison. Christian Science relies on no such exercise of blind faith; it relies on faith, certainly, but it is the faith which comes to the Scientist as, watching the operation of certain spiritual laws, he begins to have confidence in his ability to demonstrate some truth beyond his present knowledge; that is to say, to take a familiar example, the realization that two and two make four, gives the mathematician faith in his ability correctly to work out a more abstruse problem.

When first the perception of a new fact dawns on the consciousness, the person who perceives it begins to believe; as the perception broadens out into a clearer realization, the belief deepens into faith; and, ultimately, as this perception becomes scientifically understood, faith itself becomes knowledge. It is for this reason that Mrs. Eddy has written on page 297 of Science and Health: "Mortal testimony can be shaken. Until belief becomes faith, and faith becomes spiritual understanding, human thought has little relation to the actual or divine." Something like this must have been present to the mind of the writer of the fourth gospel in the distinction he makes between the two Greek phrases of believing a person and believing on a person. Believing Jesus, meant believing his statement that he was the Christ. This was blind faith; but believing on Jesus, meant the gaining of the spiritual understanding and of the knowledge of what was implied in his claim to the Messiahship. It was to those who believed him merely, though the distinction is unfortunately lost in the translation, that Jesus addressed the warning that discipleship constituted something more than a mere acceptance of a statement. The optimism of Christian Science is the mental condition resulting from the certainty that the allness of God, good, is a demonstrable fact. "Ye shall know the truth, and the truth shall make you free."

["An Unprejudiced Truth Seeker" in *Ponoka* (S. Dak.) *Herald*.]

Deeply regretting the necessity for this writing, yet knowing that one who is unwilling to be about the Father's business is unworthy the name of servant, in all loyalty to the Master's cause I would ask the reverend gentleman why an intelligent congregation should be provided with "a story he once heard of a lady," etc., rather than a reliable testimony accepted by Christian Scientists themselves. A suggestion of unfairness can hardly be entertained in connection with so devout a gentleman, but why should Christ's miracles be classified as "only incurable cases," when we are told that he healed "all manner of disease," "and as many as touched him were made whole"? And why does the critic tell us that Christian Science treatment is useful only in minor cases or nervous disorders, when many well-authenticated testimonies are given of healing of incurable diseases—at least so pronounced by eminent physicians? Many remarkable testimonies are found in the Christian Science periodicals, duly signed and vouched for, and as believable as are those recorded two thousand years ago.

Again, why does the critic say he will accept Christian Science when it is shown to have healed extreme cases, when he continues to disbelieve in the face of indisputable testimony? These are indeed true words: "Neither will they be persuaded, though one rose from the dead." But herein lies the strong point concerning this new-old doctrine. No one is expected to believe because of others' experiences. Mrs. Eddy tells us, "The divine Principle of healing is proved in the personal experience of any sincere seeker of Truth" (Science and Health, Pref., p. x). The gentleman freely admitted that the doctrine included a great deal of good, and in instances accomplished wonders. Well, if the cause is so sanctioned of God, who can presume to criticize or so forget the Master's gentle spirit that these great and vital "signs" can be discussed in a jocular, even ridiculing manner, when Christ Jesus himself emphasized them in such a marked degree? Rather should his humble servants be commended for endeavoring, at least in part, to realize his promises, "If ye shall ask any thing in my name, I will do it;" "These signs shall follow them that believe;" "Greater works than these shall he do; because I go unto my Father," etc.

Is it consistent to make a jest of those who take the Saviour's words seriously? If this pious gentleman has "read these works from beginning to end," then he may have forgotten the author's words, "Until the enemies of Christian Science test its efficacy according to the rules which disclose its merits or demerits, it would be just to observe the Scriptural precept, 'Judge not.'" "Proofs are better than mere verbal arguments or prayers which evince no spiritual power to heal" (Science and Health, pp. 344, 355).

[David Anderson in *The Yarrawonga* (Australia) *Chronicle*.]

A recent reference in the *Chronicle* to Mrs. Eddy, the Discoverer and Founder of Christian Science, in association with the notice of a "new mysticism," or mode of treatment of disease by meditation and silence, may have conveyed to some readers the erroneous impression that she was a theosophist, and that the Christian Science religion is akin to theosophy, or that its metaphysical healing has something in common with the mysticism then under review. Mrs. Eddy never was a theosophist, and there is no analogy between theosophy and the demonstrable truths of Christian Science.

Christian Science rests on the basic statement of the infinitude of omnipotent God, "the same yesterday, and today, and forever," and its healing is effected through the realization of the potency and unceasing activity of the divine Mind, operating through law as constant and unchanging as its author is unchangeable. Christian Science finds no room for exercise of the human will, but shows how the carnal mentality can be subordinated to the Mind which was in Christ Jesus. It makes no attempt to heal through will-power or mental suggestion, and consequently seeks no aids of sense concentration or of meditation on, or repetition of, resonant words. Its teachings and practise are entirely antithetic to all such aids. The silence which Christian Science inculcates is the "silent prayer, watchfulness, and devout obedience" which "enable us to follow Jesus' example" (Science and Health, p. 4); and to illustrate that direction of the Master preparatory to prayer, "Enter into thy closet, and . . . shut thy door," Mrs. Eddy writes: "We must close the lips and silence the material senses. In the quiet sanctuary of earnest longings, we must deny sin and plead God's allness" (Science and Health, p. 15).

Digitized by Google

The healing of Christian Science is now admitted by many opponents who erstwhile had nothing for it, root and branch, but solemn and sulphurous condemnation. By and by they will acknowledge the last of the three stages through which Agassiz says every great scientific truth must pass, and will declare they have always believed it. It should not, however, be forgotten that "the mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to test the reality of the higher mission of the Christ-power to take away the sins of the world" (Science and Health, p. 150).

[Albert E. Miller in *Waterbury* (Conn.) *American.*]

In a recent editorial a statement appears which was evidently written without weighing the matter carefully on all sides, and I desire to offer a few words of additional comment on the subject. You say, "The value of publicity is only too well appreciated by every experienced campaigner. The Christian Scientists were almost the first moral or social propagandists to understand it, and for a time they used the press with great freedom and with perfect willingness on the part of the press." This statement charges Christian Scientists with having taken the initiative in using the columns of the daily press to set forth their doctrine. You will be interested to learn, I am sure, that with Christian Scientists this publicity was not sought, but resulted from the necessity of correcting misunderstandings of this faith and answering the frequent attacks made upon it.

The frequency with which Christian Science was misrepresented in the daily press some years ago clearly showed that a lack of understanding of the subject existed which could hardly be allowed to stand. Fair play, to say the least, required that Christian Scientists be given better treatment, and committees were appointed by the churches of this faith to see that as far as possible misstatements involving Christian Science should not go uncorrected. As a result, editors of newspapers and other periodicals have gladly complied with requests for space in which misstatements concerning Christian Science could be corrected, and the public has thus received greater enlightenment on the subject. Nothing could be fairer, and one sees an attack upon this faith in the public prints much less frequently in these days; in fact, it may be said that religion generally has been benefited by this course of action.

["Onlooker" in *Gazette-News,* Blackpool, England.]

One of our local ministers has been delivering his soul on the subject of "The Fallacy of Eddyism." Some persons seem to have a peculiar taste for misrepresenting, and then attacking, phases of religion which, on their own confession, they do not understand. On this occasion the preacher said it was stated that the creed of Christian Science was based on the Bible, but he failed to see it. The failure to see it surely does not mean that it cannot be true. I do not know whether it is true or not. I am not a Christian Scientist, but I have done a little logic, and I do like fair play for religious phases of thought other than my own.

I suggest another text to this gentleman, "Master, we saw one casting out devils in thy name, . . . and we forbad him, because he followeth not us. But Jesus said, Forbid him not: for there is no man which shall do a miracle in my name, that can lightly speak evil of me. For he that is not against us is on our part." I take it that Jesus knew what Christianity is, and to say that "Christian Science is distinctly antichristian," in the face of the above rebuke to an intolerant follower, is nonsense. "The tree is known by his fruits," and the fruits of Christian Science will bear investigation. Christian Scientists may not be orthodox in creed, and their scientific point of view may be hard to grasp, but no sane person can deny that Christian Science produces works of healing that our orthodox churches cannot produce.

The attempt to prove Christian Science unchristian by quotations from the Bible is rather ludicrous in these days. No one values the Bible more than I do. That is why I object to the taking of verses from their context and using them to prove one's own point of view. By this method one can justify slavery and polygamy and the murder of witches.

I know a good many Scientists, and am proud to think they regard me as a friend. It is an honor. As a class of people they are the most ladylike and gentlemanly I have ever met. If I were not content with my own faith, I should want to embrace theirs, if only because of the beautiful traits of character it seems to develop in them. As to the healing, this preacher said there was not half the healing in it as could be found in other religious communities. It had been practised centuries ago by Brahmins and Hindus. So much the better for the Hindus and Brahmins [if this were true]. They must have known more about Christianity than the Christian church in the twentieth century. To class Christian Science healing with "the black art and devilry" reveals a hopeless obscurantism. It makes me feel bad. I told you I was not a Christian Scientist; if I were I should not be so affected.

[Editorial in *The Morning Telegraph,* New York, N. Y.]

There are in the United States, in round numbers, a million Christian Scientists. This means that there are a million optimists spread over the country who are enjoying good health and helping others. A life insurance company recently announced that persons are living to a greater age; that seventy years no longer is life's limit. As a matter of fact, it is said that if one lives in a right manner he may exist a century. Doctors are claiming credit for this increase in the length of life, but Christian Science really is responsible for it. One million Christian Scientists and five thousand healers are practising what they preach among the other millions of America, and even as a little leaven leaveneth the whole lump, so have they inspired the country with the spirit of Mrs. Eddy.

True faith will not let the body suffer. Mrs. Eddy says: "A person healed by Christian Science is not only healed of his disease, but he is advanced morally and spiritually" (Retrospection and Introspection, p. 34). This woman, the discoverer of a great truth, has been at least partly responsible for the better bodily and mental health of this country. Doctors did not do it, for they work on the body; Christian Science works on the mind, and the moral nature. There are no pessimists among Mrs. Eddy's followers; they preach and practise the doctrine of hope and good will. That the country is better and enjoying health, is due to the efforts of these Christian Scientists.

[Editorial in *Rock Island* (Ill.) *Union.*]

Those who profess belief in scientific truths, and who claim liberality in their views on religious and other kindred subjects, are, and should be, the first to concede the right of others to freedom of thought. Liberality should be in all directions, but this is not always the case. For example, the Puritans came to this country because of a desire to worship God according to the dictates of their conscience. They at once proceeded to become as bigoted and as unrelenting toward those of other beliefs as were their English persecutors. The "free thinker" who cannot see good in orthodox religious beliefs, ceases to be a free thinker. He may contend for principle, but he may not condemn. So, those of the present day who can see nothing good in Christian Science, must modify their attitude. The very fact that between one and two millions of the people of our country have espoused that belief, and among them the best people, shows conclusively that there must be something

Digitized by Google

good in it; and people are coming to that position. There was a time when people were not kind to the followers of Mrs. Eddy; they concede now that the church has accomplished much good.

It should be the attitude of all good, broad-minded men to attack only the very corrupt and that which produces evil results. They should defend that which makes for happiness and contentment. They should not seek to take away that which offers consolation without offering something in its stead. We cannot all believe alike, but we can concede to others the same rights to their beliefs that we hold sacred to ourselves.

[Willis D. McKinstry in *Fredonia* (Kan.) *Herald.*]

In a recent issue, under the heading "Revival Sparks," we read, "In Christian Science there is neither Christ nor science." We are informed that this expression was used in a sermon by a clergyman who is conducting a series of meetings in your city. Our critic is but criticizing his own sense of Christian Science, and his statement shows quite clearly that he has failed to grasp its truth or its teachings. Christian Science is no new form of religion or worship; it is the reestablishing of primitive Christianity as taught and demonstrated by our Lord and Master, and practised by the early Christians for three centuries after the crucifixion of Christ Jesus.

All Christians claim to believe in the omnipotence and omnipresence of God; then why should it be thought impossible for Him to manifest His goodness to His creation today, the same as in the beginning? Is not God just as able to heal the sick as He is to redeem the sinner? The fact that Christ Jesus was able to perform many mighty works is proof positive that the same works may be wrought throughout all time by any and all who spiritually understand God's law; for God is "the same yesterday, and today, and forever," and Jesus said, "I am the way," that is, the way to be followed by all mankind.

Mrs. Eddy through years of faithful research and study of the Bible discerned the spiritual meaning of its teaching, and through this revelation of Truth she proved the verity of Jesus' words: "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." The knowledge of God and the Christ as gained through the study of Christian Science causes mankind to hunger and thirst for the fruits of Spirit; awakens a desire to love one's neighbor as one's self and to do unto others as he would be done by. Those who understand and live the truth as taught in Christian Science are able to "prove all things; hold fast that which is good."

Through an understanding of the Scriptures as taught in Christian Science, mortals are able to take Christ into their daily lives and to show their Christianity by becoming better men and women.

[Arthur L. Worthen in *Vinita* (Okla.) *Chieftain.*]

I would like to make a few remarks on a sermon on Christian Science as reported in a recent issue of your paper. It seems strange that any one should object to Christian Scientists for trying to relieve poor suffering humanity from its burden of pain and sorrow, and I cannot believe that our clerical critic does. What he objects to, I believe, is the method which he thinks Christian Scientists employ. He seems to be under the impression that Mrs. Eddy denies that there is such a thing as disease. What she does teach regarding disease is very clearly stated on page 460 of the Christian Science text-book, "Science and Health with Key to the Scriptures," as follows: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being."

She does teach, however, as did Jesus, that disease and sin are not from God, and are to be overcome by knowing the truth about them. Jesus denied the evidence of the physical senses on every hand, and annulled so-called physical law by his clear understanding of spiritual law. It was through his understanding of these laws that he was enabled to heal those who were infirm, both in body and mind. Furthermore, he said that all those who understood these laws could get the same results which he did, and even better. St. John reports him as saying: "He that believeth on me, the works that I do shall he do also."

Jesus preached a gospel that healed the sick; or rather, he preached the gospel by healing the sick, and that is what Christian Scientists are trying to do. Christian Science employs the same method in destroying sin that it does in destroying sickness; for we find that the one is the cause of the other. One must not think, however, that the physical healing is the consummation of Christian Science, by any means; but it is part of the work to be done by those who would keep his commandments. It is to be a mark of discipleship; for "faith without works is dead."

Christian Scientists use the same Bible and worship the same God that other denominations do. They acknowledge the same Christ, and endeavor to keep the same great commandment to love God supremely, and one's neighbor as one's self. They have their commentary on the Bible, "Science and Health with Key to the Scriptures" written by Mrs. Eddy. It is through the study of this book that the Bible has yielded up its treasures to unnumbered thousands after they had sought in vain elsewhere.

[William C. Kaufman in *Anaconda* (Mont.) *Standard.*]

The reference made to Christian Science, calling it "suggestive treatment," is misleading, and would give readers a wrong impression of it. Christian Science treatment does not deal with mental suggestion; it is the truth about God and man realized. In the mental treatment known as the "suggestive treatment," disease is admitted to be a fact which is overcome through the human will. Christian Science teaches that God is Life, Truth, and Love; that this divine Principle is manifested as Spirit, Soul, divine Mind; it recognizes Him as the only presence, law, power, cause, and effect. It regards man as made in the image and likeness of God; in other words, that man is the reflection or expression of God, Life, Truth, and Love, not in a bodily form, but in a mental manifestation of quality and essence. Since sickness or disease cannot partake of the nature of God, divine Spirit, it is no part of His creation; therefore it is foreign to God or His creation, hence it is untrue, unreal. This process of spiritual thinking disposes of matter and is a corrective to all error, sickness, disease, or any discord. It should be made plain that "suggestive treatment" may suggest either truth or falsity, but that Christian Science does not suggest anything, but brings to human consciousness, through a spiritual understanding of Truth, a realization of that which is true.

[Written for the *Sentinel.*]

KIND WORDS.

CHARLES C. SANDELIN.

Words soft-spoken and kind,
  Like sunbeams through clouds of day,
Into the heart to grief resigned
  Stealthily find their way!

Lightening the darkness there
  Till the full-orbed sun doth shine:
Thus thy brother's burden bear,
  Knowing his good is thine!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"AND BE YE THANKFUL."

AT the annual meeting of The Mother Church, held this week, it was stated by the clerk, in his report, that the number of persons admitted to membership in the church during the year just closed was greater than ever before in any year of its history; also, that the number admitted at the semiannual admission of members on May 30 of this year was the largest number received at any one time since the church was formed.

The full significance of these statements cannot be understood except by those who realize that no one is solicited to join this church, and but few join it until after they have been healed of disease of some kind, or have experienced such a moral or spiritual regeneration as has completely changed their whole outlook upon life. What effect, therefore, such facts as these will have upon those persons who have been unwilling to admit the stability and inherent strength of the movement founded by Mrs. Eddy, is something with which we have no occasion to be concerned. All we need to know is that we have proved for ourselves in Christian Science the word of the prophet Isaiah, that "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear," and that divine Love is ready to heal mankind when mankind is ready to be healed. Jesus said that to understand God is life eternal, and so long as Christian Scientists endeavor to prove the truth of these words, so long will the healing of all manner of diseases continue to win adherents to and strengthen the cause in which they have enlisted.

Mrs. Eddy, when she formed the Church of Christ, Scientist, declared that its object was to "reinstate primitive Christianity and its lost element of healing" (Manual, p. 17). That this lost element of healing is being reinstated, is proved by the verbal testimony of thousands at the Wednesday evening meetings each week, in addition to the testimonies which with their message of hope and healing enrich every issue of the *Sentinel* and *Journal*. And not only this, but the better idea of God which Christian Science is inculcating, is shown in a letter received at this office, from which we quote as follows:—

"The Bible is a new book to me, for Science and Health truly opens up the Scriptures. In the struggle with bad health I would often ponder the Master's words, but at times I would think that perhaps it was God's will for me to suffer out my life, that this was possibly the only way for me to gain a home in heaven; but I am thankful to know that God is too just to send suffering on His children. What a grand thing it is to understand God, instead of merely believing on Him!"

It is comparatively easy, therefore, to deduce from these premises a logical explanation of and reason for the steadily increasing membership of the Church of Christ, Scientist; namely, that through the apprehension and application of the teachings of the Master, as interpreted in the light of the text-book given us by our revered Leader, mankind is being freed from the bondage to sickness and sin which has so long been accepted by the Christian church as a part of the divine plan for the salvation of the children of men; and that it is the high privilege of every Christian Scientist to spread abroad this healing truth, to become a living epistle which may be known and read of those with whom he comes in contact. Nor should we ever forget, in our gratitude to the giver of "every good gift and every perfect gift," to be thankful for the Leader through whose untiring labors for mankind the Scriptures have again been opened up to us, and the promise of the Master, "He that believeth on me, the works that I do shall he do also," has become a demonstrable truth. Remembering this, we may well recall our Leader's counsel to "avail ourselves of the blessings we have, and thus be fitted to receive more" (*Science and Health*, p. 3); and for the new year upon which we are entering, take for the church which she founded and nurtured the message of the apostle Paul to the church at Colosse: "Let the peace of God rule in your hearts, to the which also ye are called in one body; and be ye thankful."

ARCHIBALD MCLELLAN.

AS MASTERS, NOT SERVANTS.

CHRIST JESUS lived the ideally free life. In every struggle with the world, the flesh, and the devil, he overcame. Instead of yielding to circumstance, he ruled it with right. Even Calvary presents no exception to his triumph. The passion embraced nothing of defeat. He passed through the most serious possibility of human happening, only that he might voluntarily prove for himself and for all mankind the superiority of Truth over error, of the spiritual understanding of Life over the mortal belief of death. This was the inspiring and saving import of the cross: the Master consented unto death, as St. Paul puts it, that he might demonstrate for all mankind the inherent authority of that Truth and Love which is our eternal portion.

Moreover, the Master's definite assertion that he was the Wayshower for the spiritually aspiring, together with his specific command that we live his life and do his works, leaves no question unanswered as to our privilege and duty. Our triumph over sin, sickness, and death is to be as unconditioned by material sense experience as was his,—it is to depend upon the knowing of divine law and obedience thereto, and upon these alone. Said he, "I give unto you power . . . over all the power of the enemy: and nothing shall by any means hurt you."

This possibility of the permanent sovereignty of the Christ-life is one of the daring assertions of Christian Science, and it begets immediate realization of a contrast between the duty of professed Christians, the world over, and their doing, which is no less discouraging than discreditable. The attitude of the average Christian believer is one of consent to many unideal experiences as not only inevitable but as wholly profitless. Christian Science recognizes that so long as any factor of material sense remains, so long the assaults of temptation and disease may be expected, but it points out and proves that these assaults may be so met and mastered that a spiritual advance will be wrested from the struggle in every instance; in other words, that for those who have gained the Mind that was in Christ Jesus, all situations and events, however seemingly ill, shall work together for their good; that they shall present not only the opportunity, but the stimulus for the conquest of self. This is the mastery which pertains to man, a demonstration of peace and joy independent of human conditions. St. Paul could say to the Romans that he rejoiced in tribulation, knowing that through the power of Truth it "worketh patience; and patience, experience; and experience, hope," and this, as St. John has said, "is the victory that overcometh the world."

An almoner of the bounty of brotherhood, visiting one who had lost her home and everything in it by the late floods in the West, was impressed by her buoyancy and cheer, her manifest superiority to the situation. "Loss," said she, "we have suffered no loss! On the contrary, we have experienced great gain. For years husband and I have been laboring for the things that perish, and we had well-nigh lost sight of their nothingness; but now we have acquired a true sense of values, and we are rejoicing in the

Digitized by Google

richness of our possession!" Here was one who gave great promise of becoming a genuine Christian Scientist. To think of sense satisfaction as a life end is to identify its loss with defeat, and the superficiality of professional Christianity is often revealed in the tragedies of experience. The knowledge of divine Principle and its eternally safe ideas is able to reverse the seemings of sense and to lay hold upon spiritual realities, it gives one a firm footing upon the "rock of ages," and this experience is not infrequently named, "My coming into Christian Science."

JOHN B. WILLIS.

INSPIRATION, HOW GAINED.

IN the book of Job we are told that "the inspiration of the Almighty" giveth men understanding, and Christian Science would add that no true understanding can be gained in any other way than by divine inspiration. It is believed by many that inspiration is the coming of a supernatural influence to men, which fits them to receive and give forth divine messages, especially in times of doubt and darkness, and this without any special effort on their own part. Again, there are those who hold that every brave and noble thought deserves to be classed as inspired, and this would include the products of art even where these do not reach beyond the mortal concept of existence. We shall, however, get nearer to the truth if we remember that the word really means inbreathing, and that the divine ideas come most perceptibly to the one whose deep desires may be expressed in the psalmist's words: "As the hart panteth after the water brooks, so panteth my soul after thee, O God;" or to use our Leader's words, "The desire which goes forth hungering after righteousness is blessed of our Father, and it does not return unto us void" (Science and Health, p. 2).

From the Christian Science standpoint, inspiration comes in some measure to all who long to know and realize the deep things of God, and its outward expression can best be judged as is the "faith that makes faithful." We thus look for the inspiration that inspires with high and holy thinking, with pure and purposeful living, whether it come to man, woman, or child. In the Christian Science Sunday schools the aim of all the teachers should be to gain for themselves such an inspired sense of the power of divine Truth that the pupils will all feel its resistless influence and be drawn toward the Christ-idea to receive the bread which "giveth life unto the world." We must not forget that inspiration found its best response at one period in the child Samuel, and that through him the people were led a long way toward the realization of the divine ideal of national existence which means first of all the righteousness that blesses all mankind, and the consequent prosperity that does no less. Peter tells us in his second epistle that "holy men of God spake as they were moved by the Holy Ghost," which is explained in Science and Health as "Divine Science; the development of eternal Life, Truth, and Love" (p. 588). As this revelation of divine power comes to humanity, "the windows of heaven" are opened, and with the healing comes the inspiration which does indeed make all things new.

We should often remind the dear children in our care that "Spirit, God, is heard when the senses are silent," and that "we are all capable of more than we do" (Science and Health, p. 89); ofttimes, too, the teacher must realize this for the pupils, when the senses are not silent but are clamorous. We fully believe that divine inspiration comes to us through the Bible, as understood in "Science and Health with Key to the Scriptures," God's message to this age, for we have daily proofs of the power of the word in the healing of sickness and the overcoming of sin. Shall we then doubt for a moment that it will do for the children what the apostle declared God would do to His flock at that day, namely, "make you perfect, stablish, strengthen, settle you."

We read in the Scriptures of many who from their childhood loved the inspired word as it was then known to men, and whose lives were made strong and beautiful in so far as they lived in obedience to it. It matters not that some persons deny its present power to heal, for unnumbered thousands are proving in their own experience that Christ is "the same yesterday, and today, and forever," and that our age is specially blessed in the gain of divine inspiration which forever reminds us that "with God all things are possible." Who shall question this, or its full significance as applied to the children who are being instructed in the word of God from Sabbath to Sabbath, directed ever to the Love that "inspires, illumines, designates, and leads the way" (Science and Health, p. 454)!

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

EVANSTON, ILL.—It is expected that the Sunday school room of the new Christian Science church will be completed so that services may be held there in the near future. The use of this room will do away with the necessity of holding any service in the Evanston theater, which has been used for the regular morning service and the Sunday school ever since the old building was torn down last September.

This church will cost, when completed and furnished, nearly one hundred thousand dollars. The building occupies very nearly the whole of the large lot at the southwest corner of Chicago avenue and Grove street. It is set back about twenty-five feet from the front on Chicago avenue, and the width is 89 feet, with a depth of 125 feet. The exterior is of gray pressed brick with Bedford stone, and the interior will be largely white enamel.

The church finances are in excellent condition. All contractors' bills have been paid as presented and audited, and money is on hand to meet the rest as soon as presented. The total amount in hand and pledged is within a very few thousand dollars of the outside estimate of the cost.

Evanston Index.

ZURICH, SWITZERLAND.—The local branch society of the Christian Science church has been obliged to leave the old quarters, having outgrown them, and has moved into the former Schwimmhalle on the Eisengasse, which for a time had been used for industrial purposes, but now has been transformed into a suitable place of worship, which can accommodate about one thousand people. In this hall Prof. Hermann S. Hering delivered a scholarly lecture on the fundamentals of Christian Science on Saturday and Sunday, the 12th and 13th of April.—*Züricher Post.* (Translation.)

LINCOLN, NEB.—The Christian Science church has deeded to the city a building lot valued at one thousand dollars, as a site for a Carnegie library. The lot is given free, on the condition that it be used solely for library purposes.

Kansas City (Kan.) *Gazette Globe.*

THE LECTURES.

TAUNTON, MASS.

The Christian Science lecture delivered by Prof. Hermann S. Hering at Odd Fellows' hall was attended by a large audience. Charles H. Merrill of the local church introduced the speaker as follows:—

The world today, from nation to individual, is reaching out for peace, harmony, and freedom from sin, disease, and death. Christ Jesus said nineteen centuries ago, "Ye shall know the truth, and the truth shall make you free." He came showing humanity what this truth was. Today Christian Science is showing humanity what this truth is that makes men free, and how it can be obtained. Five years ago my case was pronounced by the physicians as incurable. The understanding of this truth through the study of Christian Science, made me free. This afternoon we shall hear from one who by his own proofs and demonstration is able to give you some knowledge of Christian Science.

Taunton Gazette.

ROCKY FORD, COL.

The opera house was well filled by a very attentive audience to hear the lecture on Christian Science by Judge Clifford P. Smith. In introducing the speaker, C. O. Clark said in part,—

It is probable that there are represented among you here this evening, widely divergent opinions concerning God and His creation; concerning man, his origin and destiny; Christ, and the scheme of salvation; but your presence indicates that the incessant yearning on the part of humanity, throughout all ages, to know more than is already known, is still being felt; and you have come, perchance, to learn if in this claimed rediscovery of the Science of Christianity there is aught of truth, any hope, some measure of comfort and consolation.

Let me assure you, as one who once stood outside the pale of its benefactions, and whose mind was filled with all the prejudices, fears, doubts, and misgivings it would seem possible to entertain, that the message of Christian Science is not a deception. It has come reaffirming the words of the Master, "I am not come to destroy, but to fulfil." It seeks not to impair your faith in the presence and power of God, but to increase it. It seeks not to take away your love and reverence for the Holy Bible, but rather to enable you to read it with greater joy, knowing that every promise therein contained is possible of fulfilment in your own experience. It comes to open the door of understanding, that we may enter "the secret place of the most High," where we may "abide under the shadow of the Almighty;" and to give a consciousness wherein we may realize with the psalmist that "there shall no evil befall thee, neither shall any plague come nigh thy dwelling." It comes declaring that "now is the day of salvation." It comes bringing men the message of "on earth peace, good will toward men." It comes singing a new song. Yet it is the old, old story that we have loved so long.—*Rocky Ford Tribune.*

DUBLIN, IRELAND.

At the lecture on Christian Science by Bliss Knapp, at First Church of Christ, Scientist, the speaker was introduced by Lady King, who said:—

You have come to hear, perhaps for the first time, something of what Christian Science is and of what it is doing for mankind. Christian Science is the law of God, ever-present and ever-operative, healing the sick, reforming the sinner, and comforting the sorrowing by one and the same divine method. Paul writing to the Romans says: "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." The mighty works done by Jesus of Nazareth in the first century of the Christian era, and by his followers for three hundred years after his ascension, were in demonstration of this law.

In 1866, this law of Life, Truth, and Love was discovered by Mrs. Eddy, and she named it Christian Science. Having fully tested and proved the efficacy of her system of healing through divine Mind alone, she gave the result of her discovery to the world, and I am one of countless thousands who today are rejoicing in the sense of health and freedom that has come to us through its means. Christian Science has come to this age because this age is ready to receive it.—*Correspondence.*

LAKEWOOD, OHIO.

Inclement weather did not prevent a very large attendance at the Christian Science lecture held in Gordon Square theater. The lecturer, Virgil O. Strickler, was introduced by Dr. W. W. Totheroh of Lakewood, who said in part,—

In recent years it has been quite common in certain circles for the opinion to be expressed that ours is an irreligious age, but to those who are discriminating it cannot fail to be apparent that it is not religion to which the multitudes have become indifferent, but rather scholastic theology; that is, dogmas, creeds, traditions, and ritual, the mere carpenter products of men, or the wood, hay, and stubble which has repeatedly been substituted for spiritual truth. There is today, the world over, dissatisfaction, discontent, and unrest. This is manifest in the realms of state, commerce, trade, society, but nowhere more markedly than in the realm of religion.

In Christian Science, however, hundreds of thousands, representing all classes and conditions, and scattered the world over, have had their yearnings satisfied. They have reached this state through diversity of experience, physical, mental, moral, and spiritual, but their testimonies constitute one grand anthem of praise and thanksgiving. It is peculiar to Christian Science that its adherents have all experienced the significance of the Scripture passage which is the key-note of its teachings, "Ye shall know the truth, and the truth shall make you free." Naturally, there is a wide-spread and an ever growing desire to know what Christian Science is. Its message, abounding with Bible truth, reason, hope, cheer, joy, and particularly its manifold healings, have attracted universal attention. With its challenge that it be judged by its fruits, quietly and unostentatiously it has steadily gone forward, everywhere bringing blessing, and winning the gratitude of saved men, women, and children.—*Cleveland Enterprise.*

JEFFERSON CITY, MO.

William R. Rathvon, who lectured on Christian Science at the opera house before a fairly good audience, was introduced as follows by Perry S. Rader, reporter for the supreme court:—

My purpose in appearing here is to let the lecturer of the afternoon feel that he is among friends in a town where truth is always accepted with an open hand. The test of any religion is the lives of its devotees. If it makes a man good, it is a good religion. By that test the Christian Scientists have nothing to explain or to apologize for. So far as my observation has gone, they are a people of large charity, of a tolerant spirit, of great kindness to their fellow men, refraining from harsh expressions or harsh criticism, from saying or doing things that hurt. Added to that, the great purpose of the Christian Science religion is to heal men of their diseases, and that must be the ultimate aim of the Christian religion, as it was from the beginning. All who are in harmony with that great purpose ought to be glad to listen to any man who comes with something which promises to relieve and finally to remedy the pains and suffering that they have or seem to have.—*Correspondence.*

MERIDIAN, MISS.

Frank H. Leonard, who delivered a lecture on Christian Science in the church edifice, was introduced by V. L. Crawford, whose remarks were in part as follows:—

I am not a Christian Scientist, but I have recently made a somewhat fragmentary study of the subject, which has been a source of delightful spiritual illumination. I have always tried to hold myself, as I conceive every man should hold himself, in an attitude of receptivity to the truth, whatever may be its source. I want to say, and I feel it is due Christian Science that I should say, that many passages of Scripture appeal to me with a deeper, a more far-reaching significance, and with added power, as a result of my investigation of the teaching and view-point of Christian Science. I have also been profoundly impressed with some of its striking statements of hitherto, to me, unobserved truth.

Christian Science, if I understand correctly, stands primarily and fundamentally for a knowledge, an understanding, a spiritual comprehension of God, "whom to know aright is Life eternal" (Science and Health, Pref., p. vii); that this comprehension of God, and our spiritual relationship to Him, brings to fulfilment that promise of the Master in these words: "Ye shall know the truth, and the truth shall make you free." and brings us into an immediate experience of freedom, of dominion, of power, peace, love, harmony, and immortality. I do not know of any stronger appeal that could be made along the line of the dignity and majesty of man than we find in Christian Science. It tells us that man is "the spiritual image and likeness of God" (Science and Health, p. 591); a reflection of Him as light is a reflection of the sun; that in our true selfhood we are His spiritual offspring. Why, then, should we doubt His tender care? The will of God carries plenty for His children. I shall nevermore fear evil or harm from any finite source so long as I can realize the presence of omnipotent Love.

Christian Science teaches us that now is the day of actual salvation; that the kingdom of heaven is not a place in the geography of the universe, but is within, a mental state of harmony, of peace, and of joy wrought out in the individual consciousness through spiritual understanding. It teaches us that evil, fear, sickness, disease, and death are nothing, because God did not create them; therefore they have no source or origin, no scientific nature or basis, no reality, no power. All reality and power belong to God. Christian Science teaches us that only that which is right is eternal; only the spiritual embodies the elements of permanency and immortality.

The supreme illumination of my study of Christian Science has been this: the teaching in a new, deeper, and more significant sense that God is Love, not in attribute only but in essence; and this to my mind comprehends the whole of Christian Science teaching. To understand His love, as Mrs. Eddy so well expresses it, "is the work of eternity, and demands absolute consecration of thought, energy, and desire" (Science and Health, p. 3).—*Correspondence.*

RIVERSIDE, CAL.

The Christian Science lecture at the Loring theater drew a large number of people who for an hour and a quarter listened to an able presentation of the doctrines of Christian Science. The speaker, William D. McCrackan, M.A., was introduced by Librarian J. F. Daniels as follows:—

A librarian has an unusual opportunity to note the tendencies of his community and of all the community life that goes to make up the national life. Nothing is clearer today than the fact that people are very much in earnest in their search for better standards of conduct that will lead to the durable satisfactions of life, and that bring to society something of the happiness which has been relegated to the life hereafter in the more forbidding rules of theology. In that search the human body and all the ills and weaknesses that flesh is heir to, have been encountered as barriers in the way. We have already several schools of thought which seek to conquer the frailties of this human tenement. Physicians have become eclectic; we have begun to train our children in diet, in open air, and in the excellence of temperance, and good health is becoming fashionable. Not only the medical and spiritual advisers recognize the issue, but the layman takes it upon himself to organize about this idea of a sound and healthy race. The parent-teacher associations, the clubs for the study of eugenics, and many similar groups, base their reasons and their activities within this field of health and happiness.

Christian Science interprets all this human need with a spiritual significance that is unique, and those who bring the message to us have been selected for qualities which give them credit with all creeds and sects, no matter what differences may obtain in the opinions of the individuals. We are here today to listen to one who has proved his title and who delivers his message with authority.—*Riverside Press.*

MODESTO, CAL.

An audience which crowded the Isis theater to the doors, listened with close attention to the lecture on Christian Science delivered there by Francis J. Fluno, M.D. In introducing the speaker, Miss Ada Lawrence, first reader of the local organization, said:—

One of the purposes for which this lecture is given is to correct an erroneous impression which some people have in regard to the teaching and practise of Christian Science. We who are students of Christian Science know that we have found the "pearl of great price," the truth that Jesus said would make us free, not only from sickness, but from all discordant conditions of the flesh and the limitations of the material senses. It brings into our lives a joy and peace which the world can neither give nor take away. I am sure the lecture will appeal to all who are great enough to be humble, and who are so loving, compassionate, and spiritual as to be truly Christian.—*Modesto Herald.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Batavia, Ill.—Odenthal hall, 8 p.m., June 16.
Bloomfield, Neb.—Pospeshil theater, 8:15 p.m., June 19.
Chagrin Falls, Ohio.—Assembly hall, 8 p.m., June 12.
Columbus, Ohio (Second Church).—Memorial hall, East Broad street, opposite Sixth street, 3 p.m., June 15.
Cripple Creek, Col.—June 10.
Dayton, Ohio (First and Second Churches).—Memorial hall, 8 p.m., June 10.
Enid, Okla.—American opera house, 8 p.m., June 16.
Excelsior, Minn.—Opera house, 8 p.m., June 20.
Hagerstown, Ind.—I. O. O. F. hall, 8 p.m., June 20.
Humboldt, Iowa.—8:30 p.m., June 19.
Kewanee, Ill.—Grand theater, 8 p.m., June 10.
Kokomo, Ind.—Sipe theater, 8 p.m., June 9.
Minneapolis, Minn. (Third Church).—Auditorium, 3:30 p.m., June 15.
Oklahoma City, Okla.—Overholser theater, 3 p.m., June 15.
Rock Island, Ill.—Illinois theater, 8:30 p.m., June 17.
Saginaw, Mich.—Masonic temple, 8:15 p.m., June 12.
Salem, Ohio.—Grand opera house, 3:15 p.m., June 15.
San Diego, Cal.—Spreckles theater, 8 p.m., June 20.
Seneca, Kan.—Church edifice, 8 p.m., June 12.
St. Louis, Mo. (First Church).—Church edifice, Kingshighway and Westminster, 8 p.m., June 16.
Toledo, Iowa.—Wieting opera house, 8 p.m., June 17.

TESTIMONIES OF HEALING.

I desire to acknowledge to the field at large my gratitude for healing which occurred twelve years ago. In all this time, while my heart has been constantly overflowing with gratitude to God, and also to our beloved Leader, yet I have neglected to send my testimony to the *Sentinel*.

My healing came about in this way. After long years of invalidism, during which time I tried by the use of drugs and other material means to overcome fatigue, suffering, and pain, as these proved of no avail, I gave up in despair. This was Truth's opportunity! So-called hereditary liver trouble, chronic peritonitis, headaches, etc., were some of the names under which the adversary manifested itself. A copy of the *Christian Science Sentinel* came into my home at that time. I saw the name on the title-page, and threw it from me, for, like many others, I was prejudiced against my own false concept of Christian Science; but I soon found the paper in my hands again, for something impelled me to read it, and Truth began its leavening work from that moment.

I soon heard that testimony meetings were held in our city, and I was anxious to attend, for I now felt that Christian Science was my last hope. Not feeling strong enough to go alone, a friend went with me, and we found a pleasant room, where were gathered a few persons of various ages. I thought the talk good but visionary, and left the room utterly cast down, thinking I had sufficiently investigated Christian Science, the last resort, and found it wanting. Later, in coming into some understanding of the work of Truth in neutralizing error in the human consciousness, I knew the name and nature of the error which was then manifesting itself in me. The readers had spoken encouragingly to me and had given me some literature to read, which I had no intention of doing.

The next day, the darkest of my life, found me in great distress mentally and physically, but with those papers in my hands, endeavoring to read. I began to feel that if I could only know God, as did those whose testimonies I had read, and could have the faith in Him which they unquestionably had, I should be "every whit whole." Up to that time I was wholly unacquainted with God, and had not prayed since childhood. The reading of those papers was enough to convince me that Christian Science was the one thing I needed.

That night I asked to be left alone, and while sitting in darkness, except for the light which shone in from the street, it suddenly came to me to pray for that faith for which I so longed. The thought of freedom from suffering did not occur to me then, for my one desire was to find God. The result was that the material sense vanished, leaving me conscious only of spiritual harmony. My husband came in from the next room to see how I was, and in answer to his inquiry, I looked up at him and said, "I am all right, only so hungry." For months I had been slowly starving, because food caused me great discomfort; but I arose from my chair free, and prepared for myself a substantial lunch, eating food of which I had not dared to partake for a long time. Just before retiring, my husband said, "You never had a sick headache end like this. I do not know what it is that has come to you, but—I thank God for it." Instantly I knew that it was God who was to be thanked, and replied accordingly.

My prayer was answered; I had at last found God. The realization of this fact so overwhelmed me that I could not say another word. I slept soundly for the first time in years, and waked up the next morning with the same sense of peace which had come to me immediately after my prayer; but I seemed not to know on first awaking what it was that made me so happy, when suddenly all was made plain; my prayer for faith and acquaintance with God was heard, and the answer came in instantaneous healing, verifying the Scripture, "Acquaint now thyself with him, and be at peace." I had "become conscious for a single moment that Life and intelligence are purely spiritual" (Science and Health, p. 14), and in that moment old things passed away and all things became new.

Mere words fail to express my gratitude for this revelation of the actuality of God's presence and power. Material remedies, to which I had long been in bondage, lost all place in my thought and were thrown away. I purchased a copy of "Science and Health with Key to the Scriptures," and before finishing the preface I felt sure the book contained the truth about God and all things. I read every spare moment. Demonstrations soon followed the application of its teachings to the problems which presented themselves, and after a few months a friend was healed of a supposedly incurable disease through my fervent prayers.

Each day brings to me a deeper sense of reverence for God, unspeakable gratitude to our dear Leader, and increasing love for all mankind. My highest desire is so to live that my life may attest my worthiness to bear the name of Christian Scientist.

MRS. KILMENY B. HOLT, Fitchburg, Mass.

It is surely a pleasure to testify in Christian Science. To many the seeming difficulty in giving testimony inheres in the fact that words are entirely inadequate to express gratitude, but the pleasure derived from the knowledge that one's testimony may serve to illumine the way for others, places the deficiency of words in the background. I was not led into Science through physical healing, although such demonstrations have since been numerous. My interest and understanding were brought about through the influence of friends and prolonged study of the Bible and our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

It was not long ago that I was a frail lad in the grades, with an insatiable thirst for learning which the schoolroom text-books failed to satisfy. There seemed to be something infinitely greater which they did not contain. I attended three Christian Sunday schools at various times, but these, too, seemed to miss the point, for the majority of the lessons dealt more with history and geography than with the word of Christ. I trust this will be interpreted as I intend, not by way of criticism, but as an expression of my actual experience. When the light first came to me, I was still in the labyrinth of these perplexities, but after a time I began to study our text-book, and with increased understanding I was guided along the straight and narrow way. The difficulties always adjust themselves as we gain the correct interpretation, followed by the right application of the divine law. In my own instance, mental uplift accompanied this, together with the complete healing, both physical and mental. I finished the high and normal school courses and later spent some time as a teacher.

In April, 1911, an added proof was given me of the efficacy of Christian Science. Early one Sunday morning, I was severely burned when a coal stove blew up. The burning cinders and hot ashes fastened themselves to my face, and the pain was intense; but I quickly declared the truth and tried to realize that as God, good, is all power and ever present, no accidents could occur and pain could not be real. Contrary to all mortal so-called laws, I immediately washed off the burning cinders and hot ashes with cold water. I then hastened to get Science and Health and tried to read, but found the pain so severe that I could not sit still. My eyes refused to stay open, for they too were badly burned. I had my elder sister read to me, while my younger brother went to ask a friend to help me. As soon as the treatment was started, the pain began to subside, and soon it had entirely disappeared. I went to church that morning, and only a few noticed the effects of the experience. No ill results followed, and it was indeed a sign to

Digitized by Google

me. Science has made a happy home happier for our family, and every member now attends the church service and loves it.

For the innumerable blessings which Christian Science has brought me, and for the knowledge that there is a haven of rest for the children of God, I am truly thankful, and feel that I can show my gratitude only by a constant effort to know the truth, and by applying the divine law of Life in prayer and watchfulness, in keeping with Christ Jesus' express command, "Be ye therefore perfect, even as your Father which is in heaven is perfect."

My physical as well as mental regeneration has been lasting, and I feel that I am progressing daily. I have enjoyed the blessing of class instruction and am preparing to take further steps of God's choosing.

J. HARRY BENSON, Niles, Mich.

In the hope of doing good to some poor sufferer, I send this message, in thankfulness to God, to our blessed Redeemer, and to our dear Leader, Mrs. Eddy, for the healing truth of Christian Science, which found me seven years ago a total physical wreck, according to the material senses. I had for years consulted the best physicians, and one of them told me that the only hope for me was an operation, but that my condition was too weak for such an ordeal. In my distress I consulted another doctor, who was willing to perform this operation at once, thinking that I might find some relief; but the operation left me worse than before. My friends openly stated that my days were numbered and waited for me to pass on.

At this time Christian Science was brought to my notice, and I began to investigate it at once, although with little hope. My healing was very slow, but today I am a perfectly well woman. The chief trouble, which was of ten years' standing, and which was said to be the result of childbirth, has entirely disappeared. I can truthfully say that I owe my life to Christian Science. It has lifted me from a sense of death to life, from that of sickness to health, from sorrow to joy, and from darkness to light.

Another demonstration of Truth's power, which saved my daughter as well as a laundress, was in their rescue from the effects of escaping gas. When I went into the laundry, the laundress had fainted. Trying to find out what was the cause of this, I myself began to succumb, and it was the same with my daughter, who tried to come to our rescue. Dragging myself to the telephone, I called up a Christian Science practitioner, who said she would declare the truth for us at once. Meanwhile, though we were constantly declaring the truth, the condition seemed not much better, and I was thinking of sending for an ambulance to take the laundress to the hospital; but I telephoned again to the practitioner, and she told me to turn off all gas and open all the windows. Up to this time we had not known what had caused all the trouble, but the practitioner discerned the cause, and came to our home to help us. She said that as this was a case of emergency, she would declare the truth for the laundress. She did so, and in about an hour the woman was able to go home alone. We all gradually recovered, and the next day were quite well.

To me, the wonderful part of this demonstration was, that the understanding of Truth gave me the strength to attend to all this, while seemingly in a fainting condition, as the three of us were alone in the house. Besides this, I have been healed of acute lung trouble, rheumatism, and many other ailments. Words cannot express my gratitude for all that Christian Science has done for me.

MRS. LINA LIENEMANN, Milwaukee, Wis.

I would like to tell others how Christian Science came to me in an hour of great need. I had gone through a serious operation and was not relieved. I went to several prominent physicians and was told that another operation was necessary. In a few months I was operated on again and was helped very much, but the main trouble a hemorrhage of ten years' standing, was not relieved. The different physicians told me if it did not stop I would have to go through another operation, and that it would be the last.

I was most miserable both mentally and physically, but I turned to God for help and prayed earnestly for healing. I was then called to St. Louis, and while there something seemed to tell me to go to the Christian Science church. I finally went to one of the churches there, and I felt that I had never seen a more joyous and happy lot of people. They were very kind to me, and one lady took the trouble to look me up at my room one night to tell me of the power of Truth. As she told the wonderful story, it was to me as the opening of the gates of heaven. I was filled with joy, and a great spiritual awakening took place in my consciousness. I had been wearing glasses which a specialist had recently told me I must always wear, but my eyes were healed that evening, also a bad case of hemorrhoids. I took up the reading of Christian Science, and in a few months was entirely healed of the other ailment.

Divine Truth has been my strength in the time of sorrow, bringing to me that peace "which passeth all understanding." I am grateful to God, and also to our dear Leader, Mrs. Eddy, for Christian Science.

MRS. ELIZABETH BICKLE, Glenwood, Mo.

Four years ago I had what *materia medica* called an exophthalmic goiter, and seemed to be getting worse all the time. An examination by our doctor brought the verdict that no medicine could help me, and he advised me to start at once for the one hospital where he felt the dangerous operation could be performed which he said was my only chance.

Just a day or two before this some remarkable cures through Christian Science had been brought to my attention, and although I had been very much opposed to what I thought it to be, I now decided to give it a trial, and at once asked for help. There was a slight improvement from the first, and I became so interested in the teachings of Science and Health that I never thought of the operation again. At the end of four months the disease had disappeared to its native nothingness, the heart action had become normal, and I began to gain in flesh. I found then the meaning of Jesus' words, "Ye shall know the truth, and the truth shall make you free."

Words can never express my gratitude for this beautiful demonstration of the power of divine Truth; but to be able to read the Bible understandingly, to know and to prove that God's promises in it can be realized here and now, is more than all else. My hope is that I may prove by my works my thankfulness for all that Christian Science means to me. My heart overflows with gratitude to Mrs. Eddy for bringing to us anew this truth which Christ Jesus taught and demonstrated.

MRS. ETHEL BALDWIN FOOTE, Champaign, Ill.

[Translated from the German.]

We heard of Christian Science several months ago, and I feel greatly indebted for the many benefits we have received since that time. I am unable to express my gratitude in words for the kindness shown to me by the one who explained the truth to me. We daily experience the fact that it is possible for us to reject the claims of evil and declare them null and void on the basis of the knowledge that God is omnipresent Love, which is constantly being revealed to us, and therefore that we are at all times able to overcome the sense of fear.

Through Christian Science I was healed in two weeks' time of a leg trouble, the pain leaving me after the first treatment. Since childhood I had suffered with severe pain in the stomach, and later on an abdominal complaint mani-

Digitized by Google

fested itself, with much attendant nervousness; but all these ills have been healed. My husband joins me in giving this testimony, since he, too, used to be ailing constantly. One of us was always afflicted in some way; but there has come a thorough change in our lives, all troubles having vanished as if blown away by the wind. It will be our firm endeavor to attain to that understanding of Truth which will make our lives more and more harmonious as we walk in the holy paths of Christian Science. I thank God from the depths of my heart for all these benefits, and also thank our dear Leader, Mrs. Eddy, who has shown us the way to divine Love.—FRAU EMMA ELEND, Hannover, Germany.

We have received many blessings in Christian Science, and the following experience meant much to me as a proof of the ever-presence of divine aid. One day more than a year ago, my little daughter, at that time about eleven months old, fell from her carriage to the concrete floor. I heard the child's scream, but it brought no sense of perturbation, although I had been studying Science and Health for a few months only; but every thought of Truth and Love which I had gleaned during that short time seemed at that moment of need to enfold my being as a banner, and to free my consciousness from all sense of accident and discord. I knew that God does not permit the mutilation or injury of His little ones, and I was comforted. A fellow Scientist was staying with us at the time, and my wife rushed to him with the child for treatment, and then came to me in a state of great fear and mental disturbance; but this condition was destroyed almost instantaneously, and replaced by a sense of assurance so complete that she returned to her household duties without finding it even necessary to inquire how the child was faring. The baby was at that moment seated on my friend's knee, laughing with joy at the ticking of a big watch. There was no scratch or mark on her, no sign of tears, no fear, no memory of that accident, and when we left the house for a walk a few minutes later, she was again playing as before. May this simple testimony bring to those who read it the wonderful sense of God's nearness and protection which the experience brought to me.

My wife had been lame from early childhood. While a baby her hip had been badly injured, and was imperfectly set. As she grew, the deformity increased, and the growth of her right leg was impeded. On reaching womanhood one limb was some three or four inches shorter than the other, and a doctor stated, on examination, that the hip-joint was completely abnormal. The words he used were, so far as I can remember, that "a false joint had formed." After we became interested in Christian Science, my wife wrote to a practitioner, asking for absent treatment, and the next morning she came to me with a look of radiant happiness. For the first time in her memory she was able to stand upright and plant both feet flat on the ground. What a marvelous release from the bondage of a lifetime, and what happiness it was to be able to discard the unsightly boot which had been used to lengthen the limb artificially! This cure was not completed immediately, but progress has been steady, until at the present time her walk is normal, and it is only on rare occasions that a slight limp manifests itself; and this I know will shortly disappear entirely.

One Sunday morning I awoke in great pain and with a high temperature. I was unwilling to submit to the sense of illness, so got up, and after calling up a Christian Science practitioner on the telephone and asking for absent treatment, I went down to the office. I undertook to do some work which demanded my attention, but the effort required was tremendous, and the conditions had seemingly become so aggravated by the time I reached home again that I was compelled to take to my bed. I felt myself in a high fever, and the pain in my head and body became so intense that toward evening I asked my wife to telephone to the practitioner again. All that evening and night I tossed about in my bed in semidelirium, till just as day was dawning I fell asleep, and thanks to Truth, I was at my office desk at nine in the morning perfectly fit for my day's work.

In the early part of December, while playing Rugby football, I received a tremendous blow in the face from the head of one of the players. I was compelled to leave the field, bleeding profusely and suffering greatly from pain and shock. On reaching my dressing-room I examined my face in the glass and found that, to mortal sense, my nose had been badly broken and knocked several degrees out of the straight. The nose was not manipulated at all, but I at once telegraphed for absent treatment in Christian Science, and the difficulty was wonderfully met. The hemorrhage ceased, the train journey home was performed with no pain and very little discomfort, and after dinner that evening I was able to sit down and do about four hours' paper work, which required careful thought and mental concentration. My nose, though nothing was done physically to set it, has mended and gradually grown straighter, until at the present time it is not noticeably crooked, and I have not a shadow of doubt as to the ultimate completeness of the mending.

I long to show myself adequately grateful for all that Christian Science has done for me,—for my wonderful physical healing, for my moral regeneration, for the understanding that I am given in the upbringing of our child, and for the uprooting of fear out of my consciousness. May my life and thoughts attest my appreciation of all the good that Christian Science has brought to me!

J. W. E. GILLESPY, R. N., Sheerness, Kent, England.

Some time ago an article appeared in the *Sentinel* which impressed me very deeply. One sentence from it has often recurred to me: "No matter what your problem may be, meet it with love." I could not at the time see how one could meet every problem with love, but an incident of recent occurrence served to make it clearer to me.

My baby girl had been troubled for months with what seemed to be stubborn inaction of the bowels; frequently five and six days passed without a movement, yet throughout this trying time there was not once an indication of fever. This alone should have put my fears to rest, and shown me clearly that my child was governed by divine law, material law, so called, having been proved powerless. But though the proofs of God's care and protection were daily brought home to me, I grieve to say that it was a long time before I mentally gave my child into the care of the all-loving divine Mind; in fact, it was not until I met that great Love with love in response, with love and trust, realizing that God did not need my anxious care to help in keeping His little one harmonious. When finally I came to that point where I could in thought free the child from my fears and fancies, loose her, and let her go, she responded quickly and beautifully, manifesting in a very short time the harmonious action of spiritual law.

I learned much during this time, and now, when any thought of inharmony comes, the question presents itself, "Wherein have I been lacking in response to divine Love, when and where have I not reflected that Love?" Quite recently this question, squarely faced, uncovered to me a mistake I had made in criticizing and condemning one whom I thought lacking in love and charity. My error recognized and acknowledged, and the effort made to overcome the sense of criticism with the love which refuses to know anything but good of any one, brought about that true state of consciousness wherein an old physical trouble that had tried to present itself, found no response in discordant thinking, and so disappeared almost immediately.

On page 418 of Science and Health Mrs. Eddy says, "By the truthful arguments you employ, and especially by the spirit of Truth and Love which you entertain, you will heal

Digitized by Google

the sick." My gratitude for each new lesson learned is boundless, and can best find expression in the endeavor to put such lessons into daily practise.

IRENE WALSH NASMITH, Vancouver, B. C., Canada.

I had attended churches all my life, listened to sermons in all denominations, but none seemed to satisfy my need. Spiritualism and hypnotism also attracted my attention, only to leave me farther away from the truth, and I had almost lost faith in God. My nervous system became a wreck, and I had severe headaches for weeks at a time; then my eyes were so weak that I could hardly read, and I was miserable and dissatisfied, when a kind friend advised me to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, which I did.

My husband and I had no faith in anything religious, but I soon gained faith in Christian Science. Being of a goodly nature, he was only too glad to grasp at anything which would bring us peace and health, and for twelve years we have relied on Christian Science for healing in our family. Our two little girls have been healed of many ailments, among them being throat trouble in a serious form, which was overcome in two treatments. My husband has received many benefits, both physically and financially. I have been healed of all my ailments and am now perfectly well. The physical healing is, however, nothing to the happiness and satisfaction experienced through the little spiritual understanding I have gained in Christian Science. For this and many other blessings I am ever grateful to Mrs. Eddy, who so patiently put this wonderful truth before the world.

MRS. ALICE RICHARDS, Santa Ana, Cal.

I have been under Christian Science influence nearly all my life. When I was twelve years of age I began to attend a Christian Science Sunday school. Before this time my school work seemed very hard, and I disliked to go to school, but after I studied more of Christian Science my lessons were a pleasure to me. When we came to Santa Ana, I had a fear of not holding my grade, but instead I was examined and put into a higher class. The next year was to the material sense of things very hard, but through Christian Science I gained an understanding that all true knowledge is in Mind, and that spiritual knowledge is for every one; and so the way was made clear. Not only in my school work have I been helped, but in many other things as well. On one occasion I was healed of a very serious attack of throat trouble, and I was also healed in two treatments of eye trouble.

For these and many other demonstrations of the power of Truth I am very grateful. I cannot express how much good I have received from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.—PEARL RICHARDS, Santa Ana, Cal.

In deep gratitude I express my thankfulness to God for Christian Science and for the many blessings which it has brought to me. My son, who was employed at a wholesale chemist's, was working much with drugs, and he was often taken ill. He would be seized with very violent pains in the lower part of the stomach, with severe retching, after which he was left very weak. These attacks were becoming more severe as well as more frequent, and to friends who saw him the illness appeared to be a very serious one, especially at his age; but he was treated in Christian Science, and in a short time completely healed, and has enjoyed good health ever after.

Since coming into Christian Science I have not used any medicine, nor have any of our family of nine. To God I give every praise, and daily realize that in Christian Science there is not a demand without the supply. I feel ever grateful to our Leader, Mrs. Eddy.

E. HAYDON, Addington, Christchurch, New Zealand.

FROM OUR EXCHANGES.

[*The Congregationalist and Christian World.*]

Each new generation, though it has its own tasks and triumphs, has also a right to ask of its predecessor that its starting place shall be advanced upon the road that leads humanity to its final goal. We of this generation cannot be content to hand down just what we received, to add no gain of our own winning. Shall the tree in autumn shed not only leaves, but also all its summer growth of branch and bough? Shall there be no advance of justice, knowledge, insight into the needs and opportunities of men for all our years of trial and endeavor? Our overcomings are a part of God's renewals. Our children will have their own work and care, but if we have done our part there will be some hindrances moved out of the way, some wisdom garnered, some progress made secure. If not, we stand condemned as faithless servants who have wasted what God committed to our care.

We are today in the midst of one of those springtime periods when God is working visibly to renew and regenerate the life of men. The growing sense of social responsibility, the desire that justice shall run before charity and prepare the way for freedom and brotherhood, the very restlessness that disturbs our easy-going thoughts and ways, are signs that God is working through the hearts of men for growth and for renewal. As the devout soul rejoices in the beauty of the spring, finding in it a token of God's renewing presence in the earth, so we find hope and offer thanksgiving for the spirit of a time that seeks to make justice and brotherhood at home in the affairs of men. The change will cost us something. There will be overturnings, misunderstandings, loss as well as gain. But the question we have to ask ourselves is whether these are the companions and necessities of growth, or the mere breaking down of aimless destruction and decay.

Do you believe that God seriously intends to work through change to the betterment of human life and character? Is the spirit that so evidently works in men the spirit of renewal and of growth? Then you will neither be in haste to complain that all the changes do not come while you are watching, nor to stand aside and take no part in the tasks and troubles of your own generation.

[W. B. Selbie, D.D., in *The Christian Work and Evangelist.*]

Religion seems to have lost its theological and dogmatic interest. It is great on history and psychology, revels in the subjective, and is content to soothe rather than to challenge or sanctify. But the situation is one of transition rather than of crisis. To those who really believe in the guiding hand of God, the present distress is not the beginning of the end, but only the darkness that precedes the dawn. No doubt God's judgments are abroad in the earth, and men are feeling the hand of His discipline. Doubt and criticism, uncertainty and fear, have their purpose to serve in the providential order. They are a challenge both to faith and intelligence. Our business as thinking men is to use them, to read what they have to tell us of the signs of the times, and to find in them the heralds of a brighter day; for we cannot put back the hands of the clock. For good or ill we are committed to this twentieth century; we have to live under its conditions and to speak in its tongue; no return to the dogmatisms of a dead past will avail us.

If religion is to live in these days, it must have a living message for these days. Such a message must be couched in language which the age can understand, and must take account of its special defects and needs. If men have lost hold of religion, and fail to find in it the old motives and sanctions and appeals, we may be sure that the fault is not altogether that of the men. We have to ask whether the religion itself has not changed, whether it still retains its

Digitized by Google

soul, whether it stands as once it did for power and life, or has degenerated into empty forms. In other words, if men have lost the whole note of certainty, why is it, and how can it be restored?

[Rev. J. Parton Milum, B.Sc., in *The Christian Commonwealth.*]

The kind of restatement that matters today is not that which will enable a person living a quiet and refined life to accept the historic religion esoterically interpreted. What is wanted is such a presentation of Christ as once thrilled through the ancient world, causing all hearts to leap at the thought of a coming redemption, a Christ who stands for perfected individuality in a reconciled social order, a spirit that shall so quicken the soul-life of the common people that like seeds in springtime they shall burst their bonds, a spirit perceived by some of us knocking at the gates of civilization like Alaric the Goth at the gates of Rome, yet not "to destroy, but to fulfil."

Economic processes alone will not bring in the new age. Consciousness has an ever greater part to play in history. The vehicle of men's common consciousness has been their religion. This has been sufficiently exemplified already. In one of his last and least-known works, "The End of the Age," Tolstoi remarks that the first and surest sign of impending social change is the dissolving of current religious ideas. We do not fear this dissolution; on the contrary, we hail it with joy, for already there have arisen within us, we know not how, inklings of that experience of a world-wide spiritual unity for which the world is ripe. An economic adjustment without that spiritual experience would fail to relieve our deepest poverty, the poverty of personality, of soul-life. But what is very much more to the point is that the economic adjustment itself will not be made until the people's minds are welded by the fire and force of the religious revival. Christianity born anew shall relate the individual to the whole, focusing in men's consciousness the martyrdoms of the past, the sorrows and imperfections of the present, and the promise of the future. And the telling of this gospel from mouth to mouth has power to emancipate from the narrow seed-self and to admit to the universal life.

[*The Universalist Leader.*]

The visible flower is not life; it is an expression of the mysterious Life back of the flower. So there is, back of all externals and expressions of Christianity, the Life itself. It is the essence of all true living, the motor-power of all conscious endeavor to a nobler and better life. Christianity includes all organizations, all creeds, all rituals, but is not confined by them; all of them combined are but faint expressions of the great universal Life that knows neither mete nor bound. Now we can answer the question, What is a Christian? It is one who has this Life, who is animated by this Spirit, who is filled with this essence, no matter what the organization to which he belongs or the creed which he professes or the ceremonies he observes. It may be one who is outside of all these organizations, who professes no formulated creed, who observes none of the accustomed religious rites; for Christianity is a name given to a universal Spirit which touches the spirits of men everywhere, and some of the finest, purest, and divinest are outside of all man's organizations, creeds, ceremonies.

[*The Christian Register.*]

We submit that the cardinal business of churches is to foster righteousness and to help bring about in the world what we all understand as the kingdom of goodness. Let us strive for this end, and we may hope to be in unison at once with all true hearts in the universe; we shall care the least possible about names and titles, for ourselves or for others; we shall be sure that he is the greatest who serves the most; and we shall never be able to find out who this is. It is not even important to know.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

Two new translations into German have been made and are now on sale. "Die Christliche Wissenschaft: Das Evangelium von dem Reich" ("Christian Science: The Gospel of the Kingdom"), a lecture by Judge Clifford P. Smith. "Im Dienste des Vaters" ("The Father's Business"), containing five articles.

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by bank draft, express order, or postal money order payable at Boston post-office. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE. Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

The Supreme Court of the United States in the case of the Belden Water Power Company versus the United States, Justice Lurton writing the opinion, decided that the federal government had prior rights over riparian owners in the Sault Ste. Marie river in Michigan. The Sault Ste. Marie is a navigable stream in which the government had begun the erection of a dam, when it was sued for damages by the water power company as the owners of the riparian rights which, it was alleged, were violated by the government construction. The decision is far-reaching, for apparently it settles for good the question of the power of the government over intrastate streams and recognizes the authority of the federal government as superior to that of a state. This power has been questioned in many states and may have a direct bearing upon the Connecticut river improvement project, which has been held up for many years through considerations of local ownership.

The La Crosse Telephone Company and the Wisconsin Telephone Company have been ordered to make a physical connection between their toll lines or systems. This is one of the first contested cases of its kind to be brought before the railroad commission since the passage of the physical connection law two years ago. It is said by telephone men there that the case will be appealed to the state supreme court, and if beaten there, it will go to the United States Supreme Court. The commission gives the companies thirty days to comply with the order.

Immigration to the United States has been heavier this year than during the three previous years, 747,998 immigrant aliens having been admitted to this country during the nine months from July, 1912, to and including March.

The law abolishing the mayoralty form of government for Denver, Col., and establishing the commission form, went into effect June 1. The new commissioners were chosen in a special election on May 20.

International.

The eight-months war between Turkey and the allied Balkan states is ended. "The Peace of London" was signed May 30 in the picture gallery of St. James palace. Sir Edward Grey, the British foreign secretary, presided over the formalities. After informing the ambassadorial conference of the signing of the peace draft, Sir Edward Grey suggested that the conference limit its discussions to three questions: a constitution for Albania; the delimitation of the southern frontier of Albania, and the status of the Ægean islands. The program submitted to and approved by the powers consists of four articles. The first deals with the proportion of the Ottoman public debt to be assumed by the allies. Article two refers to the taking over by the allies of the engagements and rights of Turkey in respect to third parties concerning works and concessions in the conquered provinces. Article three deals with the claims of the allies resulting from expenses and damage incurred by them as a result of the war. The fourth paragraph is concerned with the exchange of prisoners and expenses connected with this and kindred questions. The Bulgarian minister of finance says the Balkan states will ask for a war indemnity of four hundred million dollars, of which Bulgaria's share would be two hundred million dollars.

Senator Bérenger, the French reformer, widely known in connection with schemes for the promotion of public decency, virtue, and good morals, is now about to associate his name with a vast scheme for the relief of the out-of-work and destitute, especially those who have large families to support. The building of so-called workmen's dwellings does not meet the case, as such dwellings are really occupied as soon as built by workmen who can afford to pay for a fair amount of comfort. The people, on the other hand, who are evicted, especially when they have large families, have got into trouble because they are totally destitute. Senator Bérenger advises that temporary or permanent barracks should be constructed for them. With the buildings there should go large playgrounds for the children, and finally, this sort of workmen's barracks could be supplemented by suitable trade schools, in which the children, when they reach a certain age, could be taught a trade and fitted for self-support.

According to the most reliable information from Peking, the Russo-Chinese-Mongolian negotiations have terminated. The agreement was submitted to closed meetings of the Senate and House of Representatives at Peking, and it has been favorably received and referred to a special committee of both houses for examination. The terms are as follows: China undertakes not to disturb the *status quo* regarding the previously existing outer Mongolian autonomy and recognizes the Mongolians' rights to preserve peace in outer Mongolia and prevent colonization by foreigners. Russia recognizes outer and inner Mongolia as an integral part of China, undertaking to respect China's rights there. Russia, as before, may maintain consular guards and officials in outer Mongolia, but no other officials, and she is not allowed to colonize there. China accepts Russian mediation between herself and Mongolia and grants Russia commercial privileges there, while China controls international relations.

The returns from the federal elections held last week in Australia, indicate the probable defeat of the Ministerialists. The Liberals scored heavily in the rural districts, while the metropolitan districts polled strongly in favor of the Labor party. The issues involved in the general elections for the commonwealth were the most momentous yet submitted to the people of Australia. The electors were asked by the Fisher ministry to grant vastly increased constitutional powers to the commonwealth Parliament, and to lessen the state's powers correspondingly. These proposals were put to the people in the form of six separate referendum questions, the voting on which was simultaneous with the polling for the election of the new Parliament. This referendum formed the issue between the Liberals and the Labor party.

The Oppenheim excavation and discovery expedition of Berlin, Germany, in central Mesopotamia, has unearthed a number of interesting treasures during the last few months. Among the most remarkable discoveries is a palace of large dimensions. During the course of the work, stone implements, ivory, bronze, and numerous pieces of pottery have come to light. The results of these excavations, from the historical as well as from the architectural point of view, are so important, and they involve so much work, that Baron Oppenheim has engaged five hundred native Arabs, who will be employed under five German architects.

An arrangement has been made under which sovereign rights over an area of eighteen thousand acres of land and water at Jervis bay have been transferred to the commonwealth of Australia by the state of New South Wales. The land will be used for a naval college and other federal purposes. Over two hundred and forty thousand acres have been handed over by New South Wales, free of cost, for capital purposes, while eighty-eight thousand acres have been acquired from private owners.

The two sister dreadnoughts, La Provence and La Bretagne, have just been launched by the French government. The navy department has so improved its construction yards as to be able now to compete successfully with other countries in the building of dreadnoughts, and to complete in less than three years the largest type of battleship afloat.

Over four hundred nightingales and other small birds have just been liberated by the Paris authorities in the Luxembourg gardens.

Industrial and Commercial.

Looking forward to the moving of northwestern crops, four great railway systems are planning to spend sixty-five million dollars on improvements in 1913. The Great Northern, the Northern Pacific, the Chicago, Milwaukee & St. Paul, and the Chicago & Northwestern are the roads affected. Improvements will include terminal facilities, new trackage and equipment. The Great Northern will expend ten million dollars for fourteen thousand units of rolling stock. Over five hundred miles of new railway lines will be constructed in North Dakota alone, to take care of the development of the country. When these new lines are completed, every one of the forty counties in the state will be touched by a railroad.

Evidence of the growth of cooperative trading in the United Kingdom is furnished by the report of the chief register of the Friendly societies, registered under the industrial and provident societies act. Cooperation, as represented by societies carrying on industries or trades, small societies carrying on businesses, land societies (including small holding associations), enrolled at the end of 1911 a membership of 2,932,590. The total accounts of the societies dealt with in the report aggregated $340,445,235, representing an addition of more than $23,750,000 during the year 1911.

The railway which is being built between Nice and Vievola, and which will unite the French Riviera with the railway system of northern Italy, was begun in 1910, and will not, it is expected, be completed until 1917. The cost of the work when completed is estimated at one hundred and forty million francs. The opening of this line will reduce the distance by rail to Turin from 179½ to 132 miles.

The building of the great transsiberian railway first brought into notice and active operation the coal mines of Siberia, and the announcement is now made that the construction of a railway in the Altai region is to take place this year. This will open up a district extraordinarily rich in ores,—iron, copper, silver, gold, zinc, and coal.

To restore to that part of the midlands of England, known as the Black Country, something of its primitive timbered appearance, is the object of the Midlands Reafforestation Association. Owing to its endeavors the pit mounds and furnace slag heaps of south Staffordshire will be reclaimed and made to grow useful timber.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

NOTES OF THE ANNUAL BUSINESS MEETING OF THE MOTHER CHURCH.

In fulfilment of the promise made in these columns last week we are presenting to our readers a more complete report of the annual meeting than was possible in the time at our disposal for the issue of June 7.

Following the opening exercises, the retiring president, Bliss Knapp, C.S.B., read the list of officers for the ensuing year, as follows: Frederick Dixon, C.S.B., of London, president; John V. Dittemore, C.S.B., of Brookline, clerk; Adam H. Dickey, C.S.D., of Brookline, treasurer. In presenting the new president Mr. Knapp spoke briefly, saying that one whose work had so thoroughly identified him with the cause as had Mr. Dixon's, needed no words from him in coming before so cosmopolitan a gathering as is included in the membership of The Mother Church. Mr. Dixon's response follows.

Address of the President.

It is impossible to stand on this platform without a sense of deep gratitude for being permitted to fill the office of president of The Mother Church for the coming year. Never since the foundation of this church, by our Leader, has it stood more squarely to the four winds than today, and this is due, in no small degree, to the wisdom and faithfulness of the Board of Directors, supported by the loyalty of the members. It was Mrs. Eddy who taught us all what true loyalty means, and so the loyalty of the movement is devoted not to persons, but to Principle, in unswerving obedience to the form of church government laid down, with such surpassing foresight, in the Manual of The Mother Church. In the exact proportion in which we individually reflect this loyalty and obedience, shall we do our part in holding up the hands of those who are occupying positions of responsibility and difficulty.

There is a well-known proverb that the strength of a chain is its weakest link, but like a great many proverbs it will not bear the strain of a metaphysical deduction. In Christian Science, the strength of a chain is its strongest link. It was the ability of Mrs. Eddy to demonstrate the power of Truth, and not the ignorance of her feeblest supporter, that founded and upheld The Mother Church in its early days. It is the demonstration of Mrs. Eddy, seconded by the realization of those of her followers who have understood most of the vision of the Christ which she unveiled for them, that is today making available the spiritual forces which are compelling the movement to become a world power. As we grasp this, we recognize the responsibility, placed upon each of us, to meet the demand of our Leader for better healing. "The highest spiritual Christianity," she wrote in her "Message to The Mother Church," in 1901, "in individual lives is indispensable to the acquiring of greater power in the perfected Science of healing all manner of diseases" (p. 2).

I wish I could find words in which to picture the stupendous majesty and grandeur of the Christian Science movement as I see it, blurred in a glass all too darkly. It, in the words of the Hebrew writer, is truly gaining dominion "from sea to sea, and from the river unto the ends of the earth." Some of our lecturers could tell you much of what they have seen, from Hongkong to Melbourne, and from Table bay to the Golden Gate. But even they have only seen, as it were, the Broadways and Unter den Lindens, the Watling streets and Appian ways of the field. Some time ago I talked with a man who told me of the tiny meetings, where the Lesson is read, from Bushire to Karachi on the Persian gulf: you see we are getting very near the garden in Eden. Day after day letters come to me, generally asking for literature, from the very marches of the British empire, from the outpost of Quetta, from far-away Bechuanaland, and from the Gold Coast, where white men are counted by tens, and black men by tens of thousands. Only last summer, a Boer, from the Orange river, with a historic name, dilated to me on the way our literature was flooding not only the great towns, but the villages and homesteads of the South African veldt.

In correcting, however, our geographical perspective, we must not diminish our spiritual horizon. I said, last year, in this very place, that a famous statesman had advised the empire builders to buy big maps and learn to think in continents. But I went on to point out that this would not suffice for Christian Scientists, who must learn to think in hemispheres. At the same time, thinking in hemispheres is of little value unless you realize simultaneously that the "things which are seen were not made of things which do appear." This, indeed, in a word, is what the Christian Scientist must do. Talk relatively so as to be understanded of the people, think absolutely so as to understand God. *The Christian Science Monitor* is today thinking aloud in hemispheres, but that thinking will be as the clashing of cymbals or the blaring of a trumpet, unless its dynamic force is the recognition of the eternal fact that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468).

It is this "foundational fact" which constitutes the good news that The Mother Church through its literature is giving to the world. It is sometimes said that there is no missionary work in Christian Science. If by missionary work is implied verbal persuasion this is inevitably true. You can persuade a man by words of a sentiment or a dogma, but a scientific fact has to be mastered and understood. The literature of Christian Science is devoted to reasoning its premises, not rhetorically, as Paul objects, by enticing words, but by sheer weight of argument supported by practical demonstration. This literature the Publishing Society supplies in the most abundant and varied form, leaving no excuse for the circulation of those apocryphal aids intended to perform the impossible task of hewing a royal road to the mastery of metaphysics, and succeeding only in darkening "counsel by words without knowledge."

The dissemination of the publications of the Publishing Society may be termed the missionary effort of the movement, the ultimate object of which is to bring "Science and Health with Key to the Scriptures" into the hands of every man. This work is being organized in a thoroughly efficient

way from Dan to Beersheba, and it is one in which it is possible for every member of The Mother Church to aid, for while the demand is insatiable, the supply, though generous, is all too inadequate. If those who buy this literature, without any effort, on the news stands or in the reading-rooms of the world's great cities, realized what a single paper may mean in some mining camp in the Andes or to some forlorn white man in Uganda, not a copy which comes out of the publishing house would be wasted, nor would it have a less distinguished future than the copy of a *Christian Science Monitor* I heard of the other day, which, having passed eighteen times, I think, from household to household, in Russia, was still continuing its dilapidated career. The test of what we think of our literature is what we do with it.

These are a few of the ways in which the members of The Mother Church may emulate the example pictured for them in those mighty metaphors which, during his residence in Corinth, Paul borrowed from the Isthmian games. By holding "thought steadfastly," as Mrs. Eddy says, "to the enduring, the good, and the true" (Science and Health, p. 261), every one may prepare himself with the same resolution and devotion with which the Grecian boxer prepared himself. Then, when he descends into the arena for that struggle which is "not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world," his blows will bring healing and not wounds, joy in the place of sorrow, life instead of death, for he too will be fighting "not as one that beateth the air."

The first report called for in the items of business was that of the treasurer. Mr. Dickey's report, which gave in detail the status of the various funds of the church, was most gratifying, affording as it did a comprehensive review of the wide-spread activities of The Mother Church and showing a financial condition which assures an even wider dissemination of the truth taught by the Discoverer and Founder of Christian Science, Mary Baker Eddy. Some phases of this work are given more in detail in the report of the clerk which follows.

Annual Report of the Clerk of The Mother Church.

In the Manual of The Mother Church our Leader has not only provided for these annual meetings, but has clearly defined their purpose. "These assemblies," she says, "shall be for listening to the reports of treasurer, clerk, and committees, and general reports from the field" (p. 56). Inasmuch, therefore, as the clerk of an institution is its recording officer, his annual report should constitute a record of its growth and progress during the preceding year. In attempting to fulfil this responsibility on behalf of The Mother Church, one is immediately confronted with a realization of the impossibility of doing more than to recall to thought some of the outward and visible signs of the reappearing of Christ's Christianity and its natural and inevitable accompaniments.

The Church of Christ, Scientist, as an organized religious movement, is just entering upon the thirty-fifth year of its history. It is recorded that "in the spring of 1879, a little band of earnest seekers after Truth" (Manual, p. 17), humble and devoted disciples of the revelator to this age of the Science of Christianity, Mary Baker Eddy, proceeded under her inspired guidance to found and organize a church which should revive and preserve that true Christianity which was revealed and demonstrated by the Galilean Prophet. This church was intended to be the human vehicle by which divine Truth should be carried to sick and suffering humanity, demonstrating its mission as the promised "Comforter," and fulfilling the prophetic vision of Isaiah that "the earth shall be full of the knowledge of the Lord, as the waters cover the sea."

How well this church is fulfilling its mission, and thus typifying the church triumphant, is recorded, not primarily in its numerical growth or material prosperity, though these are eminently satisfactory, but rather in the achievements of its members in their consecrated effort to fulfil their responsibilities to God as the beneficiaries of the teaching and example of the Founder and Leader of the Christian Science movement. It can again be reported that the growth in membership of The Mother Church during the past year has exceeded that of any previous year of the history of the denomination. There has also been evidence of a clearer understanding, on the part of Christian Scientists throughout the field, of the sacred responsibilities assumed in joining this church, and the importance of constantly striving to raise the standard of its membership. It is not an advantage either to the church or to the one who would join it, to assist in effecting an applicant's membership until such time as his knowledge of Christian Science has passed beyond the stage of blind faith or simple belief in the truth of Christian Science, into some measure of demonstrable understanding of its teaching, together with a very clear and sympathetic recognition of the aims and purposes of its Founder. Unless one gives unmistakable evidence of the ability and the intention to comply with the apostolic injunction to become "a living stone" in the building of the "spiritual house" which this church organization typifies, he should not be encouraged to apply for membership. True membership must ever mean at-one-ment, not merely enrolment.

The increase in new organizations during the year has been at the rate of one every three and one half days, there having been a total increase of one hundred and two, including five in England; Germany, Switzerland, Australia, New Zealand, and Porto Rico are also represented in this number.

The prosperity of the Christian Science movement being dependent upon the work of healing and regeneration, the increase during the year in the number of persons devoting themselves solely to the practise of Christian Science is both interesting and significant. One year ago there were published in the practitioners' directory of *The Christian Science Journal* the names of 5193 persons throughout the world who were devoting themselves exclusively to Christian Science healing. At the present time the number is 5394, making an increase for the year of 201.

Reports made to the clerk's office show that during the past year about eight hundred and fifty thousand persons have attended the lectures delivered by the various members of the Christian Science board of lectureship. These figures indicate an approximate increase in attendance above that of last year of over one hundred thousand. For the first time, lectures have been given in Germany and Switzerland in the German language. The reports show that the results from this new departure have been eminently satisfactory.

Since the last annual meeting, a German translation of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has been published and placed on sale. The results of this step, not only in Germany but among German-speaking people in the United States and elsewhere, are most gratifying.

The growth of the Christian Science publications necessitates another addition to the publishing house which will meet the present needs of the Publishing Society. The larger portion of the cost of this addition will be paid from Mrs. Eddy's specific bequest of fifty thousand dollars to the general fund of the church, and it is anticipated that all future additions or improvements to the publishing house will be provided for out of the earnings of the publications, thus eliminating the necessity of any financial demands on the field for this purpose.

At the last two annual meetings the statement has been made that there was every reason to believe that Mrs. Eddy's intentions and desires in regard to the disposition of

Digitized by Google

her estate would be fully carried out according to the provisions of her will. It is, therefore, with profound gratitude that we are now able to confirm this statement by reporting, what is probably known to most of those present, namely, that the efforts to prevent the fulfilment of our Leader's wishes and expectation that the residue of her estate, after the payment of specified legacies, should be used "for the purpose of more effectually promoting and extending the religion of Christian Science as taught by" her, were entirely abandoned a number of months ago. The final proceeding is now pending in the New Hampshire court to determine in detail the exact manner in which the executor shall turn over the residue of the estate. A decision of this formal question is expected very soon. In connection with the solution of this problem, it should not fail of mention that all questions of doubt as to the ability of The Mother Church to receive this bequest in trust, for the purpose named by Mrs. Eddy, were removed by a special act of the Legislature of Massachusetts. It should be clearly understood that the residue of Mrs. Eddy's estate will not come to The Mother Church for its own purposes and uses, but must be held and administered by it as a trust fund for the purpose designated in her will, namely, of "more effectually promoting and extending the religion of Christian Science" throughout the world.

We stand today at the threshold of a new era. The most cherished forms of the world's belief are being proven to be "broken reeds," upon which humanity can no longer lean. From the depths of the world's helplessness the cry again goes up, as of old, for a savior who shall deliver mankind from its oppressors. In this period of mental revolution, are we as Christian Scientists prepared to fulfil our responsibilities and take advantage of the privileges which God has given us? Those guardians of Christ's Christianity in the apostolic age who were awake to the sublime opportunities which were theirs, earnestly and prayerfully sought and found the higher meanings and broader interpretations of the great truths which they had been taught. And so it should be today with those of us who have taken the name of Christian Scientists. Let us gain a broader sense of what constitutes the sublime mission of the Church of Christ, Scientist. Our Leader has proven to us that the teachings of Jesus the Christ "are not theoretical and fragmentary, but practical and complete" (Science and Health, p. 98), and it is likewise inevitably true that Mrs. Eddy's inspired messages to humanity, as recorded in her published works, including the Manual of The Mother Church, having come to us from the same unfailing source, must also be "practical and complete" and unfailing, when spiritually discerned and demonstrated.

This church, whose mission is to rouse "the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science" (Science and Health, p. 583), can advance only in proportion to the wisdom and loving consecration of Christian Scientists. May we therefore each day gain a clearer realization of the spiritual significance of the laws and ordinances which God has given us for the guidance of this spiritually inspired organization of The Mother Church. May we also recognize the subtle intimations which sometimes come to argue legitimacy to those evils which, in the false name of growth and progress, would, if they could, render of no effect our Leader's life-work. Mrs. Eddy has said that the consummation of her hope would rest in the higher attainments of students in the understanding of her teaching. May each one of us, therefore, strive to fulfil in larger measure this hope of our Leader by greater vigilance and greater faithfulness to our trust. This is God's movement, and if we are faithful, we may prove the truth of the words of the prophet, that we "are not come unto the mount that might be touched," but we "are come unto mount Zion, and unto the city of the living God, the heavenly Jerusalem."

Reports from the Field.

Thirty minutes was given over to three-minute reports from the field. From Hamilton, Ohio, thanks were expressed to The Mother Church and to the whole field for the help rendered in the time of the floods. Reports were heard from Concord, N. H.; First and Second Churches, Minneapolis, Minn.; Wilmington, Del.; Lynn, Mass.; Omaha, Neb.; New York city, and one of the coast cities of California. Some of these made special mention of the good work that is being accomplished by the introduction of Christian Science literature and services in penal and other institutions.

Clarence C. Eaton read written reports from churches throughout the field: from Hartford and New London, Conn.; Wilmington, Del.; First, Second, and Third Churches, New York city; Second Church, Indianapolis, Ind.; a joint report from the eight churches of Los Angeles, Cal.; a joint report from the churches in Chicago (forty-four lectures delivered; fifty-five thousand persons attended); and a telegram from First Church, Cincinnati, Ohio.

Reports from the Lectures.

Bliss Knapp told some of the experiences in his lecture tour around the world that indicate the growth of Christian Science. On the boat that took him to Honolulu he found himself seated opposite the ship's surgeon. They grew friendly and organized a ball team to pass the time. At Honolulu, all those who had played ball with him attended the lecture—they wanted to know what a baseball player could say about Christian Science. At Honolulu there were seven hundred people out for the lecture. At Yokohama he attended the Wednesday evening meeting, where there were twenty-one persons present. At Shanghai he found a very vigorous group of Scientists holding services. The Hongkong people had just completed their church building. He went to the regular services, and the lecture delivered by him was well attended. This church is doing a great deal of distribution work. At Manila between four and five hundred persons were present at the lecture.

In New Zealand and Australia he found that there are scores of groups of Christian Scientists holding meetings. The growth there is tremendous. There are many unorganized groups of Scientists as well as the regularly organized churches and societies. The people are very eager for Science, also. In Perth two people came over five hundred miles to hear the lecture, and in other places people made great efforts to have him come and talk to them about Christian Science. He lectured in Christchurch, Tasmania, Fremantle, Thursday Island, Adelaide, Brisbane, Sydney, and Melbourne to large and eager audiences.

Bicknell Young told of the growth of Christian Science in Sweden. People have begun to understand something, he said, of Mrs. Eddy's teaching. Some years ago they established services in various places, notably in the city of Stockholm. About two years ago the workers there asked the government, under the constitution, that they be recognized as a Christian church. This petition was sent to the convention, or synod, of ministers of the state church. Some of the literature, including the text-book and periodicals, were sent to this company of ministers, and for over a year these men met every fortnight and, so the Scientists were informed, spent most of the time at these meetings in discussing Christian Science. There was no satisfactory result from these conferences, however, as after a while the petition was rejected. They were then permitted under the law to appeal to another body, also composed of ministers of the state church, and four in number. This body came to the conclusion that Christian Science was not a Christian religion and again their petition was rejected. But there was still another chance—they could appeal to the King; and they did. They were kindly received, and held a number of conversations with the prime minister. One man

Digitized by Google

gave a testimony of his healing before the minister, who told it to the King. About a fortnight afterward a telegram was received by Mr. Young, saying, "Legalized."

Col. William E. Fell told of the progress of Christian Science in the north of England. He said that twelve years ago the Scientists in that section could be numbered on the fingers of one hand. Today there are twenty churches and societies, while in quite a number of communities they have not yet been organized. Just now there is a good deal of church building going on in this part of the country. Leeds is the last to build, and is erecting a church edifice at an estimated cost of fifteen thousand pounds. The Christian Science movement is progressing rapidly in Yorkshire; and this progress is based on healing.

Prof. Hermann S. Hering related some of his experiences and the impressions he received while delivering lectures (in the German language) in Germany and Switzerland. He said that there was a great interest in Christian Science in Germany. In Berlin there was a congregation of eleven hundred at the Wednesday evening meeting. At his first lecture in Hannover there was such a "jam" that they had to open some of the ante-rooms. Fully eighteen hundred people were there. When he went up on the platform he saw there a man in a brilliant uniform who had a stenographer with him. He was told that this man was the lieutenant of police, that all of his lecture would be taken down, and if he said anything illegal, he would be stopped by the lieutenant and perhaps arrested. There were no interruptions, however, which showed that there was nothing illegal in his lecture, which probably appears as a part of the archives of the city of Hannover.

There is great interest in Christian Science in Braunschweig, and the halls were crowded. People were standing three rows deep at the lecture, twenty-five hundred being present. A professor had lectured, previously, to his students, making a very bitter attack against Christian Science, and advised his hearers to go to hear this American who was going to lecture on Christian Science, and they would learn what a dreadful thing it was. He told them to start a discussion and neutralize everything that the lecturer should say. The police feared a disturbance, and asked a member of the society to preside. There was none, however, but instead the most marked attention, and at the end of the lecture there was a very unexpected and rousing applause. At Zurich Professor Hering delivered two lectures and the halls were crowded; at Stuttgart, likewise, and at Frankfurt. There was such a crowd at Berlin that three lectures were necessary to meet the demand. The German people are very loyal.

John Sidney Braithwaite told of the active work in London. The number of lectures delivered last year was half as large again as in the previous year. Crowds had to be turned away. The distribution of literature in London is organized in a very complete way. Increased demand and greater interest in the literature is reported everywhere. One fire station that was given a subscription to the *Monitor* proposed to bind the copies of the paper, and has done so. The most important point is the greater recognition that Christian Science is receiving in every direction. About a year ago an act was introduced in Parliament, which was intended to aid the doctors and be harmful to Christian Scientists. When the act was finally passed, however, it was so worded that it will be possible under the wording for Christian Scientists to obtain all the recognition they require when they need it.

The Rev. William P. McKenzie was the last speaker, and said he intended to cover what there was left of the world that had not been heard from. He told of the Christian Science movement in Canada as noted in his lecture trip through that section; also some of the experiences the Scientists there had been subjected to, particularly in Calgary, in meeting opposition and bitter attacks. He also spoke of the encouraging outlook in Texas and other southern states where he had lectured.

HEALING AND PRAYER.

LOUISE SATTERTHWAITE.

WHEN I first heard of Christian Science and was told that these people thought they healed the sick by prayer, I asked, "Are they mad?" Some time afterward I was impressed on reading one of George Bernard Shaw's books, in which he speaks of Christian Scientists as consistent enough to rely for all things upon the God whom they declare, and believe to be, omnipotent.

At the time that I pronounced Christian Scientists mad because they relied on prayer to heal the sick, I believed myself upheld in this opinion by all that is intelligent, and by common sense, and yet at that time I was suffering from the failure of the best-known, and I might say the most expensive, medical methods for relieving disease. I had taken whatever was prescribed for me by specialists at the head of their profession, and had painstakingly done all they had told me to do, and as carefully refrained from doing all they had forbidden. I hung upon the words of the physician with faith and awe; I regarded his professional judgment as the last word of the science which continually announces new and important discoveries. This is said, not in a critical spirit, since among my physicians there were honest thinkers and hard workers, who labored most earnestly to help me; nevertheless, the conditions grew steadily worse.

Very relevant, surprisingly so to me, is the colloquy of Macbeth and the court physician, where Macbeth says:—

> Canst thou not minister to a mind diseas'd,
> Pluck from the memory a rooted sorrow,
> Raze out the written troubles of the brain,
> And with some sweet oblivious antidote
> Cleanse the stuff'd bosom of that perilous stuff
> Which weighs upon the breast?

To this the physician replies:—

> Therein the patient
> Must minister to himself.

Macbeth rejoins:—

> Throw physic to the dogs; I'll none of it.

So was it in my case, physic or its equivalent was of little avail. In my mind at that time dwelt despair, a crushing sense of the futility of life and of living; sorrow, discouragement, unremitting discord. I knew not God, that was the sum and substance of it; and not knowing Him I knew not Life, nor its meaning, and my own and the world's misery depressed me day by day, to the lowest possible degree. What, indeed, can strychnine or digitalis or calomel do in such a case? What can sleep do, or journeying in pleasant lands, since the shadow of your own inharmony travels ever with you? What can baths do, or the manipulation of bone or flesh? Inside the prison cell of a darkened consciousness the prisoner still grinds the wheel of his own sick thoughts.

There are those who, looking on the other side of the shield, will ask, What can a knowledge of God do for organic disease? Can religion quicken failing circulation into life and health? Can spiritual consolation help with imperfect digestion, bloodlessness, poor eyesight? This is what I once asked, this indeed was the seeming anomaly which staggered me; but today I am a living witness to the fact that the right knowledge of God gives healthful, happy thought and a stability of contentment; and this happy thought, combined with true prayer, quickens the body and every part of it into abundant, joyous life.

Our Saviour deemed it no disgrace to use the power of God to relieve suffering; nor did he deem it an absurd thing that he should banish all kinds of sickness and organic disease from those who asked for help. Remembering these things, why should the world cavil and sneer at those who humbly look to God by the bedside of pain, and at the same time pray with the certainty and efficiency bred of a trained scientific knowledge of the nature and law of Mind? Even less may the world sneer on beholding the results of scientific prayer, by which the lame walk, the blind see, the invalid is raised to health, and the so-called "incurables" come forth whole, "walking, and leaping, and praising God."

SELECTED ARTICLES.

[Frederick Dixon in *Bedford Daily Circular*, Bedford, England.]

I have read Phillip Hall's last letter to you without, to be quite candid, finding in it anything beyond a whirl of texts, the value of which in argument a great church paper not very long ago dismissed as futile. One thing, however, stands out in it, with all the emphasis of the Matterhorn flung up against the blue Swiss sky, and that is the fact that this critic wants Christianity judged by what men say, whereas Christian Science wants it judged by what they say and do. He is desperately anxious to prove that the command to heal the sick was never intended to be taken seriously, in spite of the fact that Christ Jesus and the disciples not only persistently preached the gospel but healed the sick, and that the former declared that he was "the way." He wants to water away the statement that "faith without works is dead" to some purely ethical meaning, about which men may dispute *ad infinitum*.

It is precisely this attitude of certain religious sects which is largely responsible for filling the Christian Science churches. Christian Scientists demand that Christians should give proof of their faith by their works, and they insist that the works which Jesus did, and to which he alluded, are the works which he claimed as evidence of the fact that he was the Christ. They do not disguise from themselves that it is very much easier to preach the gospel than to heal the sick, unless the gospel preached does heal the sick. It is this largely which has made Christian Science a living force in the world today. The critic may go on writing letters to the papers, criticizing Christian Scientists and the Christian Science movement as fiercely as ever he likes, but he will never stop the progress of the movement one hair's breadth, so long as the movement continues to accept the commands of the Founder of the Christian religion in their obvious meaning, and so to preach the gospel and to heal the sick.

[Albert E. Miller in *Marietta* (Ohio) *Register-Leader*.]

It would be difficult to imagine how a greater number of misstatements could be introduced into an article of equal length than one finds in the criticism of Christian Science in the *Register-Leader* of recent date. Christian Science is as widely separated from the things which your correspondent names in part one of his attack as are the poles separated from each other. Christian Science has nothing in common with mesmerism, spiritualism, hypnotism, and other phenomena of this sort. Christian Science is based upon the teaching and practise of Jesus of Nazareth, and it heals the sick by entire reliance upon divine power as did Jesus and his disciples.

To charge Mrs. Eddy with having absorbed queer superstitions and strange beliefs in her early years, is at variance with the truth. Mrs. Eddy's early education was, by reason of her invalidism, mostly dependent upon the home training and loving direction of her family, and her studies were very largely planned by her brother Albert, who was a graduate of Dartmouth College, an eminent lawyer, and a chosen representative to Congress from his native state, New Hampshire. Her advantages in this respect were superior to those of the average child, and to state otherwise is to claim that which is untrue. It is absurd to charge the members of the Christian Science church with being compelled to distribute the literature of their faith. Whatever the members may do in this respect, they do gladly and voluntarily, as they realize the necessity of sharing the good one has if one would possess more, and they very naturally recommend to others the perusal of that literature which they have found beneficial and helpful in teaching them how to overcome disease and sin.

The charge that Mr. Quimby was the originator of this teaching has been refuted many times, in season and out of season. Mr. Quimby was one of many to whom Mrs. Eddy applied for relief from her ailments, and through his magnetic treatment she seemed to obtain, for a time, a measure of relief. In her enthusiasm for this new-found cure she may have assumed, for the time being, that his gift was traceable to a higher source than that of the others who had endeavored to help her. Later, however, she found that the help she had thus obtained was temporary in its effect, and through her vanishing hope she was forced to the discovery of Christian Science, whose Principle is God, the giver of every good and perfect gift. It is sad indeed that one should be called upon to refute such base falsehoods as those uttered by our critic concerning a woman whose whole earthly life was one tireless effort to benefit others. Mrs. Eddy's later years witnessed in a measure the fruition of her early hopes. Those who had been sick and sorrowing poured in upon her their grateful testimonies of the healing of sickness and of their emancipation from sin. Let me assure your readers that the onward march of the Christian Science movement has in no sense diminished, and today there are being reared in many cities of America and abroad beautiful church edifices which testify to the strength and permanence of Mrs. Eddy's teaching.

Let no one fear that Christian Science will rob mankind of God or of the Holy Spirit. The movement is made up very largely of those who have had experience and early training in the older churches, and they have found in Christian Science the fulfilment of their early religious hopes. The teaching of Christian Science concerning the unreality of matter is one that is shared by many eminent thinkers, and if it were not logical and sound the fact would have been demonstrated long before this. The denial of the power and reality of sin and sickness, based upon the indisputable truth of God's allness, is one which every Christian will do well to ponder. The prosperous and permanent character of the Christian Science church today is notable and significant. Your critic's effort to abuse Mrs. Eddy for having demonstrated the efficacy of God's power to meet every human need is ill-timed. For success and prosperity to attend one's consecrated effort to live aright is by no means at variance with Scriptural teaching, notwithstanding that our critic would have us believe to the contrary.

The hope and prayer expressed in the article to which I have referred, that the attack which the article makes on Christian Science "will not antagonize" but will enable some to find Christ, will, let us hope, find their fulfilment in a broader inquiry into this teaching and the resultant benefit which will accrue to all who give this subject impartial investigation.

[Charles K. Skinner in *Benton Harbor* (Mich.) *News-Palladium*.]

Clergymen and all other opponents of evil in its many forms are to be congratulated upon having the moral courage to warn the public against the pitfalls of the present day, provided they know the facts concerning them. We presume that the minister knows the truth of the play which he censures; but when he drops his cue and by innuendo attacks a religion of which he has little information, the good which he is doing begins to be lost sight of by the many who know the truth about the aforesaid religion and its Discoverer and Founder.

This critic tells your readers that "sin exists and did exist long before Mrs. Eddy began to claim she knew so much," etc. I cannot imagine a Christian minister wishing to be discourteous to the memory of such an eminent American woman as Mrs. Eddy, or to misrepresent her teachings, when the truth concerning them is so readily obtainable. At this late hour no one is justified in so doing, for the various writings of the Founder of Christian Science can be read in every city in the land.

Neither Mrs. Eddy nor her followers have ever denied the existence of sin or evil as being apparent and very real to mortal sense. On page 210 of Science and Health she writes thus: "To mortal sense, sin and suffering are real;"

Digitized by Google

on page 188: "Passion, depraved appetites, dishonesty, envy, hatred, revenge ripen into action, only to pass from shame and woe to their final punishment;" on page 404: "A corrupt mind is manifested in a corrupt body. Lust, malice, and all sorts of evil are diseased beliefs, and you can destroy them only by destroying the wicked motives which produce them." More than one thousand references condemning sin in its various forms can be found in the text-book, "Science and Health with Key to the Scriptures." Would it not be a more kindly act to withhold criticism of others until one really knows whereof he speaks?

[Editorial in *Portland* (Ore.) *Spectator.*]

Christian Science offers a broad field for the contemplation of humanity. The physically ailing say it heals them; the mentally ailing say it cures them; the spiritually ailing say it saves them. Its appeal, therefore, is wide, and its efficacy seems far-reaching. The growth of Christian Science has been remarkable—almost as much so as its effect on those who practise its teachings. It seems a religion of sunlight, that gives its followers a notably cheerful interest in life. They seem to have given up the thought that they must die to be happy. Christian Science, according to one of its lecturers, teaches that heaven is not reached through the dark door of death, but by right living, and that heaven is a living, active state of goodness on earth.

It is a very pleasant belief, and if followed, even without expectation of any other heaven than the one that Christian Scientists make for themselves here on earth, it must indubitably lead to that heaven which the rest of us hope for beyond the grave.

[George A. Law in *Bristol* (Conn.) *Press.*]

In the review of a new book recently appearing in your columns, the term Christian Science was used in connection with the mention of different methods of mental healing in a manner which might cause an erroneous impression regarding it. When it is understood that Christian Science healing is accomplished in the same way that Jesus healed, it is at once appreciated that its practise is not the operation of the human will or of the human mind, and also that it is in no way similar to any system operating by means of the human mind. Jesus was explicit in stating that he healed by spiritual means. He said: "The works that I do in my Father's name, they bear witness of me." "Many good works have I showed you from my Father."

The advent of Christian Science is simply a return to primitive Christianity as taught and practised by Jesus, in which healing the sick was an important element. Jesus' instructions to his followers were, "Preach the gospel," "Heal the sick," two inseparable admonitions; and in history we find that this spiritual healing was practised in the Christian church for some three hundred years after Jesus passed from this plane. Christian Science is today reinstating this part of Christian practise which has so long been neglected.

[Willis D. McKinstry in *Walnut Valley Times*, Eldorado, Kan.]

Regarding Christian Science our critic says, "It is not Christian, and certainly not science." Christian is defined as "one who believes, or professes or is assumed to believe, in Jesus Christ; one whose life is Christlike; professing Christianity;" hence it is readily understood that to believe in Jesus Christ is Christian. Now Christ Jesus gave a rule by which one can know whether or not he really does believe on him. "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also." To be a Christian in fact is to do the works of the Christ—"preach the gospel." "heal the sick."

Webster defines science as "knowledge; knowledge of principles and causes; ascertained truth or facts." Thus to have a knowledge of that which is, to understand the Principle or cause of existence, to know the why of being and its operation, is science. The Word of God, spiritually understood and scientifically demonstrated, is Christian Science. It is an exact science, because it has a divine Principle and rule of demonstration; it is Christian from the fact that it is the truth ascertained, or true knowledge about Christianity as taught and practised by Christ Jesus. The teachings of Christian Science illumine the Scriptures, they impart to mortals the spiritual understanding of the Bible; hence, in the degree that one understands, has the spiritual knowledge of God, His universe and His law, he is able to demonstrate that the healing and redemptive power of infinite Love is available now, and thereby prove his Christianity.

Our critic also says, "They argue there is no heaven." In "Science and Health with Key to the Scriptures," the text-book of Christian Science (p. 587), Mrs. Eddy gives the spiritual definition of heaven as "harmony; the reign of Spirit; government by divine Principle." She also says: "Heaven represents harmony, and divine Science interprets the Principle of heavenly harmony. The great miracle, to human sense, is divine Love, and the grand necessity of existence is to gain the true idea of what constitutes the kingdom of heaven in man. This goal is never reached while we hate our neighbor or entertain a false estimate of any one whom God has appointed to voice His Word" (p. 560).

The Scriptures record him who established Christianity as saying, "As ye go, preach, saying, The kingdom of heaven is at hand." "Neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you." These words of the Master do not indicate or teach that heaven is a locality, that it is some far-away place which man shall enter into to be saved. "The kingdom of heaven is at hand," "the kingdom of God is within you," signifies that heaven is a divine state of consciousness, and it was through this spiritual consciousness, or divine understanding, that St. John's human concept of existence gave place to the divine idea and he saw the new heaven and the new earth.

It is not a difficult matter to understand why the multitudes followed the Christ, nor does one need to be a master theologian to explain why "more than one hundred thousand have left the churches and gone off after Mrs. Eddy," as our critic states.

[Editorial in *Lemoore* (Cal.) *Republican.*]

It is amusing to see the knocks that are being given to Christian Science; yet this organization continues to grow, and many are willing to testify as to what it has done for them. The old orthodox theology is crumbling fast, and will be compelled to give way to a more scientific study of the human family and the power of mind over matter. We are not a convert to the Christian Science faith, but we do know that this teaching is far in advance of the old theology of hell-fire and brimstone after death, and calomel and quinine while you are living. It is a day of progression and enlightenment, and the people are thinking for themselves.

[Frank Bell in *The Democrat*, Allentown, Pa.]

The speaker quoted in a recent issue as having satisfied himself that he does not need to believe in Christian Science because of the effects he observes from sitting on a tack, might indeed be said to be painfully in error. The illustration is not original with our friend, and it has gained no weight in transit. The "idealism gone mad," to which the critic refers, is not to be compared, we should say, with the materialism gone mad that would attempt to evolve a philosophy of life from the point of a tack.

Criticism of Christian Science as an effort to induce the material senses to ignore their own sensations, is misdirected. One who gives the literature of Christian Science

Digitized by Google

serious consideration, without which no important subject may be grasped, will readily discover that it concedes to material belief all the ills of the so-called physical man and all the blunders of the so-called human mind. In fact, it cites these phenomena in emphasizing the necessity of apprehending a better selfhood than flesh and blood and a higher intelligence than material brain, if one is ever to rise above the suffering and mistakes of human existence. That this is a most practical and useful idealism is demonstrated in the experience of those who have put it to the test, and found that by its means sickness and sin, twin monstrosities of materiality, may be deprived of their baseless claim of power and dominion over man.

In asking to be judged, not by the extent to which it conforms to theories or dogmas, but by the good it produces in the lives and affairs of its adherents, Christian Science meets the modern demand for demonstration rather than profession, deed rather than word.

[W. C. Williams in *Baltimore* (Md.) *American*.]

It is regrettable that the eminent surgeon who recently denounced Christian Science did not require of himself the same study and investigation necessary to understand the practise of Christian Science that he would require of those who wished to understand surgery before attempting to speak authoritatively on the subject. To speak of it in the terms he did, manifested a bitterness which to those who do not know better would seem to indicate a spirit of retaliation rather than a desire for the welfare of humanity.

Christian Science has stood the test of more than forty years, and all Christian Scientists are deeply grateful for the improved physical condition of their families since they turned to Christian Science, and the reason for it in most cases was their inability otherwise to obtain relief. That they have been made better spiritually and morally, all who know the lives of Christian Scientists will attest. They endeavor daily to practise the teachings of Jesus, and if they prefer the methods of Christ, the "Divine Physician" (a statue with this inscription commands the entrance to Johns Hopkins, where the surgeon spoke), to the material concepts of the present age, this surely does not call for condemnation. The healing he achieved is not claimed, I believe, to be inferior to that of today, and he commanded us all, or all who believe in him, to heal as he healed, through reliance on God alone.

This is the teaching of the Bible, not in an isolated place, but throughout. Is the Bible unreliable? Science is knowledge, and the knowledge of God as exemplified by Jesus is the only true science. Materialistic science, with its basic facts continually changing, is not absolute knowledge, therefore not real science. Which is illegitimate?

[Thomas F. Watson in *Montague* (Cal.) *Messenger*.]

The *Messenger* in a recent issue contains an editorial which objects to the statement made by a Christian Scientist that "sickness and sin were never made or supported by God." The editor says: "If God did not create these disease-producing bacteria, who did?" In Genesis we read that "God saw every thing that he had made, and, behold, it was very good." Then, as "disease-producing bacteria" are not good, they could not have proceeded from God. If God had sent sickness, sin, and death upon His children, Jesus would not have healed them, for he said, "I came down from heaven, not to do mine own will, but the will of him that sent me."

The Bible teaches us that it is God who "forgiveth all thine iniquities; who healeth all thy diseases," and as God is unchangeable, "the same yesterday, and today, and forever," His power is as great today as it was nineteen hundred years ago. Jesus neither used drugs nor recommended hygienic methods; he healed through the power of Spirit, and said, "Follow me;" also, "He that believeth on me, the works that I do shall he do also." His commands, "Go ye into all the world, and preach the gospel," and "Heal the sick," were for all his followers in every age. In Gibbon's "Decline and Fall of the Roman Empire" we read that Christian healing was practised by the early Christians for three centuries after Jesus' resurrection, in accordance with the Scriptural text, "And these signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover." The Bible states, in Psalms, "He sent his word, and healed them;" and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, teaches us how to understand the word of God which heals the sick and saves the sinner.

The editor's fears lest the adherents of Christian Science be a menace to the community because of their reliance upon God instead of upon medicine, are groundless, for Christian Scientists obey the law, report all cases of contagion, and observe all sanitary regulations. They do not go about "scattering disease and death," as the editor intimates, but they are endeavoring to follow the Master in being daily about their Father's business, obeying the command of him who said, "Ye are my friends, if ye do whatsoever I command you."

Through the study of the Bible and Science and Health, all may learn how to be "transformed by the renewing" of the mind. Christian Science is a religion of doing, not merely believing, and it is willing to be judged by its fruits. Hundreds of thousands have testified to its efficacy. Mrs. Eddy has well defined Christian Science "as the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1). It destroys ignorance, superstition, and fear, and it does comfort the sorrowing and heal the sick.

[W. E. Fell in *Yorkshire* (Leeds, England) *Post*.]

Your correspondent, "Working Man," is misinformed when he says that Christian Science is "hypnotic suggestion disguised." To call hypnotism "Christian suggestion" would be a misnomer. I am not aware that the advocates of hypnotism make the claim that it has anything to do with Christianity. It certainly is not the healing established by the Founder of the Christian religion and practised by his followers. Hypnotism is the domination of one human mind over another. Christian Science, on the other hand, is the operation of the divine Principle of all being, the primal cause of all that exists, God, the infinite intelligence, or divine Mind. There is no mental manipulation in Christian Science, and no suggestion in any form, for it is incapable of misapplication; it can work only good. This Science is safe in every respect, and the patient falls into the hands of God, and not of men. It does not trifle with effects, but eradicates the cause of disease, thus destroying forever the effect, the disease. The cause of sickness is invariably to be found in sin, fear, or ignorance in some form or other. When this ministry heals the patient of sin, it heals him of sickness, and *vice versa*. It is therefore ethically and pathologically Christian.

However perplexed you may at any hour become about some question of truth, one refuge and resource is always at hand: you can do something for some one beside yourself. At the times when you cannot see God, there is still open to you this sacred possibility, to show God; for it is the love and kindness of human hearts through which the divine reality comes home to men, whether they name it or not. Let this thought, then, stay with you: there may be times when you cannot find help, but there is no time when you cannot give help.—GEORGE MERRIAM.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"TREASURE IN HEAVEN."

When Christ Jesus said, "Be ye therefore perfect, even as your Father which is in heaven is perfect," he doubtless recognized that he was setting a standard of conduct which only the greatest measure of love, goodness, wisdom, intelligence, and understanding could look forward to as the manifestation of man in the image and likeness of God. He had no false hope that mortal mind, the belief of life and intelligence in matter, could reach this perfection of being, and that this mortal mind and its substratum, matter, should be glorified. He did know, however, that humanity is capable of rising to that spiritual perception of God and His idea, man, which is the understanding that he said is life eternal. He knew that matter could not be spiritualized, but that thought could be raised to such a perception of God as Life, Love, divine Principle, Mind, as would give humanity a more spiritual outlook and a higher ideal; an understanding which would make real in human experience those qualities to which Mrs. Eddy refers when she tells us in Science and Health (p. 465) that "the attributes of God are justice, mercy, wisdom, goodness, and so on."

Mrs. Eddy's contribution to humanity was the discovery of the Principle and rule of Jesus' words and works, which ever pointed to the perfection he urged all mankind to seek and which he knew to be the reality of being, and the application of this discovery to the needs of mankind through teaching and practise. Through her book, "Science and Health with Key to the Scriptures," and her other writings, and the demonstration of the truth therein contained, she has shown the futility of depending upon mortality and material things for the perfection which Jesus urged: therefore Christian Scientists are turning away from the glamour and complexity of matter to the sublimity and simplicity of spiritual things in their progress heavenward.

Jesus said to one who came to him, asking what good thing he should do that he might assure himself of eternal life, "If thou wilt be perfect, go and sell that thou hast, and give to the poor, and thou shalt have treasure in heaven: and come and follow me." At this supreme test of the earnestness of his desire, the young man faltered. He had kept the commandments, observed the outward forms of the prescribed religion, but his love of things material, "the god of this world," outweighed all else, and he "went away sorrowful." He was unable to balance temporal possessions against the heavenly treasure that fadeth not away, to estimate at their true value the things which though not seen are eternal. And when the disciples, wondering, asked, "Who then can be saved?" Jesus answered them, "With men this is impossible; but with God all things are possible."

So, too, Mrs. Eddy tells us that "we are Christian Scientists, only as we quit our reliance upon that which is false and grasp the true. We are not Christian Scientists until we leave all for Christ" (Science and Health, p. 192). Today as of old the call of the Master rings in our ears, "Whosoever will come after me, let him deny himself, and take up his cross, and follow me;" and though we too may have kept the commandments, the letter of the law, from our youth up, we know now that we truly follow Christ only as through purified lives, the giving up of all that would mar the perfection of God's image and likeness, we are able to do the works that he did. To heal the sick, bind up the broken-hearted, free from the shackles of sin them that are bound,—to be able to do this in the name of the Master means that we are attaining, in some degree at least, the perfection he demanded and which has become possible through Christian Science, the knowledge of God which is the assurance of eternal life to him that hath it.

Archibald McLellan.

TRUTH'S STANDARD.

A man may think he can choose his own standard of living, as to right or wrong doing, with some popular virtues to balance certain vices deemed necessary adjuncts of mortal existence; yet this can never satisfy any one, for the simple reason that an inflexible standard always has existed and always will, and Christ Jesus stated it in unequivocal terms when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." Lest any one should think this demand severe and impossible of attainment, we should as quickly as possible realize that this requirement comes from the infinite Love that knows all good to be possible to man as God's likeness, and we should also see that nothing short of perfection can ever satisfy man's real nature with its infinite capabilities and possibilities. Here it may be said that the working out of the humblest problems of daily experience, with the demand for perfection ever held in view, would make of the toiler a thinker, of the artisan an artist, and all men coworkers with God.

To the Christian Scientist there is but one standard for health and right living, and it includes the mental, moral, and spiritual qualities which alone truly represent manhood. Any system which ignores this fact must fail to meet the needs of humanity, for these can never be supplied by any attempt to establish physical health on a material basis, with the promise that moral uprightness will result therefrom. Both reason and revelation point to the fact that man is both primarily and ultimately a spiritual being, and until this is understood and made the basis of all healing work and moral reformation, no system of cure can be truly scientific or successful. It is not enough that an attempt be made to link together health and morals on a merely physical basis, as, for instance, by warning people of the penalties which will follow the violation of moral law, or by seeking to enforce material "health laws" so called. No one can deny that mortals are law-breakers, for all human history supports this statement. It is only when God is known as infinite good, as unchanging divine Principle, and man is understood to be His idea, that obedience to God's law becomes possible and permanent.

Our revered Leader says: "As a drop of water is one with the ocean, a ray of light one with the sun, even so God and man, Father and son, are one in being. The Scripture reads: 'For in Him we live, and move, and have our being'" (Science and Health, p. 361). When this is understood and held constantly before thought, one can say with the psalmist, "I delight to do thy will, O my God." Again, we are told that none should glory in wisdom, in riches, or in might, but that man should glory in knowing and understanding God, and in reflecting the divine activity which is thus set forth in the prophecy of Jeremiah: "I am the Lord which exercise loving-kindness, judgment, and righteousness, in the earth: for in these things I delight."

Truth's standard is here presented, and as we respond to its high and holy demand we should never forget that the result must be an ever-increasing measure of health, harmony, and prosperity, for Principle is unvarying; in keeping with the words of Scripture, "I am the Lord, I change not." The prophet Malachi, who gives us this word, calls upon us to do our part, knowing all the while that God never fails to do His. As we obey, wickedness is to be destroyed, root and branch, and the Sun of righteousness will shine forth "with healing in his wings." Further, the promise reads, "All nations shall call you blessed: for ye shall be a delightsome land." These assurances are for all

Digitized by Google

who hear and heed, and who do not attempt to substitute personal opinion or fleshly desire for Truth's exalted and unvarying standard.

ANNIE M. KNOTT.

OUR ADEQUATE SUPPORT.

BASIC truths are always universal, they refuse to be compassed by the specific. They must have range, be behind everything, and many of us have either failed lamentably to see this, or else we have persistently forgotten it. We are greatly given to saying "Lo here!" or "Lo there!" limiting the truth to our human perspective, identifying right with persons or policies, especially with some class or party. We are for capital or for labor, for conservatism or for liberalism, for Smith or for Jones, instead of being for justice, for integrity, for fair dealing; in a word, for righteousness and truth, for the rule of the ideal on every plane and in every relation of life.

Inspiration and courage must be the fruitage of one's knowing that every right idea has very much more than men or movements to lean upon; that it is related to omnipotence, and has all the resources of the kingdom of heaven to support it. This is true of all right action. Said Jesus, "If God so clothe the grass of the field." He discerned, as he would have us discern, that rightly interpreted the sprouting of a seed is a world event. To him, there was no least thing unrelated to the largest; hence the sustaining significance to his thought and ministry of the wayside flower and the star-strewn sky. They brought him disclosures of Life and law.

Mrs. Eddy has said that we too "must act as possessing all power from Him in whom we have our being" (Science and Health, p. 264), and to do this it is imperative that we gain the realization that every least verity, every right idea we cherish, is directly related to God; that there is no isolated fact in His universe; that He is All-in-all. This realization dispels discouragement, ends the stress of anxiety over little things, the rule of the local. It enlarges one's horizon by continually lifting up his thought. He thus finds escape from weakening self-consciousness and gains that poise which attends a knowledge that in standing for demonstrable truth he is brought into immediate touch with and is supported by the infinite.

This has been the weakness of professional Christianity, that it has lost sight of the greater in the less, of spiritual infinitude in human sense situations. The thought of obligation has been largely denominational, it has been zealous for the standing and success of Christian organizations, rather than for the reign of righteousness in the individual life and in all the world. Following Christ Jesus, Christian Science teaches that every activity of the truth, the Christ-idea, is supported by spiritual causation and the totality of being, and that these alone are the ultimate conditioning verities. It insists that "the word of God," the eternal law of right, shall be recognized and reckoned with in every experience, relation, and circumstance of life; that our supreme concern shall be that right prevail and that we find our comfort and peace in conscious reliance upon and devotion to it.

He who perceives that there is but one creator and one law, perceives also that every least expression of truth is linked to all truth. He is therefore logically impelled to declare that anything not in keeping with and immediately related to the activities of Spirit cannot spring therefrom and at best is but a product of human sense which can be only relatively important. Thinking first of the kingdom of God, our true position with respect to all church and social matters will appear, and we shall present to our fellow men an example of breadth and ethical-mindedness which will command their respect and ultimately win their emulation.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

ROCKLAND, MAINE.—First Church of Christ, Scientist, at the corner of Cedar and Brewster streets, was dedicated Sunday [April 27], with services at 11 a.m. and 7:30 p.m. The historical sketch was in part as follows:—

The first meetings were held in the summer of 1895, when a practitioner met weekly with a few patients for the study of the Bible Lessons. In 1897 meetings were permanently established at a home on Limerock street, and were held continuously on Thursday afternoon or evening for about three years, or until 1900. During the occupancy of Grand Army hall for Sunday services, which began in 1898, mid-week meetings were still held at this same home.

After a time rooms were secured in the Ulmer block, and by holding regular Sunday and Wednesday evening meetings, the order of service as given in the Manual of The Mother Church was established. At last we were in line. While in this hall, in the year 1900, we received the charter for our church, opened a reading-room for the benefit of the public, and also organized a Sunday school. After a year or two we were forced to vacate for more commodious quarters, which were found in the Kimball block, where a hall was leased for a term of five years. The congregation still increased in numbers, and soon after the expiration of the lease it became evident that we would have to secure a still larger place for the meetings, and the board of trustees was desirous that it should be a permanent home. The building secured for this purpose was a disused church edifice, and this was duly transformed and made suitable for our use.

The members of this church and congregation bear grateful testimony to the transforming influence of Christian Science in physical, mental, and moral regeneration, and through their services and meetings are now sending to the weary and heavy laden a message of "good tidings of great joy," namely, that God in His boundless love does today heal the sick as well as reform the sinner.

The Rockland Courier-Gazette.

WILMINGTON, DEL.—The corner-stone of the new Christian Science church, at Park place and Van Buren street, was laid yesterday morning [May 30] at seven o'clock. The ceremonies were simple but impressive. The church, which is to be built of stone in a classic style of architecture, with a seating capacity of five hundred, the Sunday school seating three hundred, will cost about fifty thousand dollars, exclusive of furnishings. The location of the church on Van Buren street, a short distance from Delaware avenue and adjoining Cool Spring park, is an ideal location for this style of architecture.—*Wilmington Morning News.*

LONG BEACH, CAL.—The contractors are making excellent progress on the edifice of the Long Beach First Church of Christ, Scientist, which will be completed on the valuable church site on Elm avenue, between Fourth and Fifth streets, some time in the early fall. The brick walls are now being raised, and everything is in readiness to run the concrete floor of the auditorium, while other portions of the structure are progressing with corresponding despatch.

Venice Evening Journal.

BLACKPOOL, ENGLAND.—The Christian Scientists are rapidly making headway in Blackpool. The church in Egerton road has become too small for them, and we learn that land has been acquired at the corner of Hornby road and Park road on which it is intended to erect a new church in the near future.—*Blackpool Herald.*

THE LECTURES.

PATERSON, N. J.

Henry Marelli was honored by the Christian Scientists in being chosen to introduce Virgil O. Strickler, the lecturer of the evening for that band of followers, in Orpheus hall. Mr. Marelli, who is not a Scientist, said:—

Every person in this world would like to be, in the true sense of the word, free. Why is it, then, that this desire which predominates over every other desire in the human breast, is not gratified? Simply because the customs and superstitions of the past, consciously or unconsciously, blind us to that which alone can give us the desired freedom, namely, the truth and a knowledge thereof. Universal peace among nations, for which legions of good men and women are striving, as well as universal peace of mind among all people, will come only when the truth is universally known. Christian Scientists preach what they believe to be the doctrine, or religion if you please, of truth, claiming that to be in full possession of the truth not only brings peace and comfort to the mind, but cures bodily ills as well.

That there is substance behind their cause is attested by the growth of the Christian Science church since its inception, by the testimony of many who claim to have been restored to health and happiness through Christian Science, and by the thousands of intelligent, cultured, well-meaning men and women to be found in its ranks. Their cause, therefore, is deserving of the earnest consideration of all persons who seek the truth; and certainly every one should be anxious to learn the truth, because, as I have already indicated, it is only the truth that can gratify our most urgent desire, namely, the desire to be free.

We have been invited tonight to listen to a message. If this message opens our eyes, even though partly, that we may see the light, even though dimly; if it opens our minds, that the light may penetrate, even though in a slight degree, —then the work of the one who is to address us will not have been in vain, and he will have made our community better by reason of his having been here.—*Paterson Guardian.*

GLASGOW, SCOTLAND.

A lecture on Christian Science was delivered to a large audience in the Queen's rooms by Bicknell Young. The lecturer was introduced by Robert Lang, Esq., of Johnstone, who said in part,—

Living in the midst of a community which is interested so largely in the question of education, both academic and technical, and associated as we are in the development of the engineering, shipbuilding, and other industries for which Glasgow is so justly renowned, we can the more readily appreciate the very great advance which has been made in the scientific world during recent years. When we turn our attention to the religious world, we find there also, as in the scientific world, the evidence of marvelous progress. About thirty-four years ago The First Church of Christ, Scientist, was inaugurated by Mrs. Eddy, its Founder. Its membership consisted of twenty-six persons, all earnest seekers after Truth. They took as their message the full command of the Master, Christ Jesus, to preach the gospel, to heal the sick as well as the sinning; and already, although only thirty-four years have passed, the branch churches of this Mother Church have grown and spread until they now encircle the globe, like a network of mercy, carrying with them their message of truth and love to the people of nearly every civilized country in the world.

Wherever a Christian Science church has been planted, it has been arranged as part of its organization that a lecture on Christian Science should be given by it at least once in each year, so that all persons in the community who so desire may have a special opportunity of learning as to its real nature and governing Principle. From personal experience as well as from observation I can assure you as to its marvelous efficacy as a healing power, physically, morally, and mentally.—*Correspondence.*

LINCOLN, NEB.

In introducing William R. Rathvon, who lectured on Christian Science in the church edifice, E. E. Arterburn spoke in part as follows:—

It was said by Christ Jesus, "Ye shall know the truth, and the truth shall make you free." I can truthfully say, from my own experience, that even a little understanding of Truth, God, of man, and of the spiritual universe, does make free. It has restored to me my dear wife after the skilled medical profession and the general public had pronounced the verdict that death was inevitable, after the sweat of death rested upon her brow and she had said good-by to her family of little children.

It was reliance upon God that enabled Moses to lead the children of Israel out of their state of bondage; that delivered Daniel from the lions' den; that fed the multitude in the wilderness, and that made a place of safety in the burning fiery furnace. It was Jesus of Nazareth, the great demonstrator, the appointed one, who brought this truth to a sinful world. It was this understanding of God and the real man that made it possible for the Master and his disciples to overcome sin, disease, and death. He says to you, to me, and to all people, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."—*Correspondence.*

CANON CITY, COL.

An extremely interesting and instructive address on Christian Science and its doctrines was given at the opera house by Frank H. Leonard. The speaker was introduced by Mayor Frank P. Smith, who said in part,—

Having been asked by our local Christian Science church to introduce the speaker this afternoon, I want to tell you that I am most happy to do so. Not only as mayor of the city am I pleased to welcome representatives of any and all religious denominations to the community to present their views to our people, but as an individual I am glad to see them given a hearing. I also wish to say that I have been trying to live under the teachings of Christian Science for twenty-five years, and I can recommend it as one of the greatest blessings to which mankind ever fell heir. I have seen the sick healed, the sorrowing comforted, many and many a time. It is a preventive as much as a curative. It tells you that Jesus' promises were for all mankind in every hour. Impossibilities never occur. The healing we have experienced is applicable to every man and woman that may need it. God is no respecter of persons.—*Daily Record.*

ABERDEEN, WASH.

The following remarks were made by J. W. Clark in introducing Judge Clifford P. Smith, who lectured at the Grand theater on Christian Science:—

The history of man is a history of two things: his idea of a temporal government, and his concept of a spiritual guide. The veriest savage has his fixed ideas on these two questions, even as has his most highly civilized brother. Men from the beginning of time have been improving their temporal governments; they have likewise sought to extend their knowledge of spiritual truth. Christian Science marks a step in the progress of the human race in its desire to come closer in touch with divinity. We are privileged tonight in having with us one who has studied the truths exemplified by Christian Science.—*Correspondence.*

LOS ANGELES, CAL

Under the auspices of eight churches of Los Angeles, Prof. Hermann S. Hering delivered three lectures on Christian Science. At Shrine auditorium he was introduced by G. G. Johnson, who said in part,—

We are here to learn more of Christian Science, to learn more of God, to learn more of our relationship to God; we are here to learn more of truth, that truth which makes men free, free from evil thinking, from evil doing, from hatred, malice, and sin, from all inharmony which would enter into the human consciousness; we are here to learn more of the Science which was rediscovered by Mrs. Eddy and which will heal all of our diseases. I desire to say that I am one of the great crowd of witnesses who can testify to this wonderful healing power. I was brought from helplessness to the condition I am in today. Physically, the lame was made to walk; spiritually, the blind eyes were made to see; I was indeed raised from the dead.

At his lecture in Third Church edifice Professor Hering was introduced by F. O. Cass, who said in part,—

When our great Master, Jesus the Christ, was on earth, he went through the cities and villages of Judea preaching and teaching a better and higher knowledge of the one infinite God than the world then had; and he proved his absolute knowledge of God with scientific certainty. When he was about to rise above the earthly vision of his followers, he left this command: "Go ye into all the world, and preach the gospel to every creature." In this age Christian Science, as taught by Mrs. Eddy, comes in a spirit of love and gentleness to arouse the thought of the whole world as to the deep spiritual significance of the gospels and to declare that every word the Master uttered was, is, and eternally will be, true and must be fulfilled. Christian Science also proves its assertions with absolute certainty by demonstration in healing the sick and sinning. It teaches that the kingdom of heaven is at hand,—not in matter, but in Mind.

Correspondence.

PORTLAND, ORE.

Francis J. Fluno, M.D., addressed a large audience in Masonic temple on the subject of Christian Science. He was introduced by W. A. Petteys, principal of the Weston school, who spoke briefly as follows:—

We are living in an intensely practical age, when every advancement is measured by the standard of utility, when human endeavor is directed largely to the betterment of present-day conditions. In a certain sense, religion is being put to the same test, that form offering the greatest helpfulness in solving present-day problems being the one most likely to inspire the closest scrutiny. That Christian Science offers the largest measure of life, health, and success to mankind now, accounts for its universal appeal. The truth applied by Jesus in the first century, in saving mankind not only from sin but from every form of sickness as well, is not recognized by too large a number of people today, failure to appreciate it being due in great measure, we think, to misconceptions as to what the truth embodied in Christian Science really represents. To the end that these misconceptions may be corrected, the board of lectureship performs an important function in the development of Christian Science.—*Portland Journal.*

DARLINGTON, ENGLAND.

Bliss Knapp lectured on Christian Science in Mechanics hall. He was introduced by Ernest H. Pease, Esq., who said:—

As frequently occurs in the early stages of all great and far-reaching movements, the Principle and tenets of Christian Science have been grossly misrepresented, generally, I believe, through complete ignorance of what these really are. In order to give people an opportunity of hearing for themselves the truth about this most practical and elevating form of religion, a Christian Science board of lectureship has been organized. The gentleman whom I have much pleasure in introducing to you tonight, is a member of this board, and therefore fully qualified to expound the true doctrines of this Science. Although not a member of the Christian Science church, I am deeply interested in all its tenets, and in the wonderful revolution in thought that Mrs. Eddy's teaching has brought about. One often hears people laugh and say that Christian Science is all very well for hysterical women, but of course it cannot possibly cure any case of chronic disease. Now my personal experience has been such that I can honestly refute this statement. I have been cured entirely by Christian Science, with the help of a Christian Science practitioner, of a painful and chronic form of rheumatism from which I had suffered for thirty years, during which time I had been under a number of doctors and tried endless medicines and cures, but never derived any permanent benefit. I hope you will forgive my occupying your time with a personal experience, but if there are any here tonight who have lost hope of being cured through *materia medica*, I should like them to realize that there is a new and sure way to health and happiness.—*Correspondence.*

HANNIBAL, MO.

A representative audience of about six hundred and fifty people assembled at Park theater and listened most attentively while Judge Clifford P. Smith delivered his lecture on "Christian Science: The Religion of the Kingdom." Mayor C. T. Hays introduced the lecturer, saying in part,—

Of all the wayshowers, Jesus the Christ was the most perfect reflection of the divine that has ever been on this earth. About the middle of the last century a wonderful woman, probably the most unique figure in history, with the possible exception of the Maid of Orleans, founded a religion based upon the teachings of Christ Jesus. I am not familiar with her system, but I take pleasure in introducing to you one who is prepared by careful study and practical demonstration to give you an authentic exposition.

Correspondence.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Atchison, Kan.—Church edifice, 8 p.m., June 26.
Chicago, Ill. (Second Church).—Church edifice, Wrightwood and Pinegrove avenues, 8 p.m., June 24 and 26.
Duluth, Minn.—June 23.
Green Bay, Wis.—Church edifice, corner Cheney and Monroe streets, 8:15 p.m., June 24.
International Falls, Minn.—City hall, 3 p.m., June 22.
Lake Geneva, Wis.—Y. M. C. A. auditorium, 8 p.m., June 26.
Long Beach, Cal.—Long Beach Auditorium, 8 p.m., June 26.
Los Angeles, Cal. (joint lecture).—Shrine auditorium, 3 p.m., June 22; Wilcox hall, Cahuenga avenue and Hollywood boulevard, Hollywood, 8 p.m., June 23; Elks hall, Seventh and Palos Verdes streets, San Pedro, 8 p.m., June 24.
Los Gatos, Cal.—Ford's opera house, 8 p.m., June 19.
McCook, Neb.—Masonic temple theater, 2:30 p.m., June 22.
Neillsville, Wis.—Grand opera house, 8:15 p.m., June 27.
Oakland, Cal. (Sixth Church).—Piedmont Photo theater, Piedmont avenue, near Fortieth street, June 23.
Pomona, Cal.—Belvedere theater, 8 p.m., June 27.
Prophetstown, Ill.—Auditorium, 8 p.m., June 27.

TESTIMONIES OF HEALING.

My father was a deeply spiritual man, and from his teaching and example I gained a simple faith in God, which never really left me, though after the passing on of my beloved parents I left home and plunged into the pleasures of the world. I cannot remember a time when I did not feel weary and often ill, but my intense love of excitement and amusement always kept me busy, and working up to high pressure by sheer will-power. I entered a hospital for training as a nurse, and becoming deeply interested in the theoretical side of my profession, I soon became steeped in medical law, the results of which I was to reap later on in fear and consequent illnesses. I was always receiving special treatment in the form of stimulants and strong tonics to build up my system, but I often had to go off duty through illness. I lived in constant dread of taking cold, and with unfailing regularity, for seven or eight years before coming into Science, I was annually laid low with influenza, since when I have had only one attack, which was completely overcome in two hours by a realization of the truth of being, as taught in Christian Science.

After my marriage I seemed to go down-hill very rapidly from a health point of view, developing several complaints which had been lying dormant for years. I spent a most wretched two years, and I can now see that I must have been a great trial to my dear husband. Mentally I was a wreck, and I could not begin to tell of my misery, which I know now was caused through self-righteousness, self-pity, envy, hate, a whole army of conspirators. At the end of two years of married life I left home, ostensibly to seek health in a sea trip, since in spite of every care and many medicines and stimulants I did not improve, and my life seemed so much a failure that I prayed to die.

I was, however, searching for the truth. I spent some weeks in Melbourne looking into every new theory, but not one of them satisfied me. Always there was with me that Spirit-lighted word, truth, and my earnest prayer to be guided straight to it, wherever it was, I now know kept me out of by-paths of error. One never to be forgotten day I was strolling along the street, when my attention was arrested by a brass plate which bore this inscription, "Christian Science Reading Room—Open to the Public." I stopped and looked at it, and had a little argument with mortal mind, which said, "That's only something Christian, and you've had enough of that; you're after truth, not a new religion;" but I said, "I like the look of the word Science, and I said I would be faithful and search everywhere." So up I went to the room, and after the other occupants had left I opened a conversation with the lady who was in charge, and was at once impressed that she had a logical, sensible knowledge of her subject. When I became argumentative, she quietly handed me the text-book, "Science and Health with Key to the Scriptures," saying that it would answer all my questions satisfactorily. I read the book that night for some hours, and from that time dates the beginning of my healing.

Next morning I felt changed; all the old tired feeling was gone, and the tender love I then felt for everybody, and the longing to tell them that they were all living and moving and having their being in infinite Love, has never left me since. Some physical difficulties for which I had been taking special treatment, showed improvement the day I resolved to throw away the remainder of the medicine. The worst ailment is now remembered only when it is necessary to bear testimony to Truth's power to heal.

Through studying the chapter on Marriage in our inspired text-book, I began to see how cruelly I had behaved to my husband. I saw plainly that our unhappiness was all the result of my own stumblings, and I wrote him a loving letter and told him of my new-found heaven in Christian Science. After my return I found I had a lot of work to do, that old wrong habits of thought had to be met, and I had one especially big battle with distrust and jealousy, which was completely destroyed through the study of the Bible and our text-book, which by this time had become unsealed to me, and I had grown to love to study the Lesson-Sermons.

It would take many pages to tell of all the experiences of healing which I have had and those of which I have known among my friends, cases which according to *materia medica* could never be healed. It seems wonderful to me that all the teaching of medical science which I had imbibed was completely destroyed for me in twenty-four hours, showing that there is no such thing as chronic error or sickness. Error simply is not, the instant we see the truth.

I am truly thankful for Christian Science, as we live in a trying climate where most women have to go to the coast for the summer, and where the changes are so sudden and decided that in the old thought I used to suffer with bowel trouble; but now that I have Christian Science always with me, I never have the slightest fear of change, knowing that God is changeless, and our shade and shelter. Christian Science has brought to our home life a taste of heaven; and although my husband does not study it, he knows that he has this demonstrable truth to thank for the great change that has come about in our domestic life. There is still a great amount of land to be reclaimed from the enemy, but I know through my past wonderfully satisfying experiences that divine Mind will go before every step of the way.

My sincerest desire is that I may keep this beautiful gem of pure thought, Christian Science, uncontaminated by any false teaching, and retain it on its spiritual basis. I am glad to be a member of The Mother Church.

ALICE MIRIAM CAPORN, Kalgoorlie, Western Australia.

[Translated from the German.]

It is with deep-felt gratitude to God for the many blessings which have come to me through Christian Science that I wish to tell of some of my experiences for the benefit of the readers of the Christian Science publications, since *Der Herold der Christian Science* was in part instrumental in our coming into Christian Science. A year ago last winter our little one was taken ill, and we went in the first place to a Christian Science practitioner in this locality, but we had a physician diagnose the case. My dear wife never administered to the child any of the remedies prescribed, even though the futility of material means had not been entirely accepted on my part. I had yet to be shown in a convincing way, that as material beliefs gradually disappeared and we parents as well as the grandmother of the child came into the realization that God is the only healer and helper, the trouble with its attending symptoms would yield. This was done, and the child is now in better health than ever before.

It seems impossible to tell of all the many blessings which I and my family have experienced through the study of Christian Science. At times we are overwhelmed by a sense of gratitude to our all-loving Father, and we tell each other of all that has come to us, and what we are receiving daily and with every breath we draw. We have experienced, and have had plain evidence thereof time and again, that an attitude of constant gratefulness to God, the dispenser of good, enables us to receive more. Our Leader, Mrs. Eddy, knew this, and wisely pointed out the necessity of thanksgiving. How selfless and wise of her to have provided for a translation of Science and Health to be made into German in such a way as to leave the spirit of the inspired word unimpaired! We here in Hannover are afforded a splendid opportunity of keeping in touch with the true source of infinite knowledge and with the divine wisdom contained in the Bible. For the manifold blessings we have received in Christian Science we cannot be too grateful to God, and words are insufficient to express our deep feeling of thankfulness.

WILHELM KROEGER, Hannover, Germany.

I did not come to Christian Science for physical healing, but because I was very unhappy, wandering about in the darkness and fears of mortal beliefs, afraid of God though trying to love and serve Him. In a *Christian Science Journal* sent me from America, I had my first glimpse of God as we learn to understand Him in Christian Science, of God as Love, Life, who alone can satisfy us. It was like a great light shining in upon my darkness. I had never heard of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," but I saw it referred to many times in the *Journal*, and I sent for it that night, with the hope that it would tell me more of divine Love. At first I did not understand much of what I read, but I did grasp the fact that Christian Science gives all power to God and no power whatever to anything else. I read the book every minute I could, and physical healing came without my giving it a single thought. Lung trouble, with all its attendant miseries, left me during this reading; there was no room for disease in my consciousness. Indeed, there is never any room for darkness when the light streams in, and as we open our hearts to the light of Truth, we find health and peace and joy in abundance.

I have no words to express my gratitude for Christian Science and my thankfulness to all who have so kindly helped me. Mrs. Eddy says: "The Christian Scientist has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness and the allness of God, or good" (Science and Health, p. 450). What greater joy could any one have on earth! We know that every clear, pure thought of Truth lightens the darkness for our fellow men and carries on our Master's work.

F. L. CARRINGTON, Kingston, Barbados, British West Indies.

I wish to express my gratitude to God for Christian Science. It came into my home as a ray of sunshine, and I am truly thankful for the spiritual uplift which is gained through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. Every day I want to learn more of this great truth that makes us free.

MRS. VIOLET STAHLBAUM, Portland, Ore.

That God is an ever-present help has been proven to us frequently during the past four years. Although we have been interested in Science for about nine years, we failed at first to see the necessity for working actively in the truth; but man's extremity, as always, proved to be God's opportunity. We had been helped to overcome bodily ailments many times through Christian Science, for measles, colds, serious throat difficulties, and internal disorders had been met and overcome; yet there remained something more for us to experience before we came to a fuller realization of the power of Truth and its effects on mortal mind and body.

We had thought to prepare for the future by investing in properties which promised quick returns, and we laid great stress on what we could then do for Science and for ourselves, looking almost entirely to the inherent power of material means to supply all we expected to need, instead of "leaning on the sustaining infinite," which "today is big with blessings" (Science and Health, Pref., p. vii). We were not content with investing the cash on hand, but through undue influence invested more. Then began a struggle. Car strikes came on, and business was in a deplorable condition; consequently the values of real estate decreased instead of increasing, till finally there was no demand for it at all. Nevertheless, there were payments and interest to be met, and here our first real hard blow came, for business was so inactive that my husband's services were thought to be no longer needed, at least not for some months, perhaps.

Our monthly income diminished after payments and interest had been subtracted, and we found ourselves without available means. Then, too, we were living out of town, and there were only two more rides left on my husband's commutation ticket, and we had less than three dollars in cash. Our subscription to the *Sentinel* and *Journal* expired that month, but it seemed impossible to get along without them, so I asked my husband to take two dollars and go to the reading-room in the city and subscribe for the *Sentinel* and *Journal* for six months each, as they were food to me. He did so; and as he was in the city, he thought he would go to his former place of business to see a friend. On entering the door his employer hurriedly came to him, saying, "You are the person I want; I have just dictated a letter to my stenographer asking you to return, as we need you." We, of course, realized that divine Love had opened the way. This was in itself proof of the Master's promise, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

All our trials were not passed, however, for Love meant that we should be purified; but within about two years our obligations were met, and we enjoyed mental and physical freedom. It was only as we divested mortal mind of its false claim to reality that we went higher and enjoyed the sense of dominion over all things material, and only as we laid our earthly all on the altar of our Father-Mother God, placed our hands trustingly in His, and earnestly prayed, "Lead Thou me on!" Seemingly these trials came thicker, faster, and darker just before the dawn broke in its soft gentle way, as if to say, It has never been dark, save to mortal sense; the light is always here; darkness is only the supposed absence of light, and you shut light out by believing that there is power in material things. We now thank God that we had these trials, for the test has brought us into possession of the spiritual substance which no mortal giveth, neither can any take it away.

We owe endless gratitude to God for our deliverance, for the Science by which we were brought to learn of "things spiritual" (Science and Health, p. 335) as revealed through our beloved Leader, Mrs. Eddy, in that most wonderful book, "Science and Health with Key to the Scriptures."

MRS. N. L. E. HENSHAW, San Francisco, Cal.

[Translated from the German.]

Some three years ago, at the time when my attention was called to Christian Science, I was suffering from the after effects of a painful operation for gall-stone. Assurance had been given me that I would be freed thereby of distressing paroxysms, and I submitted to the operation with no little trust. The opposite effect was the result, however, for I was left with a fistula which caused exactly the same suffering, and the discharge from it necessitated my wearing a bandage constantly. My condition grew worse as time went on and seemed unbearable to me.

When Christian Science found me, I asked for treatment with a sense of new courage. I was comforted and assisted with loving patience, and helped myself as best I could, although the struggle went on for two years, and it seemed as if in the end all the work in my behalf would prove a failure. Then, when I had almost made up my mind, upon medical advice, to prepare a second time for the operating table, a small ray of divine light dawned upon my thought, treatment in Christian Science having been resumed. It then took but a short time for the old wound to close, and I was freed! The words of the psalmist best express my thought: "Bless the Lord, O my soul: . . . who redeemeth thy life from destruction; who crowneth thee with loving-kindness and tender mercies."

Thanks to Mrs. Eddy for her work toward universal salvation, and thanks to all who have lovingly and patiently assisted me with word and deed in seeking the straight way leading to the recognition of divine Truth. It is my sincere desire so to live and love that I may be able to help others as I have been helped.

ELISABETH FREUDENHAGEN, Rheinsberg (Mark Brandenburg), Germany.

Digitized by Google

In gratitude for the blessings received from Christian Science I wish to tell of them, in the hope that some sufferer may read my experience and be encouraged to try this healing truth. For ten years or more I suffered from rheumatism in the feet and legs, and during that time I tried many doctors and many ways to get rid of the disease, but without success. I would be taken down suddenly, without warning, and would suffer intensely for days, and sometimes for weeks. I had heard of Christian Science, but had no thought of its being anything that I wanted, for I was perfectly satisfied with my own religious beliefs. It was only after a very severe attack, in which the doctors could give me no relief, and after persistent urging by some neighbors to try Christian Science, that I decided to take treatment. While it was a seemingly long fight, I was completely healed of the trouble; and though I had worn glasses for a number of years, I have not used them since that time.

I am very thankful to God, and grateful to our beloved Leader, who made it possible for us to receive this Truth-healing.—A. WEDIN, Humboldt, Kan.

Feeling convinced as I do that I owe my life to Christian Science, I freely give this testimony. About two years ago I began to read "Science and Health with Key to the Scriptures" and gained some little knowledge of the truth. On Oct. 11, 1911, when I left Wetaskiwin for my home twenty-two miles south, I had to cross the Indian reserve nearly all the way. I was driving two horses and was in the buggy alone, when after about six miles, I attempted to take the shells out of my gun. In some way the gun was discharged and my arm shot nearly in two between elbow and wrist. I was four and a half miles from Hobema, a siding or station on the reserve, and before getting half the distance I fell from the seat and could not see for several seconds. I then recovered and struggled back on the seat, holding the lines in my teeth in order to take a new hold of them with the right hand. This was repeated several times before I reached the Indian agent's house. When I got there, they helped me all they could by binding my arm above the elbow, and I took the first train, which was due shortly after I arrived there, in search of surgical aid. I could not communicate with a Christian Science practitioner, for there were neither telegraph nor telephone connections at this place; but ten miles farther south I reached Ponoka, where I found a doctor and a surgeon. I told them from the start that I needed their services only as far as surgery was concerned, and I requested them to telephone for me to the Christian Science practitioner at Wetaskiwin, who would have charge of the case.

At this time I was very weak from loss of blood, and the doctors did not think I could survive an operation, so they decided to wait until my sons came. The accident happened at three o'clock in the afternoon, I reached the doctor's office at five, and the operation was performed about half past eight the same evening. After I telephoned the Christian Science practitioner, about six o'clock, I began to gain strength and to lose all fear. I declared I was all right and ready for the operation, which was over about seven hours after the accident. Thank God, I had little pain either before or after the operation, and the next morning, with my son's help, I walked from the doctor's office to the hotel across the street. After four days I was removed by train to Wetaskiwin, where my sons, also the Christian Science practitioner, lived. There I engaged another doctor, simply to dress my arm. After the first week this doctor told me that unless I had different treatment I would lose my life from blood-poisoning, or, at best, I would be obliged to have the arm amputated and take a course of medicine, as otherwise the condition would undermine the strongest constitution. I made no reply at the time, as my family were nearly frantic with fear, but consulted with the Christian Science practitioner, who assured me differently. The next time the doctor came to dress my arm, I told him that if he would simply dress it, well and good, otherwise I would have to employ some other physician. He answered by setting another date to dress the arm, and for over two weeks after this he continued to care for it. During this time and until fully healed, notwithstanding what the doctor had foretold, my arm continued to improve very fast for one of my age (I was in my seventy-second year), and in about three months it was fully restored and I was quite as fleshy as before the accident.

Except for the little knowledge I had of Christian Science I never would have reached the agent's house where I first had my arm bound, after bleeding nearly an hour. Through the help I received after I telephoned the Christian Science practitioner, I suffered little pain, and all fear was removed. All who saw me, wondered how I could stand it without a murmur; they little knew how I was getting my help, though my own family knew the source.

In addition to this healing of my arm, I have lost my desire for tobacco, after using it for over fifty years. For this wonderful healing, and much more, I am exceedingly thankful to God, and also to the author of our text-book, "Science and Health with Key to the Scriptures."

CHARLES TATE, Water Glen, Alberta, Canada.

Eight years ago Christian Science found me in what seemed a hopeless condition, both physically and mentally. I had been an invalid more than twelve years, and during that time I had six physicians. The last one treated me seven years for what he called incurable stomach, liver, and bowel troubles, and I spent more than three years at his sanitarium. I tried every kind of treatment and diet known to medical science, without receiving any benefit. For seven years the diet was the most rigid, while for one year I had nothing but milk, though there were many days at a time that I could not take any food at all. Finally, the doctor told my friends that I had exhausted medical science, and that the limit of this life was but a matter of a few weeks with me.

I was in California at that time, and my husband was here. He wrote and told me what Christian Science had done for friends of his after doctors had given them up, and asked me to try it, saying that if it did not help me it could not hurt me. I had known nothing of Christian Science up to that time, but I began to take treatment. My healing was slow, but I am now thankful for this, as it has given me an opportunity to study and get the spiritual understanding to help myself many times when error would hold me down. Now, I can truly say that I am healed. I can eat anything I want, and at any time. I have learned that there is no power in food to hurt God's child.

I am more thankful to God for Christian Science than I can express in words. I am also grateful to Mrs. Eddy, and to every one who has given me a cup of cold water in Christ's name.—MRS. AMELIA B. SPRINGER, Boise, Idaho.

After turning to Christian Science as a last resort, and receiving the healing, before severing my connection with my former church I listened to a sermon on "Paul's thorn in the flesh." The minister said: "How surprised Paul must have been the first time he prayed to God and was not healed, after he had healed so many himself; and the second time, still no answer; and the third time answered by these words from God: 'My grace is sufficient for thee.'" Then the minister went on to say, "God afflicts man for his growth in righteousness, and gives him grace to bear it."

I could not conceive of Paul doing the works he did with a bodily affliction, and when I reached home I took my Bible and, starting at II Cor. xii. 7, read until I came to Gal. iv. 13, 14, and found these words: "Ye know how

Digitized by Google

through infirmity of the flesh I preached the gospel unto you at the first. And my temptation which [not is] in my flesh ye despised not, nor rejected; but received me as an angel of God, even as Christ Jesus." I closed my Bible convinced that Paul had found God's grace, not sufficient to bear the thorn, but to remove it.

ANNA P. ARMSTRONG, Chester, Pa.

Through Christian Science I have been healed of a throat disease and the fear of its annual recurrence. The first attack, lasting over two weeks, was accompanied by much distress and painful treatment by a throat specialist, and was followed by a relapse covering a like period. In partial fulfilment of the prediction made at that time, namely, that I might expect a recurrence of the trouble each year, during the same month of the following year symptoms of the disease became manifest. The aid of a Christian Science practitioner was immediately sought, and while to all appearances the throat passage was almost completely obstructed, this condition was attended by very little pain as compared with the previous attack, and in four days the swelling and its seeming cause had vanished and physical harmony had been restored.

Since the above demonstration of Truth's power many instances of physical discord have been overcome, and mental and financial problems have found their solution through the application of the truth as taught by Mrs. Eddy in "Science and Health with Key to the Scriptures;" but at the present writing I am rejoicing particularly over the spiritual quickening realized through this teaching when earnestly studied and applied. For the experiences of overcoming, the frequency of which is limited only by our admission of a power apart from God, good, I am deeply grateful.—MRS. PERCY R. MOTT, Berkeley, Cal.

To show how thoroughly Christian Science heals, it came to me a few weeks ago that I am now quite free from a sense of great physical weakness experienced both before and for some time after I became interested in Christian Science. For two years, however, I have been free from it, and am naturally very grateful that I have been so completely healed as to have had the disease blotted out of my consciousness, even the memory of it, all this time. It is also interesting to look back and see my experience in Christian Science as a seemingly slow but sure awakening to the fact that divine law is always omnipresent, and that we progress either by obedience or, if we refuse to listen to "the still small voice" of Truth, by the suffering such refusal brings. The awakening to the importance of understanding, choosing, and using goodness in thought, word, and deed, is a glorious privilege to have had, and one for which I am deeply grateful to God, also to His messenger, Mrs. Eddy.

HARRY RUSSON, London, England.

[Written for the *Sentinel.*]

PEACE.

GRACE ADA BOUGHTON LEIGH.

NIGHT, with its silence and its solitude,
Brings all earth's strife unto the feet of Love:
There, in the stillness of the eventide,
To lift our thoughts in prayer to God above.

The mists and clouds which seemed so dense by day
That we had stumbled on with bleeding feet,
Are in Thy presence all dispersed and gone;
And peace and harmony now reign complete.

Love hath renewed our unity with Thee,
And all the clanging strife of day is done.
Father, forgive, as we ourselves forgive;
For in Thy heart of love we all are one.

FROM OUR EXCHANGES.

[Rev. W. F. Adeney, M.A., D.D., in *The British Congregationalist.*]

Fear has always hindered the spread of light and truth in the church of Christ. It tried to check Biblical inquiries during the greater part of the nineteenth century. Bishop Colenso, Samuel Davidson, and Robertson Smith were all sacrificed to fear, shameful fear, for in each case the church concerned has been forced to honor the memory of its heretics. Fear has kept back the honest teaching of young people, and so has prepared them to fall an easy prey to the shallow, skeptical orator. A faithless fear in every case. If it had been a strong faith, we should have been spared all this flustering of the self-appointed guardians of "the ark of the Lord." Can we learn one lesson from these humiliating flusters of timorous religionists,—the one true lesson that it is wiser to trust God and to possess our souls in patience, knowing that He can guard His own cause, since truth is truth and right is right?

There are signs that this new century is going to be a century of the Spirit of God. It is not without significance that our deepest thinker describes his philosophy as the life of the Spirit, and what we want to understand is that the Spirit of God is quite close to us. What we need in ourselves for the awakening of faith, and in many churches for the awakening of life, is simply not to expect a new Pentecost, but to receive the Spirit.

[*The Christian Register.*]

What is the church's present twentieth-century message for helping the people who wander blindly like sheep scattered upon the mountain, who too often fill themselves with chaff and the east wind? Can it satisfy the multitude, the countless millions, with a few small loaves and fishes? Alas! the day of miracle is past. The modern world is avid for other bread. It knows not what it wants, though restless and unsatisfied. But its cravings are immense, its vision is as large as any that has appeared before the soul of man.

How is the church to satisfy these wants and cravings? How is it to pay its debt to the present and to the future? It may be thought that past services will satisfy all claims; but no institution can live long entirely on its past. New blood, fresh vitality, must be infused to give it a new lease of life. But its debt is unlike any other, since it must be estimated in spiritual values and by no material standard. Still, if at times the church seems retrograde in influence, going down-hill instead of on the climb, the need of its ministrations, its hopes and ideals, is not less, but greater, now than in other ages of the world. There is nothing to put in its place. It stands as the one ideal sanctuary and refuge for the weary and heavy laden, the world tired and disenchanted. Its tender and sublime lessons will never be wanting in teachers to minister to sick souls. A purer, holier vision of what it is and what it may become may arise at any moment and fire the hearts of men to a nobler service of faith and spiritual freedom. The young prophets are on the way, we feel, glad to serve the higher interests of man's nature; and the old and honored will not tire of their beautiful disinterestedness in the cause of truth and righteousness until they hear the summons, "Well done, good and faithful servant."

[Rev. Ashley A. Smith in *The Universalist Leader.*]

With our modern tendency to estimate everything by its value in dollars and cents, what marvel that there is no unveiling of the eternal to us; what wonder that we cannot see the deeper meanings of duty and destiny, the diviner issues of our hidden and dormant life! The men, whether in Hebrew or modern days, who have seen most deeply and surely, were men of open thought and heart and vision. We must have the doors of our life open to God before we

Digitized by Google

can expect Him to come in. Only a receptive mind can receive His truth, an open soul be touched by His revelation. There is no skepticism so fatal to the higher life as that which asserts that the visible cannot touch the invisible, that man cannot touch and feel and be moved by the unseen presence of God. It has been done in all the ages of time, and because we have not had those experiences shall we therefore discredit and deny their reality in the lives of the great seers and prophets of the centuries? Shall we doubt and disbelieve all that transcends the common experience of our commonplace lives? These experiences on the higher planes of life are the beacon-lights of spiritual history. They interpret life to us in its larger meanings and teach its nobler lessons. These experiences are the keys to the rich treasures of God and the divine life.

[*The Continent.*]

The recent epoch of debate on Bible criticism has painfully illustrated the havoc that can be wrought in the church, not by rivalry of new opinion with old, but by bitterness and clamor awakened between defenders of the old and champions of the new. Undoubtedly the modern movement of critical investigation into the Bible has been attended with many extravagances, but it is certainly possible to say today with all assurance that it has not done the Bible or the church fundamental harm. The power of the Bible over the world is today stronger and deeper-seated than it ever was. Christianity has not been in any wise undermined in its Scripture foundation. The basic word of revelation stands, if possible, even more safe and sound than a generation ago, because it has meantime withstood a colossal test. If, therefore, the church has come through the era of Biblical criticism in any degree a weaker church than before, the weakness results, not from the criticism, but from the spirit of debating it. The mischief has ensued when that which should have been a friendly and high-souled discussion has been permitted to degenerate into a battle of relentless tongue-lashing.

[*The Christian World.*]

You may take no place in the ranks of learning or of science; but none can prevent your entering the lists of love and of service. The learning may in the end prove out of date; love never grows old, never misses its aim. The soul that is fired with faith and hope carries everywhere its instant benediction. It shines in the countenance and radiates health by a glorious contagion. It is like the Alps. The Alps do not know you, never heard your name; but just because they are Alps, their snowy summits catching the sunlight, their glorious air charged with force, their immortal beauty shining in upon the soul,—just by being that, what a boon are they, all unknowing, to the nerve-worn travelers who look upon them! Oh, for more Alpine souls! The soul never grows for itself; it grows that others may climb on it to the heights. It gives all it receives, gives without knowing it is giving. Yes, we are here to give, and to taste its blessedness. Our contribution may seem of the poorest, but the universe would not be complete without it. No ore else can offer it. The Spirit of holiness, striving in His eternal struggle to shape this rude world into a kingdom of light, looks for our cooperation, for our contribution. Shall we offer aught less than our best?

[*The Christian Advocate.*]

When the teacher of a group of small children, after describing the transcendent beauties which shone in the character of Jesus, without mentioning his name, asked the little ones if they knew to whom she was referring, one cried out exultantly, "You must mean my mother." O mother, heavy are the burdens of thy life, and few the compensations awarded thee by the world, yet is it not reward enough so to represent the beauty of holiness to unformed minds that they shall conceive thee to be a manifestation of God?

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been *translated* into the German language and printed as a *special edition* with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

Two new translations into German have been made and are now on sale. "Die Christliche Wissenschaft: Das Evangelium von dem Reich" ("Christian Science: The Gospel of the Kingdom"), a lecture by Judge Clifford P. Smith. "Im Dienste des Vaters" ("The Father's Business"), containing five articles.

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

The lecture entitled "Christian Science: The New Birth," by Bicknell Young, C.S.B., has been printed in regular pamphlet form and is now ready for distribution. Thirty-two pages and cover.

The English pamphlet "Christian Science: Its Principle and Method," by Mr. Young, will be retired as soon as the present edition is sold out, but the Society will continue the publication of the French, German, and Swedish translations until further notice.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by bank draft, express order, or postal money order payable at Boston post-office. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy	$ .05	$ .06	$ .07
Twenty-five copies	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.40
One hundred copies	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913; XIIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "I" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

That express companies cannot escape regulation by the interstate commerce commission on the ground that they are joint stock associations instead of corporations, was decided by the Supreme Court of the United States in the case of the Adams Express Company, which successfully resisted a suit brought by the government in the southern district of Ohio charging the company with violating the interstate commerce act. The statute in prohibiting certain practises, mentions "corporations" as being forbidden to engage in them, and the express company took refuge behind the fact that it was not a corporation. "It has been notorious for years," said Justice Holmes, who delivered the opinion, "that some of the great express companies have been organized as stock companies for the express reason, it seems, to evade this law." Pointing out that it was clearly the intent of Congress originally to include express companies, Justice Holmes added that if there were any doubt as to the original intent to include them, it had been removed by subsequent amendments to the law, which have applied it specifically to express companies.

Instructions to postmasters have been issued for handling of C. O. D. parcel post packages, and the regulations will be effective July 1. Charges on packages will be collected from addressees on and after that date, provided the amount on a single parcel does not exceed one hundred dollars. The fee for collection will be ten cents in parcel post stamps, to be affixed by the sender. This fee will also insure the package against loss to the actual value of the contents not exceeding fifty dollars. The sender will get a receipt showing the amount to be collected, the amount also appearing on a tag attached to the package. The addressee will receipt for the package on the tag, which will serve as an application for a money order. C. O. D. parcels may be accepted for mailing by rural carriers, and will be delivered by city and rural carriers and special delivery messengers. Such packages will not be mailable either to the Philippines or to the Canal Zone.

The power of the states to fix reasonable interstate rates on interstate railroads, until such time as Congress shall choose to regulate these rates, was upheld by the Supreme Court of the United States in the Minnesota freight and passenger rate cases. At the same time the court laid down far-reaching principles governing the valuation of railroad property for rate-making purposes. The decision, regarded as one of the most important ever announced by the court, has been under consideration for fourteen months. Railroad commissions from eight states, with the governors of all of them, filed briefs in support of the states in these cases, recognizing that the principles involved affected them all.

A number of men of Baltimore, Md., are planning to incorporate an organization the object of which will be to urge on Congress the establishment of a forest reserve between the cities of Washington and Baltimore. The proposition contemplates the utilization by government of about one hundred thousand acres of natural timber land extending from Bladensburg on the District line, northeasterly halfway to Baltimore, and eastwardly to Annapolis. The value of the territory it is proposed to annex for the reserve ranges from eight to twenty-five dollars an acre, so that the entire tract, it is said, could be obtained from an appropriation of two million five hundred thousand dollars.

The California Legislature, Progressive in its politics, which recently closed its sessions, enacted measures of importance which may be summarized briefly as follows: workmen's compensation act, minimum wage act, mothers' pension act, rural credits commission act, civil service commission act, state water commission act, corporation commission act, primary election act, "blue sky" act, weights and measures act.

It is officially announced that all the heavy concrete work of the six locks of the Panama canal has been completed. The lower guard gates at Gatun and Pedro Miguel and the upper guard gates at Miraflores will be closed as soon as possible after June 15, the plan being to allow Lake Gatun to fill. Gatun lake will be an artificial body of water of one hundred and ten square miles. Its greatest depth will be ninety feet.

The Supreme Court of the United States refuses to review the decision of the Ohio federal courts, which, in effect, hold that contracts between the United States Telephone Company with some three hundred telephone exchanges in Ohio, Indiana, and Illinois towns were not enforceable because in violation of the antitrust laws.

The troubled section of West Virginia in which both miners and operators admit that conditions of practical warfare were present for months, was visited last week by a committee of five United States senators.

Five commissioners were elected in Jersey City, N. J., last week to carry on the commission form of government for which the electors voted last April.

International.

The American meat packing companies operating in Argentina are not considered as a trust by the Argentine government. The minister of agriculture, in his reply to the note sent to the government by six of the leading Anglo-Argentine chilled beef companies, which stated that if the present onerous situation should continue they would close their plants, declared that after investigation the government considered it was not called upon at present to modify the existing conditions. If, however, he said, new facts should later prove that the intentions of the American companies were to develop a combination disadvantageous to the country, he would adopt the necessary measures to prevent such an occurrence.

Moulinais, a French aviator, flying in a Morane-Soulnier monoplane equipped with an eighty-horsepower Gnome motor, covered the distance between Paris and Warsaw, nine hundred and thirty miles, in fourteen hours and twenty minutes of elapsed time, nine hours and fourteen minutes of actual flying time. The average speed was 100.7 miles per hour, but he made two stops. The last stage of three hundred and fifty-five miles was done in two hours and thirty-five minutes, or one hundred and thirty-seven miles per hour.

The Chinese House of Representatives has rejected the foreign loan and the Mongolian treaty. This is a protest by the democratic party against the autocratic methods of the government. Both loan and treaty will doubtless be ratified in a different form later.

Bulgaria has replied in the affirmative to the telegram from the Emperor of Russia asking the Bulgarian government to submit its dispute with Servia to arbitration. A preliminary condition is that the two countries shall demobilize their armies.

Reports announce a satisfactory arrangement of differences between Greece and Bulgaria made temporarily at Salonica by General Ivanoff and Colonel Dousmanis, who have established a neutral zone.

A parcel post bill has been enacted by the Canadian Parliament. It follows in a general way the form of the United States act.

Industrial and Commercial.

As a result of a recent meeting of the Northern Minnesota Development Association, a convention to consider land clearing will be held in Duluth on July 1. The delegates were impressed with the need of organizing companies to undertake the work of clearing land for the farmers, and with this end in view a committee will meet in Duluth to devise ways and means for the improvement of ten million acres in the state. An amendment to the state constitution is before the people, embracing a fund for the reclamation of three million acres of state land.

The project of erecting two thousand model cottages in East Springfield, Mass., under a cooperative building plan, at a cost of five million dollars, was seriously discussed at a dinner of fifteen representative real estate men at the Navasse Club. The plan is to form a large stock company to do the building, and in this way it will be made possible for workingmen and small-salaried employees with a fair amount of savings to build their own homes through the company, or to buy them on easy terms from the same source.

The Newfoundland seal fishery of 1913 has just closed with a more successful record than that of last year; for this year 272,965 seals, valued at $494,406, were caught by a fleet of nineteen ships manned by 3608 men. No ships were lost during the two months' cruise, and no serious accidents occurred, though three of the vessels were disabled temporarily in a gale.

Bids have been asked of eastern shipyards in the past few weeks for ten large steamships for leading transportation lines. They will cost about twenty million dollars, and steel requirements will be about thirty thousand tons, largely plates and shapes.

One hundred and ninety-two thousand pounds of meat, including veal, beef, and mutton, arrived at San Francisco on the steamer Sonoma, this being the third shipment of meat received from Australia.

A group of men have associated themselves together to develop sixty thousand acres of "cut over" lands in the Jump and Yellow river valleys of north central Wisconsin into dairy farms of eighty acres each.

Sewing machines valued at ten million dollars were exported from the United States in 1912, more than four million dollars' worth going to Europe.

The foreign sales of the United States have jumped from twenty-seven millions in 1852 to over one thousand millions in 1912.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

PRACTICAL CHRISTIANITY.

CLARENCE W. CHADWICK.

THE world is famishing for practical Christianity, for it is tired of the dead theories and fluctuating opinions of men, which no longer satisfy. Like the prodigal of old, it has turned its back on the dead past and has begun to think of home. The Father's welcome is no longer a theoretical uncertainty, but a practical reality. The Christ, the Saviour of men, is no longer a mere historical personage, but is the ever-present Truth that heals, blesses, and saves. This Truth still calls to the weary and burdened ones of earth, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

The influence of demonstrated Christianity which is broadcast in the world today is the scientific leaven that is spiritualizing consciousness and thus making it possible for humanity to lay hold of the teachings of the Christ. Never before, since the beginning of the Christian era, has the world been so eager to learn of him who spake as never man spake; never before has "the Book of books" been read and studied with such marked interest and respect; never before have the words and works of the great Master meant more to humanity than they do today. No longer is it possible to read the Bible and not be impressed with the great stress that Jesus laid upon his works. The lethargy of "faith without works" had well-nigh relegated Christian healing to a forgotten past when Christian Science announced to the world the power of the ever-present Christ in practical demonstration; and herein lies the secret of the wonderful moral and spiritual awakening which is today evident in all parts of the world.

Christ Jesus was not a theorist; he was the scientific practitioner or demonstrator of God's power, the power of divine Mind. He came to show men how to work out and earn their salvation by doing precisely what he did; that is, by healing the sick, the sinful, and the sorrowing, and raising the dead. By doing his own work perfectly he showed what implicit obedience to God's will would do for one and all. Christian Science has taken Jesus at his word, and is proving to humanity the practical availability of divine power to arouse the slumbering thought through moral and spiritual healing. Only through such healing can the coming of Christ, Truth, ever be realized by the individual; in no other way can the fruits of transgression be destroyed and the sinner be reformed. Mere profession of belief "on the Lord Jesus Christ" never saved from sin or its consequences; the only reformation is the putting off of the old man. Sin indulged brings retribution, and often sooner to a student of Christian Science than to any other religionist, because the coming of Christ to him has revealed the unreality of sin and the sure punishment that follows its indulgence. He who knows not Christ neither understands the mythical nature of evil nor the healing power of Truth. The mental recognition or coming to us of the healing Christ marks the egress of both sin and disease from the mind and body of the individual.

The world is sadly in need of an apprehension of this higher meaning of Christ's mission on earth, and Christian Science is making it practically available for all who will honestly investigate its teaching. Results prove that its presentation of the Saviour's mission in the light of revelation is working marvelous changes in the thought of thinking people the world over. The generous measure of respect which is being shown to Christian Scientists is evidence of a practical rather than a theoretical faith on their part, of a faith that takes hold of the unseen facts of existence and applies them to daily needs. The eagerness with which the authorized literature of Christian Science is being perused by all classes of people is certainly an encouraging sign of a wide-spread awakening. The leaven of practical Christianity is rapidly and effectively permeating every avenue of human thought. A natural and lawful fermentation is the result, welcomed by all who are sincerely striving for the conquest of good over evil.

It is the province of Truth to overturn and correct every system of thought and practise which is not founded on the rock, Christ. The selfish and turbulent elements of the human sense will necessarily cry out against that which decrees and demonstrates the abolition of all that is unlike God, good. Those who reckon from the standpoint of the physical senses will find little satisfaction in this process of divine correction, while those who are spiritually alive to the fact that redemption must come through Christ, will welcome every sign of conflict between right and wrong until Truth reigns triumphant.

The conservation of human health and life cannot be achieved without a right idea of God and of man's relationship to Him. The discovery and administration of a thousand so-called remedies will never reveal to humanity the meaning of life eternal. Neither life nor health can be found in matter, as neither is cellular nor protoplasmic. Through sore travail of mind and body the materialist will cease delving into matter for the issues of life and will meekly accept the teaching of the Master, that a right understanding of God and His Christ constitutes life eternal. Without a right or spiritual concept of God there is no practical human conservation. Right practise is right mental activity. Any so-called activity of thought which excludes the Christ or true idea of God can accomplish no lasting good for humanity. That condition of thought which is ever learning from "the tree of knowledge of good and evil" but never coming to "the knowledge of the truth," will continue to boast of its benefactions to the human race until the troubled dream of matter is pierced by a ray of spiritual enlightenment. Then will it be admitted that "without me [the true understanding of God] ye can do nothing."

The time has already arrived when every human system is being summoned before the bar of Truth to give practical and tangible proof of its right to existence. There are many which are not standing the test of scientific investigation and which would enlist the forces of human law to bolster up a waning prestige and inadequate practise. The annals of history will finally record "the survival of the fittest," physics will give place to metaphysics, and obedience to the

Digitized by Google

teachings of the Master will be recognized as the sole remedy for every human discord, whether physical or mental. The recent testimony of an old-school physician to the effect that "the best physicians have least use for medicines and use them almost exclusively for the psychic effect," proves the leavening influence of practical Christianity. The signs of the times evidence beyond all doubt the fact of a mighty upheaval and a veritable resurrection of thought above the materialism of the past. People in all the walks of life are entering more and more into the realm of right thinking and living; they are striving as never before to gain the mastery of self and to vindicate divine Principle. So much of a helpful, practical nature has been accomplished through the ministrations of Christian Science that denunciation and ridicule no longer hinder the onward march of Truth. People of the very best class, from the various denominations, have found in Christian Science something that satisfies, and with the courage of honest conviction they are rallying to its standard.

The experience of one Christian Scientist, while returning to his home in California, serves to illustrate the great gulf between theoretical and practical Christianity and the availability of ever-present, impersonal Love. In the same coach with him was a mother with her invalid child, who was being taken West under the advice of the physicians. One night the babe was very low, and the porter sought for a doctor, but could find none. In this emergency the Scientist went to the mother, and gently reminding her that the great Physician is ever at hand, offered to treat her child. Permission was given, and, to use his own words, "knowing that God is all that is present, the child responded at once, and mother, brother, and everybody in the car rejoiced. One gentleman asked me what did the work, and I replied that it was the all-presence of God. Then he said to me that it was glorious to have a God who is not only always present but is all-presence."

Truly does our Leader say: "Practise not profession, understanding not belief, gain the ear and right hand of omnipotence and they assuredly call down infinite blessings" (Science and Health, p. 15).

DIVINE EVER-PRESENCE.

LUCY HAYS EASTMAN.

ONE evening two friends were looking at the glories of the stellar display. One was a student of astronomy, the other an uninstructed admirer of the heavens. As the constellation of Lyra was pointed out to the latter she inquired the name of the dim star in the triangle. "You mean the double star," said her companion. "No," she replied, "the single little star." "Take my place at the eyepiece and tell me how things look," said the student, as he made way for his friend at the telescope before them. Looking through the instrument, the other exclaimed, "Why, I see two stars just where that dim little one appeared to be; and just think!" she added, "they have always been there, but not until the telescope was invented was the truth about them even dreamed of!"

This incident is one of many which might be cited to prove how sadly so-called material sense is in need of something apart from itself whereby to gain a knowledge of things as they actually are, for if it cannot discern the facts concerning material objects, how can it behold the realities of being? Yearningly the Master cried, "Have I been so long time with you, and yet hast thou not known me?" Despite, however, our human ignorance of Truth, there is ever at our side, "nearer than hands and feet," a divine ever-presence, and though unseen by material sense, all down the centuries human consciousness has dimly felt this presence. Since it has believed that the actual can be known only through the medium of the material senses, it has been forced either to put off a knowledge of this presence to an uncertain, unknown future, or else to grope blindly in faith without daring to hope for a satisfying apprehension.

But why should we yield to such ignorance? Why should we permit sense lethargy to deprive us of recognizing the infinite good that forever envelops us? Why let it close our eyes to the spiritual idea of God and His universe which is with us "alway"? Surely it is not God's purpose to withhold from us a knowledge of His presence, any more than a loving father would prevent his children from being closely associated with him. Nay, now is the time to cease declaring God to be afar off, and instead, to behold Him in our very midst, for it is written, "They shall all know me, from the least of them unto the greatest of them." It is indeed a present possibility for human consciousness, even while still wrestling with the beliefs of the flesh, to behold God, at least in part, if it will but put aside material thought processes and look out upon the universe through the lens of Spirit.

Such a lens has been presented to the world of today through Christian Science in its demonstration of the power of the Word, which, when spoken into human consciousness, operates as divine law, moving upon the face of mortal belief and rending the veil of sense from the top to the bottom. John has told us that this Word is not only with God, but it is God, that it is the life and the light of men. Is it not plain, then, that as human thought is uplifted to abide in this Word, to that extent it is abiding in the divine presence? The door of human consciousness is opened to receive this Word by an active desire to know God and the willingness to let go of mortal beliefs, while the spiritual energy with which confidently to assert this Word, in the face of the material testimony that would deny and exclude the presence of God, is generated through an all-absorbing love for good.

The term "to assert" is derived from a Latin verb which means "to bind together." To assert the Word of God, then, is to link consciousness to Truth; the human mind is awakened from its dreams of material presence to behold the one and all-inclusive presence of Spirit. The unillumined human consciousness may well exclaim in the words of David, "Such knowledge is too wonderful for me; it is high, I cannot attain unto it"! Let consciousness but touch the hem of the Christ-mind, however, and with the shepherd king it begins to sing, "Whither shall I go from thy spirit? or whither shall I flee from thy presence? If I ascend up into heaven, thou art there: if I make my bed in hell, behold, thou art there." Such a changed view-point from spiritual blindness to sight, from a sense of spiritual absence to divine presence, is neither miraculous nor occult; it is as natural and orderly as is the mental process through which the multiplication table is finally understood.

Gaining the spiritual point of view through self-immolation, we discover man to be a spiritual idea coexistent with God. We learn that he does not have to strive wearily to enter the presence of God; he is already there. He is forever at-one with the purpose, interest, and employment of the one great caretaker of the universe, and nothing can forbid or interdict his intercourse with God. Man is never for a single moment shut out from the divine presence, and thus never for a moment absent from Life, Truth, and Love; and this man, with all his prerogatives and powers, is to be expressed by us.

Did we but realize this possible unity with good, did we but use more frequently the lens of Science to gaze upon God and man in His likeness, how clearly would we understand "the depth, breadth, height, might, majesty, and glory of infinite Love" (Science and Health, p. 520), and with what joyful satisfaction would our hearts cry out, This is enough! In the consciousness of the divine presence, tired humanity drops its burdens, forgets its woes, and ceases to run to and fro in restless search for health and joy. Surely our songs of gratitude and praise will arise when we are

Digitized by Google

thus ushered into the healing presence of divine Love, not through penance and pleading, but through the spiritual understanding of the Word of God which Christian Science has made possible. Truly has it been written,—

Oh, blest is he to whom is given
The instinct that can tell
That God is on the field, when He
Is most invisible!

GOD'S PROTECTING CARE.

LLOYD B. COATE.

IN that memorable eleventh chapter of Hebrews the apostle gives the Christian world a summary of what had been accomplished through faith from the time of righteous Abel down to his own day. Just prior to what is called the ascension, as recorded in Mark's gospel, Jesus stated that signs of healing "shall follow them that believe," those who understand God's law. Recently, when portions of Ohio and Indiana were inundated, many Christian Scientists passed through trying experiences. To listen to the story of those who stood upon housetops in the cold and rain before being rescued in a boat, or of others who were surrounded by both water and fire, and of still others who were marooned in attics, and to hear them tell what a comfort Christian Science was to them, is to be reminded of these words in the Hymnal (p. 70):—

O for a faith that will not shrink,
Though pressed by every foe;
That will not tremble on the brink
Of any earthly woe;

A faith that shines more bright and clear
When tempests rage without;
That when in danger knows no fear,
In darkness feels no doubt.

The achievements through faith, as recounted in the epistle to the Hebrews, were no idle tale to these Christian Scientists; they were a vivid reality to many of them. And why? Because of what Christian Science teaches, that God is All-in-all, omnipotent, omnipresent, and omniscient; that God, divine Love, does not send storm, flood, or fire. In I Kings, we read these words spoken by God to the prophet Elijah: "Go forth, and stand upon the mount before the Lord. And, behold, the Lord passed by, and a great and strong wind rent the mountains, and brake in pieces the rocks before the Lord; but the Lord was not in the wind: and after the wind an earthquake; but the Lord was not in the earthquake: and after the earthquake a fire; but the Lord was not in the fire: and after the fire a still small voice."

Our revered Leader says in "Science and Health with Key to the Scriptures" (p. 410): "Every trial of our faith in God makes us stronger. The more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love;" and in Isaiah we have this beautiful promise: "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee." The great joy that possessed Christian Scientists in those hours of patient waiting was this peace of mind which was foretold by the prophet. They believed that God would provide a way whereby they would be rescued, and their faith was justified.

Some favorite passage of Scripture illumined by the teachings of Christian Science, or some declaration of Truth from the writings of our revered Leader, proved a staff upon which to lean. So, instead of coming out of the flood with long-drawn faces, the countenances of Christian Scientists fairly beamed with happiness, for it had been proven more clearly than ever before, how good God is. Notwithstanding that many lost much in the way of earthly possessions, yet they were happy. They knew that divine Love had given them all they possessed, and would again meet their every need. Through this experience there dawned upon consciousness a brighter glimpse of the real meaning of faith, "the substance of things hoped for,"—a glimpse of reality, God's loving care. They marveled and thanked God for the wonderful Lesson-Sermon which had been prepared by the Bible committee many months before for that particular Sunday, their deliverance and this Lesson-Sermon clearly proving how divine wisdom leads.

In passing through this experience, many realized as never before the meaning of these words of the psalmist: "The Lord on high is mightier than the noise of many waters, yea, than the mighty waves of the sea;" and were not a little comforted by another promise: "Yea, though I walk through the valley of the shadow of death, I will fear no evil: for thou art with me; thy rod and thy staff they comfort me." It was six weeks before the Scientists in Dayton could hold a testimonial meeting, the two congregations meeting in First Church edifice. Later, the board of education granted Second Church permission to hold services in one of the high school auditoriums. Perhaps a few of the many testimonials given since regular services have been resumed will be of interest:—

A husband and wife whose home was in the flood and fire, the house filled with smoke and terrific heat, told of the great comfort Christian Science was to them. They believed that God would provide a way for them to be rescued, and it came to pass, some members of the household being rescued in a boat, others on a raft.

A lady who, after being given up to die, had experienced a wonderful healing through Christian Science some nine or ten years previous, stated that she thought she had been grateful for her blessings, but that she never knew what gratitude really meant until her deliverance from a most trying experience in the flood. She told how she was able to comfort those of other religious faiths while marooned, and this because of her better understanding of God gained through the study of Mrs. Eddy's writings.

A Christian Science practitioner stated that he was marooned in an attic with forty-five people for two days and nights, the water on the street in front of the house being about eighteen feet deep. During this time some of the number were quite ill, and he was able to help them through Christian Science. All were rescued. Knowing that God's promises were sure, he never doubted but that his family would be saved.

Two women, one a Christian Science practitioner, were driven to the housetop and stood there for twenty hours or more before being rescued. This practitioner spoke of the great comfort gained from these words in "Miscellaneous Writings" (p. 277): "'The Lord reigneth; let the earth rejoice.' No evidence before the material senses can close my eyes to the scientific proof that God, good, is supreme. Though clouds are round about Him, the divine justice and judgment are enthroned."

Two trained nurses resided near a Christian Science practitioner in the flooded district. They had a high estimate of Christian Science, and though driven to the attic by the rising waters, they afterward stated, "We had no fear, for we knew that this Christian Science family were praying for all in the neighborhood."

In a most striking manner were these words from our text-book (p. 570) exemplified: "What if the old dragon should send forth a new flood to drown the Christ-idea? He can neither drown your voice with its roar, nor again sink the world into the deep waters of chaos and old night. In this age the earth will help the woman; the spiritual idea will be understood. Those ready for the blessing you impart will give thanks. The waters will be pacified, and Christ will command the wave." No sooner had the word gone forth that help was needed, than throughout the length and breadth of the land there swept a tidal wave of love, and the spiritual idea of the brotherhood of mankind was in a measure comprehended; men knew no creed—Jews, Catho-

Digitized by Google

lics, and Protestants, all were one family, one God and Father of all being recognized.

The writer is sure that he voices the sentiment of all Christian Scientists in saying that they sincerely thank the Board of Directors of The Mother Church in Boston for sending a worker to Columbus, Ohio, to organize a relief committee for Ohio and Indiana; and they are likewise grateful to all who responded to this call, either with money or clothing. This act of kindness has meant much for the cause here, in that it proves that Christian Science is a practical religion in every respect, whether in the healing of sin and sickness, or in helping people to reestablish themselves in their homes.

"BE THOU FAITHFUL."

W. STUART BOOTH.

KNOWING that the body is not the man, and that only that is real which expresses the qualities of Mind, Mrs. Eddy, in the chapter entitled Glossary in "Science and Health with Key to the Scriptures," has resolved not only things, but also men, into thoughts, and the world at large is beginning to acknowledge this truth as elucidated by Christian Science. In the passage referred to we find that fidelity is given as the leading characteristic of Abraham, and as one studies the life of this ancient worthy it is clear that faithfulness to his highest concept of God and God's will was predominant. When he was called to sacrifice his son Isaac, his faithfulness to his highest ideal of God outweighed the claims of self; and when his demonstration in thought was more complete, he was led to look up, and found that his willingness to be obedient to all that was required of him had been a sufficient personal sacrifice. Thus it was that the descendants of Abraham were designated as God's chosen people, not because God had chosen them above others, but because Abraham had chosen God above all else, and had been faithful to his ideal.

The history of the Israelites shows that peace and prosperity attended them when they were faithful to the one God and His law. Their leaders and prophets who most clearly saw the truth and pointed the way for them, were those whose fidelity to God was unshaken by the claims of sense and self, those who resisted the temptations of place and power with the consciousness of God's omnipresence and omnipotence. Moses was faithful; he "refused to be called the son of Pharaoh's daughter; choosing rather to suffer affliction with the people of God, than to enjoy the pleasures of sin for a season." His fidelity, coupled with humility, made him one of the world's greatest leaders and law-givers.

The fidelity of our great Master, Christ Jesus, was marked even as a boy, when he said to his mother, "Wist ye not that I must be about my Father's business?" It is not surprising, then, that it was said of him that he "increased in wisdom and stature, and in favor with God and man." From the beginning of his earthly career until his ascension Jesus' fidelity to his high ideal never wavered. He did in a short span of time that which every one must eventually do, namely, put off the false, material sense of self for the spiritual and true. His unfailing success and marvelous spiritual growth were due in large measure to his singleness of purpose, his seeking first, last, and all the time to do the will of the Father who had sent him; in a word, to his fidelity.

On page 341 of "Miscellaneous Writings" Mrs. Eddy says, "Fidelity finds its reward and its strength in exalted purpose." Perhaps the life of the master Christian furnished the inspiration for these words, but Mrs. Eddy's own life clearly exemplified the truth stated therein, for in "Retrospection and Introspection" (p. 30) she says: "The motive of my earliest labors has never changed. It was to relieve the sufferings of humanity by a sanitary system that should include all moral and religious reform." That her words and works were God-inspired is attested by thousands of men and women the world around who gratefully testify to having been made better physically, morally, and spiritually as a result of the application of the teachings of Science and Health.

Jesus said that "unto whomsoever much is given, of him shall be much required." This certainly applies to Christian Scientists, for unto them has been given the demonstrable rule for right thinking and living. We can all be faithful by using what we already know of Science, even though that be little. It might be well often to recall the parable of the grain of mustard-seed, "which indeed is the least of all seeds: but when it is grown, it is the greatest among herbs." Jesus said: "If ye have faith as a grain of mustard seed, . . . nothing shall be impossible unto you;" thereby urging a more constant and firm faith in God.

That our beloved Leader regarded fidelity as one of the chief foundation-stones in our character building is evidenced by the closing words of her inspired and inspiring article entitled "Fidelity" (Miscellaneous Writings, p. 343): "Among the manifold soft chimes that will fill the haunted chambers of memory, this is the sweetest: 'Thou hast been faithful!'"

"ALL THAT I HAVE IS THINE."

FRANCES M. GORRELL.

IN the fifteenth chapter of Luke we have the story of two brothers who received their inheritance from their father. One, the younger, took his share "into a far country, and there wasted his substance in riotous living," we are told; while the other stayed quietly at home, caring for the flocks and herds, and obeying, to the best of his understanding, his father's wishes. When the younger brother "came to himself," after a vain search for happiness in material pleasures, he realized that only in serving others could he be truly blest, and in the spirit of humility he returned to his father and found him waiting with outstretched arms. The older brother, blind to the real change of thought and purpose by which his brother was actuated, remonstrated with his father for expressing his joy at his son's return in such a demonstrative manner; but the father-love was broad enough to encompass more than one child, and he said, "Son, thou art ever with me, and all that I have is thine."

In the light of Christian Science this narrative brings to the student many wonderfully helpful lessons. As sons of God we each have an equal inheritance,—of intelligence, goodness, power, love; in fact, everything that God possesses. We may think for a while that by using these qualities in striving to acquire peace and plenty, we shall find the object of our search, but sooner or later we shall learn, as did the prodigal son, that we must return to our Father, God, and ask Him to make us as servants. We, too, shall find the Father waiting with outstretched arms, with the same measure of love and patience, if with all our heart we truly seek Him.

It may seem to us that others have much more than we,—of ability, happiness, ease, or material supply; but we need to turn our thought Godward when this temptation appears, and remember the Father's words, "All that I have is thine." Think of it,—"All that I have is thine"! No anxious waiting for years of experience to accumulate a vast fortune, no competition, no discount, but only affluence, now and forever. In Science and Health Mrs. Eddy says, "Love is impartial and universal in its adaptation and bestowals" (p. 13). As we turn our thought toward God and let it dwell on His wealth, on the true substance, our material condition, whether it be a belief in sickness, sin, or poverty, must perforce give way, and health, purity, and abundance be expressed.

[Frederick Dixon in *Kentish Express*, Ashford, England.]

I am sure that the Vicar of Tenterden, in the attitude he has taken toward Christian Science, is acting up to his highest sense of duty. At the same time, will you permit me to say that he seems to be living in a past age? Three centuries ago it might have been possible for him to direct the attendance of the dwellers within the limits of his parish, under penalty of a fine, at the parish church. *Tempora mutantur*, however, if I may quote a very trite maxim, and for a clergyman in the second decade of the twentieth century to write letters to inhabitants of the town in which he lives, demanding to know whether they are attempting to convert his parishioners to Christian Science, and quoting his ordination vow as giving him no option but to do this, is perilously near making the cause he has at heart ridiculous. A lady and gentleman resident in his parish have adopted the teaching of Christian Science. They have read their service in their own house, and such of their friends as have wished, have attended these services. Suddenly this lady and gentleman receive a letter from the vicar, demanding to know whether they are "trying to convert some of his parishioners to the doctrines of so-called Christian Science," and also demanding to know whether they hold services every week. This raises the very serious question of the right of the vicar of a parish to assume the authority to demand such information from his fellow townsmen, and to claim to control the freedom of their actions as to whether they hold Christian Science services or not. One thing is perfectly certain, that if the vicar thinks he is going to suppress Christian Science in this way, he is making a great mistake. He is, on the contrary, merely helping to lay the foundation for the extension of the Christian Science movement in his parish.

Apart from this, the vicar launched against the Christian Science movement what may be termed a doctrinal attack. He attacked it from what he called the medical and religious sides. Until, however, he is able to delete from the New Testament the command of Jesus of Nazareth to preach the gospel and to heal the sick, he will find it impossible to separate these two headings, which are not only complementary to each other, but constitute the very basis of Christian practise. He began his sermon, as all these sermons always are begun, by a reference to false prophets. That reference to false prophets is something in the nature of a boomerang. Because Jesus warned his followers against false prophets, it does not follow that everybody who fails to accept the orthodox position is a false prophet any more than, as Macaulay once said, it proves that because St. Paul was beaten with rods, everybody who is beaten with rods is a St. Paul. The vicar is only really engaged today in attempting something which routed the papal authority in England, which broke its Protestant successor into sects, and which is always foredoomed to failure. He is engaged in the attempt to control freedom of thought, and to make people who do not agree with him, accept his point of view because it is his point of view. If it is any satisfaction to him to call Christian Scientists false prophets, it would be almost unkind not to permit him to indulge in the luxury of the phraseology; but he must remember that he is merely copying the example of generations of men who have failed in the effort to strain human intelligence through their own sieves.

The heterodoxy of Mrs. Eddy, according to the vicar, reaches its meridian at two points. First, she is unsound on the Trinity; second, she demands the practise of healing in demonstration of the precept of preaching. Now the vicar is a little unwise, at this time of day, in drawing too much attention to dogmas. When the answer comes, he can no longer ring a bell and cry "Heresy!" or it would perhaps be more exact to say, if he does ring it, nothing is going to happen. The orthodox view of the Trinity has never been too clearly defined. The effort to do so led to one of the great schisms in the early church, at the Council of Nicæa, and the battle waged there between the Homoousians and the Homoiousians has left Christendom in considerable perplexity ever since. An attempt to state the matter with some definiteness was made in the Athanasian creed, but to a large extent its recital has disappeared from the services of the church. Not a generation ago, its reading had fallen into such desuetude that the Bishop of London commanded all the clergy in his diocese to revive it. A very well-known London rector replied that if his lordship insisted, he would not only read it, he would explain it. The bishop was understood not to have pressed for the explanation. The Christian Science teaching of the Trinity has the advantage of being extremely simple and in perfect accordance with the Bible.

Finally, the vicar's effort to obscure the issue of healing is also bound to develop into the proverbial boomerang. Again and again, in the most unequivocal language, Christ Jesus insisted on the intimate connection between healing and preaching, and made the efficacy of the latter the test of the value of the former. Only by playing with words is it possible to avoid this admission. Because in forty years Christian Science has not succeeded in banishing disease from the world, does it prove that healing is not an integral part of every Christian's duty any more than the fact that two thousand years of preaching have not overcome sin proves that preaching is a work of supererogation? But if those two thousand years of preaching or precept had been the corollary to two thousand years of healing or practise, millions of human beings would not today be inquiring whether or not Christianity is the truth which is to make the world free. "He that believeth on me, the works that I do shall he do also," Jesus said. Dare any one pretend that those works were not largely works of physical healing? and therefore did not Jesus the Christ, and none other than he, make the healing of the sick the test of a believer, and so of a Christian?

As for the vicar's assertion that Christian Scientists do not and never have healed the sick, it was the most unfortunate part of an unfortunate attack. Standing in the pulpit of his parish church, he blundered into a statement founded on ignorance, incapable of proof, and absolutely devoid of truth. No one case of real disease, he said, had ever been cured by one of Mrs. Eddy's followers. The Christian Science movement has existed for upward of forty years. During that time, millions of cases of disease of every description have been treated throughout the civilized world. The vicar probably does not know of one in a million of these cases, and yet he says not one case of real disease has ever been healed. I will not use his favorite word, and say this is a dishonest statement; I will confine myself to saying that it is a singularly unfortunate one. Christian Scientists, the vicar went on to say, boasted of their cures, but when asked for names and addresses, invariably refused to give them. He called this dishonest. Now, I do not think it would be any exaggeration to say that dozens of inquiries are made every year of individual Christian Scientists all over the world for such information. When these inquiries are made genuinely, for the sake of those who are sick and in search of help, I should say they were invariably answered; when they are made out of mere curiosity, or, as is very often the case, with ulterior motives, I sincerely hope they are not. How the vicar, who cannot even know one in a hundred thousand of the inquirers, can speak with such exactness, I am willing to leave your readers to judge.

It is only necessary to say one other thing. The vicar claims that his ordination vow requires him to drive Christian Science out of Tenterden. He will succeed in this, not by criticizing in the pulpit his neighbors for doing their best

Digitized by Google

to fulfil the divine command to preach the gospel and heal the sick, but by doing this himself better than they are able. Otherwise he may find that his sermon may be the cause of Christian Science in Tenterden.

[R. Stanhope Easterday in *Muncie* (Ind.) *Star.*]

As to those scoffing at the Christian Science idea of one Mind, we believe that a close scrutiny of this alleged negation in Christian Science teaching will indicate the fact that Christian Science in this particular tenet of its teaching makes a most sweeping affirmation. The burden of the teaching of Moses, and later of the teachings of the great Founder of Christianity, was the fundamental idea of "one God." Jesus further affirmed this basic teaching of only one Mind in his repeated insistence that "the Son [indicative of man in the generic sense] can do nothing of himself, but what he seeth the Father do."

Very far from denying either the belief of sin or our Lord's effectual atonement, two leading tenets of Christian Science teaching indicate a very sane and wholesome comprehension in this regard. They are these:—

"3. We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts.

"4. We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Wayshower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death" (Science and Health, p. 497).

In his effort to refute the Christian Science contention for one Mind and for the perfectibility of man as the "image and likeness" of this one perfect Mind, or Deity, our critic overlooks much significant Scripture. How, for instance, could the "express image" of God be so unlike the divine nature as to sin or suffer? And what did Jesus mean when he declared unequivocally, "The Son can do nothing of himself, but what he seeth the Father do"? Our readers might profitably study in this connection the first chapter of Genesis and the opening verses of John's gospel. Therein will be found a lucid statement as to the relationship of God and man.

The writer's concluding argument as to the matter of healing being proof of divine origin, etc., can only be answered in the words of our Lord's commission to his followers in all ages. It should be recalled also that it was of such "works," or "signs following," that Jesus declared, "My Father worketh hitherto, and I work," thus effectually separating such legitimate evidences of pure and potent Scriptural faith from the doubtful realm of the so-called "subconscious mind," and divorcing spiritual, divine healing from "mesmerism, medium revelations," etc.

[Allan F. McIntyre in *National Food Magazine.*]

I was greatly interested and pleased by the article in your November issue headed "Dietetics versus Drugs," by Professor Rutherford—interested in the statements and authorities given, pleased to see that your publication has independence enough to give your readers a word of truth regarding the allopathic or drug doctors. Notwithstanding their powerful (more or less) political association, or machine, I was reminded of your article today when I happened to come across an editorial in the Pawtucket, R. I., *Chronicle,* and I thought you might appreciate the irony of the last two lines particularly. It follows:—

"Speaking of disease, here is another deplorable confession from no less an authority than the *Medical Record.* In spite of the army of physicians, their discoveries, and their hecatombs of vivisected guinea-pigs, we may doubt, says the *Medical Record,* whether the sum total of diseases is any less than it was before the medical profession reached its present high standing. Preventive medicine has made 'little headway,' and 'in the opinion of some medical men diseases are on the increase.' In the deeper recesses of our consciousness we had suspected something of the kind ourselves, but such heterodoxy on the part of a layman would have exposed him to excommunication with bell, book, and candle, or at least with bacteria, serums, and antitoxins. But with the *Medical Record* behind us, we can afford to creep out into the open."

No doctor who has investigated the subject deeply enough to be capable of rendering an intelligent opinion, will claim that the practise of medicine is, or ever has been, a science, or an exact science. Science means "full, complete," "exact or systematic knowledge." Where are the drugs of fifty years ago,—or ten years ago, for that matter? Are they not constantly changing? Is not the experimenting or guessing going on continuously? Has it not always been so, ever since the days of Hippocrates? Has there in all these hundreds, or rather thousands, of years been found a positive drug specific for one single ailment? No, not one. Where, then, is the science, or exact knowledge of drugs? If it is not now an exploded theory that any drug or medicine can of itself cure, how many hundred years longer are we to be experimented upon before the public will cease to furnish the subjects? If drugs are such a good thing as the doctor claims, why is it, as he admits, that the use of them is lessening? If good, why should we not have more of them instead of less?

I do not see that Dr. Atkinson helps the cause of medicine by bringing in the name of Jesus, the Christ, as "another, and greater, Physician." Jesus did not advocate the use of drugs or medicine in any instance, although he cured all kinds of ailments. Furthermore, he gave explicit directions to his students how to obtain the same results as he did, but he absolutely repudiated the use of medicine or drugs. I should think the line of thought brought up by this allusion would be somewhat of the nature of a boomerang, as there is not a line in the gospels that can be construed into Scriptural authority for the use of medicines; on the contrary, there are many lines in the gospels which go to prove that the use of material means of any kind is profitless. It might be recalled to mind also, that Luke himself, at one time a doctor, gave up the practise of *materia medica* and took up the method of Jesus, explaining that he was able to get better results by the latter method.

[John W. Doorly in *Warrington* (England) *Guardian.*]

Our clerical critic admits that Christian Science has made vast strides in this country, but denounces it as "superstitious and antichristian." He does not therefore give the people of this country much credit for intelligence. What does the gentleman suppose is causing the people to forsake his church and to seek help in the Christian Science churches?

He bewails the serious leakage, but probably if he would go a little farther he would find that the Christian Science church is offering these people something vital, and something which can be made practical in their every-day lives, and this something is the simple teaching of Jesus Christ. Christian Science is teaching these people what God really is, and man's relationship to Him. Through this teaching it is comforting the sorrowful and healing the sick and sinning. It has no rites or ceremonies, but it is revealing to mankind the power and presence of God, of good, the ever-present Christ, the "Lo, I am with you alway." These results of Christian Science are facts, of which there are many witnesses in every part of the world, and for which of these things is it antichristian?

Our critic also states that Christian Science "emphasizes the supremacy of mind over the body, of spirit over matter." Is not this teaching Christian? Is it not the teaching of

Digitized by Google

Jesus Christ, who annulled every material law, walked on the waters, stilled the tempest, fed the hungry, healed the sick, and raised the dead by spiritual means alone? Christian Science teaches the absolute supremacy, not of the so-called human mind, but of that one infinite Mind named God. It acknowledges no other mind, and destroys all inharmonious conditions through the understanding that this Mind is the infinite cause, and that all effect must be the effect of this one Mind, and must necessarily be of the same nature and quality as its cause, that is, spiritual and perfect. It also teaches that matter or evil is but the false sense of this effect, and has neither cause nor reality; that it is the suppositional activity of the carnal mind, and must be corrected through the understanding of the one Mind. Christian Science is, therefore, the understanding of that one Mind or Spirit, God, and that understanding, being causative, operates to destroy a false supposititious mental condition called life in matter or evil. If Christian Scientists are antichristian for believing in the reality of spiritual things and the falsity of material existence, then they are in good company, for this is certainly the teaching of Jesus Christ when he plainly and unequivocally declared, "It is the spirit that quickeneth; the flesh profiteth nothing."

If the preacher will offer to the sick and the sinning more surcease from their troubles than Christian Science is doing, he will not have to think about the vast number who are forsaking the churches and seeking solace and comfort in Christian Science; but until he is prepared to do so, he must be prepared to see the multitude continue in the direction in which they are now going. Today is the day of deeds, and not words, and judged by this standard the Christian Science movement stands preeminent among modern religions as a testimony to the efficacy of "the prayer of faith" to heal and redeem mankind, even as it did nineteen hundred years ago. Under these circumstances it is somewhat fatuous to apply such terms as antichristian to its loving work for mankind.

[William Clarence Ferguson in *Calgary* (Alberta) *Herald.*]

The Bishop of Calgary, some time ago, condemned Christian Science as unchristian. It is quite apparent from his statements that the bishop has been misinformed on this subject, for the authorized teachings of Christian Science are not unchristian. On page 497 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, which book is the authority on this subject, we find this statement: "We solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure." Is there anything in this promise to which any one can take exception as being contrary to the teachings of the Scriptures? Is it unchristian to "pray for that Mind to be in us which was also in Christ Jesus," to observe the golden rule, or "to be merciful, just, and pure"? To this declaration every person who is joining the Christian Science church is asked to subscribe, and it is the rule by which he strives to govern the actions of his daily life. Now, in all honesty, is any person, regardless of his religious belief, and regardless of the form his religious observances may take, who abides by, or who even makes a sincere attempt to abide by, the lofty declarations of purpose found in that short paragraph, deserving of the condemnation of any other Christian?

The bishop is quoted as follows: "I cannot understand how any one who is in this church today, joining in this beautiful service of praise and thanksgiving, can become allied with a so-called religion that robs the Saviour we worship of his divinity." Now, Christian Science does not rob the Saviour of his divinity. A most emphatic declaration on this very subject is made in the text-book previously referred to, on page 497, which reads: "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness." Does that statement deny the divinity of the Christ? Rather, does it not, in the most forcible and unexceptionable language, affirm his divinity? Hence, since this is not the opinion of some one concerning Christian Science, but is an unqualified statement of its teachings, taken from the one authority on that subject, would it not appear that the bishop had been grossly misinformed about it?

Mention was also made of "three persons who last year were made members of the Anglican church, who had given up their Christianity and joined the Christian Scientists." No mention, however, was made of the reason for the action taken by these persons, nor was any mention made of the benefits they had experienced through Christian Science. Yet it was not denied that these people had received help through its application; and this is not strange, for, regardless of the prejudice against what he thinks Christian Science teaches, one cannot deny the fact that it does heal the sick, reform the sinner, and make happy and prosperous citizens out of miserable and poverty-stricken humanity. To be convinced of this fact one has only to observe the lives of the multitudes of rejoicing people who have received the wonderful blessings which are daily and hourly being bestowed through the application of Christian Science.

[Thomas F. Watson in *Fresno* (Cal.) *Mirror.*]

In a recent issue the editor seems to be laboring under the mistaken opinion that there is a sense of rivalry between the Christian Scientists and the physicians, for he states that the doctors are busier than ever, "in spite of the activity of Christian Scientists;" he also says, "Something is wrong somewhere; we wonder where." One might suggest that possibly his apprehension of the situation is at fault, for the Christian Scientists have no quarrel with the physicians; rather do they admire the noble efforts of the better class in behalf of mankind in trying to find a surer remedy for the different ills to which flesh is heir.

Many liberal and broad-minded physicians have even advised patients to try Christian Science. In one of these cases, which came under the observation of the writer, the doctor said frankly: "No medicine can reach your case, and if Christian Science can cure you I will rejoice with you," which he did later, when the patient was healed. Many prefer drugs, but after these material remedies have failed they may turn to the great Physician, "who forgiveth all thine iniquities; who healeth all thy diseases," and be healed. The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, teaches how God's word heals the sick today, as it did nineteen hundred years ago.

[Written for the *Sentinel.*]

SEEKING THE LIGHT.

MARY LOUISE FERGUSON.

I do not ask for riches, power,
For worldly wisdom, strength, or might;
I only ask that every hour
May bring to me the heaven-born light.

Then, loving Father, give me love,
That I may also loving be;
And Life, that I with Thee may move
In vision of eternity;

And, best of all, may purity
Express itself in thought, word, deed;
Then perfect, in Thy likeness, I
Shall know and live the truth indeed.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

ONE GOD, ONE POWER.

IN the chapter, "Animal Magnetism Unmasked," in Science and Health, on page 102, Mrs. Eddy writes, "Mankind must learn that evil is not power;" and while this learning may at times seem to be a slow and almost interminable process, it is essential not only to a thorough mastery of Christian Science, but also to that freedom from sin and sickness which Jesus preached and demonstrated and to which all mankind is entitled. Mortals have gone along for centuries believing and declaring that evil is power, that it acts with more certainty than does good, and, at least inferentially, that God is its author and uses it ultimately to make men good.

This latter belief, which has been conspicuous in the unthinking routine of daily affairs, is one of the most subtle and enslaving illusions to which mortals have given allegiance. If Mrs. Eddy had not taken issue with this concept of God, her teachings would not have met with such determined opposition as has marked the past thirty-eight years, and the efforts to misrepresent and overthrow Christian Science during that time would not have been so persistent. To have followed popular beliefs would have been a much easier course and would have made her a popular preacher though ephemeralizing her work; but fortunately for humanity Mrs. Eddy had the courage to withstand temptations of this kind. As she says on page x of the Preface of Science and Health, in speaking of her work, "The author has not compromised conscience to suit the general drift of thought, but has bluntly and honestly given the text of Truth."

In boldly departing from the theological beliefs of the centuries, and going back to the teachings and example of Christ Jesus, Mrs. Eddy took as her foundation the omnipotence, omniscience, and omnipresence of God, and upon this foundation she has logically built up a system which enthrones good and places evil where it belongs, namely, in the category of false human beliefs which are destroyed by Truth. Those who contend for the reality and power of evil do so largely without realizing that they thus dishonor God; for if evil were real and had power, it would either be because God had created it or because there is another creator. Christian Science sustains and demonstrates the primal commandment, that mankind shall have and acknowledge no other than the one true God, as the basis of all harmonious existence, and every claim it makes in behalf of the allness of good and the consequent nothingness and powerlessness of evil, is consistent with this first, greatest, and most comprehensive of all the commandments.

To say that we believe this commandment is, however, not sufficient. There must be an active demonstration of the truth that there is but one God, one power,—"one God and Father of all, who is above all, and through all, and in you all," as Paul declared to the church at Ephesus. If we believe the fundamental truth of Christian Science, "There is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation" (Science and Health, p. 468), then we must order our thoughts, words, and actions in accordance with this understanding,—act as endued with power "over all the power of the enemy," and see as did the seventy "even the devils" subject unto us. What may be expected as the ultimate outcome of this active demonstration has been outlined by Mrs. Eddy on page 340 of Science and Health, where she says: "The divine Principle of the First Commandment bases the Science of being, by which man demonstrates health, holiness, and life eternal. One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed." Such an attainment will be the dawn of the millennium, but it is possible and is worthy of our endeavor.

ARCHIBALD MCLELLAN.

DRUGS OR DIVINITY?

THERE are not a few beginners in Christian Science who are puzzled when called on to explain how cures are effected by the use of drugs, and one such has recently asked, "If the worth of things is to be determined by their fruits, and some material remedies have brought health as certainly as has Christian Science, according to the testimony of those benefited, why should not the good of both be recognized and accepted?" In answer to this it may be said that the world's greatest physician did not hint in any way that his followers were to vary from his oft demonstrated method of drugless healing, a fact to which Christian people today are strangely indifferent.

Further, human ills are regarded as effects by most Christian believers, as the result of sin, the infraction of divine law, and it is clear that to do away with effects we must remove the cause. Now the infraction of law is, in the nature of things, the outcome either of ignorance or of wilfulness, *i.e.*, of mental states, so that in the last analysis the removal of the cause of sickness and suffering involves a mental change, transformation in the realm of thought. This change may be superficial, a mere shifting of beliefs, or it may be fundamental, the substitution of basic right ideas for a false sense, the renewing of the mind, as St. Paul has named it. Moreover, it is a matter of general information today that the mental state has very much to do with health; that fear begets and intensifies disease, and the contention of Christian Science respecting the significance of belief in temporarily affecting physical conditions, is being fully sustained by phenomena with which the world is rapidly becoming familiar.

The distinctive feature, however, of Christian Science lies in this, that it "not only reveals the origin of all disease as mental, but it also declares that all disease is cured by divine Mind," and that "there can be no healing except by this Mind, however much we trust a drug or any other means toward which human faith or endeavor is directed" (Science and Health, p. 169). Belief in the power of serums, etc., may effect temporary cures, but it is perfectly apparent that in this process the cause of disease remains untouched and the problem of overcoming all evil unsolved, and this is the testimony of the history of medicine. Material remedies come and go, their efficiency varying with the states of mortal mentality; and while bettering beliefs are to be welcomed, the regeneration which means health and immunity from disease can come only by the attainment of the Mind that was in Christ Jesus. This is the teaching of Christian Science, and when understood it is seen to be supported by the Master's words, by sound logic, and by human experience.

The healing of sickness through the knowledge and application of divine law, which gave such unique distinction to the early church, is again being thought of as possible and its undertaking as practically feasible, even by those who are not Christian Scientists. Though Christian Scientists are as yet but babes in the understanding and demonstration of divine Truth, they are fully persuaded as to the philosophy and faith of Christ Jesus, and they have dared to try to fulfil his command that his followers shall preach the gospel and heal the sick. This is a great and impressive event in religious history. Health is again being identified

Digitized by Google

with right consciousness, the personal problem of overcoming the world, the flesh, and the devil is being entered upon, and a purpose and point of view is maintained which makes it utterly incongruous if not impossible for one thus "lifted up" to think of returning to the "beggarly elements" of materiality or the drug method of relieving pain. Better things than this are open to those who have gained the vision of Truth in Christian Science.

JOHN B. WILLIS.

SONSHIP.

CHRISTIAN SCIENCE has for nearly half a century been revealing to humanity in a new and most vital way the privilege of sonship to God, and it has had to do this in the face of a false sense of man's relation to his heavenly Father. This is very evident from the numerous protests which have come from professed Christians against the possibility of doing the will of God in the way that Christ Jesus did, some declaring that even to attempt the healing of the sick by spiritual means alone is actually sacrilegious; yet nothing can be found in the Scriptures to support such a contention. In his first epistle John declares without any reservation that "the Father sent the Son to be the Saviour of the world;" and he adds, "Herein is our love made perfect, . . . because as he is, so are we in this world." Strong words are these, but no more so than those of the Master himself, respecting his true followers, namely, "They are not of the world, even as I am not of the world."

The difficulty with the average religionist has been that he has attempted to identify the mortal, material concept of man with the spiritual man who is never less than godlike and Christlike, the one who because of his obedience to divine law is entitled to all the privileges of sonship, including dominion. A false sense of humility has led men to disclaim these privileges and man's responsibilities as sons of God, and to allot to themselves burdens as heavy as those imposed by Pharaoh. This, it will be remembered, was the career outlined for himself by the prodigal son. He was about to say, "Make me as one of thy hired servants," when the father began to lavish upon him the tokens of tenderest affection. The stern elder son had never risen above the thought of servitude, but how different was the father's thought: "Son, thou art ever with me."

How many are there who realize what is implied in our revered Leader's words respecting "the rights of man as a Son of God" (Science and Health, p. 226), and who know that the one who understands what it means to be ever with the infinite Father is under the protection of divine Love, and so is above the fear of sin, disease, and death? Jesus said, "The servant abideth not in the house forever: but the Son abideth ever." Which shall we choose to be? The son may have to labor ceaselessly, to the human sense, but not as a servant, much less a slave. "My Father worketh hitherto, and I work," said Christ Jesus, and shall we miss the opportunity to work because the Father works and as He works, inspired by Love and Truth, and guided by the perfect intelligence which knows all and loves all His children? This means working for the Father and for what Paul names as "the whole family in heaven and earth," knowing that He can and will supply the strength and the wisdom that we need, yes, ever-increasing strength.

According to the divine law of progress, the tasks keep pace with our unfoldment. The ability, the endurance of today is surely greater than that of a year ago, if we are really keeping close to the Father and letting Him show us what to do and how to do it,—pride and ambition banished to the limbo of vanities where they belong, while we serve from love. We are told that "God is not unrighteous" to forget our "work and labor of love." If, as Paul puts it, Christ is formed in us, we must know more each day of the meaning of sonship with its boundless blessings. The apostle says: "Because ye are sons, God hath sent forth the Spirit of his Son into your hearts, crying, Abba, Father. Wherefore thou art no more a servant, but a son." Shall we, then, let material sense keep from us the privileges, the joys, and the infinite outlook of sonship in divine Science?

ANNIE M. KNOTT.

CORRECTION.

Because of several mistakes in the stenographic transcript of the remarks of Bliss Knapp relative to his lecture tour around the world, as it appears in the report of the annual meeting in the *Sentinel* of June 14, we are reprinting herewith a corrected statement.—EDITOR.

Bliss Knapp told some of the experiences in his lecture tour around the world that indicate the growth of Christian Science. On the boat that took him to Honolulu he found himself seated opposite the ship's surgeon. They grew friendly and organized a ball team to pass the time. At Manila, all those who had played ball with him attended the lecture—they wanted to know what a baseball player could say about Christian Science. At Honolulu there were seven hundred people out for the lecture. At Yokohama he attended the Wednesday evening meeting, where there were twenty-one persons present. At Shanghai he found a very vigorous group of Scientists holding services. The Hongkong people had just completed their church building. He went to the regular services, and the lecture delivered by him was well attended. This church is doing a great deal of distribution work. At Manila between four and five hundred persons were present at the lecture.

In New Zealand and Australia he found that there are scores of groups of Christian Scientists holding meetings. The growth there is tremendous. There are many unorganized groups of Scientists as well as the regularly organized churches and societies. The people are very eager for Science, also. In Perth two people came over five hundred miles to hear him, and in other places people made great efforts to have him come and talk to them about Christian Science. He also talked informally with Scientists at Auckland and Wellington, New Zealand; Hobart, Tasmania; Adelaide and Perth, Australia. He lectured in Christchurch, New Zealand; Brisbane, Sydney, Ballarat, and Melbourne, Australia, to large and eager audiences.

AMONG THE CHURCHES.

CURRENT NOTES.

MINNEAPOLIS, MINN.—Sixth Church of Christ, Scientist, was organized July 16, 1908, and four months from this time a lot at the corner of Summit and Bryant avenues, south, was purchased for the purpose of building upon it our church home. Ground was broken in June, 1909, and we held our first service in the completed vestry on Thanksgiving morning, Nov. 25, 1909; but it was decided to wait until later to finish the superstructure. The work on the body of the church was finally resumed in March, 1913, and it is rapidly progressing. The corner-stone was laid Saturday afternoon, May 10, 1913, at four o'clock.

Correspondence.

MT. VERNON, N. Y.—The work of rebuilding the edifice of First Church of Christ, Scientist, which was seriously damaged by fire on New Year's day, has been started, and the building, which is of stucco, will probably be ready for occupancy by the first week in August. When completed, it will be practically new. The auditorium will be considerably increased in size, as it will seat at least three hundred and fifty people, and the Sunday school rooms will be in the basement, as formerly. Later, it is planned to install a modern organ.—*Mt. Vernon Argus.*

THE LECTURES.

LANSING, MICH.

A lecture on Christian Science was delivered at the Christian Science church by Frank H. Leonard. He was introduced by Attorney Frank L. Dodge, who said in part,—

This has been an eventful year, filled with many tender, sacred memories,—a progressive year in state, industrial, and religious affairs. Recently, one of the foremost citizens of our state, according to a newspaper report, said that perhaps it would be wise for religious bodies to adopt a uniform style of dress or costume which would have a tendency to attract people to church. The people of the Christian Science church have not adopted any uniform style of dress, and yet the seating capacity of their churches is usually filled. Shall we reason from cause to effect? Some good church people say that life is like the torrid hour, burned by the wind and sun; that it is a narrow veil between the cold and barren peaks of two eternities. Christian Scientists seem to have the conception that life, truth, and goodness are eternal and are of God.

This is a utilitarian age. It is asking of every institution the same ruthless question, "What are you good for?" Nothing escapes this stern but reasonable question; old and hitherto respected forms of government, great corporations, political parties, religious creeds and churches,—all are being called upon to answer it. What answer does Christian Science make to it? It is significant of this twentieth century spirit that it does not accept words as its answer; it requires facts, deeds; and the answer that Christian Science makes is in its deeds. It is not a religion for Sunday only, and of churches whose walls and arches are gorgeous within; its followers are known as practical, everyday followers of Jesus of Nazareth, striving to do the work which he did and commanded his followers to do, and they have one standard test of their Christianity,—"By their fruits ye shall know them." It is a religion of the home, the workshop, the office, the street. It enters every legitimate phase of life, and helps every worker to do his work better, and it gives him the health, strength, wisdom, and inspiration wherewith to do it better than he ever did it before. In the words of its Founder, it "always has met and always will meet every human need" (Science and Health, p. 494).

That this century has accepted and approved the answer which Christian Science has made to this question, "What are you good for?" is evidenced by its wonderful growth in every part of our Christian civilization; for the practical, scientific, and persistent application of its high ideal, the all-power and ever-presence of God to heal sin, ignorance, and sickness, has brought the light to millions, and it is one of the most powerful upward currents of this age.

Correspondence.

CHEYENNE, WYO.

John Charles Thompson in introducing Judge Clifford P. Smith, who lectured at Elks' Home hall on Christian Science, said in part,—

The key-note of the gospel of Jesus, its very essence, was concluded in a single sentence, viz., "Ye shall know the truth, and the truth shall make you free." He declared to Pilate that "to this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." He announced no other plan or method of salvation, and emphasized the value of that plan by saying that when he ascended to the Father, He would send them the Comforter, who would lead the world into all truth. Realizing, as all students of history must, that the only eternal and imperishable thing in the universe which it is within the power of man to embrace and use is truth, we logically reach the conclusion that it is but a generic term for the laws of God or nature. This concept of Jesus is the constructive spirit of the world-wide renaissance of Christianity which is now sweeping over the earth, and is destined sooner or later to bring into unity and solidarity the whole civilized world.

In the dawn of this Christian renaissance, beginning about the middle of the last century, there came to the front, as a religious teacher, as an organizer of a church, a most remarkable woman, Mary Baker Eddy, the author of the Christian Science text-book, "Science and Health with Key to the Scriptures," and the Founder of the Christian Science church. She accepted and taught the gospel of Christ Jesus, proclaiming anew that the truth, the reality of things, in contradistinction to the seemings of material sense, is the key to the kingdom of heaven on earth, and that Christian Science is its torch-bearer, which will accomplish its perfect work only when it finds expression in the life and character of every human being.—*Correspondence.*

WAKEFIELD, ENGLAND.

There was a large attendance at the Corn Exchange when Bliss Knapp of Boston lectured on Christian Science. J. W. Doorly acted as chairman, and in opening the proceedings said that in its early history it used to be said that Christian Science did not agree with the Bible. A short time ago, however, no less an authority than the Archbishop of York stated publicly that he never met keener students of the Bible than Christian Scientists were. As to the healing powers of the Science, he might tell the audience that his wife endured much suffering for five years, during which time she underwent several surgical operations. She was treated by many doctors without receiving any benefit, but as soon as she started studying Christian Science she received decided help, and today she was well and strong. During the past ten years, in his household, they had found that Christian Science met their every need, whether physical, mental, or moral.

Wakefield Express.

PROVIDENCE, R. I.

To a most appreciative audience numbering upward of two thousand in the Providence opera house, Virgil O. Strickler delivered an interesting lecture on Christian Science. The lecture was under the auspices of First Church, and in introducing the speaker Warren O. Evans, first reader, said in part,—

As we reason within ourselves, there is perhaps no one word more in the thought than that of immortality. The question is, What is immortality? When and where may it be found? For ages, generation after generation has speculated along this line, and theory after theory has been advanced; but to what purpose? And yet we have it in the clear, pure, simple words of Jesus: "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you." And he further declared that "this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Now, those passages are and have been familiar to us all, but have we really understood them? Not until the advent of Christian Science, the teachings of that grand and noble woman Mrs. Eddy, have mortals been able to gain their inner meaning. In the light of these teachings not only those passages become clearer, but in fact the entire Bible becomes illumined; and the former questionings and yearnings of the human heart are answered and satisfied.

Because a mighty host over this entire world have found their salvation through Christian Science, it is very natural that they should wish that their poor suffering fellow mortals might likewise share the blessing. That those who so desire may have the opportunity of hearing authentically concerning Christian Science, and furthermore to correct any possible misconception as to what Christian Science really is, these lectures have been instituted.

BAKERSFIELD, CAL.

A lecture on Christian Science, entitled "Christian Science Healing, Spiritual and Scientific," was given by Prof. Hermann S. Hering at First Church of Christ, Scientist. He was introduced by Mrs. Esther B. Dickey, who said in part,—

The mystery of the beyond has filled the lives of mortals with a nameless hidden fear which has seemed to sap them of their freedom. To those who have drunk the dregs from the cup of human misery, Christian Science comes with its "Peace, be still." It is the holy evangel that says, "Ho, every one that thirsteth, come ye to the waters." To the question, What is Life, what is God? it answers, God is Life,—your life; my life. In the words of our Leader, "It shows the scientific relation of man to God, disentangles the interlaced ambiguities of being, and sets free the imprisoned thought" (Science and Health, p. 114). It is showing the way to universal peace. It is bringing about the common brotherhood of man.—*Morning Echo.*

BRADFORD, ENGLAND.

There was a large audience at the Bradford Mechanics' Institute when the sixth annual lecture on Christian Science was given by Bicknell Young. The Rev. C. M. Shaw of Manchester presided, and in the course of his remarks said that for nearly twenty years he was the minister of an orthodox church, but that he became convinced of the truth of Christian Science and resigned his appointment. It had given him the key to the true spiritual interpretation of the Bible. In his opinion, ignorance, prejudice, and conventional beliefs prevented the world from acknowledging it.

Bradford Argus.

LAWRENCE, KAN.

The lecture on Christian Science by Frank H. Leonard attracted a large audience to the Christian Science church. He was introduced by Emerson B. Gorsuch, first reader, who spoke as follows:—

In inviting you to hear a lecture on Christian Science, First Church of Christ, Scientist, has not asked you to listen to that which is shrouded in mystery or beyond the comprehension of the human intelligence, or to hear discussed the merits of a human invention, a cunningly devised fable, or even a woman's theory, but to learn something more of the ever living divine Principle of Christian Science. Notwithstanding the fact that this truth was hidden for centuries by material thought, erroneous belief, and misconception as to the truth of being, as to God, in whom "we live, and move, and have our being," it was discovered by Mrs. Eddy to have lost none of its power, and to be just as effective in the destruction of sin and sickness as when taught and practised by Jesus, thereby verifying the Scriptural statement which declares that God is "the same yesterday, and today, and forever."—*Daily Gazette.*

HAMILTON, MONT.

Judge Clifford P. Smith of Boston delivered a lecture on Christian Science to a large audience at the Lucas opera house. He was introduced by Judge R. Lee McCulloch, who said in part,—

While I cannot include myself among those who are adherents to the belief of Christian Science, still I do confess to such an interest in the subject as produces a state of mind open to conviction. Whether one can or cannot subscribe to all the tenets of the faith, no fair-minded man can deny that great good has been accomplished by the Christian Scientists; that thousands have been relieved from physical pain and mental anguish by the application of its teachings, while thousands upon thousands have by it been made happy, and better able to contribute to the happiness of their fellow men.—*Ravalli Republican.*

HORNELL, N. Y.

A large number of those interested gathered at the Woodbury Universalist church to hear the address by Virgil O. Strickler on Christian Science. The speaker was introduced by Arthur J. Arwine, who said in part,—

Christian Science is not a bundle of speculative human theories, but a divine law, divine Principle, showing the true relationship between God and man; the truth referred to all through the Scriptures and brought down through the centuries by the inspired prophets of old, until the beginning of the Christian era, when Jesus came, preaching, teaching, and demonstrating that this divine law does heal sin and disease. This healing power was used by the followers of Jesus for three hundred years, but was lost sight of by the world until about forty years ago, when Mrs. Eddy, through her study and search of the Scriptures, discovered that this divine law of God heals now as well as it did nineteen hundred years ago. Jesus' instructions to his disciples, "Go ye into all the world, and preach the gospel to every creature," and "Heal the sick," are being followed by Christian Scientists as by no other branch of religion. Probably there is not a city or village in the world where there is not a living witness of this healing power as demonstrated by Jesus and lived by Christian Scientists today.

Evening Tribune-Courier.

FORT SMITH, ARK.

William R. Rathvon delivered a lecture in the Christian Science church to an audience that comfortably filled the edifice. He was introduced by Nathaniel Dyke, who said:—

Ignorance and prejudice have always opposed progress and truth, and Christian Science has proven no exception to that rule; but, surviving the closest and most critical tests for over fifty years, it is today attracting the attention of a large number of thinking men and women. To many the message it brings seems too good to be true. That it is our right and privilege as sons and daughters of God to find relief from sickness, sin, sorrow, suffering, and so-called incurable diseases here and now, is the testimony of over a million people in all parts of the world who are enjoying health, happiness, peace, and prosperity through the knowledge given to us in this little book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Fort Smith Times-Record.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Ann Arbor, Mich.—Church edifice, 409 South Division street, 3 p.m., June 29.
Berkeley, Cal.—High school auditorium, 3 p.m., June 29.
Berrien Springs, Mich.—Town hall, 8 p.m., June 30.
Chicago, Ill. (Eleventh Church).—Logan square auditorium, Logan and Kedzie boulevards, 8 p.m., July 1.
Decatur, Ill.—Powers opera house, 3:30 p.m., June 29.
Denver, Col. (Fourth Church).—Woodman hall, corner Clay street and Dunkeld place, 3 p.m., June 29.
Duluth, Minn.—Auditorium, Third avenue, east, and First street, 8 p.m., June 23.
Elmira, N. Y.—Assembly room, City Hall, 8 p.m., June 30.
Hartley, Iowa.—Opera house, 8:30 p.m., June 20.
Jefferson City, Mo.—County Court House, 8 p.m., June 30.
Marshalltown, Iowa.—New Odeon theater, 8:15 p.m., June 23.
Providence, R. I. (First Church).—Church edifice, corner Prospect and Meeting streets, 4 p.m., June 29; 8 p.m., June 30.
Sacramento, Cal.—Tuesday Club house, 8 p.m., June 30.
San Mateo, Cal.—Masonic temple, Ellsworth avenue, 8 p.m., June 29.
Ypsilanti, Mich.—Opera house, 3 p.m., June 22.

TESTIMONIES OF HEALING.

From boyhood I was afflicted with so-called stomach trouble, supposed to have been inherited. I never knew what it was to be entirely free from pain, and as I grew into manhood it stayed with me. Christian Science found me, ten years ago, a most miserable man, without God, without health, and without hope in this world; the vision before me then was nothing but misery.

Twenty years previous to this time I left the church to which I belonged, because I could no longer believe in the concept of God as there taught. Many times I prayed earnestly to God for healing, but He seemed to be too far away for any prayers of mine to reach. I had been trying for years to live a Christian life, but I made a most miserable failure of it, for I could not harmonize the teaching of the church and the teaching of the Bible. I was taught that I should be contented; perhaps it was God's will that I should suffer. To my way of thinking, this seemed very unreasonable, for I as a human parent could not see my own child in misery when it was in my power to prevent it; so I finally did not believe in any God at all. I left all religion, Bible study included, behind me, and went from bad to worse. Many a time I thought seriously of ending it all, and if it had not been for leaving my dear family in poverty, I undoubtedly should have done so; but during all these years there was a "still small voice" which said there was yet hope for me, and that some day I should find the true God.

It is perhaps needless to say that I had tried all kinds of physicians and remedies. At first, some of the remedies seemed to help me somewhat, but after taking the medicine for a time I would feel worse than I did when I began, so I left the physicians as I did the church, but continued to take great quantities of medicine, although I received no lasting help. I will say, however, that I have nothing but respect and love for the honest physicians who endeavored to help me, and did what they could and what they thought was right. I know what it is to go with one or two hours' sleep for night after night, until my condition became unbearable, and I was irritable and disagreeable to my family, and to those with whom I came in contact in business or otherwise; at times I could not attend to business at all.

Any one who has suffered as I did, knows that it is a living hell; but thanks be to God and His Christ, I can now say with our revered Leader, "Glory be to God, and peace to the struggling hearts! Christ hath rolled away the stone from the door of human hope and faith, and through the revelation and demonstration of life in God, hath elevated them to possible at-one-ment with the spiritual idea of man and his divine Principle, Love" (Science and Health, p. 45). I am now a free and well man. I came to Christian Science for healing, and I have found it; but great as the physical healing is, it is not to be compared with the spiritual blessings which the knowledge of this Christ, Truth, has brought to me. It is not possible for me to describe in words the blessings I have received in these ten years, and during this time I have gone through deep waters, as some dear ones have been taken away; but I have proved that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

Christian Science was brought to me in this way: I boarded a train at a mining-camp in Colorado, to go to Denver. In walking through the car an acquaintance called me, and invited me to sit beside him. After I was seated he asked me how I felt, and my reply was that I felt miserable. He then began to tell me about Christian Science and what it had done for him. I was very much surprised indeed, because I was then under the impression that he was interested only in making money. He gave me the name and address of a practitioner, and I promised him to see her next day. We arrived in Denver late that evening, but I had the most restful night that I had had for years, and the next day I called on the practitioner at her office. She talked to me for nearly an hour, and I drank in every word she said, as I was hungering and thirsting for the truth. During all the years that I was far away from our Father, I was never at peace; I was always wishing and looking for something better.

The practitioner advised me to procure a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and she also invited me to come to church the next Sunday. I bought the book and went to church, and I shall never forget that first Christian Science service. The church was the most peaceful place I had ever entered in my life, and it seemed so like heaven to me that I forgot my troubles. Since that time I have been diligently studying the Bible, together with Science and Health, and the other writings of our beloved Leader, Mrs. Eddy, as well as the periodicals, and have been a constant attendant at church.

My healing has been slow, but I thank God for it, as it has shown me the necessity of studying diligently and persistently; but I never once became discouraged, because there was nothing for me to go back to, so I am still striving for that understanding whereof Jesus spoke in these words: "Well done, good and faithful servant; thou hast been faithful over a few things, I will make thee ruler over many things: enter thou into the joy of thy lord." I have had so many proofs of the omnipresence of God, good, that I know if we listen to the "still small voice," God will lead us into all truth. Four years ago I was healed of appendicitis. It came on suddenly, in the night, with very severe pain. A practitioner was called, the pain was relieved instantaneously, and the healing was complete in about two weeks.

I will say for the encouragement of those Christian Scientists whose healing is slow, Do not be discouraged, for if you diligently and persistently study Science and Health in connection with the Bible, the understanding will be yours, and you will be as free as I am today. Mrs. Eddy says, "We must recollect that Truth is demonstrable when understood, and that good is not understood until demonstrated" (Science and Health, p. 323).

CHARLES G. CARLSON, Denver, Col.

[Translated from the German.]

A sense of deep gratitude impels me to testify to several instances of healing in our family through Christian Science. In September, 1909, our boy, then an infant, became afflicted with a swelling on the knee. I was not acquainted with Christian Science at the time, and so took him to a physician with the expectation of finding relief; but his verdict was by no means reassuring, as he said that a serious operation would have to be performed. I returned home in a state of anxiety, and on the following day went to the hospital in Interlaken with the child, who was only six weeks old, and who presented a poorer appearance than he did the first week after his birth. The professor there, after a lengthy examination, came to the same conclusion as our local physician, namely, that there was inflammation of the kneecap, and that the child was tuberculous; but that he could not operate before the age of three months. He advised me to leave the boy at the hospital until that time, for in his opinion it was an unusual case, and he also said that the child should be well fed. I took the little one home with me, however, thinking that I might as well give him the proper nourishment and care; but constant vomiting set in, and he only retained enough food to keep him alive, while he seemed to suffer greatly and was at rest neither day nor night.

I then made a trial of another medical system, which seemed to bring some relief, and lessened the vomiting, but a discharge from the knee suddenly set in. Four weeks later I again went to see the physician, as the

Digitized by Google

knee presented a swollen appearance, which had increased, whereas I had expected that it would heal. The physician said that I should not wait any longer, but should come to the hospital with the child that same day. When I refused, he said that the boy would be crippled, for the knee-joint had ceased to be movable; that the leg might even have to be amputated. My distress about the child was so great that I would rather have seen him die than go through all this suffering.

Then my attention was fortunately called to Christian Science, and I went to a practitioner, though with a sorrowful heart. She lovingly took up treatment, and I returned home in an entirely changed frame of mind and with new hope. On the first evening the child was able to sleep quietly, and the vomiting recurred but rarely after that. Since his birth we had had to keep a light burning all night, but from the time we went to the practitioner it was no longer needed. After a couple of weeks his looks had improved, and he gradually began to move his leg, though the discharge had not quite stopped. The healing was so quick and wonderful that at one year of age he was as big and strong as children of his age who have always been well. With the sixteenth month he was able to run about securely and confidently, and there was not the slightest indication of his ever having been afflicted.

We also had a convincing proof of the healing power of Christian Science in the case of the other two boys, one of whom is four years and the other four months old. Before the birth of the youngest, I was instantaneously freed of a trouble in my legs through the understanding of this glorious teaching. My mother also rejoices in this heavenly thought, for she was practically freed of a severe skin disease, with which she had been afflicted for several years.

I give this testimony with a heart full of gratitude and with the hope that it may call the attention of many sufferers to Christian Science, which can but bless the world and bring it peace.

FRAU ANNA KAUFMANN, Grindelwald (Bern), Switzerland.

About nineteen years ago my brother, who was then eighteen years of age, was in the Christchurch hospital, suffering from an injured foot. He had been in bed six weeks, and was reduced from a robust young man to a pale, thin invalid. Two operations had been performed on his foot, and when he heard the doctors deciding that another was necessary, he was filled with despair, for in the same ward was a man who had had a foot amputated on account of the same trouble.

Just at that time a Christian Scientist visited my brother and told him that she was studying a new way of healing, and that if he would like to come to her home she would do her best for him. He was glad to do anything to prevent another operation, but he had great difficulty in getting the doctors to grant him his discharge. When they did so, it was with a written notification that it was against their advice, and that they were therefore relieved of all responsibility. When with the help of others my brother was leaving the hospital, the chief wardsman remarked to him that he was mad, and that he would be back in less than a week to have his foot taken off. He was conveyed to the Scientist's home and at once sat down to an ordinary meal.

The lady destroyed the bandages and other material aids with which the kind nurses at the hospital had supplied him, and began to read to him from the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, besides giving him Christian Science treatment. She explained that because God, good, is everywhere and all-powerful, disease, corruption, and decay could not be real or present, therefore could not cause his foot to mortify; she also assured him that he need not fear, because "the word of God is quick, and powerful" to dispel seeming evil. For a few days the foot seemed worse; then every day there was great improvement, and in a fortnight he walked over a mile to the hospital to return the crutches that had been lent to him. His foot soon assumed its natural shape, and he has been strong and well ever since, for which he gives Christian Science all credit.

Since my brother's recovery I have heard from time to time of some very serious cases which have been healed in Christian Science, and many in Christchurch are thankful for having had Mrs. Eddy's wonderful teaching introduced into their homes.

MRS. CLARICE PARKINSON, Greymouth, New Zealand.

I would like to speak of the physical benefit I have received through Christian Science. In 1907, a few moments after the birth of my first child, the physician, nurse, and all present pronounced death inevitable. When I learned of the fear held, and the sentence passed upon me, I made known my desire for a Christian Science practitioner. In about ten minutes she was present. She came to the bedside, and in a very short time the struggle for life became easier. I then knew that Christian Science could heal physically, but I accepted and desired it more for this than as a religion. When I read the text-book, "Science and Health with Key to the Scriptures," it was from a sense of duty, and I did not gain the spiritual uplift which I should.

When my oldest child was a little past two years old, it became necessary to choose between Christian Science and *materia medica* for her help. We chose Christian Science, and the illness was overcome. Then for the first time, through the untiring efforts of the practitioner who had been called, I learned how I should study Christian Science, and distinguish between Truth and error. About one year after the healing of our little girl another child was born. I studied Christian Science with pleasure at this time, and was both physically and mentally helped. Comparing this experience with the birth of my first child, it seemed one of "painless progress" (Science and Health, p. 224).

The mental strength gained is, however, more to me than any bodily strength. Through the study of truth, errors such as temper, deceit, conceit, and selfishness are being overcome. Christian Science is a great help to me in raising my children. The great fear of their contracting diseases supposedly common among children is passing away from me.

I am thankful to God for this truth, and I am grateful to Mrs. Eddy for making it plain to us, as well as to all who faithfully practise it.—MRS. AMY VIAU, Santa Ana, Cal.

It is with deepest gratitude that I send my testimony, with the hope that it may help some one, as others' testimonies have helped me. For nineteen years I had worn glasses, the left eye being seemingly almost blind, and about four years ago the right one began to trouble me so much that I could not see to read or sew for long at any one time without pain. Two years ago, having heard of Christian Science, I began to study "Science and Health with Key to the Scriptures," and had help from a practitioner.

Words can never express my gratitude for the help, health, and understanding I have received from Christian Science. I can now see splendidly to read, write, or do anything I want to do, either by daylight or lamplight, and for as long as I wish, without the slightest inconvenience. For this healing, and many other blessings, I am indeed grateful, and especially thankful for being entirely freed from pain in my back, the result of a fall over seven years ago. I am learning more and more to do unto others as I would have them do unto me, in thought, word, and deed.

MARY BOARDMAN, Ely, Cambridgeshire, England.

For about eight years I suffered from stomach trouble. At times for a whole week I could keep nothing on my stomach, not even the lightest kind of food. The pain would

Digitized by Google

extend upward through my chest and would be so intense that I would lock my jaws in agony, and I sometimes prayed to God to let me die, that I might be released from suffering. Nothing that I could do would give me relief, until about eighteen months ago I began to read the Christian Science literature that our daughter sent us, when I soon experienced a change for the better. Later she sent us a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I had not studied it very long before I found I was entirely well. I was also healed of other ailments, such as female weakness and neuralgia, and my husband was healed of the liquor habit.

We both thank God for His goodness, and are trying to have our lives express our gratitude to Him for all that He has done for us through Christian Science. We are also very grateful to Mrs. Eddy for showing us the way to this saving truth.

MRS. JOHN LAWVER, Agenda, Ashland County, Wis.

I wish to tell others of my wonderful experience in Christian Science. I was healed in a few weeks of a very serious kidney trouble, and my boy was released from a violent cold and cough in one treatment. Besides this, my husband was healed of an acute attack of cold on his lungs, accompanied by severe pain and distress, which was overcome within twenty-four hours, while a toothache was banished within a short time. I am truly grateful for what Christian Science has done for me and my family.

MRS. SARAH HOCKER, Chanute, Kan.

Like many others, I have great reason to be thankful for the blessing which Christian Science has brought me. Eight months ago I was in very poor health, and had been for twenty years, with bladder and kidney trouble, and at times it seemed as if I could not live. I was going to be operated on, since the doctor said it was my only chance for relief, but in the mean time my husband was taken sick and died, and then I was left in a very bad position, for we were poor. Necessarily I had to give up the thought of the operation, because I had to take care of my family, and with all my trouble it seemed as if I should give up. I was then advised to try Christian Science, and I am so thankful today that I ever found that inspired book, "Science and Health with Key to the Scriptures," since as I began to study it, and to understand the Scripture, I began to get well, and life means something to me now, whereas before it seemed as if I had nothing to live for. My home is pleasant and peaceable, and I am striving to learn more of the truth and to be better. I know God will care for me and my little ones if I lean on Him for my daily help. Science and Health is our only physician.

MRS. CORA WALTER BADGLEY, Creston, Mont.

The sweet, healing influences of Christian Science have come into my life so naturally and so gradually that I scarcely know where to begin to tell of its many blessings to me. For a long time I had been dissatisfied with my religious experience, and though there were times when God was revealed to me in such a way that I felt sure I was His child, yet I no longer enjoyed the church services. They seemed to me so full of outward forms that my heart cried out in anguish for a satisfying knowledge of God.

The Bible was a sealed book to me. I tried to read it from a sense of duty, but derived little real benefit from so doing, and I finally gave up reading it altogether. I was taught almost from infancy to pray, but in my early childhood I found that my most earnest prayers were not answered, and this experience only added to the discouragement of later years. In a state of great mental darkness, my prayer resolved itself into this single petition: "Father, show me Thy way so plainly that I cannot be mistaken!" This prayer was constant, sometimes uttered on my knees, again at my work, but it was always with me, "the heart's sincere desire," and it brought its reward. In addition to my darkened mental state, I was a great sufferer from a spinal and so-called female trouble, with headache, backache, sleeplessness, nervousness, and protracted spells of depression.

I had been told by a reputable physician that only an operation would relieve me, but I felt I could not submit to it, so I wandered on through the wilderness, helplessly, almost hopelessly, until Christian Science was mentioned by a friend. I was a willing listener, for I was hungry for the truth, and as this friend and her mother told me that I could not only be made well but kept well, it seemed indeed a sweet message. As a result of this conversation, I began taking treatment in Christian Science. In a short time I was healed of all the most distressing conditions to which I had been in bondage so long, and I entered into a new world of mental and physical freedom. I realized that I had found God, and that my prayer for the plain path had been answered.

During the ten years which have followed this first healing, I have found that in truth God is "a very present help in trouble." Having so long been a veritable slave to laws of hygiene, it has taken years to grow away from it entirely, but I now rejoice in a large measure of freedom, which constantly increases as I gain a clearer knowledge of God and my relationship to Him. I am glad to state that with the first treatment I was healed of any desire for medicine, and have not taken any since. God has supplied all my need, and I am grateful.

Better than all physical healing, however, is the assurance that I know God aright. Through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, the inspiring truths of the Bible are being unfolded to me, and I rejoice to know that there is a lesson for each of us on every one of its sacred pages. To all suffering humanity I would like to carry the glad message of God as a loving Father,—that whatever our particular trial, He is always ready to heal and to bless when we come to Him understandingly. Those who come to Him and prove Him, will never cease to be glad for the circumstance which led them to seek God through the open doorway of Christian Science.

With an ever increasing sense of gratitude to God, to our Leader, and to all who have so lovingly helped me on the way, I submit this testimony, with the hope that it may be the means of bringing some one "into the glorious liberty of the children of God."

ARSELLA E. ROBERTS, Saint Maries, Idaho.

We came into Christian Science as the result of the healing of my brother of serious nervousness. Previous to this trial I had been considered very delicate and caused my mother constant worry, as I was nearly always under the care of doctors and nurses. Soon after we became interested in the study of Science I met with an accident. As I was coming down the steps of the school which I attended, I did not notice that they were icy, and I slipped and fell, landing on my shoulder. At first, to mortal sense, I suffered great pain and began to cry; but at the Christian Science Sunday school I had been taught that error cannot harm God's child; that Love protects us. So I declared this truth over and over to myself, and in a few minutes all pain left me.

When I reached home I told my mother about my experience, and that evening she asked my grandfather to treat me, which he did. This was on Friday, and he continued to treat me. On the following Monday, however, my father had a surgeon examine my shoulder, and he said that the collar-bone was broken, but he expressed much surprise that I suffered no pain and that there were no symptoms of inflammation. He also said that the bone

Digitized by Google

should have been set immediately, and that as a result of not doing so I would always have a lump there, though he now advised me to remain very quiet for a certain length of time. Again my father asked my grandfather to continue the treatments in Christian Science, and the next day found me out of doors, playing with the other children. In a few more days I was able to dispense with the sling. Now, so far as the bone is concerned, no one could tell which side was injured, and there is not the least sign of a lump there.

I have seen many other cases of healing in our home, for which I thank God, and I am also grateful to our beloved Leader, Mrs. Eddy.—MARION HUNIE, Meriden, Conn.

It was in 1907 that we first came into Christian Science, through the healing of my wife of a fever after all medical aid had failed. Since then we have depended altogether on Christian Science in sickness and in health, and for every discord that has come to us. It has been a great help to us at all times, and has proven beyond doubt the power of God, good, over all evil.

On Dec. 31, 1911, our little boy, three years old, fell into a kettle of hot grease which (to mortal sense) burned him terribly. This caused a sense of pity to come over me, also a sense of unworthiness to treat the case; but it soon dawned upon me that these were just the arguments of evil. I then set to work, and in about two hours the pain had ceased, so that the child even played a little, although he was somewhat restless the rest of the afternoon; but that night he slept better than usual, and he was not troubled any more except for a few minutes next day, when he rubbed some of the skin loose while playing.

Words cannot express our gratitude to Mrs. Eddy for the spiritual quickening and peace of mind gained through the understanding of the Scriptures as she has taught us in Science and Health.

DELFORD MCGREW, Lost Springs, Wyo.

[Written for the *Sentinel.*]

"SEEK YE FIRST THE KINGDOM"

DAISY L. STWALLEY.

WOULD you run and not be weary,
  Would you walk and never faint,
Would you gain eternal freedom?
  Never listen to complaint.
Would you see your skies grow brighter
  Unto everlasting day?
Seek ye first of all the kingdom;
  Christ will lead you all the way.

Would you drink the living water,
  Would you eat the bread of Life,
Would you heal the broken-hearted,
  Banish every sense of strife?
Claim for yours each precious promise
  Writ by patriarch of old;
Seek ye first of all the kingdom;
  It will wondrous wealth unfold.

Turn aside from golden glitter,
  Tread the path that Jesus trod;
Though at times your footsteps falter,
  You are safe in trusting God.
Find the love that is eternal,
  Learn the truth that is the light;
Seek ye first of all the kingdom;
  Know that God is always right.

FROM OUR EXCHANGES.

[Rev. Charles Strong, D.D., in *The Herald,* Melbourne, Australia.]

An Anglican bishop, preaching lately in Melbourne, is reported as having said that already eyes were turning to the time when Anglicanism was going to vanish away, and the church of the living God would take its place; and there would be no more Presbyterianism or Anglicanism or sectarianism. He was not ashamed to say that he did not believe that a settlement made in the sixteenth century was to be a settlement of church affairs for all time. I do not know all that the good bishop meant. He may have been thinking only of a purified and expanded apostolic Anglican church as the church of the future. But, even so, is it not the growing ideal of religion that is driving the bishop to seek such expansion?

Anglicanism and Presbyterianism and all the churchisms are, as such, passing, not merely by reason of attacks or changes from without, but because of the fresh, expanding spirit within, that, like the plants in springtime, breaking through the imprisoning earth, appear through the ecclesiastical crust. It is a larger, more spiritual, and more loving ideal of religion and human destiny, a more worthy thought of the divine Being, and of what "salvation" means; a more truly Christian idea of Christianity, brotherhood, love, incarnation, faith, the church. It is this that is undermining all our ancient church forms, which are destined to disappear as the bud disappears when, nursed by rain and sunshine, it passes into the flower.

The only way in which we can keep anything, even our own self, is by allowing it to grow. The church is no exception to the rule. The "churches" have done good work in the past, and under other conditions than those of today. We do not wish to lose what love and life they have embodied; but the day is at hand when they must die—die, we hope, into a larger, fuller life, and "the churches" become "the church," the family, the brotherhood of the sons of God, the army of the Christ-spirit "throughout the whole world," federated and bound together by a divine work and aim, in the bonds of a world-conquering and world-blessing spiritual truth and good will.

[Rev. Sidney M. Berry, MA., in *The British Congregationalist.*]

The task of the soul is simply to receive the seed of the kingdom, and when once it is received the kingdom will prove its own power to produce the richest fruits of the Christian life in us. The growth of the Christian life is not the result of strenuous and painstaking effort on our part; it is the result of the quiet, all-powerful forces that God brings to bear upon our souls. We receive Jesus Christ into our souls, and then we sleep and rise, night and day, and go about our different duties and tasks in the world, and, behold, the seed springs up and grows, we know not how. It is not our labor that achieves the result. It is rather his power to subdue all things within us unto himself.

I recognize at once that this is the partial truth, and not the whole. I know how much might properly be said as to the duty of cultivating our lives in such a way that they might provide a fit soil in which the seed of the kingdom could grow. If the garden is left to itself, it will assuredly grow more weeds than roses; and the heart that is left to itself will show more vices than virtues. But with all these considerations in mind, it yet remains a great truth and law of the Christian life that men grow in beauty and in grace of character, not by a scrupulous examination of their own defects, nor even by strenuous effort after the qualities they admire, but in filling the vision of the soul with Jesus Christ. It is in the looking upward to him, and not in the looking inward to ourselves, that we are changed into his image.

[Rev. Stanley A. Mellor, B.A., Ph.D., in *The Christian Commonwealth.*]

We return to our starting-point. We began from the fact of the presence of a spirit of revolt in actual life today; we have examined a genuine, personal, religious experience, and we have found that experience containing inevitably an element of revolt. To us this seems fraught with deepest significance, meaning many things. It means, among other things, that the atmosphere of life today is extraordinarily charged with religion, not with the religion, formal, respectable, and stereotyped, of churches and sects and organizations, but with the unorganized religion of the heart, with the native longing of humanity for the ideal, with the native demand and desire of the individual soul for freedom and fuller realization. It means also that organized religion is face to face with a stern challenge: the whole future of organized religion depends on the answer given. Will organized religion recognize the spirit of revolt as really its own spirit, and welcome it as such, or will it endeavor still to follow the way of compromise and contentment? If the latter, then organized religion is doomed; if the former, then religion is saved, and the spirit of revolt in the world can be turned into the true instrument of God, the piercing power of His grace, fitted to penetrate and destroy the dark places of our guilt and woe.

[*The Continent.*]

Discouraged, are you, because the thing you have been trying to do in the church or for your community is not coming out so well as you expected? Perhaps the trouble is that you have been expecting too much; at least, expecting too much too soon. Does that sound impious? Can a faithful Christian look for too great results in religious work? "Attempt great things for God; expect great things of God," William Carey's thrilling motto, has been held forth everywhere as a model for Christian faith. And it is a good model if understood; but it must not be understood with any impatience in it. Impatience ruins all its virtue; and Christian discouragement is generally impatience. In one sense, discouragement is a noble fault; it is the shadow of a fine enthusiasm gone by. The weakling and the sluggard are never discouraged; there must first be some stir of courage to make discouragement possible. So the very fact that a Christian is discouraged, signifies that there is the quality of a worker in him; and usually all that is needed to bring out of him the powers of a worker again, is some antidote against impatience, against expecting too much of God too soon.

[*The Advance.*]

The modern Christian is not greatly concerned with the answers that may be made to questions of cosmogony. He deals with the living, present world and its permanent needs. He is eager for truth concerning all questions of origin, but none of them vitally affect his real problem. He is dealing with the God of today. Knowledge of the past is of value in proportion as it gives assurance—and it does—that God is "the same yesterday, and today, and forever." Build your faith on matter, and you build on sand; build it on energy, and you find your foundation effervescent; build it on the spirituality of life, on the intimate kinship of God with man's spiritual nature, and you have an abiding fact.

[*The Universalist Leader.*]

No program of social or industrial progress will travel far or gain the suffrage of the thoughtful, which places humanity under the necessity of discrediting the most sacred hopes and the deepest spiritual longings. The mass of mankind still believes that moral idealism is a divine reality, and that these prophetic intuitions which stir in us do lead somewhere, under God. There is no program of progress, however noble it may appear for a time, that will not be an ultimate curse if it smothers our dreams and leaves us finally with broken confidence in the unseen realities of life.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal,* printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

Two new translations into German have been made and are now on sale. "Die Christliche Wissenschaft: Das Evangelium von dem Reich" ("Christian Science: The Gospel of the Kingdom"), a lecture by Judge Clifford P. Smith. "Im Dienste des Vaters" ("The Father's Business"), containing five articles.

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by bank draft, express order, or postal money order payable at Boston post-office. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: **For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20.** For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: **Current and past year, cloth, $2.50; half calf or half morocco, $3.** On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: **For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required.** When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: **For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.**

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

ITEMS OF INTEREST.

National.

"The lower the rate charged to consumers by electric power companies, the lower will be the tax which such power companies must pay the government." Secretary Lane of the interior department announces this as "the heart of the policy adopted as to the disposition of water rights of the government," and names these conditions as standards in making governmental contracts: The greater the development of horse-power, the lower the charge per horse-power to be made on the part of the government; the lower the rate to consumers, the lower the charge on the part of the government; no charge whatever for a period of five or ten years, during which the power company is finding its market; acceptance as a public utility of the state's jurisdiction over intrastate rates and service and federal jurisdiction over interstate rates and service; absolute prohibition of combination or monopoly, and the right of revocation on the part of the government in the event that it is established to the satisfaction of the secretary of the interior, or the courts, that such combination has been made, or that prices have been fixed by agreement with competing plants.

An elaborate plan of hydraulic "monitors" has been installed near Gold Hill, overhanging the famous Culebra cut in the Panama canal. A great supply of water has been obtained by damming up Obispo river, and the engineers will seek to sluice away the sides of the hill, so that the water-borne earth will be carried away from the cut and into the valley in the rear. It is hoped in this way to relieve the tremendous pressure which forces up into the bed of the canal the underlying strata, as well as to prevent the sliding of the earth at the sides of the cut in seeking an angle of repose.

The validity of two-cent passenger laws and maximum freight rates in Missouri, West Virginia, and Arkansas, were upheld by the Supreme Court of the United States last week, in another series of decisions in the noted state rate cases. No decision was announced in the Kentucky case, but in the Missouri case the great majority of rates contested by the railroads as confiscatory were held valid. State freight rates established in Oregon were also approved. All claims that the state laws attacked interfered with interstate commerce, were swept aside, following the precedent set in the Minnesota rate decision a week earlier.

Experiments conducted in Washington county, Maine, by the industrial bureau of the New England lines, with a view to demonstrate with what success farming can be carried on in New England on what has heretofore been regarded as practically waste land, have been so successful that steps are being taken now to secure the colonization of this tract by practical farmers. Recently an option was secured on thirty-six thousand acres of land situated near Cherryfield on the Maine Central. This tract has produced nothing but huckleberries up to this time, with no heavy timber on it, because every year it has been burned over for the berries.

The annual convention of the National Association of Comptrollers and Accounting Officers, held last week in Chattanooga, Tenn., was addressed by Charles F. Gettemy, director of the Massachusetts bureau of statistics, on "Recent Massachusetts Legislation relating to Municipal Indebtedness." Mr. Gettemy described the several investigations of this subject made by his department during the past two years and by the committees on municipal finance of the Massachusetts Legislatures of 1912 and 1913, and then reviewed the important legislation passed this year for the correction of long-standing abuses.

The affairs of the St. Louis & San Francisco railroad, now in the receivers' hands, are under consideration in both houses of Congress. The Senate called upon the interstate commerce commission to make an investigation, while another demand for an investigation by a committee of Congress was made in the House. The House resolution would direct the commission to recommend a law to govern the reorganization of railroads generally.

The House of Representatives, prior to the adjournment of the present session, will probably put into operation a budget system, under the operation of which there will be a correlation between the receipts and disbursements of the government and consequent economy of administration. Agitation in favor of its adoption began during the latter part of the Taft administration and President Wilson heartily endorses it.

Fines imposed by the federal courts against "trusts" during the current fiscal year, for alleged violations of the Sherman law, aggregate $151,957, or more than three fourths of the two hundred thousand dollars originally appropriated by Congress for the year's prosecutions of combinations in restraint of trade. Most of this amount has been paid, and the remainder is the subject of appeal in the courts.

The contest of Denver, Col., for municipal ownership of its water works plant was won in the Supreme Court. A decision of the federal circuit court of appeals enjoining the city and public utilities committee from issuing eight million-dollar bonds for purchase of the existing water works plant of the Denver Union Water Company, or construction of a new plant, was reversed by the Supreme Court.

After a brief debate the Massachusetts House passed to be engrossed on a voice vote the five million-dollar harbor and tidal river improvement bill. It is provided that one million dollars shall be appropriated annually for five years for the use of the harbor and land commissioners for harbor and river improvements.

The Connecticut House has passed what is known as the Gross Sunday bill, permitting band concerts and "recreative sports" in parks on Sunday, under authority of the park commissioners, who are to make rules so that the peace and comfort of citizens be not disturbed. The Senate had already passed the bill.

Exercises on the site of the new two million-dollar Harry E. Widener memorial, library in connection with the laying of the corner-stone, opened commencement week at Harvard.

Water was admitted for the first time to the Gatun locks on Saturday, June 14. This was for the purpose of testing the valves, and the test was considered entirely satisfactory.

The United States Senate sub-committee has finished its investigation of the coal strike situation in Paint and Cabin creeks, West Virginia.

The bill changing the United States legation in Spain to an embassy having passed without opposition in the Senate, now goes to the House.

International.

The strongest faction of the Chin-Pu-Tang party in China has promised to support the Kuo-Min-Tang in order to inaugurate a progressive policy, the basis of which is the establishment of security for life and property, the reorganization of the country's revenues, and the development of its resources. The Kuo-Min-Tang has agreed to support a coalition cabinet. Yuan Shih Kai is expected to be reelected to the presidency. Sun Yat Sen is retiring from politics to devote his attention to railway and industrial development. Yuan Shih Kai, in an interview, reiterated his intention not to seek to establish a dictatorship, but to continue to follow a pacific policy unless forced to take action by incorrigible agitators.

A report signed by the engineer-in-chief of every state except Tasmania, has been presented to the minister for home affairs on the question of a standard gage for the Australian railways, and this report recommends 4 feet 8½ inches as the best system. The cost of converting the few lines in New South Wales not already using this gage would be £120,000. Victoria has a 5-foot 3-inch gage, and the cost of conversion would be £6,117,000. Queensland would require an expenditure of £12,578,000. South Australia £6,228,000, Western Australia £10,310,000, and the commonwealth £1,281,000.

Premier Count Gombei Yamamoto, in the course of an address to an assemblage of Japanese journalists, announced that the government was introducing administrative reforms which would effect an economy of thirty-five million dollars.

A parliamentary return recently issued gives particulars of all deer forests and lands exclusively devoted to sport in the various counties of Scotland. The total acreage is given as 3,599,744, and the rental as £183,788.

Following on the note from the Czar to the same effect, the great powers have represented to Servia and Bulgaria the necessity of demobilization.

M. Venizelos, the Greek premier, is the first to accept the Russian invitation to attend a conference in St. Petersburg.

Industrial and Commercial.

Competition between the Rothschilds and Standard Oil was started at San Francisco when the Dutch tank steamer Kessler arrived recently from Sumatra with three million gallons of gasoline. This is the first consignment of many which will be used to wrest from Standard Oil its American monopoly. The cargo was consigned to the American Gasoline Company, the corporate name under which the Shell Petroleum and the Royal Dutch Petroleum companies, controlled by the Rothschilds, will operate on the Pacific coast. The Kessler proceeded to Martinez, where a million-dollar plant has been established. Other big tank steamers are already on the way. The company will also refine oil and export California petroleum.

The Puget Sound Mills & Timber Company has awarded a contract for the erection of a lumber mill with a capacity of half a million feet daily at Port Angeles, Wash. The plant will cost one million dollars. The company has a tract of one billion eight hundred million feet of timber to cut.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

SOME THOUGHTS ON THE CHRISTIAN SCIENCE LECTURE.

WILLIAM D. MCCRACKAN, M.A.

IT must often come to the thought of practical Christian Scientists how they can best prepare for the lecture, and likewise further its true purpose when attending it. In this connection it will be well for them to turn to the Church Manual and there read that "it is the duty of the board of lectureship to include in each lecture a true and just reply to public topics condemning Christian Science, and to bear testimony to the facts pertaining to the life of the Pastor Emeritus" (Article XXXI, Sect. 2). The principal purpose of the lectures, therefore, is to correct public misconceptions concerning Christian Science and its Discoverer and Founder.

Turning to "Rudimental Divine Science" by Mrs. Eddy, on page 15 we find a fundamental distinction between public lectures and class teaching. Mrs. Eddy writes, "It is impossible to teach thorough Christian Science to promiscuous and large assemblies, or to persons who cannot be addressed individually, so that the mind of the pupil may be dissected more critically than the body of a subject laid bare for anatomical examination. Public lectures cannot be such lessons on Christian Science as are required to empty and to fill anew the individual mind."

It is evident from these words that Mrs. Eddy had in view for the public lectures a work different from that of class teaching. Now, taking the words from the Church Manual and from "Rudimental Divine Science" together, the inference is natural that the Christian Science lectures are addressed primarily to the general public. The Christian Scientists of the locality in which the lecture is held have invited a member of the board to address their fellow residents. They have thrown the doors wide open and extended a general invitation to all to partake with them of the feast provided. The lecture is a free gift, a love offering. The Christian Scientists are the hosts upon this occasion, the general public is their guest.

A clear recognition of this fact, with the resulting attitude of mind and heart, will be found most effective in reenforcing and confirming the truth uttered from the platform by the lecturer, and an added blessing will flow toward the Christian Scientists who have provided this opportunity. An atmosphere of healing and redemption will pervade the time of preparation, will characterize the lecture itself, and will remain after the healing word has gone forth to bless the whole community.

FUNDAMENTAL RELIGIOUS RIGHTS.

ERNEST C. MOSES.

IN using the word "fundamental" in the caption of this article it is the intention to show that the religious rights of man and woman are what the Standard dictionary declares as the meaning of that word: "indispensable; primary; essential;" based on a "principle; a primary and necessary truth." The right of all men and women to choose and enjoy the religion which seems to them best suited to their spiritual aspirations and needs is, in the human economy, an inviolate right of choice; a human approximation of divine Principle, a manifestation of justice which has its root and vitality in infinite Truth.

Of the natural liberty to pursue individual well-being, which is the birthright and the abiding right of every man and woman, Alexander Hamilton, one of the great patriots of the Revolutionary period of American history, wrote the following fine sentiment (we quote from "The Works of Alexander Hamilton," edited by Henry Cabot Lodge): "The Deity, from the relations we stand in to Himself and to each other, has constituted an eternal and immutable law, which is indispensably obligatory upon all mankind, prior to any human institution whatever. This is what is called the law of nature, 'which, being coeval with mankind and dictated by God Himself, is, of course, superior in obligations to any other. It is binding all over the globe, in all countries, and at all times. No human laws are of any validity, if contrary to this; and such of them as are valid derive all their authority mediately, and immediately, from this original' (Blackstone). . . . The sacred rights of mankind are not to be rummaged for among old parchments or musty records; they are written as with a sunbeam in the whole volume of human nature by the hand of Divinity itself, and can never be erased or obscured by mortal power."

This view of personal liberty is entirely in accord with Christian Science when applied to a person who seeks membership in its visible church organization. The government of the Church of Christ, Scientist, is a pure, moral democracy, and in becoming a member under the qualifications laid down in the Manual of The Mother Church (Articles IV to VII inclusive), no person surrenders his or her true individual liberty. Indeed, a right reading of the "Discipline" in Article VIII of the Manual, and all other of the by-laws, points the way whereby one may obtain and retain the highest sense of liberty.

This freedom is gained because membership in the Christian Science church is not secured by binding oaths, ceremonial procedures, or artificial covenants, but through demonstration, whereby the seeker for church privileges becomes joyfully obedient to the teaching of the Bible as interpreted in Christian Science, and to our Church Manual. No one rightfully becomes a member without a willingness to be obedient to the church laws; and the only hold which the Church of Christ, Scientist, has upon its members is found in the opportunities it presents for loving service to others and in the benefits which loyally active membership brings to the right-minded individual. These phases of experience decide the true value of church-membership to each individual; and of the measure of this value each member under the direction of God must be sole arbiter for himself.

The Church of Christ, Scientist, has made steady progress in becoming acceptable to men and women of intelligence the world over, because it nourishes their religious natures with something more substantial than they had found in the systems of religion or philosophy, to which in

many cases it may be alleged they were bound by some material ceremony performed in their unconscious childhood. But why should men and women of any one generation consider themselves bound by paternal vows or actions, based on "the tradition of the elders," which may preclude the exercise of individual rights of conscience or selection in religious matters during the mature years of the individual? Can it be said that true individual liberty is enjoyed by the man or woman who is prohibited from exercising his or her volition and conscience in matters pertaining to life and morals by compacts to which their own consent was not asked or given?

Because Christian Science stands in the highest degree for the rights of conscience, "the glorious liberty of the children of God," its church laws include no rules or ordinances, secret or open, which compel human parents to bind their offspring to a lifetime affiliation which can only be rightfully effected and maintained through each individual's own convictions and consent. On the same platform of freedom and justice this church exacts no pledge from the adult which would prohibit a withdrawal from membership by any member who might elect to do so.

Christ Jesus declared that the knowing of the truth would make men free. As his statement was universal, specifying no exception whatever, the truth must be available to make any demonstration of freedom from an outgrown affiliation in religious matters necessary to each student's growth. There is, therefore, a way to be free through the right application of Christian Science, and our Leader has taught us that "Love is the liberator" (Science and Health, p. 225).

WHAT DO WE MEET?

LOUISE KNIGHT WHEATLEY.

THE newcomer in the Christian Science church is often heard to remark upon the happy faces of those who attend the services, and this comment is well deserved, for surely no body of persons have greater reason to rejoice than have Christian Scientists. It might fittingly be said of them, in the words of the Apocalypse, "These are they which have come out of great tribulation," for in these large congregations there can hardly be found one person who has not left behind him some burden of physical or mental discord. No wonder, then, that their eyes shine, that their lips break into a ready smile, that their hand-clasp is cordial and sincere. A long-faced Christian Scientist would be an anomaly.

Occasionally, however, one comes across a student of Christian Science to whom this description would not apply. He is a regular attendant at the services, is possibly a church-member, and cases have been known where he even holds some official position among the various activities of the church organization; yet his face habitually wears a look which seems strangely out of keeping with all that his lips profess. Asked a reason for his general air of gloom, his answer, nine times out of ten, is this: "I have so much to meet." And having thus spoken, he continues with a sigh his joyless way, evidently satisfied that this brief explanation has been sufficient. This expression is familiar to most of us; in fact, it is quite possible that we ourselves have been known to make use of it in moments of depression, when we seemed to forget that "the government shall be upon his shoulder," but evidently believed that it was resting all too heavily upon our own. Before we employ this term again, however, let us analyze its meaning somewhat.

"So much to meet." So much what? So much truth or so much error? Each Sunday we stand in church while the scientific statement of being is read, and silently acquiesce to the fact that "all is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468), because we know that upon this tremendous verity rests the entire superstructure of the Christian Science religion. This being true, it must follow that God and His infinite manifestation is all that we have to meet. Is this what we mean? If our face is long or our eyes refuse to smile, is it because we have "so much to meet" of Life, Truth, and Love, with all the varied expressions of infinite and unfailing goodness?

Of course not. What, then, is the alternative? If it is not God and His spiritual and perfect creation which is giving us so much trouble, obviously it must be *something* else. But is there anything else? Does Christian Science furnish us any authority for believing in something more than that which is "All-in-all"? We are certainly repudiating the fundamental teachings of our religion if we are believing in something apart from God, an entity and presence unlike Him, with power, underived from Him, to make us miserable; we are virtually acknowledging, audibly and without shame, that we are harboring thoughts which have no right whatever in the consciousness of a Christian Scientist.

We would hesitate to invite attention to our material home, so called, if it contained unlovely evidences of carelessness and neglect. Then why do we unblushingly invite attention to our mental home under similar conditions? It would indeed be a strange sort of housekeeper who would say to her friends: "Come in and see this ugly home of mine. Look it all over carefully. The rugs need sweeping, the furniture needs dusting, the floors need polishing, there are cobwebs in the corners, and the windows still bear the traces of the season's storms. But step right in, and see the whole miserable state of affairs. Do you wonder that I am unhappy?" Yet this is practically what the one who has "so much to meet" is saying. "Come in," he cries, "and see where I live. This is my consciousness, the place where I do my thinking. See my false belief about God, my Father, and about man, my brother. These other things which seem to be taking up so much room are called hatred, malice, envy, jealousy, revenge, fear, discouragement, sensuality, greed, ingratitude, treachery, hypocrisy, deceit, suspicion. They really belong to some one else, but I take them in just as fast as they come. Do you wonder I am unhappy in a home like this?"

At this season of the year, when the tidy housewife is opening her windows to the fresh spring air, and from garret to cellar a vigorous rubbing and scrubbing is going on, suppose we follow her example, and do a little mental house-cleaning. Elizabeth Barrett Browning once spoke a volume in a sentence when she wrote,—

> Look round, look up, and feel, a moment's space,
> That carpet-dusting, though a pretty trade,
> Is not the imperative labor after all.

After we have looked up that little space, will not "the imperative labor" be the opening of the windows of our thought, that the pure winds of Truth and the warm sunshine of Love may enter, to invigorate and refresh the atmosphere within? With their coming, the horde of false beliefs will quickly disappear, like the dark dream-shadows that they are, and in their place we will find a "larger thought of God," our Father, who made all, and made it not only good, but "very good," and a truer concept of man, our brother, who can send us nothing that will do us harm, for he is God's child, just as we are, and he loves us. Since, as Mrs. Eddy tells us, "everything is as real as you make it, and no more so" (Unity of Good, p. 8), where is the place to locate the whole trouble that gives us "so much to meet"?

Have we not, then, leaned long enough on that broken staff of a worn-out aphorism? Let us be honest with ourselves. Would we not get along faster, perhaps, if we flung the thing away altogether, and began leaning a little more upon God? Would we not find the pathway less rugged if we stopped thinking about what somebody, somewhere, seemed to be doing, and thought a little more about our Father's

Digitized by Google

tender, protecting love for His children, and how it encompasses and enfolds them every step of the way, shining as a light in the darkness, making the crooked paths "straight, and the rough places plain"?

"Whither shall I go from thy spirit?" is the glad cry of the psalmist, "or whither shall I flee from thy presence? If I ascend up into heaven, thou art there: if I make my bed in hell, behold, thou art there. If I take the wings of the morning, and dwell in the uttermost parts of the sea; even there shall thy hand lead me, and thy right hand shall hold me." Our Father is so near, so dear, so ever ready to bless and save! The hand that reaches out for His will always find it, though the night be starless. Then let us look up, and take courage. Has there ever been, can there ever be, anything to meet but God and His idea?

OUR DAILY FOOD.

HARRY WOOTTON.

As we push manfully on in the study of Christian Science, we find that there must be constant watchfulness over our thoughts, and a glance at the average daily newspaper, magazine, or "up-to-date" novel forces us to the conclusion that there is but little of enduring good set forth therein for the perusal of the followers of Christ.

The selection of reading matter to be made by a Christian Scientist is of the utmost importance, and in Science and Health Mrs. Eddy has given us many counselings regarding it. In contrasting the early life of the great Teacher with that of the materialists of his day, she writes: "His senses drank in the spiritual evidence of health, holiness, and life; their senses testified oppositely, and absorbed the material evidence of sin, sickness, and death" (p. 52). Can we devour the news of the day as set forth in the usual metropolitan daily, become absorbed in the tide of melodramatic fiction which crowds the pages of many of the monthly magazines, or follow the shady characters portrayed in a large proportion of present-day society novels, and feel that we are giving heed to the apostle's admonition to let that Mind be in us "which was also in Christ Jesus"?

If one will but stop and note his state of mind after reading the records of error, he will surely realize a sense of discordant thought, a sense of having strayed from that which is good into an atmosphere of selfish contention. Surely the "wholeness" which is health of mind and body is not to be obtained by constantly dwelling upon so much which is absolutely the opposite of all that is spiritual. The constant perusal of crime, of disaster, of wretchedness, tends to a belief in the actuality of these discords and thereby retards us in our effort to gain an understanding of the unreality of all that is discordant. In Christian Science we learn that man is God's image, reflecting nothing but good, and that God, good, is the only power. This is man as Christ Jesus saw him, and if we are striving daily to see man as the Master saw him, our thoughts must be lifted above all false concepts of man and God's creation.

It is not to be inferred that we are to shut ourselves away from good literature and from contemporaneous history, or that we are not to be in touch with the events which are a part of or which concern our city, state, or country, and other countries and peoples as well. There is much in the world of human events which it will be right and helpful for us to know, but let us be constantly awake to the fact that God's kingdom is at hand, and that in it there is nothing but good. Then we shall recognize the falsities of mortal sense for what they are.

Mrs. Eddy tells us that in order to do this "we must first turn our gaze in the right direction, and then walk that way. We must form perfect models in thought and look at them continually, or we shall never carve them out in grand and noble lives" (Science and Health, p. 248); and one of the many wonderful provisions she made for the students of Christian Science was the supply of the means by which we can avoid absorbing the evidence of sin, sickness, and death, and the ease with which we may find "perfect models in thought" to which we may at all times cling. *The Christian Science Monitor* with its constructiveness, its truthfulness, its current news sifted of all that is unworthy; the *Sentinel* and *Journal* with their helpful selections and testimonies of gratitude from countless numbers of those healed in Science, and the *Quarterly* with the lessons which enable us to read the Bible anew and find strength and healing,—all bear witness to the divinely given wisdom with which Mrs. Eddy counseled the abandonment of all that is evil or discordant, and with which she supplied us something to take the place of what should be discarded.

The Bible and our text-book, together with the publications represented by the periodicals and pamphlets sent out by The Christian Science Publishing Society, afford every student of Christian Science treasures of reading matter. It is not necessary and it is not wise that one should read, discuss, or in any way absorb any other publication purporting to explain or discuss Christian Science. The models for our daily reading are before us. In them we can gain knowledge, we can keep in touch with all that is of interest to and good for us as members of society, and find material with which to pass many an hour in pleasurable and beneficial reading. If we are watchful and on guard with respect to these things, our advancement as students will be marked, baneful habits will be given up, and we shall be endowed with the power to apprehend God and man aright. It will indeed be well with us if we daily heed the wise counsel of our Leader, namely, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (Science and Health, p. 261).

SPIRITUAL SUPPLY.

LILIAN GALARNEAU.

If one will but turn to the Bible, he will find from Genesis to Revelation a continuous assurance of infinite supply,—a supply which arises from the boundless basis of Spirit, God, —and that nowhere is mentioned limitation in regard to the needs of God's children. In Christian Science we perceive that the sense of limitation is solely a belief of mortals, that it is self-deceived error, for in effect we try to limit the infinite, which is limitless; and this is the wonderful message of our faith, that there is unlimited good for us, whether it be of supply or health or life. We therefore find our great need to be the overcoming of a sense of insufficiency of any good. By keeping our windows open toward Jerusalem, by listening, as Elijah did, for God's voice, we may fully realize that we are at one with the infinite source of supply, and then we shall lose all sense of limitation; thus demonstrating man's dominion over all and the all-sufficiency of divine Love, for Love supplies all needs, and according to our faith will it be unto us.

We once thought that supply referred mainly to material things, but our Leader has shown us that the true sense of substance is found in the understanding of Life, Truth, Love, and we who daily pray for that Mind to be in us "which was also in Christ Jesus," must know that the Wayshower not only received large supplies of divine power, but that he was willing to give his all; that while he gave us as of first import his spiritual work, he remembered the temporal needs of humanity and fed the multitude. Though we consider our church a spiritual structure, yet its outward symbol must be sustained. He who has told us to ask largely and we shall receive, bids us bring the tithes into His storehouse.

How priceless seem the values of the supplies of understanding and wisdom which we have received through Christian Science! How beyond price are the peace and deliver-

Digitized by Google

ance from fear! Silver and gold seem as trifles compared to these, and yet we may even here show a willingness to gain the spiritual by giving up the material, for we must do this at every point if we would lay up treasure in heaven. Jesus commended the woman who so appreciated the spiritual blessings which he brought to humanity that she poured the costly ointment on his head.

God's promises are indeed wonderful to those who are willing to trust Him for all supply. There is no more helpful thought on this subject than that found on page 308 of "Miscellaneous Writings," where Mrs. Eddy says: "God gives you His spiritual ideas, and in turn, they give you daily supplies. Never ask for tomorrow: it is enough that divine Love is an ever-present help; and if you wait, never doubting, you will have all you need every moment." Then, knowing that all the Father hath is ours, as we need it, it is our privilege to share this rich abundance, since, as some one has so understandingly said,—

To give rightly is Love's first behest,—
To give as the rain floods all the thirsting earth,
As flings the breeze its ripple of soft mirth;
As the wide tree spreads shade in noontide glare,
The best thou knowest give, that all may share.

And as these lack not, neither shalt thou lack;
For all thy giving shall increase thy store.
Because unsought, thy sowing shall give back
An hundredfold of good—till more and more
Thy garners of true joy are brimming o'er.

LESSON FROM NATURE.

GERTRUDE A. COWLES.

EARLY one spring morning not long since, the thought that there are "sermons in stones, and good in everything," was impressed upon me in a very vivid manner, for if spiritual sense is alert we are easily impressed with great truths.

I am connected with a government institution in the midst of the western desert, where by irrigation a little valley has been made both beautiful and productive, an illustration of Truth's power in the desert wastes of human existence. In passing over one of the irrigation ditches I was so charmed by the stream's limpid purity that I paused for a while to enjoy the beauty of the scene, and to think with pleasure of the time to come when the land would be green with vegetation and would yield bountiful harvests as a return for the pure, life-giving water thus brought to the soil. Later in the morning I passed over the same spot, and looking down into the water with the expectation of the same pleasure I had experienced in the morning, I was surprised to find that what had earlier been a thing of beauty had become repulsive. The blue sky and fleecy clouds above no longer were reflected on its limpid surface; it had become stagnant, and was covered with slime and débris.

Searching for the cause of the changed conditions, I found that the gardener had placed an obstruction in the current's path and thus cut off the supply from above, so that it was no longer a flowing stream. Then the analogy between this circumstance and our too frequent experiences in Christian Science was made apparent. We start out at the beginning of the day, after a careful study of our Lesson-Sermon, with thought attuned to harmony, with a promise that in all our waking moments our consciousness will prove an open channel for Truth and Love; but soon, perchance, we allow the interruptions and trials incident to human experience to usurp their place in our thought, thus robbing ourselves and others, perhaps, of that "water of life" which alone can supply our need. Our fault may have been in our ceasing to give, or our failure to deny an error which was brought to us by another; thus was our channel choked with the obstructions of mortal sense, until our words and deeds no longer reflected the sunlight and beauty of Truth.

Had the gardener removed the obstruction from the course of the current and allowed it again to flow freely through its channel, it would soon have become a clear, pure stream, a source of pleasure to the beholder and of refreshment to the land; and a kindred removal of hindrances from the channel of right thoughts is referred to by Mrs. Eddy when she says, "The way to extract error from mortal mind is to pour in truth with flood-tides of Love" (Science and Health, p. 201). We may, if we will, so preserve the flow of right thought that every error will be removed *from* consciousness, and we thus become a perfect channel *for the* life-bringing ministries of Truth.

REALITY OF GOD.

F. M. BROWN.

THE great need of religion is genuineness. Thousands of well-meaning preachers do their best every Sunday to reach the people and help them. The lack of real interest on the part of the hearers, and their hunger and thirst for something that is available and not far off, is the best evidence of the fact that something vital is wanting. Then, too, the thought is very prevalent that Christianity is not practical, not for use in this world, and that the teaching is only to prepare one for life in some hereafter. The truth is, however, that genuine faith in God and Christ is a very present help, and the most real and important thing in life.

All men naturally seek happiness, and there is a widely prevalent belief that money will bring it; but this is the belief in a graven image, a false god. How many men who seek wealth for its own sake ever find happiness? Either they lose the pleasure which comes from the right use of money by their habitual practise of saving or hoarding, or something happens which turns their fancied joys to wormwood and gall.

Any one who will seriously consider the subject for a moment, however, will admit that the truest happiness they have ever known, came from the innocent enjoyments of childhood and early youth. Men may think that this happy period is gone forever, and that the responsibilities of maturer life render this innocent happiness impossible; but this is not true. The seeking and finding of God, which is possible to every one, brings, as we gain an understanding of the teachings of Christian Science, first faintly, then more and more vividly, a demonstrable sense of power, peace, happiness, and freedom which can only be likened to the joy of childhood. When will men open their minds and hearts to this real power and force which is God?

[Written for the *Sentinel.*]

"DUST TO DUST."

MARY HICKS VAN DER BURGH.

"DUST to dust." The Father's voice
Speaks to the mortal dream. Rejoice
That this alone it is that dies,—
The fear that fails, the law that lies.
No good can ever pass from hence,
What passes is the sleep of sense.

These words, once charged with loss and ill,
Now sing the star-song, Peace, good will;
Transformed by Love that understands,
God's child shall break restraining bands
And rise from earth's obscurity
To grasp man's immortality.

When that last dreaded foe shall fall
Which from the depths defies us all,
Alone the Father knows the hour;
We trust in Truth's transcending power,
And though we see not yet, believe
In our complete and glad reprieve.

SELECTED ARTICLES.

[Frederick Dixon in *Kentish Express*, Ashford, England.]

Writing in the Tenterden *Parish Magazine*, the Vicar of Tenterden says: "It was with the deepest regret that I was compelled to perform a most painful task on Sunday morning, April 20. In fulfilment of my ordination vow, 'to banish and drive away all erroneous and strange doctrines contrary to God's word,' I felt it to be my duty to warn my people against certain parishioners who had been secretly disseminating the doctrines of the false prophet of America, Mrs. Eddy."

The vicar begins by saying that he prefers to call Christian Science "Eddyism." *Chacun a son goût.* We have Lutheranism and Calvinism in the Christian church, and Confucianism, Zoroastrianism, and Mohammedanism out of it, to say nothing of Platonism, Berkeleianism, and a score of other religions and philosophies, so that historically Mrs. Eddy would be in very good company. At the same time, Mrs. Eddy's teaching is known as Christian Science all over the world, so that the vicar's effort is a little late and a little feeble. If it is simply a question of being rude, that, of course, is another thing; it is always so easy as to be never worth while. He then goes on to quote against Christian Science all the most disagreeable lines in the poets he can apparently call to mind at the moment. It is a simple relaxation, especially if you have a dictionary of quotations by you; but reading this week's *Parish Magazine*, one is inevitably reminded of the inimitable scene in the inn on the Wretford road, when the bishop, with imperturbable bonhomie and gravity, remarked to the highwayman, "Of scurril terms you have a most remarkable empire."

Next, he goes on to make almost as many statements, without troubling about the proof, as if he were Stephen Paget himself. He endorses the criticism that Mrs. Eddy's statement, that pain and death are not real, "comes from hell." Personally, I thought Mrs. Eddy's authority was the Bible in such declarations as "The last enemy that shall be destroyed is death." The vicar does not explain how, if death is real, that is true, you are going to destroy truth. Jesus of Nazareth said, "Ye shall know the truth, and the truth shall make you free," free from death and pain, surely. A great churchman and a great scholar, Bishop Westcott of Durham, commenting on this passage, writes: "The freedom of the individual is perfect conformity to the absolute, to that which is. Intellectually, this conformity is knowledge of the truth; morally, obedience to the divine law." Mrs. Eddy uses real in just this sense, that is, as the creation of God, spiritual and indestructible. She never said that pain and death were not, relatively speaking, facts to the human consciousness; she did deny that absolutely, that is spiritually, they were facts, and so does the Bible. "It is entirely competent," Mr. Froude writes, for any one "to define the terms which he intends to use just as he pleases." This does not appear to have occurred to the vicar. He apparently thinks that it is open to any critic to fit another person's conclusions on to his own definitions, for the express purpose of reaching a *reductio ad absurdum*. It makes argument very easy until you are found out.

Then he tells of a lady who gave up Christian Science because she found it did not heal. She is reminiscent of the stage army who march off at one wing to march on at the other. What a tribute is this solitary swallow of anti-Christian Science to the strength of the movement! Multiply her through all the pamphlets against Christian Science, and then subtract her multiplication, and she remains one. Why, all the Christian Scientists in the world, and there are thousands not a few, have become Christian Scientists because they found orthodox medical treatment did not heal their bodies or orthodox theology their minds. Does the vicar imagine that the infidels, heretics, and Turks of the church prayer-book represent the successes of orthodox theology, or the obituary columns of the papers the successes of orthodox medicine?

One hundred and fifty years after the ascension, the vicar goes on, the canon was fixed by the church. I really do not know what this has to do with Christian Science, as Christian Scientists use and read the King James version in their churches, but I do know it is a piece of astounding history, calculated to involve the vicar in a quarrel with the scholars of his own and every other church. The canon was revised and altered by council after council, and it was never fixed authoritatively until the Council of Trent, in 1545. The Reformation broke even that decision, and the vicar presumably knows that the canon is different today in the Greek, Protestant, and Roman churches.

His definition of the Christian church is even more unfortunate, and that is saying a good deal. It would include or exclude every one or any one at will. Surely he knows that the churches of Christendom have for centuries been slaughtering one another in battle, and murdering one another by persecution, over the very dogmas the treatment of which in Christian Science he denounces. Take the sacrament, as he selects it. Was not the dogma of transubstantiation almost the *fons et origo* of the Reformation? The Protestants coined the term hocus-pocus out of the most solemn words of the mass, and the Romanists retaliated by burning them whenever they could. What the reformers left, the Quakers finished, and yet the vicar wants to insist that the Christian Science teaching on the subject is antichristian. Would he admit that a Quaker was a Christian? Would he describe a Roman Catholic as one? I can assure him that the latter would describe him as a heretic. The fact is, that he has the haziest ideas as to what the teaching of Christian Science is on the subject of the church, the Trinity, and the eucharist. That, however, is no reason why he should put into the *Parish Magazine*, without any reference to show where he got them, quotations from Mrs. Eddy in support of his argument.

[W. C. Williams in *Baltimore* (Md.) *American*.]

In a recent article upholding Dr. Osler's position on the inefficiency of the saints in curing human ills, a certain reverend gentleman referred to Christian Scientists as representing the extreme form of trust in miracles. He stated that it is just beginning to be seen that this is the wrong kind of trust in God. Christian Scientists do not believe in miracles, if by miracles is meant something that is accomplished contrary to law; nor did Jesus, for he said that he came to fulfil the law, not to destroy it. He also said that as the Father did the works, all who believed him and trusted in God would do even greater things than he did; and most of his work was the healing of "all manner of disease." He did not advise the people to go to the medical men or to study medicine, but proved to them that it was their God-given privilege to be filled with health and holiness; and through obedience to God's law—seeking the kingdom of heaven, loving their neighbor, and overcoming sin—health of mind and body would result.

Either sickness and disease are in the divine order of things or they are not; either God afflicts His children with suffering or He has nothing to do with it. If the Father visited disease on His children, they would have no right to try to overcome it, and they could not overcome it if sent by an all-powerful God. Jesus showed that it was not through God that we were made sick, but that through the understanding of Him and man's relation to Him, sickness and all other discord could be overcome through truth. A human father would not inflict suffering on his children for the benefit they might derive from the patience gained in fighting for their health, and would we attribute to a loving heavenly Father that which we would abhor in a human one? The command, "Seek ye first the kingdom of God," and all else shall be added unto you, will keep one busy enough without

Digitized by Google

wasting his energy during the whole of his mortal existence in struggling for freedom from the nightmare of disease, and the promise is there which makes such a waste unnecessary.

If God did not inflict disease, it is man's duty to reach upward for the truth that makes free, and not delve in materiality for something to make him a further slave to it. Jesus believed, with our critic, that "all God's creatures will be happy," but as he knew that happiness would be unknown so long as the creature was disease-bound, he went about teaching and proving that God's law makes man free.

Our reverend friend, a minister of the gospel, says that it is our duty "to discourage reliance upon any spiritual efforts to take the place of necessary material medicines and treatment, though giving due weight to the aid of God . . . in seconding . . . every effort;" and yet the Bible states that "God is a Spirit," and tells us to put our whole trust in God, and also says "the flesh profiteth nothing." This does not look as if an omnipotent, omnipresent God was intended to take second place in His universe.

[Algernon Hervey-Bathurst in *Truth*, London, England.]

The very ably written article entitled "Old Ills and New Remedies," which appeared in a recent issue, certainly gives a vivid picture of the many and varied devices to which mankind has recourse with a view to obtaining relief from various ills. Your contributor has also touched upon Christian Science, but his remarks on the subject are by no means so accurate as the descriptions of the mud bath and the "return-to-nature theories" are amusing. May I, therefore, be permitted to point out that Christian Science goes far beyond merely saying "that nothing unpleasant exists," but proves with unerring certainty, to that individual who endeavors to practise its teaching faithfully, that discord, whether mental, moral, physical, or of any other description, can be healed by a correct understanding of God and His law, the infinite law of good, as originally taught by Christ Jesus, set forth in the New Testament, and reiterated in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

[M. S. Bruen in *The Express*, Dublin, Ireland.]

A writer in a recent issue calls attention to Christian Science, and I think the following may clear up some points with regard to it which trouble him.

Nearly forty years ago a book was published which brought a seemingly new idea before the world, new in the sense that it had been lost sight of for centuries. Christian healing was its central idea, the healing which had ceased to be definitely practised since the third century. Instead of insisting on the power, inevitableness, and all-presence of evil, men were bidden in Christian Science to turn and look for the all-power and presence of God, whom the Bible names Love, Life, Spirit, remembering that their conscious existence must be due to some cause which must be intelligent, Mind. Being aware that every one wants happiness, love, betterment of some sort, this book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, as it was called, brought out the fact that God, good, is the only power and presence, and bade men recognize that fact, and take it for their standpoint of thinking and living,—to magnify good, and not evil. The chapter on Prayer unfolded a sane and higher view of how to pray so as to receive answers, while the chapter on Atonement and Eucharist opened out practical views of the way to "draw near to God," which Jesus lived and taught with the deepest reverence, making the Saviour better known to all.

This book showed that God, being "of purer eyes than to behold evil," cannot possibly have made, or sent, or permitted evil or trouble of any kind; for if God had made evil and misery, they must be eternal, so it would be of no manner of use to try to get rid of them. But God being absolutely perfect Love, Truth, and Life, He could not make the opposites of these, and did not make them; therefore they are only of the nature of an illusion, and temporary. This seemed startling and "too good to be true;" but here and there men and women who were suffering and crying out for relief, began to read the book, and found their illnesses and pains were leaving them. This happened more and more often, till there was quite a stir. "Have the days of miracles come back?" No, they said; Christian healing is not miraculous, but divinely natural, for we are beginning to understand God's law: "Thou shalt have no other gods before me," and the blessing follows: "I will take sickness away from the midst of thee." They had begun to learn the way to be free.

In his commentary on St. John's gospel, Dr. Westcott has pointed out that a particular use of the definite article in it makes a very emphatic distinction between the absolute truth and a relative sense of truth. "The truth that shall make you free is expressed in perfect conformity to the absolute, to that which is. Intellectually, this conformity is knowledge of the truth; morally, obedience to the divine law." Those who are ready to follow this new idea are being healed of their ills, for not only functional but organic diseases yield to it, according to testimony, as well as sin, false appetites, and poverty. Others who have not been ready to accept it have criticized what they have not understood. Taking up a distorted view, they criticize that view, which is not Christian Science. Nowhere in Mrs. Eddy's writings has she ever boasted that she had taken away their Lord. She has instead given all mankind a more spiritual idea of the Saviour. Some devout Christians before her spoke of God as the great First Cause. Does not Principle signify somewhat the same?

To another critic this is offered: Take no one's ready-made advice about Christian Science. It is meant for practical use, and can only be tested by individual study. It is not a patent medicine for promiscuous use, neither need any one be afraid to use it for himself. It is not will-power. Other systems study the minds of mortals; this is the Science of Mind, the exact knowledge of God.

[Royal D. Stearns in *Cozad* (Neb.) *Local*.]

Christian Science is essentially a religion. It is founded solely upon the Bible and the works and teachings of Christ Jesus. It is the restoration of primitive Christianity. Christian Scientists are obeying the commands of Jesus, to go into all the world, and not only preach the gospel, but heal the sick, and thereby are reestablishing the healing work of the primitive church. History assures us that the healing of the sick was a part of the regular church ministry for three hundred years after the ascension of Christ, and that the dead were raised during the first and second centuries. What does it mean to have a science? It is well understood that a science implies classified understanding; it requires a law, which must be presented in its unity, order, and system. This is precisely what Christian Science does. It presents this divine law in its unity, order, and system with such precision and certainty that Christian healing prevails by way of proof. It is therefore eminently scientific; moreover it is Christian, because this law is not physical, but divine, compassionate, and helpful.

Every one who concerns himself with religious affairs would enjoy having the power of good that Jesus had; every one would be glad to understand the divine law well enough to heal and reform men as did primitive Christians. That Christian Science does conform strictly with the gospel is shown from the great success that comes to its adherents in healing the sick and in reforming the sinner. Indeed its scientific value rests upon fact, for there is no doubt that Jesus taught the truth, since all scientists and philosophers have agreed that his gospel is of the highest

Digitized by Google

ethical value, that it is indeed eternally true. Being true, it must be scientific, since nothing could be more scientific than that which is forever true.

Your critic claims that Christian Science teaches that "God is not a person." Your critic has not stated what kind of person he thinks God is. Does he think God is a corporeal being? Mrs. Eddy says in her 1901 Message to The Mother Church: "We understand that God is personal in a scientific sense, but is not corporeal." "We believe, according to the Scriptures, that God is infinite Spirit or Person, and man is His image and likeness" (pp. 4, 5). As the spiritual sense is gained, it is learned that Christian Science gives out the idea of God which is demonstrable and at the same time in harmony with the grandest and purest conception of being. It is the human limited sense of personality which is denied in Christian Science.

Christian Science accepts the doctrine of the immaculate conception and offers a scientific and satisfactory explanation of it. Jesus was the way in the sense that he was the example and the truth, in that he indicated the way of salvation through the understanding and practise of the truth. He said, "Ye shall know the truth, and the truth shall make you free." The term Jesus Christ used in the Scriptures means Jesus the anointed. This is exactly the sense in which Mrs. Eddy uses the term.

Christian Science unreservedly accepts the Bible doctrine that all things were made by God, and that "God saw every thing that he had made, and, behold, it was very good." It follows that if sin is real, it must be God-made, and hence good; if sin is real, it becomes a part of omniscience, and as omniscience cannot forget anything it has once known, it becomes eternal. That is where your reverend critic's logic leads necessarily. Christian Science reverses this doctrine, and denies the reality of sin and evil in the sense that it is God created. Speaking absolutely, sin is unreal, that is to say, it is absolutely unknown to the divine Mind, which is without sin. It is not claimed by Scientists, however, that sin does not seem real to human consciousness; and it is not claimed that during this human experience it is not necessary to grapple with it and overcome it; it is claimed merely that it is not real in the sense that it is not a part of God's creative work. The universe created by God must also be like its creator, for like produces like, and since God is infinite Spirit, the real universe, His manifestation, must be spiritual. It must comprise the infinite ideas of this infinite divine Mind, forever unfolding and appearing in the perfect harmony of divine Science, governed by the perfect law of divine Love and expressing the indestructible substance of Spirit.

[George Shaw Cook in *Aurora* (Ill.) *Beacon-News*.]

In an item in a recent issue the statement is made that the "Brahmins held to the doctrine that there is but one being in the universe, and that is the universe itself." The question is then asked if this is the doctrine of Christian Science. This theory finds no agreement with the teaching of Christian Science. On the contrary, Christian Science clearly indicates that there cannot be a noumenon without phenomena. Most people admit that there is one primal cause, and that this cause is mental or spiritual. Christian Science starts with the basic proposition that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468). Mind being infinite, perfect, its manifestation or expression must partake of its nature, and is therefore perfect. Thus Christian Science teaches that the universe, including man, is the emanation of the divine Mind and is governed by this Mind.

This understanding of man as spiritual and the universe as perfect, has liberated many from evils which have their origin in the belief that man is mortal and the universe material, and that both are governed by material laws which are changeable and destructive in their nature. This belief, which leaves God out of His own universe, constitutes a fundamental cause for disease and sin, while the knowledge that God's law is supreme here and now, and that man may be and in reality is governed by it, relieves fear, and inspires thought with hope and courage.

Today in increasing numbers people are giving thanks to Mrs. Eddy for her exposition of this Science, which is bringing comfort and healing to men and women in all walks of life, and raising them from bondage to material beliefs into faith in the one Mind, God, the source of all good.

[Frank Bell in *Gazette and Bulletin*, Williamsport, Pa.]

A few things need to be said, briefly, with respect to several quotations in a recent issue of your paper, in which the name of Christian Science was associated with conceptions entirely contrary to its teachings. For instance, no one who is really a Christian Scientist ever could have said material things were merely imaginary, because that sort of explanation of Christian Science finds circulation only among jesters and those who wilfully or in ignorance misrepresent other people's beliefs. The expert behind the bank counter does not brand as imaginary the counterfeit silver dollar which an uninformed patron proffers in good faith; he merely pronounces it not a real dollar. Christian Science gives an explanation of matter as in the nature of a counterfeit of the true spiritual creation, and this enables the learner at least to begin to rid himself of some of matter's deceptive claims to the power to hinder his natural and rightful growth and dominion. Christian Science is not concerned with denying that matter is relatively real to the perception comprised in what are termed the five physical senses. The bank patron above referred to will waste no time considering the constituents of the bogus coin, once he actually learns it is not a dollar. His protection from this fraudulent thing is accomplished as soon as knowledge of its not being what it appears to be has enabled him to assume a right mental attitude toward it.

Christian Scientists work, play, eat, sleep, clothe, and house themselves as do their fellows in this world; only with a better knowledge of the nature of things and a larger freedom from the ills of material existence than they enjoyed before. In their daily affairs they are encountering renewed proofs of the truth of the teachings of their adopted religion, and Christian Science makes no other demands on their allegiance; that is to say, it requires no profession not founded on individual demonstration. Much of such misunderstanding of Christian Science as has remained in the public thought is due to careless attempts to set forth its teaching. As an illustration, the recent statement that Mrs. Eddy says "good is mind," conveys not the slightest intimation of her meaning. In the expression in the Christian Science text-book (see Science and Health, p. 113), the word "mind" is capitalized and is used as a synonym of Deity; in other words, God, good, is intelligence, a perfectly sensible and reasonable statement.

Those who wish to be really informed as to what Christian Science has to offer will consult its official literature, which may be freely obtained in the public reading-rooms maintained by its churches everywhere.

"Everything good is on the highway," said Emerson; and the first and only lasting success is that of character. It may not be, for the moment, exhilarating to realize that one's ill fortune is usually the result of some defect in his selection, or error in his judgment, but, on the other hand, if the cause of his unhappiness lies in himself, the cause of his happiness may also lie with himself, and thus it is in his power to so transform his attitude to life as to reverse the gloom and have the joy and sweetness rather than the bitterness and sadness of life.—LILIAN WHITING.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

[Reprinted from the *Sentinel* of March 15, 1900, by request.]

THE CHRISTIAN SCIENCE BOARD OF LECTURESHIP.

Beloved Students:—I am more than satisfied with your work: its grandeur almost surprises me. Let your watchword always be,—Great, not like Cæsar, but only great as good. You are not setting up to be great; you are here for the purpose of grasping and defining the demonstrable, the eternal. Spiritual heroes and prophets are they whose new-old birthright is to put an end to falsities in a wise way, and to proclaim Truth so winningly that an honest, fervid affection for the race is found adequate for its emancipation.

You are the needful and the inevitable sponsors for the twentieth century, reaching deep down into the universal, and rising above theorems into the transcendental, the infinite—yea, the reality of God, man, nature—the universe. No fatal circumstance of idolatry can fold or falter your wings, no fetishism with a symbol can fetter your flight. You soar only as uplifted by God's power, or you fall for lack of it. You know that to conceive God aright, you must be good. The Christ-mode of understanding Life,—exterminating sin and suffering, and their penalty, death,—I have largely committed to you, my twelve faithful witnesses. You go forth to face the foe with loving look, and, with the religion and philosophy of labor, duty, liberty, and love, to challenge universal indifference, chance, and creeds. Your highest inspiration is that nearest the divine Principle, and nearest the scientific expression of Truth. You may condemn evil in the abstract without harming any one, or your own moral sense; but persons seldom, if ever. Improve every opportunity to correct sin through your own perfectness. When error strives to be heard above truth, let the "still small voice" produce God's phenomena. Meet the raging element of individual hate dispassionately, and counteract its most gigantic falsities.

The moral abandon of hating even one's enemies excludes goodness: hate is a moral idiocy let loose for one's own destruction. Unless withstood, the heat of hate burns the wheat, spares the tares, and sends forth a mental miasma fatal to health, happiness, and the morals of mankind: and all this only to satiate its loathing of love, and its revenge on the patience, silence, and lives of saints. The marvel is, that at this enlightened period a respectable newspaper should countenance such evil tendencies.

Millions may know that I am the Founder of Christian Science: I only know what that means.

MARY BAKER EDDY.

THE LECTURE SERVICE.

AT the beginning of another year of work in the lecture field, we are glad to comply with the request for a republication of the letter addressed by our revered Leader to the board of lectureship in the earlier stages of this great work for humanity, believing that it will likewise be an inspiration to every Christian Scientist. We are also giving, by request of the board of lectureship, a part of the editorial, "The Lecture Service," which appeared in the *Sentinel* of June 22, 1912. The growing importance of this work is shown by the increased attendance at the lectures, the number of persons comprising the various audiences during the past year having been, in round numbers, about 850,000, an increase of about 110,000 over the previous year. We quote from the editorial referred to as follows:—

The importance of the lecture work as an authorized means of disseminating in a community, aside from the regular church services, an accurate knowledge of Christian Science and the facts pertaining to the life and work of its Discoverer and Founder, Mrs. Eddy, is emphasized by these figures. It is, therefore, with the desire to impress upon the branch churches the need for even more earnest and thoughtful cooperation, that attention is directed to the list of lecturers for the coming year on page 852 of this issue; also to the necessity of arranging for the lecture or lectures which are to be given, as soon as possible after July 1, the beginning of the lecture year. If before the end of July the lecturers are able to make up their schedule for the year, they can plan their trips to the advantage of all concerned, and this is often an important consideration with the smaller churches and societies.

The annual circular of the board of lectureship has been mailed to the clerks of all branch churches and societies having cards in the *Journal*, and the instructions therein given should be carefully followed, that the best possible results in every particular may be secured. Seemingly unimportant details ofttimes make for or mar the success of a lecture, and the experience of years in the lecture work has shown the importance of scrupulous care in this direction. Especially should the proper advertising of the lecture have attention, the date, day of the week, place, and hour of the lecture being plainly specified. The local advertising need not begin more than four or five days beforehand, but it should continue in some form to the day of the lecture. Suitable ways of accomplishing this are detailed on page 4 of the circular. The announcement in the "Lectures to be Delivered" column is also important because it reaches many outside the local field, but to insure insertion it must reach the *Sentinel* not later than Monday of the week in which it is desired that it shall appear.

Another point to be remembered is that in the work of a church or society incident to a lecture, much will be or must be done through the officers or committees, but the complete success of a lecture calls for the united effort and demonstration of the entire membership, that no avenue through which the lecture may be brought to the attention of the general public, for whose benefit it is primarily given, will be neglected. The lecturers are grateful for the cooperation shown by the workers throughout the field during the past year, and we bespeak for them in the weeks and months to come the same spirit of helpfulness and understanding in the carrying on of this important branch of the Christian Science movement.

The board also wishes to have attention called to the following, in connection with the lecture work, namely: They believe that church-members should not be requested to remain away from the lectures. Inasmuch as the church gives the lecture to the public, the members are the hosts and should be present to receive their guests and provide them with the best and most comfortable means of hearing the lecture. If the largest hall available is not ample to accommodate both Christian Scientists and the public, then the lecture should be repeated until all who desire have heard it. The giving of the lecture is part of the regular church work as provided by the Manual, and should not be made a separate activity, with separate funds, etc. While the circulars issued by the board are sent to the clerks of the branch churches and societies, it is intended that each officer of the church or society should have a copy. The applications for lectures should, however, be made by the clerk only, and these applications should be sent direct to that member of the board of lectureship whose services are desired. Given a careful attention to the preliminary details of arrangement, and a hearty cooperation on the part of the members of the church or society, and seed will be sown that in due season shall bear a rich fruitage.

ARCHIBALD MCLELLAN.

"WHAT SHALL I RENDER?"

ONE of the most noticeable effects of Christian Science is the awakening of gratitude for every good thing, and a desire to manifest it in some practical way. That this spirit is not inherent in the human mind to any great extent is evidenced by an unwillingness on the part of most mortals to admit that any favors have been received, either from God or man, or to make any return for the same; indeed, the true sense of thankfulness is never awakened until spiritual consciousness begins to replace material belief. As this is attained, the grateful thought cries out with the psalmist, "What shall I render unto the Lord for all his benefits?" On referring to the 116th psalm we find that these words were spoken by one who had been healed of sickness, sorrow, and the fear of impending death, one who had been "greatly afflicted," perhaps by treachery on the part of his fellow men. The all-important thing, however, is that he found complete deliverance in turning unreservedly to God, and in finding that God is both "gracious" and "righteous," also merciful.

It was undoubtedly an unspeakable blessing to this man to be delivered from his dire distress, but what was of infinitely greater importance was his discovery that God is good, and good only. Well might he cry out, "I love the Lord"! even before giving the reason therefor. Like thousands at the present time, he had judged God by mortals, had found them to be "liars," and so a new and true concept of both God and man was needed. When this is found by any one, healing follows "as naturally and as necessarily as darkness gives place to light," to use our revered Leader's words (Science and Health, Pref., p. xi). Christ Jesus said that it is "life eternal" to know God; and if our sense of life is darkened, it goes to show that we do not know Him in the way which Jesus meant, that we have not grasped the truth which he said would make us free. Lowell says:—

> Many loved Truth, and lavished life's best oil
> Amid the dust of books to find her,
> Content at last, for guerdon of their toil,
> With the cast mantle she hath left behind her.

None can, however, seek Truth in the Christ-way without finding that Truth delivers from sin, disease, and death; and though this eternal fact may at first seem as a distant star, it will guide to full deliverance and boundless gratitude all who unwaveringly follow its light.

He who would measure spiritual blessings by material evidence is never ready to say, "What shall I render unto the Lord?" To do this he must see Truth and Love face to face, and when he does, there will be no hour of the day or night in which he is not ready to call upon God with thankfulness. The question, however, goes very deep. It does not stop with a mere verbal outpouring of gratitude. It surely reminds us that we should pay our vows by letting others know of the help to be found by calling upon God when in trouble. It must also mean that our gratitude should impel us to rise out of the mortal sense of things, its dishonesty, impurity, cruelty, and treachery. Jesus told of one who was forgiven for grievous wrong-doing, but who took an offending brother by the throat to enforce a very mortal sense of justice. Such a one is not asking what he shall render to divine Love for benefits received, nor is he who forgets that he must be true if he would express gratitude for knowing the all-power of Truth and Love.

Moreover, the vital question is not what others should render for the blessings of Truth, but "What shall I render?" and we cannot ask this of ourselves too often, or probe too deeply into the hidden motives which lie back of all words and deeds. To us much has been given in the great revelation of Christian Science, and it rests with us to prove our gratitude to God and to His messenger to this age by drinking deeply of the "cup of salvation" ourselves, and offering it to those who know not that God delivers from all evil those who seek His omnipotent aid.

ANNIE M. KNOTT.

REMAINING SHADOWS.

SHE was speaking of her personal problems and manifestly thought of some of them as of a kind that would demand great effort for their solution. Responding, her friend said: "Don't make such hard work of it. Let us remember that light dispels darkness without strain or effort, and that Jesus said, 'I am the light of the world.' Our sense of struggle in spiritual overcoming simply witnesses to the fact that we are looking upon the situation from the human point of view instead of from that of divine Mind. Christian Science should illustrate in us, as Mrs. Eddy has said, 'the unlabored motion of the divine energy' (Science and Health, p. 445). In so far as we apprehend this, and truly commit the work of our redemption to Truth, it is certainly possible for us to find relief from all sense of burden, and rejoice in our freedom regardless of present human limitations." "But," she answered, "we have the shadows when the light is present!" "That is true," he replied, "but it is explained by the fact that we admit the light at one point only. We raise the shade of a single window while keeping the others closed to the light. When it is permitted to enter from the north, south, east, and west, then there is no hiding place for the shadows and they flee away."

Musing afterward upon the conversation, the friend was impressed with the manifestly limited number of those who have proved in their experiences that they have answered the Master's "Wilt thou be made whole?" with an intelligent and unqualified affirmative. Most people want to escape hell, as Jonathan Edwards used to say, but they are not entirely willing, and the many do not know how to yield human belief to the redemptive Christ-idea. Some of the obligations connected with a religious life can be assumed without any inconvenience, and this professional conformity may prove an open window through which not a little light is admitted; but shadows will certainly remain so long as through ignorance, prejudice, or sensual desire any beam of divine light is unwelcomed.

The dawn of freedom is likely to render the disabilities of enslavement more manifest and correspondingly more irritating, but the increase of liberty will in due time eliminate the pains of human travail and establish a redeemed society. The awakening to Truth likewise precipitates that struggle with remaining false sense through which Jacob passed at Peniel. In most experiences there is a period in which shadows not only remain, but they often seem more intense because of the brilliance of the illumination of a single field of thought. If, however, "gladness to leave the false landmarks and joy to see them disappear" (Science and Health, p. 324) describes our attitude toward the coming day, then the question as to the persistence of sense shadows is settled once and for all.

"Unto the uttermost," is a Scripture phrase descriptive of the completeness of our redemption through Christ, the inclusiveness of that right consciousness which divine Science brings to receptive thought. The truly aspiring Christian Scientist longs ever for light, more light, and for all such the day has surely dawned which in its fulness shall know no shadow. Meantime it is ours to rejoice now and unceasingly that in Science we have come to know the nature of the shadow and the way its lingering darkness may be dispelled.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

REDONDO BEACH, CAL.—The Christian Science people held the first service in their new church on Wednesday evening [May 15], and it was a testimonial meeting. The church will be used regularly now, although the formal opening services will not take place until later, when the seats will be placed and every detail complete. The edifice has a fine reading-room.—*Redondo Beach Reflex.*

THE LECTURES.

BOARD OF LECTURESHIP.

APPOINTED FOR THE YEAR JULY 1, 1913, TO JUNE 30, 1914.

Hon. Clarence A. Buskirk, C.S., R. F. D. No. 1, Princeton, Indiana.
Clarence W. Chadwick, C.S.B., 654 Omaha National Bank Building, Omaha, Nebraska.
Clarence C. Eaton, C.S.B., 719 South Union Avenue, Tacoma, Washington.
Col. William E. Fell, C.S., West Bar Chambers, 38 Boar Lane, Leeds, England.
Dr. Francis J. Fluno, C.S.D., 1732 Franklin Street, Oakland, California.
Willis F. Gross, C.S.B., 505 Berkeley Building, Boston, Massachusetts.
Judge Septimus J. Hanna, C.S.D., 803 Oakland Avenue, Pasadena, California.
Prof. Hermann S. Hering, C.S.B., Post Office Box 385, Concord, New Hampshire.
Bliss Knapp, C.S.B., 11 Hawes Street, Brookline, Massachusetts.
William D. McCrackan, C.S.B., Post Office Box 779, New York, N. Y.
Rev. William P. McKenzie, C.S.B., 10 Concord Avenue, Cambridge, Massachusetts.
William R. Rathvon, C.S.B., Post Office Box 1308, Denver, Colorado.
Judge Clifford P. Smith, C.S.B., 16 Corey Road, Brookline, Massachusetts.
Virgil O. Strickler, C.S., 1 West Eighty-fifth Street, New York, N. Y.
Bicknell Young, C.S.B., Virginia Hotel, Chicago, Illinois.

Letters and telegrams sent to the addresses given above will be duly forwarded. Use these addresses, unless for a special occasion a different one is given.

VICTORIA, BRITISH COLUMBIA.

William Blakemore, president of the Over-Seas Club and editor of *The Week*, introduced Judge Clifford P. Smith, who lectured on Christian Science at a meeting held in Victoria theater. His remarks were in part as follows:—

It is as a journalist that I would speak to you for a few minutes, and you know that a journalist is supposed to study all subjects and to know something about everything under the sun. I have learned within the short time which has elapsed since I first studied Christian Science, that the subject is greatly misunderstood and misrepresented. The popular conception seems to have been that it is simply a cult for healing sickness and disease. As a matter of fact, while this may be the phase of Christian Science most in evidence and the feature which first attracts the attention of those who subsequently become converts, this is not the end of Christian Science teaching, but only a means to an end. The greatest teacher and healer of all times, the Master, went about exercising his divine art of healing. He caused the deaf to hear, the dumb to speak, the blind to see, the lame to walk; he cured many insidious diseases, but he always urged those benefited to go and show themselves as a testimony to the divine power which had wrought these great results. He went further, in teaching and urging those who were healed to give themselves to the divine service. It was the healing of the life and the casting out of the devil of sin which was the objective point of all his teaching.

Christian Science is based on the teaching of the Master. It aims at reviving in this age the great art of healing which he practised, and none the less but indeed the more, the healing of the mind. If the public press and the world at large understood that, important as bodily healing is, it is only a phase of Christian Science teaching, and that the real object is to make men better, to lead them to live holier lives, to recognize the golden rule, and, in short, by a more intelligent conception of their true relation to the divine Being and their real obligations to each other, to attain that standard of Christian living which has been the aim of the Christian churches in every era, they would at least cease scoffing and begin seriously to study the fundamentals of this great Science.

The world has always cared more for practise than profession, for holy living than for creeds. Christian Science, properly understood and acted, puts one's life in the right. This is what the world wants today; it is the failure of the church to square conduct with theory which has constituted its greatest weakness and so seriously lessened its hold upon mankind. It is the renaissance of the Master's teaching in his Sermon on the Mount which constitutes the guiding Principle of Christian Science, and the world has yet to learn of a nobler conception or a loftier standard of living than that which would lead us to do unto others as we would they should do unto us, and to serve the divine Being with all our heart, mind, and strength. It is because I believe this to be the true character of Christian Science teaching that I have not hesitated, although only a novice, to associate myself with this meeting and to recommend to your most serious and reverent consideration the address which you will hear from one who is competent to speak to us upon this profound Science.—*Correspondence.*

DALLAS, TEXAS.

In introducing William R. Rathvon, who lectured twice on Christian Science at First Church of Christ, Scientist, Brigman C. Odom at the first lecture said in part,—

The mission of Christian Science is to confirm and amplify the Bible teaching that "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind," and that God's law of truth destroys all sense of fear and its consequent suffering, for "perfect love casteth out fear." The teachings of Christian Science are best summarized in these words of the Master: "Be not afraid."

At the second lecture Mr. Odom said:—

Christian Science is the new-old gospel of a present salvation. It says with Paul, "Now is the accepted time." The operation of its basic law brings the awakening to man of his possibilities and capabilities as a child of God, and so he realizes that the kingdom of heaven is within, hence at hand, even at his very door. Through spiritual discernment he comes to know that in his true being nothing exists now that defileth or maketh a lie, and he begins to learn what God has already done for man. The dominant note, therefore, of Christian Science is, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light;" "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee."—*Correspondence.*

MINNEAPOLIS, MINN.

On the occasion of the lecture delivered by Virgil O. Strickler under the auspices of Second Church, the Minneapolis auditorium, a building seating twenty-seven hundred and fifty persons, was filled to its capacity, and about fifty were turned away. Mr. Strickler was introduced by the Hon. George R. Smith, ex-probate judge and congressman-elect, who said in part,—

When I received this invitation to introduce the lecturer, I could not refuse it, for I know personally many of your people, have been intimately connected with them, and have great respect for them, since if we cannot all be of the same faith we can be united in the same purpose,—to discover and follow out the truth of life as we see it. To my mind the commandment, "Love the Lord thy God with all thy heart,

Digitized by Google

and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself," is a broad principle on which we can all stand and all come into the fold. I desire to reiterate that as a public official of this city and a citizen for a number of years, I have come in contact with a great many of your people, and I have always been able to point out the Christian Scientists without any one telling me, for the reason that I discovered in them great self-control and reliance. That is the one thing which has impressed itself upon me. It is my belief that if we find associated with us in life those who possess worth, beauty, and usefulness that we do not ourselves possess, we should take such unto ourselves, so that we may become better citizens.—*Correspondence.*

BOLTON, ENGLAND.

The Christian Science doctrine expounded by Mrs. Eddy in America has spread to all parts of the civilized world, and it continues to gain ground. In England it is gathering in a great number of converts at the present time, and the interest evinced in Bolton, particularly, was emphasized very strongly last year, when a big mass meeting was held. Although the largest available building in the town was taken in order to accommodate as many as possible, hundreds had to be turned away. This was explained, however, as being not so much because there was such interest in the doctrine as because of the sheer curiosity of the Bolton inhabitants to obtain an insight into a theory which was considered to have such a practical bearing on the health of its members. The miracles of healing, it was said, were too great to be attributed solely to spontaneous thought, and the impression on the minds of many was that the effect of the visit of the lecturer (W. D. McCrackan, M.A.) would not be lasting. Another well-advertised meeting, however, dispelled any such thought; for the Grand theater was packed, every seat being occupied. The chairman was John W. Doorly of Leeds, and the lecturer was Bicknell Young of London.

The chairman observed that Christian Science was not new to any of us, because, literally and truly, it was nothing but the teachings of Jesus Christ carried to a practical conclusion. Nineteen hundred years ago the gospel of the reality of spiritual things was preached by one who had rightly been called the Saviour of humanity. At that time he told his disciples that he had many things to tell them, which they could not yet bear, but promised them that when the Spirit of truth did come he would guide them to the truth. For three hundred years after the Saviour's mission the gospel of Christianity was preached and followed by healing the sick and by raising the dead; that is a historical fact. At that time Christianity was taken up by the Emperor Constantine, when it seemed to lose its spiritual power and its ability to heal the sick or to raise the dead. In 1866 a woman whose life and circumstances were such that, when she lay seemingly at the point of death, she again discerned the spiritual truth and was healed by that truth. Understanding that it was spiritual law which had healed her, she set about discovering that law, and after years of trial the law had been demonstrated in thousands of well-authenticated cases in healing the sick of all manner of diseases, and it had reformed sinners. Thus today Christian Science is spread over the world and forms a large body of adherents of thinking and enthusiastic men and women.

Bolton Chronicle.

SHREVEPORT, LA.

William R. Rathvon lectured on Christian Science in City Hall auditorium to a fair-sized audience which gave the closest attention to the speaker. J. C. Hamilton made the introductory remarks and said in part,—

Your presence is evidence of an interest in that greatest of all subjects, religion; and the fast growing Christian Science, which already encircles the globe, cannot be affected by the misstatements of what it teaches. It is announced at the beginning of each Sunday service in the Christian Science churches that the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures," "are our only preachers." No text-book is easily understood, but requires study and the aid of teachers for many years. Is it then any wonder that the spiritual truths, which must be apprehended spiritually, are not understood with a casual reading? Would any reasonable individual expect to understand any other text-book about a science without study and application? If so many different denominations have arisen, and all from the study of the same Bible, is it fair to expect one to understand Science and Health without study? These lectures are for the purpose of making clear to all the teaching of Christian Science, the spiritual truths which Mrs. Eddy gleaned from her study of the Bible.—*Correspondence.*

OSKALOOSA, IOWA.

The annual lecture on Christian Science, at Armory hall, was well attended by a representative as well as an attentive audience, which evidenced the desire to hear, to learn, and to know. Virgil O. Strickler, the speaker, was introduced by Irving C. Johnson, who said:—

This is an age of healthful spiritual and intellectual unrest. Old aspects of truth are questioned and new aspects welcomed. In ancient days, the Christian knight went out to seek and to slay Saracen, giant, or beast; later, his successor sailed his ships to remotest seas; then our fathers set out to conquer, in a material way the regions opened up by the explorers; and now we are reaching the place where material progress must give way to higher things. Man is naturally religious, and when the material part of his nature is sloughed off, he unconsciously turns to the consideration of spiritual things. It is in this quest for a new spiritual kingdom that devoted men and women have consecrated themselves to the work of discovering new truths and promoting the health and happiness of their fellows. In this search for universal good, surely all right-minded Christian men and women can join. Each year there is being registered a protest against the worship of mere material things. It is but a step from the defense of liberty and property to pleading the cause of health and truth.—*Oskaloosa Herald.*

MILTON LOWER MILLS, MASS.

Under the auspices of The First Church of Christ, Scientist, of Boston, a lecture on Christian Science was delivered in Odd Fellows' hall at the Lower Mills. The speaker, Frank H. Leonard, was introduced as follows by Frederick R. Bates of Ashmont, who presided:—

This lecture is given under the auspices of The First Church of Christ, Scientist, Boston, that the people in this vicinity might have an opportunity to learn what the message of Christian Science is. This message is really a fulfilment of the words of the Master, who said: "I am come that they might have life, and that they might have it more abundantly." "Go ye into all the world, and preach the gospel," "Heal the sick." It is in accordance with this divine command, that Mrs. Eddy established, among other activities of The Mother Church, a board of lectureship, the members of which may be called to any part of the world to speak with authority on the subject of Christian Science.

Milton Record.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Johannesburg, Transvaal.—William D. McCrackan, M.A., Orpheum theater, afternoon, July 27.

Mystic, Conn.—Lyceum theater, Virgil O. Strickler, 3:15 p.m., July 6.

TESTIMONIES OF HEALING.

In October, 1911, I had occasion to have my arms in five gallons of gasoline when, through friction, it ignited and I was enveloped in flames. Notwithstanding the fact that my hair, eyebrows and eyelashes, and portions of my dress were on fire, I did not lose consciousness of the ever-presence of divine Principle. I at once withdrew my arms from the fluid, as the flesh seemed on fire from the elbows down. As I glanced down and heard the roar of the flame, the thought flashed through my mind that Spirit is the only substance; that these flames could never destroy an iota of good, that there is no intelligence in matter, and that I could not suffer unless I admitted the belief of pain.

I extinguished the flame by rolling my arms in the folds of my dress, entered the house and threw water on my hair, while the household stood aghast at the spectacle I presented. One nostril was scorched, my eyes were inflamed, while my arms were purple and in portions deeply burned. Refusing the urgent request of neighbors to apply material remedies, I quickly telephoned a Christian Science practitioner. I was assured that I would at once be given absent treatment, and I then took "Science and Health with Key to the Scriptures" and attempted to read; but my arms jerked so that I could not hold the book steadily enough to do so. In fifteen minutes, however, this nervousness ceased, and the soreness was also disappearing very rapidly.

I then dressed and called on the practitioner, as I wished present treatment. While I was entirely free from pain, I yet voiced the fear that portions of the arms had been burned so deeply that if the truth were not perfectly realized, complications would set in. The Scientist turned at once to page 447 of Science and Health and read this to me: "The recuperative action of the system, when mentally sustained by Truth, goes on naturally." He then turned to page 423 and read: "The metaphysician, making Mind his basis of operation irrespective of matter and regarding the truth and harmony of being as superior to error and discord, has rendered himself strong, instead of weak, to cope with the case; and he proportionately strengthens his patient with the stimulus of courage and conscious power." This truth was conveyed to my consciousness with such clearness that I at once lost all fear, and went home and used my arms with impunity. Within four days they were perfectly healed, the accident leaving only a depression in one arm, which disappeared entirely within a few days.

To me this is a priceless demonstration of the truth of our Leader's teachings, and also recalls the words in Isaiah: "When thou walkest through the fire, thou shalt not be burned; neither shall the flame kindle upon thee."

MRS. BERNETTA GEARHART, Fresno, Cal.

I wish to express my gratitude for what Christian Science has done and is doing for me. I was raised on a farm, and at the age of nineteen went to the city, taking up the drug business as an occupation. While there, an eminent physician recommended the use of brandy every night and morning. After two years I gave up the drug business and took a position as inspector of ties and bridge material for the Union Pacific railroad. I followed this line of work for three years and continued to take a social glass, but never to the extent that it could be noticed by my friends; yet this habit grew until I became a habitual drunkard, losing my position, and afterward losing my friends, my home, and my family. I was a drunkard of the worst type. I mean by this that there never was a time that I did not think I needed another drink. Always, when it was possible, I would take whisky to my room when retiring, as I was afraid I might awake in the night in great need of a stimulant.

In 1892 my friends and associates so despised me that they tried to avoid meeting me. My mother then sent me to a well-known institute for such cases, and after returning home, things seemed to be all right; my wife took new courage, as well as my mother and friends. This, however, lasted only a year. I, of course, found an excuse for using liquor again, and was soon in a much worse condition than before taking the cure. At this point my family deserted me, until I had only one friend left, namely, my mother, and for some years I wandered about from place to place, without home, without friends, and without money.

In 1899 I was approached by a business man in Fort Scott, Kan., who offered to give me a thirty-days treatment in another institute, and to give me a position if the treatment proved a success. I immediately accepted his offer, entered the institute, and remained thirty days. At the end of the thirty days the doctor pronounced me cured, and I went to work. I was sent to Iowa to get me away from all my old associates, and I started life anew, joined a church, one of which I had been a member in previous years; and this proved a success for three years. After that time I was taken with acute lung trouble, and hot whisky was prescribed by my physician. I felt that I could use will-power and master the situation, so I struggled along, but at last had to succumb to the evil which had so long held me bound in chains. Without letting my employer know my condition, I proceeded to take another cure, which lasted only six months. After trying a number of home remedies, I decided to take the first "cure" again; so I left my home in October, 1905, and came to Kansas City to enter the institute.

On my arrival, I was forced to go to my employer to ask for money and a thirty-days lay-off, as I was then working on a salary and conducting land excursions. He at first refused the lay-off, as it was in the harvest season for land business; but after I had explained why I made the request, he immediately granted it, and also said I could have the money. Right then he advised that I try Christian Science. This was the first time it had ever been recommended to me, and as the name sounded good I immediately accepted it. I was directed to a practitioner and remained in Kansas City until I had taken three treatments. He then told me that I might return to my work, but asked me to read "Science and Health with Key to the Scriptures," and said he would continue with absent treatments the remainder of the week. I returned to my home in Iowa, read the text-book daily, attended to my business, and have never taken a drink of liquor since, and have not wanted one; neither have I taken any medicine nor lost any time on account of sickness. I was perfectly healed of the liquor habit in those three treatments. I continued reading Science and Health, as the practitioner advised, and within two weeks I was entirely healed of the tobacco habit, having been an inveterate smoker. Since then I have overcome the use of profanity, gambling, and prevarication, and am gradually overcoming malice, envy, revenge, etc. For this healing I am truly grateful, but I am more especially grateful for my spiritual awakening. I now know how to live, as I know God aright, and I am striving to practise the golden rule and to live to the best of my understanding the teachings of Christian Science.

I would be glad to answer any inquiries which may come to me regarding my healing.

L. D. HIGGINS, Kansas City, Mo.

[Translated from the German.]

I feel it to be my duty toward God and my fellow beings to give this testimony as an expression of my deep-felt gratitude. Our babe was born with a lame arm, which hung inertly by his side. The little fellow was several days old before I became aware of the defect, and my husband, who is very quickly beset by fear, sent for a physician, who examined the arm but gave me very little hope, saying that the

Digitized by Google

nature of the trouble had not yet been ascertained and that nothing could be done. My husband then sent for another medical man, who told me that the arm must be treated with electricity, and a couple of days later he returned with a professional colleague; the arm was examined once more, and very little encouragement was given.

Having attended the Christian Science services for about a year, besides reading a good deal of the literature, I held fast to the thought that it was not God's will that my child should have a lame arm. I also entrusted him to the care of a practitioner, who treated him three times a week, with the result that in five weeks' time the affliction gradually disappeared. He began to move his little finger, then the hand, and the effects of God's omnipotence were daily noticeable. Today the arm is normal.

Later, an abscess formed on the child's head. It presented an inflamed appearance, and fear got hold of me; but with my small understanding I held to the truth and immediately sent to a Christian Science practitioner, who took up treatment for the child. My husband said that should the abscess not break on the following day, he would have it lanced, as it might result in something serious. I slept little that night, but prayed God for help; my prayer was answered, and no operation was needed. I would also mention that the child was very bright during all those days, and it became plainly apparent that when error is denied and the presence of God recognized, evil loses its seeming power.

With the help of a practitioner I have also been able to overcome business difficulties, which often seemed great, and I am deeply thankful to God for all the blessings received through Christian Science, and also grateful to our beloved Leader, Mrs. Eddy, who has shown us the way to a clearer recognition of the truth.

FRAU ALWINE KNELL, Frankfurt a. M., Germany.

It is indeed a blessed privilege for Christian Scientists to give expression to their gratitude in our *Sentinel* and *Journal*, and I have been helped many times by reading the testimonies coming from grateful hearts. I too have had many proofs of God's love and care for me since this truth came into my life.

A wonderful proof of the protection of Love in these latter days was given me in my experience with a degenerate who entered my home and held a loaded revolver to my face for ten minutes. My one thought was that of protection for him, and I broke the silence to tell him that as God's child he could not hurt me. Love was indeed close to me that evening, and saved us both. A remarkable healing was manifested in one of my family who had burned her hand, according to mortal thought, most seriously. Ten minutes after the practitioner was notified the agonizing pain stopped, and no scar remains.

One evening, before the day that I was to sing on an important occasion, I found myself suddenly hoarse, and the sharp pains in my throat became unbearable. I went to bed and tried to treat myself, but even the attempt to swallow caused great suffering. After I had repeated the "Mother's Evening Prayer" by our Leader (Poems, p. 4), I grew calm, and could realize the healing power of Truth, and knew that my voice had nothing to do with material manifestations, but was governed by spiritual law. I sang easily and well the next day. I have had many other proofs of the ever efficacy of Christian Science to heal and to save, but for these I have no words; our dear Father-Mother God knows, however, my intense gratitude for the "Love that guards the nestling's faltering flight," for that light which has revealed the most subtle machinations of mortal mind that have sought to ensnare me.

I owe everything to Christian Science; all my success as singer and teacher is due entirely to the application of the truth found in our text-book, "Science and Health with Key to the Scriptures," given us by our beloved Leader. The peace, joy, and love which has come, and which continues to come to me in my work, is unspeakable. I only pray that I may give out as much as I receive. From a semi-invalid I have grown strong enough to bear the responsibility of keeping together our home, doing work seemingly impossible, and carrying out with success work which, according to human thought, was beyond my ability.

ELSA OWEN, Rutland, Vt.

I want to express my gratitude for the many benefits received through Christian Science. I had never been strong, and as far back as I can remember was considered a very frail child; consequently I was tenderly nurtured, but with the thought hanging over me that in all probability I would never reach maturity. In after years I passed through many trying experiences, each occasion leaving me in a more weakened and nervous condition. Finally, when the greatest sorrow came into my life, I suffered a complete nervous collapse, with many complications. I passed through weeks of sleepless nights, and when I did sleep it was only to have dreadful dreams. I was left with one daughter, and instead of being a brave mother and making an effort to brighten her life, her mission was to tend an invalid mother, as for five long years I was in this condition. The doctors in Mississippi, my native state, did all they could for me, but I got no relief; so with my little girl I went to Louisville, Ky., where I spent six months, part of the time at a sanitarium, and a short time at an infirmary. I was treated by some of the best nerve specialists in the city, who tried hard to help me. I took massage, baths, etc., but finally returned to Mississippi in a worse condition than when I left.

Shortly after leaving Kentucky, I came to Memphis, and there I heard of Christian Science. I had grasped at everything of which I heard, and my means were almost exhausted, but I was persuaded to try Christian Science. At first I was very much opposed to it; in fact, I thought God had sent my affliction upon me, and I had been so rebellious that I almost doubted whether there was a God. It was in this condition that Christian Science found me, and I can never forget the calm, peaceful feeling I had when I first met a practitioner. After a few treatments, on leaving her home one morning, I thought I had never seen the sky so blue and the sun so bright; in fact, everything looked different to me, and all nature seemed so beautiful that I felt like praising God, for I realized that I was healed.

Surely no one has more to be thankful for than I, and I do feel grateful to God, and also to Mrs. Eddy for bringing this beautiful healing truth to mankind.

MRS. BELLE M. PUGH, Memphis, Tenn.

I became interested in Christian Science through the healing of my mother, an experience which to me was very wonderful. At that time I was a miserable, unhappy girl, but after reading Science and Health a short time I was convinced that I had found God, and everything looked more beautiful to me. I seemed to take on new life, as did my mother, and since then we have depended entirely upon God to meet our every need.

My first proof of the healing power of this truth was in a severe attack of measles. There were several other cases in the house at the same time, under medical treatment, and in each case the children suffered bad effects and were confined indoors for several weeks. I was in bed only half a day, at which time I was seemingly very ill; in fact, the fever was so high that the lady with whom I was boarding, wrote to my mother, who was out of the city, that I was very ill and must have attention. A Christian Science practitioner was telephoned as to my condition, and she came to me at once. In a short time I was resting quietly, and in less than an hour I got up and dressed. The Scientist

Digitized by Google

remained with me about two hours, and when she left I was perspiring freely, with no sign of fever, and I was never the least bit sick after that. During the entire time I read in the Bible and Science and Health, wrote to my mother each day, as was my custom, and in one week was back at the office with no bad effects whatever, notwithstanding the many predictions made about me.

When a small child I had had a very mild attack of the same disease, which left me with hay-fever in a severe form, from which I suffered greatly every fall. This trouble is now in such a mild form that I scarcely notice it, and I know that as I gain greater understanding and do my work it will vanish into its native nothingness. I was also troubled a great deal with my eyes, said to be caused from hay-fever, and just before coming into Science an oculist told me that I must never go without glasses, and that I should use my eyes as little as possible, for they were both badly diseased; in fact, the sight of one was almost entirely gone. The glasses were never purchased, however, as it was soon after this that we were led to investigate Christian Science. My eyes never trouble me, and I use them constantly all day, do fancy work, and read until late at night. I have also been helped in a business way, and I have had many wonderful proofs of the power of Truth.

My heart goes out in gratitude to God for giving us the understanding of this truth through our dear Leader, Mrs. Eddy.—Miss Georgie M. Pugh, Memphis, Tenn.

[Translated from the German.]

I feel it to be my duty to write this testimony, and I would be glad to be able to contribute in some degree toward encouraging those who may still be living in uncertainty as to the truth of Christian Science. The truth Christ Jesus taught is available to every one, and the understanding of it frees us from physical bondage. For eight years I was afflicted with a severe abdominal trouble and had consulted the most eminent physicians in order to be cured, besides having been for three weeks in a clinique where a very high temperature was daily applied to my body; but it all proved a failure, and I was visibly pining away, unable to move about, much less to climb stairs. That this condition was attended by mental suffering goes without saying.

In my great need I heard of Christian Science, and I may say that I immediately experienced a sense of trust, for I knew that medical skill was exhausted in my case; so I applied for treatment, and in about two weeks' time I was again able to move around and attend to my household duties. Now I can walk for several hours without experiencing a sense of fatigue, and the pain in the back has entirely disappeared. Whenever any sense of inharmony manifests itself, I reject its claims through the power of divine Truth, which enables us to annihilate whatever does not belong to man as God's likeness. Through persistent effort and the improvement of my bodily health, my mental condition has also undergone a change. Loving encouragement has awakened me from the bad dream which held me to eight years of miserable existence and made me a pitiful creature. Many are the benefits received by the family of which I might tell, but words seem too poor to express the facts. I can only prove my gratitude through an honest endeavor to study the teachings of Christian Science, and not this alone, but to live in accordance with its spirit.

Luise Neumeyer, Berlin-Stegliz, Germany.

When people live as far away from a Christian Science church as I do, they are apt to neglect giving help to mankind by testifying to the good that has come to them through the study of Science and Health.

In 1904 I was to belief a very sick woman, since for a good many years I had suffered from colds and a cough. I always tried to be brave, and prided myself on my will-power, thinking it would pull me through; but I found that the human will had very little endurance. In the winter of the same year I felt that I would have to give up, as my brother and sister had done, and pass on from what was called tubercular disease of the lungs; but about the time I was ready to give up, a friend from Chicago visited me and told me about Christian Science, so I attended the next testimonial meeting, and when I left the church I knew I had found the "pearl of great price." I went to a practitioner for treatment, and in one week I felt that I was born anew. I was engaged in the business world at the time, and came in contact with quite a few people; but I could see only beauty in every face into which I looked. For me, hate was turned into love. I had always been very quick tempered, but all this has given place to the temperance of love since I found the truth.

I had worn eye-glasses for several years, and a specialist had operated on one of my eyes three times, but the reading of Science and Health has completely cured me of all this trouble. It has been over eight years since I laid aside my glasses, and I have had no further need for them. One of the seemingly obstinate ailments which has been overcome in the past year was a bowel difficulty, said to have been inherited from both mother and father. For two years I have taken no thought of what I ate or drank, while all fear has left me, and I have been completely healed.

My little girl has never taken any medicine and has always been very healthy, but recently she manifested some alarming symptoms before I knew she was at all ill; but I realized quickly that I had nothing to fear, that I did not need any material means, that the child lived and moved and had her being in God. The ailment was overcome at once, and I was indeed grateful for the understanding I had of divine Truth.

My heart overflows with thankfulness to God, and I am also grateful to Mrs. Eddy when I think how the Christian Science literature has blessed my far-away home. Even though we do not receive our mail but once a week, with the abundance of good reading from the Christian Science publishing house we are never without daily food for thought. The *Monitor* is truly a blessing, for one can feel that he has nothing but truth before him when he reads the news of the day. I am indeed grateful to Mrs. Eddy for the understanding of God, and I thank our dear Father in heaven for all the blessings that have come to me and mine. My understanding has grown day by day, and every day has been a blessing, for it has made me free from the fear of sin, disease, and death.—Eva Orman, Wilder, Mont.

[Translated from the French.]

It is with great pleasure and happiness that I wish to speak of a healing in Christian Science which took place under my eyes. My husband, who had been seized with delirium tremens, was taken to Bellevue hospital, where he lay very ill for many days without coming to his senses. I visited him every day, and one evening I was told that he was dying, that he had hardly an hour to live. I ran to tell a friend, a Christian Science practitioner, this verdict, and she returned with me, accompanied by one of her sons, that I might not be alone. Every few minutes one or another of the physicians came in, declaring that my husband was about to die. Then a most extraordinary thing occurred. The Scientist demanded silence, and prayed for him, treating him after the manner of Christian Science. We remained for several hours afterward, until the doctors on their rounds told me I could go home, saying, "Your husband is better; he is not going to die." Since this, he has continued to improve, and for myself I have no doubt whatever that Christian Science brought about this healing, and I am happy to testify to the same.

Zoé J. Muller, New York, N. Y.

With my heart full of love and gratitude to God, I wish to tell of the blessings that have come to me through Christian Science. I had suffered from heart trouble, supposedly inherited, for fourteen years, and in March, 1909, I had appendicitis and was in bed for a month. After I got up I had to be very careful, as I was always expecting a return of the illness.

In April, 1910, I became very ill with a fever, also stomach and bowel trouble, and was under a physician's care. I continued in this state for six weeks without any benefit, but at the end of this time another doctor was called in, who said that I was suffering from a malignant internal growth in the last stages, and that nothing more could be done except to have an operation at once, and that my chance for recovery was very slight. I would not consent to this, and so wrote to some specialists, who, however, said they could do nothing to help me; but I would not give up trying, for I always felt that I would find that which would heal me.

A friend then advised me to try Christian Science, and a practitioner was sent for. The following morning I got up and dressed myself and walked about the house; the fifth day I took a carriage ride and was able to go to the practitioner's home for treatment. I continued to take treatment for three more weeks, at the same time doing my housework and riding about daily. At the end of this time I was perfectly healed of all my troubles and was gaining in weight very rapidly. This was almost two years ago, and I am now a strong, well woman, and have had no return of any of the troubles. Is it any wonder that I feel thankful for Christian Science, which sets those who are in bondage free?—Mrs. L. T. Smith, Phœnix, Ariz.

With gratitude to God, and with the hope that this testimony may be helpful to others, I will tell of my healing. Bronchitis and attendant ills were overcome in three treatments by a faithful practitioner, and a severe cold from which I had suffered for two weeks was instantaneously healed. I have since then experienced many instances of God's power to heal, in answer to prayer, which, before I studied the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, would have seemed unthinkable. I have been helped in many ways, and in seeing the perfect trust in God's ever-present help on the part of Christian Scientists, I have been taught how to apply the truth for myself. Christian Science has given me a happier outlook by showing me that God is our life, because in Him "we live, and move, and have our being."—A. Wink, Emsworth, Hants, England.

In Christian Science we are taught that we should daily protect ourselves against the admission of error in any form into our consciousness. Carelessness on my part recently permitted an attack of disease to fasten itself upon me to a degree which made necessary the calling of a practitioner; but the healing came quickly, and it was thorough. I gratefully acknowledge the untiring zeal of the one who came to my aid, and also the efficiency of Christian Science in destroying error, disease. The most important lesson gained, however, was that of the need for constant watchfulness on our part to protect ourselves in Science against the illusiveness of error, which is often so insidious as at first to escape our notice.

Charles A. Bradley, Denver, Col.

I wish to testify to help received in Christian Science. I was confronted with harassing business difficulties, also the serious illness of my daughter, diagnosed as ulceration of the stomach. In both cases practical benefit was received, for which I am devoutly grateful.

A. C. Chester, New York, N. Y.

FROM OUR EXCHANGES.

[Rev. Stanley A. Mellor, B.A., Ph.D., in *The Christian Commonwealth.*]

No unprejudiced observer of contemporary life would deny that the most significant fact in the world of men today is a certain temper and spirit of thought and of action to which the only satisfactory name that can be given is that of "revolt." We are living in a definitely revolutionary age; in an age marked on every side by a characteristic readiness to abandon the ideas and standards which have come to us from the past, and to substitute, at one blow as it were, new standards and new ideas. Already, in some directions, the significant spirit of the hour expresses itself with open violence; while in other directions there is evident a strong distrust of what may be called gradual methods, and an equally strong desire to break, once and for all, with the past, and even by sudden violence to overthrow the old order and establish the new. Men and women seem prepared to risk all, "neck or nothing, heaven's success or earth's failure," in response to inward desire and inward demand. It is today very significantly true that "the kingdom of heaven suffereth violence," and the violent would take it by storm. The real reason for this is to be sought ultimately in the fact, also of the deepest significance, that not for many generations has the sense of personality, the feeling of individual worth and value, been so strong as it is today.

[*The Outlook.*]

To the affirmation of Judaism, that the supremest manifestation of God is in human life, Christianity adds, The supremest manifestation in human life is in the life of Jesus of Nazareth. It is this twofold fact, that the supremest manifestation of God is the manifestation in human life, and that the supremest manifestation in human life is the manifestation in Jesus of Nazareth, that makes him the Christ. He is the Messiah because he is the one who brings God near to men, makes God understandable to men, makes companionableness with God possible to men, enables us to have fellowship with God. In him God is interpreted to us in terms of a human experience.

So long as men thought that God and man were opposites, the alternative, Is Jesus God or man? was a significant alternative. When we come to understand the faith common to Judaism and Christianity, to the Old Testament and to the New Testament, that man is the offspring of God, made in His likeness and possessing His Spirit, and therefore it is in man that the image of God is to be found, as the likeness of a father in his child, we come to understand that there is no meaning in the question whether Jesus was God or man, no reality in the rhetorical contrast of humanly divine and divinely human.

[Rev. G. Campbell Morgan, D.D., in *The British Congregationalist.*]

This is a day of wide-spread admiration of the kingdom of God as the kingdom of God has been revealed to us. The kingdom of God is righteousness, peace, joy, and these things are popular within the church and outside it. Righteousness is well spoken of today; men everywhere are professing to love peace; joy is the very fashion of the hour. Yet there is an equally wide-spread refusal to enter into the kingdom which is righteousness and peace and joy; there is persistence in wrong in spite of admiration of right; perpetuation of strife in spite of adoration of peace; the profanation of joy by which it is killed. "Blessed is he that shall eat bread in the kingdom of God." But we are not proposing to enter it just yet. A man prays, "Thy kingdom come," and says in his heart, "We will not have this man to reign over us." He says, "Lord, Lord," and yet does not the thing that the Lord commands.

Digitized by Google

[Rev. Frank J. Goodwin, D.D., in *The Advance.*]

We are tempted to think that our mission in the world is too narrow for the expression of our spiritual force. We long to do something which will show in works visible to the eye; we wonder whether we are doing our full duty to hold so tenaciously to the mere proclamation of the principles of pure religion, and to the associating of ourselves in meetings of prayer and praise. In such moods it is well for us to be reminded that our Lord Jesus Christ was a specialist, that he left no word of specific wisdom on the subject of law and government; he founded no educational institutions; he had nothing to say on art or science; he did not interest himself in literature; he gave us no intimation on inventions or industries which play so large a part in the happiness of civilized life; and he did not even found any charity organization or hospital. Nevertheless, wherever the truth of Christ has been preached with apostolic simplicity, the science of law has been cultivated; states which protect the rights and liberties of men have grown up; art, science, and literature have flourished; and the practical instinct of man has expressed itself in inventions which have given to the homes of the humblest the joys of thousands of conveniences which were formerly denied to kings.

[Rev. John E. White in *Los Angeles* (Cal.) *Examiner.*]

The disappearance of sectarian bitterness is one of the most observable facts of today. Whatever may be thought of it, no man can regard it possible to check the movement which is breaking down the old denominational antipathies. It is interpreted by many as the best modern evidence that a heavenly power is at work in the world. They believe that the spirit of its divine Founder is prevailing in Christianity over the human passions of men, and that the gospel of love is at last completely conquering the hearts of those who preach it. The large front of this movement appears in religious conventions and in the current religious literature, in reiterated proposals of church federation and missionary cooperation. Not a few religious leaders ardently believe that the amalgamation of denominations in one great inclusive church is not only desirable but inevitable.

[*The Christian World.*]

Prayer, we say, is the soul's contact with the realm to which it belongs. Throw your cable across to it and you find that it holds. Throw your bridge across to it, and the treasures, the society, of that realm will begin to pour in. Nature, we have seen, in all her departments, is full of answers, most of which we have not yet learned to decipher. But our higher nature, as its throws out its signals to the silent air, is also answered back. The notes that come to us, faint and far off though they may seem, are from the realm of the real. Nature, so honest with us in all our lower questionings, will not turn traitor to us in this last and highest. The range of things through which she leads us are the outer courts of a temple. Her final secret is God.

[*The Universalist Leader.*]

Religion in its simplest and profoundest meaning is the venture or adventure of the soul into the unknown upon the conviction that virtue, goodness, mercy, love, the great qualities on which we rely, are embedded in the very framework of the world. Religion is you or I beginning the exploration of life by acting upon the conviction that the life of the world, the spirit of the world, is virtuous, good, merciful, loving. Religion is the discovery of God and ourselves through finding out in our own experience that we were made for virtue and goodness and mercy and love, and that we were not made for vice and badness and revenge and hate. It is the demonstration in consciousness of the reality of the spirit of mercy and love.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal,* printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

Two new translations into German have been made and are now on sale. "Die Christliche Wissenschaft: Das Evangelium von dem Reich" ("Christian Science: The Gospel of the Kingdom"), a lecture by Judge Clifford P. Smith. "Im Dienste des Vaters" ("The Father's Business"), containing five articles.

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by bank draft, express order, or postal money order payable at Boston post-office. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

The regulations of the United States department of agriculture, bureau of biological survey, fixing the seasons in which the shooting of migratory birds is allowed, authorized under the recently enacted Weeks-McLean migratory bird law, have just been made public by the department. They become effective Oct. 1, 1913. A bill to protect such birds was passed March 4. A closed season of almost five years, until Sept. 1, 1918, has been established on certain game birds "which have been hunted beyond the margin of safety." Along the routes of the Mississippi, Ohio, and Missouri rivers Jan. 1 to Oct. 1 is a closed season. Breeding and wintering zones are established, but the regulations make few changes in existing hunting seasons as provided by state laws, except in the elimination of spring shooting. No migratory game or insectivorous birds may be killed anywhere between sunset and sunrise. Migratory insectivorous birds, including the robin, lark, reed birds, and rice birds, already protected in many states, may not be killed, except reed and rice birds in Delaware, Maryland, Virginia, South Carolina, and the District of Columbia, from Sept. 1 to Nov. 1.

Cabinet officers, congressmen, economists, and others, gathered before the House public lands committee last week for final hearings on pending legislation to enable San Francisco to carry out its seventy-five million-dollar Hetch Hetchy reservoir project, under which the city proposes to get water from the Sierra Nevadas, one hundred and forty miles away. Secretary Lane, Secretary Houston, and other departmental chiefs, with Gifford Pinchot, former chief forester, endorsed the Hetch Hetchy plan. Secretary Lane gave notice that he would present an amendment to have the government receive a rental, graduated according to the water rate charged by the city, with a view to making Yosemite park self-supporting within a few years.

Secretary Houston may send four or five experts from the bureau of animal industry to Argentina, Australia, Uruguay, Brazil, and other countries which may be possible sources of meat supply to the United States. The department of agriculture believes that other countries may soon be shipping beef here. His purpose in studying the situation at first hand is to find out exactly what provisions other countries make for inspection of their meat, and whether any conditions prevail which might conflict with the meat laws in operation here.

The franking privilege, which costs the government millions of dollars a year, would be eliminated by a bill proposed by Senator Kenyon. Official stamps would be issued to government officials, who would be required to give strict account of their use. Testimony in the lobby investigation shows that in one instance certain interests, under a senator's frank, circulated at the government's expense mail matter which would otherwise have cost them sixteen thousand dollars in postage.

The Quaker Oats Company, the so-called oatmeal trust, controlling 90 per cent of the oatmeal products and by-products of the country, was attacked by the federal government in a civil antitrust suit filed in Chicago last week, charging a monopoly in "derogation of the common rights of the people of the United States" and in violation of the Sherman law.

Bearing a personal plea for immediate action by Congress to revise the banking and currency laws, that business may be aided in meeting tariff revision, President Wilson, last week, for the second time went to the House of Representatives and personally read his address on the subject to both houses of Congress assembled in joint session.

Dissolution of the so-called Eastman Kodak trust has been asked in a civil antitrust suit filed in Buffalo, N. Y., by order of Attorney-General McReynolds. The government seeks the dissolution by receivership, if necessary, charging a monopoly in trade in photographic supplies in violation of the Sherman law.

Purchase of supplies by weight instead of by the bushel has been recommended to the commissioners of the District of Columbia by the superintendent of weights and measures, as being more just to householders in the purchase of food products.

Governor Dunne of Illinois last week signed the equal suffrage bill. This action enfranchised one million six hundred thousand women, more than doubling the number previously entitled to vote in the United States.

There are only two alternatives in reforming the currency, in the opinion of President Wilson, and these are, whether the people themselves shall control or whether the bankers shall usurp the power.

Delegates appointed by the New England governors to study and report on the New England railroad situation, convened at the Massachusetts State House last week.

Governor Sulzer's direct primary bill for New York state was defeated in the Assembly for the second time this year by a vote of 54 yeas to 92 nays.

The antitrust suit against the eastern states retail lumber dealers has been advanced by the United States Supreme Court for argument on Oct. 14.

International.

The imperial Parliament has read a second time the German military contribution bill, whose purpose is to meet the non-recurrent cost of $250,000,000 in connection with the increase of the German army. The measure has been greatly changed from the original bill proposed by the government, which contemplated a levy on owners of property valued at over $2500, with an incidental tax on big incomes. It now also hits persons earning salaries, as it taxes incomes of $1250 and upward on a graduated scale of from one to eight per cent. The increased armaments of Germany, according to the government's financial estimates, will be largely a rich man's burden, as $40,750,000 of the $250,000,000 is to be derived from persons worth $250,000 and over, and $23,250,000 from those with incomes of over $25,000 per annum.

Railway studies are now being made by the Panaman government in the interior of the republic. It is expected that by the time the studies are concluded and the recommendations of the engineers are before the President and his advisers, financial arrangements will be perfected and actual construction begun. The engineers are also making a thorough investigation of possible development of water-power, and it is said that there is little or no question but that sufficient hydro-electric power could be developed in Chiriqui, in any one of two or three rivers, not only for the operation of the railway, but for lighting and power requirements.

A spirit of thankfulness to the National Trust for Places of Historic Interest or Natural Beauty, in having saved for the people of the present and the future a place of such attraction as Colley hill, England, pervaded the ceremony of the dedication of the hill to the use of the public, which was performed by Lord Curzon recently. In these places of unspoiled natural beauty can be seen survivals of the days before the country was cut up by hedges and roads and built over by houses. They are a part of the history of the country, a portion of the national heritage of England.

Industrial and Commercial.

A deadlock exists in Chicago between the five hundred members of the Building Construction Employers' Association and the twenty thousand members of seventeen building trades unions who were locked out. The contractors discharged the men after one hundred and fifty marble-workers, who were employed by a firm furnishing ornamental stone for a large bank building, struck for higher wages. They have been out six weeks, and the employers assert that the lockout will continue until these few return to work. More than twenty-five thousand laborers whose work dovetails in with that of the locked-out men, automatically lost their jobs, making a total of forty-five thousand men thrown out of work. The lockout affects more men than any similar action in the history of the labor unions in Chicago, suspending work on improvements aggregating thirty-five million dollars, including ten office buildings, the county hospital, and five hundred apartment houses. The threat of a coast-to-coast strike in sympathy with the Chicago union men has been made.

The Florida citrus fruit season has closed. A statement gives the total number of cars shipped since Sept. 1, 1912, as 27,003, averaging 307 boxes to the car, which is equal to 8,290,000 boxes. On June 1 the Florida citrus exchange, which handled more than 20 per cent of the crop, issued a report showing that the average net return to growers was $1.91 per box. On this basis the total returns to the growers of the entire state aggregate $15,734,000. With freight charges of sixty-five to eighty-five cents per box to New York and the other great markets, it may be assumed that the transportation companies received an average of two hundred dollars per car for moving the crop, and so their total income from this source is five million four hundred thousand dollars. This, added to the growers' returns, makes the market value of the crop more than twenty-one million dollars at wholesale prices.

The silk strike, over Passaic and Hudson counties, New Jersey, which has been dragging along for nearly eighteen weeks, has cost the people of the state, to date, about three million five hundred thousand dollars. This amount includes the loss in wages, maintenance of families of indigent workers, extra precautions against destruction of property, and preservation of order. It does not include the losses caused by cessation of production in two hundred mills, some of which have been closed nearly four months.

The value of the mine production of gold, silver, copper, and lead in Washington, in 1912, was $1,120,214.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

PRESENCE OF MIND.

M. G. KAINS, M.S.

IN the business world, devices in great variety have been adopted to protect life and property. Many of them are ingenious, many simple, and probably the majority of them are effective within prescribed and therefore restricted limits; but probably, if the facts were known, their presence has not invariably proved efficacious. Not that the fault is necessarily due to their failure to operate, but that their proper use depends upon presence of mind on the part of the people who use them.

This phrase, "presence of mind," glides very glibly from the tongue, but how little does it mean in many cases, most cases! To the majority of people it simply means that in a period of stress one must not lose his head, but must keep his wits about him; that is, he must think clearly enough and act quickly enough to avoid unfortunate consequences. By reversal, the absence of mind, the inability to think clearly and act quickly, may be as productive of serious consequences as presence of body. This is an outline of the popular idea of presence of mind. It is limited to the person acting, or failing to act, under conditions of more or less stress; in a word, it looks upon each person as possessed of self-power which may be lost or retained according to the exercise of will or command over himself.

To the Christian Scientist the phrase has a far higher, broader, deeper significance, and better yet, it has a much more positive, definite application. The Christian Scientist realizes this significance by recognizing Mind as another name for God. Because God is infinite, He must be ever present, consequently there must be, always and everywhere, presence of Mind, God. On this basis there is, there can be, no such thing as personal or self-power, as is believed to be the case in the former instance. Christian Science emphatically declares: "There is no power apart from God. Omnipotence has all-power, and to acknowledge any other power is to dishonor God" (Science and Health, p. 228). The wonderful significance and utility of this statement is evidenced by countless cases of protection where the phrase "presence of mind" in its lower or human significance, as first outlined above, does not and cannot apply, because no degree of such presence of mind can account for the safety which those who realize the presence and protection of God have experienced in passing through calamities. Let suffice a single instance, selected at random from a long and steadily lengthening list.

During one of the tornadoes that recently swept the state of Nebraska, carrying devastation with it, a few Christian Scientists were impelled to take refuge in a certain position, then almost suddenly to move to a second and a third place. Scarcely had they left one place for another than something was torn loose by the wind or fell just where they had been standing. Because these people relied implicitly upon divine Mind to move them, to guide them, and to halt them, they came through the ordeal without the slightest injury. They thus proved the presence of Mind in the highest signification of the phrase. They knew and proved that Mind, because synonymous with divine Love, is an ever-present protection, and that nothing can penetrate this armor of divine Mind, which at all times, in all places, and under all circumstances envelops those who rely upon it.

This instance is typical of divine protection, the presence of Mind, in cases of fire, flood, shipwreck, railway accident, and other disaster. During the last two or three years the testimonial columns of the *Christian Science Sentinel* and *The Christian Science Journal* have contained several as striking instances of divine protection as the one just cited. Similar instances are often given at the Wednesday evening testimonial meetings in the Christian Science churches. The case mentioned above was outlined in such a meeting, and these instances are modern proofs that the ninety-first psalm is as true and applicable today as it was when first written by the inspired psalmist centuries upon centuries ago. These people proved that Christian Science has to do with spiritual causation as the only real causation; God, Mind, is recognized as the creator and governor of all that really exists. With this as a foundation the Christian Scientist seeks to realize in terms of daily experience the truth that he is protected not only from the results of untoward events such as those just mentioned, but from "every high thing that exalteth itself against the knowledge of God," for by so doing he is proving little by little what Mrs. Eddy declares in Science and Health (p. 276), that "man and his Maker are correlated in divine Science, and real consciousness is cognizant only of the things of God."

To have presence of mind in the lower sense is often to be inordinately conscious of the presence of body also; and to be in such a state of consciousness is temporarily to be governed by fear rather than by the "perfect love," the trust in God, which "casteth out fear," and which the working Christian Scientist applies with redoubled positiveness under similar conditions. The impulsion of fear under such circumstances impels the fearful one to act upon the basis of the thought that "self-preservation" is "nature's first great law," and therefore to seek to protect the physical body as if it were the real man and he its sole guardian. That the physical body is not the real man is in strict accordance with Christian Science teaching. Under stress, such fearful thought, while seeking to protect the body, generally thrusts it in the very path of danger. On the other hand, when placed under similar stress, the man with a working knowledge of Christian Science seeks to realize the presence of Mind as his only guide and protector, to become so imbued with the fact of man's spiritual existence and the absolute rule of God, that in spite of any seeming turmoil he definitely knows that nothing can either come to him or go from him but what is directed by God, because only one Mind exists, and that Mind is everywhere and always present. Thus with success in proportion to his understanding he proves the teaching of the Christian Science text-book to be true, especially such statements as that on page 383; namely, "The Christian Scientist takes the best care of his body when he leaves it most out of his thought, and, like the apostle Paul, is 'willing rather to be absent from the body, and to be present with the Lord.'"

TIMELY REENFORCEMENT.

PETER B. BIGGINS.

As we read in the Bible the history of human advancement, the long story of men and nations, we find these cheering words of Joshua to his compatriots: "One man of you shall chase a thousand: for the Lord your God, he it is that fighteth for you." In early boyhood the writer used to read with keen interest the historical account of the battle of Bannockburn, where the Scottish army, numbering about thirty thousand and poorly equipped, save with that priceless protection, love of liberty, routed the English army, numbering about one hundred thousand, splendidly organized and richly caparisoned. On that memorable occasion a band of Scottish gillies mustered themselves into what looked from a distance like an imposing army. As they marched into view over the brow of the hill with their improvised banners gaily flying, the English army, seeing these reenforcements coming to the aid of their opponents, fled demoralized. It would be too much to say that the writer now cherishes all that he was taught in connection with this and similar events, for much has been laid aside to make room for a broader patriotism, even the recognition that since God is the Father of all, all men are brethren. It is certain, however, that one good lesson has never been forgotten, namely, that numbers do not count for much when opposed by sterling courage and a righteous cause.

This lesson has been particularly helpful to the writer since he began to grasp something of the teaching of Christian Science. Our work is carried on in the face of much hostile evidence, which would discourage us if we gave it credence; but learning, as we gradually do, the utter falsity of the testimony of the material senses, we begin to apply ourselves with real zest to the healthful task of intelligently and scientifically opposing this evidence at every possible point. At times, when the beginner's courage is inclined to wane, much inspiration and help is afforded by the arrival of our weekly periodical; but here the comparison needs to be modified. In the historical event above mentioned, the tide was turned through the ingenuity of the useful but untrained camp-followers; in our present experience, the help comes through the unselfish labors of trained thinkers, skilled in the sacred work of comforting mankind by word, pen, and silent prayer. Our Leader pointedly states in her Message for 1901, "They are not the *addenda*, the *et ceteras*, or new editions of old errors; but they are what they are, namely, students of a demonstrable Science leading the ages" (p. 21).

The articles, contributed by experienced Scientists, calm, positive, yet temperate withal, encourage the beginner, steady his faltering footsteps, and lead him into a new realm of spiritual possibilities. The neophyte's modest acknowledgment of some specific blessing derived from the better knowledge of God gained from the Bible studied in the light of Christian Science, gives a clearer view of another's problem and helps to foster brotherly love. The editorials, with words of loving counsel, keep us alert to present problems and give valuable instruction as to how to solve them. They speak clearly and uncompromisingly, without fear or favor.

The selected articles present another aspect of the fighting line. The knowledge gained therefrom is often of inestimable value to the student. Even although he may not be called upon to answer a public attack on Christian Science, the invariably patient replies help him to meet rightly whatever opposition he encounters, spoken or otherwise. They teach him how to answer the critic according to his criticism, yet not altogether in accordance with it. This exemplification of the "seventy times seven" forgiveness inculcated by the Master and emphasized in Christian Science, engenders in the observant reader that patience and temperance which he needs in order to guard well his growing understanding of eternal Truth.

Yet another view of the far-reaching agencies for good is obtained from the reports from the lecture field. If at times the word of Truth is spoken into dull ears, we still have the positive evidence that the seed is falling continually into good soil; that the message is being received with more receptivity than we in our conservatism may sometimes admit; that the sick are being thereby healed and the sinner quickened to search for purity and manhood in a better understanding of God. The testimonies of healing, proclaiming in no uncertain tone how Christian Science is meeting humanity's great need, serve to remind us how much we ourselves owe for our healing, point to our many opportunities to bring this blessing to others, and inspire us with a purer and deeper desire to consecrate our *lives* anew to help mankind.

This weekly messenger, the *Sentinel*, telling of the mighty works that are being done throughout the length and breadth of the world, comes to the lonely worker, in city, town, or hamlet, as a powerful stimulus to more faithful effort. This glorious record of the good that is being done for humanity, dispels the self-mesmerism which would hold us within the narrow confines of our own problem, and enables us to discern more clearly the universal significance of this movement. Thus stimulated, we naturally behold the signs of hostility dwindling away before these evidences of the supremacy of good. The Scriptural promise is fulfilled in our experience: "Ye shall chase your enemies, and they shall fall before you by the sword. And five of you shall chase an hundred, and an hundred of you shall put ten thousand to flight."

TRUE TO ONE'S SELF.

ELSIE IVES.

MUCH of the sense of lack of time complained of by Christian Scientists, as well as by those who are not Christian Scientists, could be overcome by gaining a better understanding of what God really demands of them. In proportion as we gain this knowledge, we will find our days never overcrowded, but filled with the happy, profitable things that make for the establishment of the kingdom of heaven on earth; and this, not because we are busy and "troubled about many things," but because we are faithful over a few.

To spend all of one's time in either material or mental work for others, with the idea that we are being unselfish and doing God's will, is a mistaken idea both of unselfishness and of God's will. Many persons are so humanly unselfish that their greatest pleasure is found in constantly doing for others, and ofttimes at the expense of their own material and spiritual welfare. They may not realize that unless their acts are inspired by wisdom, by God, they may be injuring those they mean to aid. They do not stop earnestly to consider whether the would-be aid is wanted, and that perhaps their presence or offered assistance would be deemed a nuisance.

In our effort to do God's will, let us pray that we enter not into temptation; let us not allow human impulse, no matter how good it may seem to be, to govern our actions, but turn always to divine wisdom for guidance. This wisdom is the All-love, in comparison with which our sense of human love becomes as nothing. On page 127 of "Miscellaneous Writings" Mrs. Eddy says: "One thing I have greatly desired, and again earnestly request, namely, that Christian Scientists, here and elsewhere, pray daily for themselves; not verbally, nor on bended knee, but mentally, meekly, and importunately. When a hungry heart petitions the divine Father-Mother God for bread, it is not given a stone,—but more grace, obedience, and love."

This, then, is the thing for which we must daily pray: to have "more grace, obedience, and love," a love that is not governed by a mistaken, human sense of good, but love that

Digitized by Google

is a reflection of divine Love. It behooves us to learn of this Love daily, for in its light we shall see light. Only by learning to walk in this light can we possibly avoid making mistakes and wasting time, for Love does not overcrowd our day, since Love determines exactly what we can and should do. There is no lack of time or waste of time in the divine Mind, and in reality man reflects this Mind, "for all the law is fulfilled in one word, even in this; Thou shalt love thy neighbor as thyself." In other words, Thou shalt see man, thy true selfhood, in God's own likeness, perfect, spiritual; and if this is earnestly striven for, there will be fewer mistakes in our thoughts in regard to our neighbor's needs or our own, hence fewer mistakes in our effort at helping to meet those needs and less wasted time.

Let every Christian Scientist gain the correct view of man, himself included, and he will heal the sick and sorrowing, also his own thought of the burdened sense of lack of time in which to do God's work, the will of wisdom; and he will not be found among those who are complaining of lack of time because they have been constantly doing for others what they might not think of permitting any one to do for them. The Christian Scientist who prays daily for himself knows that such work is not the result of divine guidance, but a mistaken sense of love or selfishness; hence he knows that these acts are a waste of time, bringing no reward, but robbing the one who has given his time of all he should have gained therefrom. There is great wisdom in these words from Shakespeare,—

To thine own self be true,
And it must follow, as the night the day,
Thou canst not then be false to any man.

"SAVING HEALTH."

CYTHNA WOODHOUSE.

It is often asked by those becoming interested in Christian Science, why so much emphasis is laid on the healing of sickness, and why so much time and thought are given to what seems to be the merely temporal and material needs of humanity. Every sufferer, at some time, has echoed the words of the psalmist, "As the hart panteth after the water brooks, so panteth my soul after thee, O God," and in his trouble has longed for the healing waters which would wash away his sins, as well as heal him of his sickness.

In "Science and Health with Key to the Scriptures" by Mrs. Eddy the world is given a message of deliverance today in these words: "Healing the sick and reforming the sinner are one and the same thing in Christian Science" (p. 404). To the writer came deliverance, through Christian Science, from the suffering of years and from paralysis which had made her completely helpless, while at the same time there was begun a work of regeneration, a loosening of the fetters of belief in heredity, disease, and fear, and a bringing in of the promised deliverance from the greater burdens of ignorance and sin. The physical healing of Christian Science points to a fuller salvation than we have hitherto known, and it is a sign which a little child may understand, telling of a God who is Love, and of a Father who "pitieth his children."

In the book of Revelation we read of a tree whose leaves "were for the healing of the nations," a tree watered by "a pure river of water of life, clear as crystal, proceeding out of the throne of God and of the Lamb." Mrs. Eddy tells us that river "typifies the course of Truth" (Science and Health, p. 593), and in this healing course the misconceptions of material self and sense are being washed away through an understanding of God as ever-present Spirit, and through a realization of God as Love and Life, which at once begins to deliver the sufferer from sin, as well as from the bondage of fear and sickness.

As we experience consciously, for the first time, the healing and saving power of divine Love as revealed in Christian Science, the vision of a full salvation dawns, and we discern, though dimly, something of the unreality of evil and discord, and of the reality and presence of infinite good. In healing the blind man, Jesus said, it was "that the works of God should be made manifest." Every healing in Christian Science, however small, is in some degree manifesting the works of God; bringing a clearer realization of the kingdom of heaven here on earth, and of the real man made in God's image and likeness. If the fight seems long, and the error hard to overcome, we cannot be depressed, nor filled with useless condemnation and regrets, for we are learning that error is no more a part of our true selves than are the mist and darkness of a fog which may penetrate and envelop us. Is it not rather cause for great gratitude and joy that we have had revealed to us, through Christian Science, the fount and source of all true understanding, by which we may daily prove that we are working in obedience to the divine Principle manifested in the mighty works of our Master, and thus bring to some weary wanderer in the desert of mortal beliefs, the knowledge of the saving and healing power of Truth.

A ray of light, born of humility and joy, shines into our hearts as we realize that each one may reflect something of the "brightness of his glory," and we strive more earnestly to express the love and gratitude we owe to our beloved Leader by sharing with some thirsty one a healing draft, which "shall be in him a well of water springing up into everlasting life."

DIVINE SERVICE.

CAMPBELL MACCULLOCH.

Quite frequently words are bland smugglers trying to pass the customs line of expression without paying full duty upon their burdens of meaning. They require to be sternly halted, thoroughly examined, and made to declare their full import and intent with reference to the mission upon which they are bent, and only in this way, it would seem, can they be made to yield up the hidden stores they have concealed about them.

The word service may be considered as an example in its application to church activity. To many persons the expression "divine service" seems to indicate a weekly performance of a set form or ceremonial, some worship to be concurred in mainly by the physical presence of one who professes a belief in the ceremony. This is a plain perversion of the sense and import of one of the commonest and most expressive words in the English language. A well-known dictionary gives a variety of shades of meaning to the word, and chief among them stands out the definition tending to perpetuate the erroneous concept conveyed above, viz., "public exercises of worship according to the . . . form prescribed by an ecclesiastical organization;" obviously a limited and faulty rendering in the light of Christian Science, where the words take on a broader significance. Mrs. Eddy says (Science and Health, p. 40), "It is sad that the phrase *divine service* has come so generally to mean public worship instead of daily deeds." Service in Christian Science is therefore the loving performance of any act or series of acts that tends to aid in the production of a clearer realization of the allness of God; and this definition is broadly applicable to any use to which the word service may be put.

Not long ago there came to the writer a young man who was then officiating as an usher in a Christian Science church, and he said: "I am going to ask to be relieved of duty, or changed to some other position where I can get more out of the service. I find I am losing much, and I cannot afford to miss the Bible reading and the silent prayer." Perhaps such an attitude is not uncommon in church matters, but it is unquestionably a most insidious form of error striving to separate the individual from his duty, particularly prone to

Digitized by Google

attack the men of the usher force, and doubly dangerous because of the apparently truthful and laudable yearning in which it clothes itself. It should therefore be vigilantly guarded against, because it is a base counterfeit of right desire.

The usher in a Christian Science church occupies a very important post in the church work, and he should be fully awake to the responsibilities and privileges conferred upon him. In no particular is his work more important than in a clear apprehension of exactly what the word service means in its application to himself and his part in producing that very necessary realization of God's allness. The whole of a Christian Science meeting is service in its widest possible interpretation. No one goes there, or should go there, with the thought of gaining something as the prime motive. Attendance should be from the initial standpoint of giving, or serving the general good. The very act of listening to the reading, if done in the right spirit, is service, for it should be a conscious realization of the presence of God and the healing power of Truth; a straight, pure conviction of the efficacy of the spoken Word and its immediate application to humanity's needs at that instant. The singing of the hymns is service, for it is an act of conscious rejoicing at the ever-presence of divine Love made available to all mankind; the conscientious work of the two readers is eminently practical service because it takes the form of a definite expression of Truth; the singing of the solo and the attention given it are concrete expressions of praise to the Almighty for His Word made manifest, and this, too, is service in its very essence.

The opening of a door to facilitate the ingress of the congregation is service of a similar character to those mentioned, because it is the loving activity of a thought devoted to aid in the assimilation of Principle. There can be no classification of duties in Christian service, for each is of the utmost importance in that it represents a demand of Principle. Essentially, then, true worship is synonymous with efficient service, and it becomes apparent that true worship is not and never can be the more or less selfish desire to attend church for the purpose of reaping a benefit first, but should be conceived in the determination to add one's full quota to the outpouring of gratitude to the creator for His manifold blessings bestowed upon man; to manifest Jesus' divinely philosophical perception when he said that "it is more blessed to give than to receive," for it requires but the smallest consideration to discover that in the order of divine Science payment must always be made in advance, and that no bargain may be made with God on the basis of something purchased upon the collect-on-delivery plan. One must give service in some form or another before there can be a liberal outpouring of those gifts the promise of which runs from Genesis to Revelation.

One can as sincerely and effectively worship God by standing in a corridor or hallway during the whole of a Sunday or Wednesday service to extend a welcome or assistance to those who have come late, as he can honor Him by sitting in a comfortable seat and following the service. It is quite as possible for a man to fit himself for the reception of divine gifts by guarding the congregation from disturbance by the unthinking late comers during silent prayer, as by joining, however fervently, in the responsive reading. Service is by its very character the most important manifestation of Christian Science, and whether it merely takes the form of a full realization of the supreme value of the Word, or the position of a doorkeeper in the house of God, there is no whit of difference in the payment for what is rendered.

When the significance of divine service in its marvelously broad interpretation is realized, there will be more of a willingness to serve God efficiently, in however humble a capacity from the human standpoint, and the situation where there is a dearth of volunteers for the necessary work of the church will be eliminated. When the realization of what an inestimable privilege it is to serve in any least capacity is attained, the waiting list for the post of usher will be limited only by the membership of the church.

In some quarters there has been a disposition to regard the quick and effective seating of the congregation as of first importance in the work of the ushers; but this is a faulty and limited concept of their service, for the actual ushering in its prime sense is one of the least of their activities. In order that any service may reach its highest efficiency, each man should carry with him as complete and serene a confidence in the present availability of the truth to heal as he is capable of demonstrating, and he should be continuously awake to make this truth manifest and triumphant over the phantoms of error which creep in and attempt the disruption of the harmony of the work of Christian Science. Not infrequently this error takes the form of restlessness, of coughing, of lack of attention, of late coming, of a scattering among the seats with a resultant difficulty in taking the collection, of lax attendance, and the numberless false manifestations that need not be enumerated. In the presence of these intruders, the ushers occupy the sentry posts in the church, and it is paramount that they be alert to their duty and prompt in its performance. If one or two fail, there is a tendency to lower the standard all along the line, and the church as a whole inevitably feels it.

Effective service, then, consists in a full realization of exactly what service means, and the recognition that a liberal sharing in the worship of God is quite as possible in any direction toward which duty points as if the worshiper were physically in the midst of the congregation. When this is thoroughly understood and applied, it will be found that ushering indeed consists in a bringing of "all the tithes into the storehouse," with the result that God will indeed pour out such a blessing, "that there shall not be room enough to receive it."

[Written for the *Sentinel.*]

MY NEED.

SARAH E. P. MCLEAN.

GIVE me, O Lord, the strength that dwells
  As everlasting hills,
That stands serene through stress and storm,
  And human passion stills.

Give me the peace that silent flows
  As river deep along,
Content to bear on bosom broad
  Love's message sweet and strong.

Give me the faith that's hidden deep
  Like root and bulb and flower,
That grows and strengthens day by day
  In sunshine and in shower.

Let me reflect the love that shines
  As glorious orb of day,
The soothing, tender love that speaks
  In moon, and stars' soft ray.

Let me express the joy that rings
  In song of merry birds,
The patience that in bee and ant
  The love of service girds.

Help me reflect the perfect Mind
  That speaks through flower and sod,
Pointing forever up to Thee,
  As did Thy Son, O God.

SELECTED ARTICLES.

[Frederick Dixon in *Kentish Express*, Ashford, England.]

Considerations of space have compelled me to confine myself to negations in order to deal with the extraordinary claims and charges of the Vicar of Tenterden with reference to Christian Science. I should therefore be grateful if I might be permitted to say today something positive on the subject, so as to give your readers a true idea of its aims and teachings.

The vicar is very free in calling all humanity to witness against Christian Science. He constitutes himself, for instance, the mouthpiece of the church, and Mr. Paget, of all people, the oracle of the medical profession. This, perhaps, is not unnatural, for has not the latter announced that what is wanting to demonstrate the gospel of love and the gospel of drugs, is a "furious, hating attack" on Christian Science, to be waged everywhere by the combined forces of the vicarage and the surgery for the purpose of driving Christian Scientists out of every parish? and is not this precisely what the vicar's ordination vow has assured him is the business of the church?

Yet all members of the church and the medical profession do not seem so sure of this as are the clerical Damon and the medical Pythias. The Archbishop of York, to begin with, speaking some little time ago, asked how they were to account for the lives Christian Scientists lived. "He could only say that he had rarely met with such capacity to enter some of the deeper aspects of truth, and he had seen the lives of Christian Scientists tranquil, bright, cheerful;" while, although the vicar knows that Christian Science has never healed a case of real disease, Dr. Saleeby, a defendant in a recent *cause célèbre*, quite lately told a London audience that "the doctors were coming to see that Christian Scientists had got hold of an important part of the truth, in proof of which there were cases, too numerous to be denied, where doctors' methods had failed and Christian Science had actually cured the patient," and in proof of this he quoted a case of the healing of "locomotor ataxy" within his own experience.

Some three centuries ago, a candidate for a medical license was compelled to attend before the bishop of his diocese and satisfy him of his claims. Imagine a bishop today examining a doctor on the use of the forceps, and yet if the teaching of the Bible means anything, a knowledge of the use of the forceps is unnecessary, and a bishop would be the very person to examine claimants to the art of healing. Was not the divine command to preach the gospel and to heal the sick? and is there any authority in the gospels for separating the two, and for handing the sick over to doctors who may be the "Jews, infidels, heretics, or Turks" of the church prayer-book?

A few weeks ago the University of Cambridge called together its graduates to decide the test of a divinity degree. If the word divinity, like theology, had not long ago lost its true meaning in this connection, and come to imply an intellectual grasp of a scholarship by no means spiritual, and a knowledge very far from divine, the university would not have been putting the question to a number of gentlemen, many of whom were no doubt Jews, some infidels, others heretics, to say nothing of Turks, Hindus, or Confucians, and not a few—may I break it to the vicar—Christian Scientists. Instead of this, they would have been looking for the answer, not in human opinions, but in the pages of the New Testament, and they would have found the answer in the test demanded by Jesus himself, "He that believeth on me, the works that I do shall he do also."

There is a phrase in the Greek text of the New Testament which is unfortunately translated "knowledge of God," but which, as every one knows, should be translated "full, exact, or scientific knowledge of God," and so of Truth. It was to this knowledge of God or Truth that Christ Jesus alluded when he said, "Ye shall know the truth, and the truth shall make you free." Now if this knowledge is a scientific knowledge, and the New Testament undoubtedly claims that it is, it is a demonstrable knowledge, and this, of course, is just what Jesus insisted, in maintaining that those who believed in him would be able to do his miracles. Even "greater works" was his statement, and a man can only claim to be his follower in the exact proportion in which he repeats those works.

The day is gone by when it is any use to maintain that the words in the Bible translated miracle have, or ever have had, any supernatural significance. That, at any rate, is one of the things of which the mere intellectual reading for a divinity degree should convince any one. They mean simply the scientific proof of the power of spiritual law, and that is naturally why Jesus explained they could be done by any one who believed in him and why he required that his followers should preach the gospel and heal the sick. For some twenty centuries, innumerable sects have preached the gospel their own way, and have shown the utmost alacrity in persecuting their neighbors for preaching it differently. They have, however, with systematic disregard for Jesus' use of the present tense, and the perpetual recurrence of that awkward little word "now," postponed their demonstrations for a future life. The high priests found it much easier to frighten Pilate into crucifying Jesus than to imitate Jesus' example. The Pharisees perceived that it was much simpler to violently eject the man born blind than to heal blindness. The Christian sects which have succeeded them have discovered that precept is less difficult than practise, and that it is one thing to preach the gospel in theory and another to demonstrate the truth of the theory in the object-lesson of healing.

It is ill kicking against the pricks. The categorical commands of Jesus, the whole tenor of the Bible, the history of the primitive church, prove healing to have been not merely an adjunct to preaching, but the only proof that the gospel preached was the gospel of Christ. It is as easy today to denounce a man for healing or endeavoring to heal the sick, by spiritual means, as it was to burn him four centuries ago for saying the earth moved. The result is bound to be an equally complete and a much quicker failure. The earth cannot move, said the medieval ecclesiastics; such a thing would be contrary to the Augustinian exegesis of Genesis. It does move, said Galileo, and, like the Pharisees, they promptly locked him up to prove it did not. The earth is not the center of the solar system, said Bruno. Such a statement is clear heresy, said the College of Cardinals, and so, like the chief priests, they burned him to show he was wrong. Is this very different from the attitude of the vicar, who wants to drive Christian Scientists out of Tenterden because their theology, in his opinion, does not square with his ordination vow; and who denies the evidence of Christian Science healing because it is based on teaching out of harmony with his personal exegesis of the gospel?

There is, however, one difference between spiritual and physical healing, so vast as almost to preclude the term healing being applied to the latter. Physical healing, in insisting that causes are physical, can never do more than make the body temporarily well; spiritual healing, recognizing causes as mental, cannot make a body better without effecting a corresponding moral improvement. This is making a man "every whit whole," for "whole" is only a more archaic form of "holy," and it is just what Jesus meant when he asked, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" It was this secret of spiritual healing which, as she writes, on page 344 of the Christian Science text-book, "Science and Health with Key to the Scriptures," "Jesus preached and practised and left to us as his rich legacy," that Mrs. Eddy rediscovered, and so made again available to humanity.

[Henry Deutsch in *News Tribune*, Duluth, Minn.]

It is surprising that men who assume to stand as leaders of thought, especially in a religious line, should wilfully indulge in such reckless statements with reference to a religious movement, as those credited to a recent critic in your paper in relation to Christian Science. Christianity is founded upon the teachings of Jesus the Christ, and his teachings were a statement of his clear understanding of the Scriptures and the relation of God to man. Christian Science is based absolutely upon the teachings of Christ Jesus and the Bible, and follows them to an extent to which other Christian churches have refused to go. It insists that when the Master said, "Preach the gospel," "Heal the sick," he laid upon his followers the necessity for obeying the last command as well as the first.

The Master offered as the evidence of the truth of his teachings, signs, which he emphasized as the tokens of faith in those who claimed to believe in him. He said, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." In the realization and application of the teachings of Christian Science this prophecy of the Master is confirmed. It is difficult to understand how absolute adherence to the teachings of the Master and the Scriptures can be termed erroneous. Christian Science is being demonstrated by a class of men and women who are the peers, mentally, intellectually, and spiritually, of any men and women that may be referred to. We do not point to these individuals as necessarily an evidence of the truth of Christian Science, but when comparisons are made it is well to bear in mind the fact that no religious organization contains within its midst men and women superior in all qualifications to those that can be found in large numbers in the Christian Science denomination.

It is easy enough to make reckless and extravagant statements which it is hoped will be accepted as the mere opinion of the person making them, but that method of argument is not new or original. The Master was accused of performing his wonderful works through the power of the devil, and the argument of entrenched theology has always been of similar import when applied to his followers. But mere words cannot destroy the effect of demonstration, and while those who criticize, condemn, or ridicule Christian Science, limit their proof to the mere unsubstantiated statement, Christian Science is pursuing its very progressive course, healing the sick, saving sinners, and bringing to the lives of thousands upon thousands the present evidence of the realization of "Thy kingdom come. Thy will be done in earth, as it is in heaven."

[John W. Doorly in *Salford* (England) *Reporter.*]

The critic accuses Christian Scientists of being "determinists," and of believing that the human body is a myth. If to understand that there is no law but God's law, "the law of the Spirit of life in Christ Jesus," which makes "free from the law of sin and death" (but does not bind men with false laws of heredity, etc., as our critic states), is to be a determinist, then Christian Scientists certainly are determinists in this sense, for they have determined not to know or acknowledge any power but the power of Spirit, the power of God, and not to recognize any effect but the effect of that one infinite cause, which effect must be perfect and spiritual. This kind of determinism is hardly to be condemned by a Christian preacher unless he is prepared to condemn his Master's teachings. Of course, Christian Science has nothing at all in common with what is popularly known as determinism, but is as far apart from it as are the two poles.

The teachings of Christian Science show clearly that through a right appreciation of true being, of that which is the will of God, we can in every case correct the discords of material sense; for whatever is true is affirmative, and is based on law and power. Christian Science teaches that the real man has a perfect, indestructible being, and is forever in the image and likeness of Mind; that he is not fallen, and never can be, since he is the expression of infinite perfection; and through this understanding of God's immutable law, Christian Science dispels the false or mortal sense of man, just as light dispels darkness, and it does not matter whether this darkness be sin or disease; in fact, it shows that our Saviour's statement, "Be ye therefore perfect, even as your Father which is in heaven is perfect," was a scientific statement, to be demonstrated at that time and forever.

As long, therefore, as the critic continues his erroneous statements about Christian Science, so long will he urge on honest people to investigate what Christian Science *really* is. Today the Christian Science movement has so many witnesses of its ability to demonstrate Christianity, both in healing the sick and in saving the sinner, that his diatribes against it are rather apt to fall flat. Men and women demand addresses that uplift and strengthen them for their daily lives, and not abuse of another's religion, and our clerical friend would add much to the good he has already accomplished if he would give more time to constructive Christianity and less to destructive criticism.

[Charles K. Skinner in *The Berrien Springs* (Mich.) *Era.*]

Christian Science claims to be the only known method since the time of Jesus the Christ which heals the sick and the sinner by one and the same rule. Its Principle is absolute and sure, provided its demands are complied with by the individuals concerned. It is related in the gospels that the Master in certain places "did not many mighty works there because of their unbelief," showing that the same hardness of heart, the same clinging to material means for relief, the same questioning of the power of God to heal in His own way, existed in that time as today. In connection with this it may be well to note that in all of his wonderful works which are recorded, Jesus made a special demand upon the one to be healed. To one he said, "Stretch forth thy hand;" to another, "Arise, take up thy bed, and go unto thine house;" to the centurion, "As thou hast believed, so be it done unto thee;" to another, "Sin no more, lest a worse thing come unto thee." Obedience, faith, and reformation were thus demanded. Christian Science teaches that everything is thought before it is acted, and if thought were controlled and purified before being expressed, nothing but good could be manifested. This concurs with the Master's words, "Out of the heart proceed evil thoughts, murders, adulteries, fornications, thefts, . . . these are the things which defile the man."

The Christian Science church differs from some other churches in this, that it holds to a more spiritual understanding and application of the Scriptures and the works and teachings of the Wayshower. Jesus said, "The kingdom of God is within you," not a place or habitation, as some have taught, but a condition of mind. He said also, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life." The Master thus indicated that the particular forms of outward religious expression were of little value, but what is necessary is comprised in obedience to the spirit of the two commandments, "Thou shalt have no other gods before me," and "Love thy neighbor as thyself."

It has been truly said that few, if any, accept Christian Science healing until the gamut of everything in the material scale has been run and found wanting. This is not strange when it is considered that the Christian world has been steeped in materialism since the time of Constantine. The fact, however, is very noticeable, and cannot be gainsaid, that humanity is fast awakening to the demands of the spiritual. A few years ago it was preached from the pulpit

Digitized by Google

and asserted in the medical conventions, that Christian Science would soon pass away. Instead of this, the growth has been unprecedented. Church after church has been erected every year, and each is filled every Sunday and Wednesday by those seeking for what they have not found elsewhere. In the city of Detroit two large organizations have been founded in the past three years, making three in all, and the fourth is not far distant.

One may ask, "Why all this interest in a midweek prayer-meeting?" If he will step inside he will see the church filled to the doors with men and women of all ages and from every walk in life, almost as many men as women. He will see the same faces with new ones added at each service. Why do they come? Because, as one woman said, "I never could put my hand in God's hand and understand that He is Love until I learned it in Christian Science." The testimony of a hard-headed business man was equally forceful. He said: "The Bible was always a sealed book to me until I studied it with the 'Key to the Scriptures' by Mrs. Eddy. Now its daily study is a joy, for I can make its teaching practical." Mrs. Eddy once said, "I love the orthodox church; and, in time, that church will love Christian Science" (Miscellaneous Writings, p. 111). That the fulfilment of this prophecy is not far distant seems evident from the many testimonies from the clergy of the different churches, one of which will suffice for this article. This clergyman said: "I am glad to acknowledge publicly a great indebtedness to Christian Science for some of my clearest views of Christ's teaching. I am seeking for the truth, and I will not spurn it because it happens not to come through my own church. Some of the finest and most helpful phases of truth are set forth only in Christian Science literature, therefore I read that literature."

In conclusion, if those who think themselves opposed to Christian Science would approach the book "Science and Health with Key to the Scriptures" with the same unbiased thought they would hold toward any work on the physical sciences, and read it from the standpoint from which the author wrote it, viz., that of spiritual man and universe, the seeming mountains would melt into molehills and disappear.

[W. E. Fell in *Bradford* (England) *Daily Telegraph.*]

"Petros" has given his views upon the atonement. I presume he is aware that the denominational churches hold as many different views upon the subject as there are days in a month, or perhaps it would be nearer the mark to say days in a year. Why then are Christian Scientists to be denied their view? To understand aright man's at-one-ment with the Father "reforms the sinner and heals the sick" (Science and Health, p. 1).

Our critic cannot understand the Christianly scientific view-point of the atonement, because he seems unable to differentiate between mortal material man and man in God's image and likeness, that ideal man whom Christ Jesus exemplified. We would agree with our critic when he declares that the part the former man took in the crucifixion exemplified mortal man's "disunity" with God. But that man is the one governed by "the carnal mind," which Paul declares to be "enmity against God;" hence the crucifixion. Jesus defined the man who reflects Truth, Life, and Love when he explained to Nicodemus that the man governed by "the carnal mind" must be "born of water [purity] and of the Spirit" or he could not enter into the kingdom of heaven, into the at-one-ment with God. In order to mark the difference between the man of the carnal mind and the man of Spirit, and how they must forever be, as it were, at the opposite poles of being, he added: "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit." Jesus sharply rebuked Nicodemus for his inability to differentiate between that which is governed by the carnal mind and that which is governed by the divine Mind, that Mind "which was also in Christ Jesus." Paul accentuates the gulf that lies between the carnal man and the spiritual man in the following soul-stirring words: "So then they that are in the flesh cannot please God. But ye are not in the flesh, but in the Spirit, if so be that the Spirit of God dwell in you. . . . For if ye live after the flesh, ye shall die: but if ye through the Spirit do mortify the deeds of the body, ye shall live. For as many as are led by the Spirit of God, they are the sons of God."

Not until a man learns through the teaching of Love that "ye are all one in Christ Jesus," and how it is that "we live, and move, and have our being" in Him (God), can he possibly understand what this at-one-ment or atonement signifies. To unfold man's unity with God was the mission of the Saviour, who said, "At that day ye shall know that I am in my Father, and ye in me, and I in you." To be at-one with the Father, is the atonement.

[From a report in *The Journal and Tribune*, Knoxville, Tenn.]

Ossoli Circle studied "Women Prominent in Religious Movements" on Monday afternoon. Mrs. Emma Lee Rice was chairman *pro tem.*, and the meeting closed her department on "The Women Workers of America." "Christian Science," "New Thought," and "Theosophy" were studied, and the whole was of unusual interest.

Mrs. George W. Denney, president of the club, read the first paper, on "Mary Baker Eddy and Christian Science," which was a comprehensive summary of the Christian Science belief, and was heard with approval by a number of Scientists who were present. She gave a brief sketch of the life and character of Mrs. Eddy, and told something of her work and struggles. She said that she was truly a wonderful woman, and that she succeeded in founding and maintaining a system of religion in spite of every handicap possible to encounter. This system rested upon the cornerstone of Love and brought to the world the brief message, "Be not afraid." She told of the growth of *The Christian Science Monitor*, a paper published for and in behalf of the Christian Science church, and also spoke of "Science and Health with Key to the Scriptures," mentioning in particular its beauty of composition and the purity of its phrases.

In closing, the speaker said that the *Monitor* is founded on a platform of constructive journalism. If Christian Science had done nothing else for the world than to start and maintain this paper, it would have done much; for departing from the beaten path of journalism of today, largely destructive in nature, it daily tells of the good in life, of what normal people do, instead of telling of the abnormal and the freakish.

[Duncan Sinclair in *Greenock* (Scotland) *Telegraph.*]

"Spiritual facts" as understood in Christian Science, and explained in "Science and Health with Key to the Scriptures" by Mary Baker Eddy, are true statements about God and His universe. God is the infinite Mind or Spirit, the source of all reality, omnipresent and omnipotent good, all Life, Truth, Love. This is the "standard" which Christian Science sets up and by which it tests every experience in the lives of men. The "material senses" take not the slightest cognizance of these eternal facts, but are constantly proclaiming the existence of evil and diseased conditions. And Christian Science, holding by its "standard," maintains that such conditions are not of God, have not even the remotest connection with Him, since He can know nothing unlike His own nature, and that consequently they have no right to acceptance in the consciousness of man.

Mrs. Eddy discovered the regenerating power of such an outlook. She proved that in proportion as one understands the spiritual facts of being, these replace the "material sense" of things, including sin and sickness, and thereby establish better conditions of both morals and health.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"ACQUAINT NOW THYSELF WITH HIM."

If one were given a problem in mathematics to solve, he would first endeavor to understand it thoroughly, and then apply to its solution the rule by which such a problem can be worked out. So doing, he is putting himself in line to obtain the desired result, the correct solution. The same order of procedure must be followed in our work in Christian Science. If we try to apply the rule of Christian Science treatment, while still holding to "the error which says that Soul is in body, Mind is in matter, and good is in evil" (Science and Health, p. 204), we are simply nullifying our efforts, and will ultimately find ourselves as far from a solution of the problem as we would be in trying to add by the rule of subtraction.

A marked difference, however, between a problem in Christian Science and one in mathematics is that in the latter there may be several bases from which it can be worked out, but in Christian Science there is only one. Every problem to be worked out in Christian Science springs from the false belief which for centuries past has held mankind in bondage, namely, that there is life, truth, intelligence, and substance in matter; whereas the truth is, that "all is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468). This is the truth before which error's fetters must yield, and only as this truth is understood can the rule of Christian Science healing be applied, whether the seeming difficulty be one of sickness, sin, poverty, or any other form of evil.

The great duty of Christian Scientists is so to acquaint themselves with God as to be able to see at once the unreality of all that is unlike Him, to see evil, whatever the guise it assumes that it may the more subtly delude us, only as a false claim which can be and must be destroyed by Truth. There are not two creations, one spiritual and the other material, nor are there in reality two men, one in the image and likeness of God, and the other mortal.

Mrs. Eddy has said that the First Commandment is her favorite text, and this is not to be wondered at, because Christian Science is founded upon the oneness and allness of God. As Christian Scientists join with their Leader in their understanding of and obedience to this commandment, they will find themselves prepared to meet, quickly and surely, the problems which confront them. To know God, to understand His oneness and allness, is life eternal, for this means the overcoming, the destruction of evil in its every phase, and in the degree that mankind arrives at this understanding, to that degree is it freed from the false beliefs from which it suffers. There is, therefore, no greater work and no loftier mission before mankind than that of obtaining a perfect knowledge of God.

Throughout the ages there have been multitudes of the weary and wayworn who have echoed the mournful plaint of Job, "Oh that I knew where I might find him! that I might come even to his seat!" and have longed for the assurance which could declare in the face of trials grievous to be borne, "But he knoweth the way that I take: when he hath tried me, I shall come forth as gold." Yet not until "the way" was again made plain in Christian Science, not until mankind learned the true meaning of the Master's declaration, "No man cometh unto the Father, but by me," did the search for the knowledge of "the one true God" seem likely to avail; and only as we abide in his words and do the works he said we should do, is it possible for us to attain in a measure to the understanding of God which is life both now and forever.

There is a right solution for every problem, and he who advances most surely in the understanding of Christian Science will be the better able to apply its rule of healing. To those who would gain this understanding the way as pointed out by its Discoverer is open: "Study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495); and to those who seek the truth at its fountain-head, in the study of the Bible and the writings of our revered Leader, it will not be denied, for through the discovery of Christian Science it has been demonstrated again and again that "the prayer of faith," "an absolute faith that all things are possible to God" (Science and Health, p. 1), is answered today as of old.

ARCHIBALD McLELLAN.

"CHRIST IN YOU."

No more fitting symbol for St. Paul is found than in that great spreading oak whose roots have laid a mighty hold upon the earth and rock of the hillside, and whose knotted branches lift themselves into the upper air with a vigor that braves all storms. His faith was wondrously deep-rooted, and he gave himself to its all-conquering theme, "Christ, and him crucified," with an inspiring abandon. His loyalty to the logic of the fundamental teaching of the gospel was unreserved and insistent. He had no fear of the truth, no hesitation about attaining the Christ-manhood, and he stood for all that was involved in his theology as he met all that was involved in his world-defying ministry. His thought of man's spiritual possibilities had that tremendous outreach and expectation which is so startlingly expressed when he says, "Till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

Elsewhere he defines the fulness of our possible spiritual experience in the phrase, "Christ in you, the hope of glory," and since his time no religious teacher has so embraced and projected this exalted thought of man appearing in the Christ-likeness, as has the Discoverer and Founder of Christian Science. Many reformers and saints have been splendidly devoted to the realization of the divine ideal as they apprehended it, but their identification of selfhood with the body of material sense has always darkened their outlook and handicapped their hope. Mrs. Eddy essayed flight upon the unfettered pinions of this Pauline concept of human privilege, and this explains the altitude she gained.

This thought of the Christ-appearing in human life pervades the Master's teaching. His life, as he constantly declared, was not to be unique in its inspiration and spiritual authority. It was the rather to be duplicated in every faithful believer. They were to know his Father, have his commission, exercise his power, and enter into his joy, and this is the teaching of Christian Science. It is a new vision of the continuing Christ, and it makes quickeningly intelligible the words of the Master, "I will not leave you comfortless: I will come to you."

The moment one gains this point of view, that moment he takes a new hold on life. Thereafter the material and the commonplace can no longer be harmfully absorbing, since human destiny is seen to be divinely directed. For the true Christian Scientist as for the great apostle, the confidence that he "can do all things through Christ" has become an immediate and abiding stimulus and strength, and the conquest of sense impulse and satisfaction is entered upon with an entirely new expectation of triumph.

Christian Science thus inaugurates in the truth-loving life that Christ-coming which at once begins to conform responsive thought to the Messianic model, and the humble in heart begin to lisp the word of Truth which was spoken so effectively by the "elder brother." Speaking of him of

Digitized by Google

whom he had said, "If my words abide in you," the Master affirmed, "The works that I do shall he do also." How natural and legitimate this order now seems, and yet it can but mean that we are to repeat every spiritual declaration of the Master with that knowing love and that irresistibly healing assurance which was his; that we are to be the ambassadors of Life, Truth, and Love, of all good, to all, and with power. We can now no longer think of ourselves as without the pale of that prophecy which saith, "And it shall come to pass afterward, that I will pour out my spirit upon all flesh; and your sons and your daughters shall prophesy." They who have attained to the demonstrable knowledge of Christ, Truth, are among the elect, they are privileged to live the radiant life; and the realization of this, their exceeding great inheritance in Christ, is the pole-star of Christian Science.

JOHN B. WILLIS.

PURIFICATION.

THERE has been a tendency in late years, both among religious and non-religious people, to study the ceremonial law found in Leviticus and Numbers in order to prove therefrom that divine law deals with material things in safeguarding the health and morals of mankind. Those who seek such evidence in the Scriptures fail to see that the ceremonial law was mainly symbolic, "a shadow of good things to come," as the writer of the epistle to the Hebrews explains, whereas a spiritual sense of law lifts thought to the apprehension of reality and reveals the kingdom of God on earth. On page 133 of Science and Health Mrs. Eddy speaks of the wonders wrought for the Israelites by divine Mind,—of their deliverance from what seemed deadly perils, and of their national prosperity, until they "departed from the true idea."

It is sometimes asked if Christian Scientists do not consider outward cleanliness essential to health, if they do not even consider it a Christian duty to observe strictly the popular opinions held as to fresh air, pure water, etc. To this it may be answered that Christ Jesus evidently considered all these things as at best secondary to the great and urgent need of absolute purity in thought, word, and deed. We read that the scribes and Pharisees complained to him of his disciples' entire disregard of required observances, and they even accused him with having himself neglected the customary ablutions before meals. In his reply he charged these complainants with their neglect of divine law, though they were so assiduous about "the washing of cups, and pots, brazen vessels, and of tables." He said they were "making the word of God of none effect," and that is what is done by all who rely upon outward cleanliness as a substitute for moral and spiritual purity. He insisted that it is not that which goes into the mouth which defiles, but "evil thoughts." His rule was to "cleanse first that which is within" and then the outward would take care of itself; whereas mortal belief would reverse this divine statute, and by beginning wrongly never reach the kind of purification on which health is actually based.

We read in II Kings that Naaman was cleansed of leprosy through the spiritual understanding of Elisha, although he was told to bathe seven times in the river Jordan, but we never hear of any such method being adopted in modern times for the cure of this disease. Elisha's treatment of Naaman was symbolic, whereas that of Christ Jesus was the direct application of the truth, in the case of lepers and all others who sought healing from him. We are told that he even touched one of these, as he came down from the mount, after that wonderful sermon, and with the infinite majesty of Truth said, "Be thou clean." Need we wonder that the healing was immediate, and that a man, not a leper, stood before him, ready to testify to his cure, to which the Mosaic law pointed by type and symbol.

Today we are face to face with the great realities of being as revealed in Christian Science. We are looking with unveiled vision upon the Christ demand for purification from all fleshliness, a demand which is addressed to all mankind; and though mortal sense would seek to cleanse the festering sores of humanity in its own material way, the heart of man cries out for the living God, and for the Christ purity which alone gives health and peace. Who would dare bar the way to Truth's cleansing waters by pointing to the sullied streams of materiality? The one who has brought Truth's message to this age began as the Master said we should, with the purification of thought, and everywhere that her teachings are studied and practised cleanliness prevails, both within and without. Those who follow her teachings should remember oft the words of Christ Jesus: "Now ye are clean through the word which I have spoken unto you."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m. (during July and August the Sunday evening service is omitted); Sunday school, 10:45 a.m; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

SING SING PRISON, OSSINING, N. Y.—The first Christian Science service ever held within the walls of Sing Sing took place on Sunday, May 11, under the direction of the first and second readers of Ossining. It was held in the little court-room adjoining the principal keeper's office and, considering the short notice given, the attendance was very satisfactory, numbering thirty-one. Some twenty others who failed to have their names listed promptly, were of course unable to attend. Indeed, the response to the announcement that a Christian Science service would be held, so far exceeded expectations that it would have been difficult to have placed two, much less twenty, more men in the room.

The proceedings were the same as those in all Christian Science churches on this day, there being only one form of service and a universal subject, "Adam and Fallen Man," for all congregations. With characteristic forethought there had been provided for use in place of the rather ancient square piano, which has done duty on so many and varied occasions, a Pease cabinet grand, and Sing Sing No. 62082 was requisitioned to act as accompanist. Hymnals and Quarterlies arrived with the piano on Saturday morning.

It was announced that services will be held every Sunday, and that arrangements have been made for a soloist from New York for all future Sundays; that Bibles and several copies of the Christian Science text-book, "Science and Health with Key to the Scriptures," had been placed in the prison library, but that those desiring either or both for permanent use would be supplied direct from the publishers on application, in the regular manner, through the chaplain's office, and that visits would be arranged for, for those desiring instruction or advice. It was also stated that the coming of the Christian Scientists to Sing Sing was actuated by the desire to bring love and helpfulness to the inmates of this institution.—*Star of Hope.*

THE LECTURES.

MONTPELIER, VT.

In introducing Virgil O. Strickler, who lectured on Christian Science in Kellogg-Hubbard hall, James Borden Estee, mayor of Montpelier, spoke as follows:—

I am a member of no church and yet a friend and advocate of all churches. I respect and cherish the church because to me it is an outward symbol, variable in its structure and formularies, of an indestructible and changeless principle, or an idea planted in the heart of each man and woman by an outgoing impulse of divinity. To encourage and support the church is, therefore, one way to cooperate with God; one means of human advancement; one method of attaining individual unfoldment and contributing to the general well-being; and one process by which the individual or a group of men and women may come in contact with the universal law of concord and harmony.

I have only an imperfect knowledge of the teaching of Christian Science, but I have heard that it rests upon the affirmation that God is One and All; that God is Spirit, and that His followers "must worship him in spirit and in truth;" and that man is the "offspring of God" and the external universe is the manifold outpouring of His infinite oneness. This is a high concept and a wide generalization. Is it true? Is it the whole truth, and nothing but the truth? If so, it will stand the test of time and trial. We build in vain except upon the granite rock of truth, in whatever realm of research or field of action we embark.

I am informed also that as a corollary to the great affirmation, God is Spirit, infinite good, the one divine presence, Christian Science denies the existence of evil as a reality, and teaches that it is only a transient appearance to be dissolved by recognition of the truth of universal good, of changeless and perfect law, and of conscious unity with the one presence which in itself is good, is law, is harmony. This declaration seems to bring the tenets of Christian Science into harmony with the doctrine of the church so far as the affirmation is concerned, but separates the one from the other by its denial of evil. The church seemingly admits the existence of both good and evil as contending powers, while Christian Science claims the universal existence of good, denying evil any permanent place in the process of divine evolution, though it admits evil to be a temporary appearance resulting wholly from wrong thinking and a departure from the law of unity and harmony.

By its name, Christian Science seems to take a second step of departure from the established beliefs of the church. Science is recognized as a systematic and exact formulation of knowledge on a given subject. The Founder of this method of thought, growth, and worship, and her adherents, claim scientific certitude for the system if intelligently and persistently applied in personal unfoldment and in the wider affairs of social and business life. They claim, as I understand it, for their system that it is an exact Science of Christ by which each one may with certainty fulfil the ancient admonition "Know thyself," recognize his true relation to his fellow men, and in the process of development reach a conscious union with the great source of all expression and variety. The fundamental characteristic of science is its demand for proof. Science slowly and surely feels its way by trial and experience, establishing its claim to acceptance by proof. Unsupported assertion and unproved belief have no place in science. A system which does not account for and explain all the facts within the horizon of observation and knowledge is not science. Mrs. Eddy and the adherents of the system she founded admit this test of science, and claim that to follow the process and apply the rules laid down will lead to inevitable demonstration. Hence they take the third step in departure from the church in the healing of sickness and the curing of all manner of diseases. To open the "eyes of the blind" and to unstop "the ears of the deaf;" "to bind up the broken-hearted" and to plant a new hope where courage has withered; and to remove pain, discomfort, and poverty, and replace them with ease, comfort, and wealth, is demonstration.

There comes one into our midst tonight to tell us of this new way. He comes with accredited authority, and if, indeed, he walk in the path of science, he will speak as one having authority. I commend to your attentive consideration the message he brings.—*Correspondence.*

ST. PETERSBURG, FLA.

A lecture on Christian Science was delivered at the Auditorium by William R. Rathvon, and the lecturer was introduced by Paul Poynter, editor of the *Daily Times*, who said:—

We have come this evening, in response to the invitation of the Christian Science Society of St. Petersburg, to hear a lecture on Christian Science. We who are not members of the society feel a particular gratitude for the effort and thoughtfulness which have given us this much desired opportunity to hear a lecture on this important and interesting subject by one so well-equipped to enlighten us. Though I am not a member of the Christian Science church, I am not unacquainted with the benefits of an understanding of its truths and the practise of its teachings. It is not a new religion; it is a revelation to mankind of the power, force, effect, and strength which can come to the Christian faith; it is a practical, working, tried system by which divine Principle is made available so that men may meet the every-day problems and perplexities of life, for an understanding of its truths brings unity and peace, happiness and harmony, health and real purpose to life. The influence of good and Truth in the lives of men is not a discovery; but the scientific statements that God is All-in-all, that Truth always conquers, that good always prevails, that Love is sufficient for every human need, are contributions to the religious thought of the world made by the Founder of this great movement. That man is made in the image and likeness of God, that Christ Jesus is the Wayshower to teach men the superiority of Spirit over matter, that even our physical ills are the result of false beliefs, with no real place in God's plan, but they may be overcome by the power of Truth, are some of the teachings of this Science, which denies the power of evil and proclaims the infinite and everlasting power of good.—*Correspondence.*

PAWHUSKA, OKLA.

Frank H. Leonard delivered the initial lecture on Christian Science before an attentive audience which filled the district court-room. He was introduced by Judge R. B. Boone, who said:—

While I do not belong to this branch of God's great church, I am not one of those who believe that our ancestors of centuries ago discovered all spiritual truths and embodied them in their little creeds and confessions of faith. It is to me a strange thing that so many good, wise, and useful men, both of the past and the present, have conceded that science is daily discovering wonderful truths in the physical world, yet steadfastly deny that there are any new truths to be discovered in the spiritual realm. To my mind it is a monstrous proposition that bars the right of man to search for spiritual knowledge wherever he may find it in God's great universe, for only through knowledge of the truth are we at last made free. I conceive it to be man's highest duty diligently to search for the truth, and as he finds it, to appropriate it to his own uplift and good; and then as diligently promulgate and disseminate it among his fellows. Thus, in a while, from the bit of leaven shall the whole be leavened.

Digitized by Google

The speaker who is with us will explain some great truths; let us listen with open minds. He will tell us of divine Love, which is at once the omnipotence, omniscience, and omnipresence of God. "God is love," and love is everywhere that life is found. No subjects are more vital to human interest than those of love and truth, which constitute the very essence of all that is best for mankind. They establish the basis for all human hope and aspiration, and hope and aspiration are the inspiration of life.—*Correspondence.*

LONDON, ENGLAND.

In introducing Bicknell Young, who lectured on Christian Science at First Church, Miss C. V. Spiller, first reader, said in part,—

This lecture work is one of the many branches of activity, in the wonderful Christian Science organization, in which men and women are standing side by side, shoulder to shoulder, working together to uplift the standards of health and morality through the truth that makes free. In St. John's gospel we learn that Jesus expressed this prayer and desire for his followers: "That where I am, there ye may be also." It is obvious that in this Jesus was not referring to any locality, but rather to the place in consciousness in which he knew himself to be; to his sense of sonship with God, of oneness with the Father; to his consciousness of dominion over the world, the flesh, and the devil, of rejoicing in spirit, of peace that passed human understanding; in fact, to his consciousness of the kingdom of heaven within.

Now Christian Science asks nothing of the world; it has nothing to gain from any one, but it has everything to give; and it is because of this, because we who are Christian Scientists today know that through this teaching we are gradually gaining a recognition of the kingdom of heaven within, together with a measure of the love and health and peace that accompany this recognition, that we are not afraid to go forward and hold out our hands to all the world and say: Be with us, where we are, in this. Take your share of the infinite supply of truth and happiness. Mrs. Eddy refers to this true sense of happiness in the Christian Science text-book, "Science and Health with Key to the Scriptures," thus: "Happiness is spiritual, born of Truth and Love. It is unselfish; therefore it cannot exist alone, but requires all mankind to share it" (p. 57).

Correspondence.

PASSAIC, N. J.

Virgil O. Strickler, who lectured on Christian Science at Smith Academy, was introduced by Peter E. Alliot, whose remarks were in part as follows:—

We are assembled this evening in search of spiritual enlightenment. Christian Science, as is generally known, was founded some fifty years ago by Mary Baker Eddy. We who are now watching with interest the efforts of women to achieve their political rights, can in a measure appreciate the magnitude of Mrs. Eddy's struggle in her endeavor to establish new spiritual standards in the face of the orthodox opposition of her time. Nevertheless, in the short space of half a century this religious movement, which in its incipiency counted but a small number of followers, has grown to gigantic proportions; for today its branch churches and societies girdle the globe.

A consideration of Christian Science brings us face to face with a question which has acted as a line of cleavage in human thought ever since the world-old days when man first realized his spiritual nature, when he first realized that he possessed a constructive reasoning faculty, and with the help of these newly discovered powers endeavored to analyze the mysterious conditions surrounding his every-day existence. The question is: What constitutes reality? On one extreme we have those who tell us that what we see, what we handle, in other words, the evidence of our physical senses, constitutes reality; on the other hand, there are those who tell us that what we see, what we handle, or the evidence of our physical senses, is illusory, transitory, absolutely unsatisfactory. It constitutes nothing save perhaps a veil which we must lift or penetrate in order that we may apprehend certain laws working harmoniously for perfection. These laws are perceived spiritually, and a correct understanding of them means at-one-ment with God, the great underlying Principle, the only all-pervading reality.

Mrs. Eddy places herself squarely on the spiritual basis; her work is founded on, correlated with, the Christian Bible. She earnestly calls our attention to the mandates of Jesus Christ: "Preach the gospel," "Heal the sick," and reiterates the teaching of Jesus Christ that our faith must be made manifest by our works, and that the extent of our performance is the true measure of our spiritual understanding.

Correspondence.

TYLER, TEXAS.

William R. Rathvon delivered a lecture on Christian Science in the auditorium of Carnegie library. He was introduced by the Hon. John S. McIlwaine, city attorney, whose remarks were in part as follows:—

Creeds are as numerous as the leaves of the trees; however, on final analysis, all express an honest purpose, a striving for the same goal; to wit, definite and demonstrable knowledge of our welfare and well-being in the world to come. And while we travel the road to the ultimate goal, it is but meet that we accord to others the same privilege that we demand for ourselves, namely, the right to think for ourselves. I am not a Christian Scientist, nor do I subscribe to the tenets of the faith; however, I am frank to confess that my attitude may perhaps be due to ignorance and not to disbelief. I therefore congratulate myself upon this opportunity to hear the subject discussed by an able exponent of it.—*Correspondence.*

NEVADA, MO.

The Hon. Clarence A. Buskirk, who lectured on Christian Science at the High School auditorium, was introduced as follows by the Hon. O. H. Hoss:—

The schools, universities, and colleges teach us concerning physical causation, but most of us grow up without ever having acquired any accurate knowledge of it. And I am reminded that some years ago a noted scholar said, "A man may know all there is to learn about matter and still know nothing that he needs to know about man." Now Christian Science teaches us that the Bible is the most scientific, up-to-date book in existence, and that it is a text-book on spiritual causation. There are unnumbered thousands of thinking men and women the world over who, through the study and application of Christian Science, have found, and are finding, a remedy for all the discords which beset the human pathway.—*Correspondence.*

LECTURES TO BE DELIVERED.

Aspen, Col.—William R. Rathvon, church building, corner Main and Center streets, 8 p.m., July 7.

Bellingham, Wash.—Bicknell Young, Metropolitan theater, 8 p.m., July 7.

Hood River, Ore.—Bicknell Young, Heilbronner hall, 8 p.m., July 14.

TESTIMONIES OF HEALING.

My heart goes out to God in gratitude impossible to express in words as I recall some of the many blessings which have come into my life through even my very limited knowledge of Christian Science. Prior to gaining an understanding of this great truth, many years of my life had been spent in the medical field as a trained nurse. I graduated, years ago, from one of New York's large hospitals, and served long and earnestly in my capacity as nurse; but not until I learned through the study of Christian Science some of the fundamental and wonderfully beautiful truths of its teachings, did I realize the source of all true healing. I found few of the splendid, intellectual men and women of the medical profession other than sincere in their beliefs, but I now realize that theirs, like mine, was a misplaced confidence.

A very convincing evidence of this fact was presented to me soon after I became interested in the study of Christian Science. My brother's child at the age of eighteen months became ill, stricken with a fever. Later he developed marked symptoms of Bright's disease in complication with a very high temperature. On the eighth day, the physician in charge considered the illness so critical that he felt it his duty to inform the parents that no hope could possibly be entertained of the child's recovery. My brother had no knowledge of Christian Science, but becoming alarmed, he urged me to come to him, saying he felt sure that if I could do so his baby would be helped. I did go, and although the journey required fourteen hours by rail, the time was utilized in striving to gain a clear sense of the omnipotence and omnipresence of an infinite God who is Love, and whose marvelous compassion for His children never fails to manifest itself when we turn to Him.

Arriving at my brother's house, I found the family in a state of despair and the baby to all sense desperately ill; but I realized, even then, the falsity of the sense testimony, and I think perhaps as never before the significance of the Scriptural assurance that God's hand "is not shortened, that it cannot save." The physician, whose attitude toward Christian Science seemed kind, frankly admitted that he knew nothing of its teachings, but he continued his visits. There was no excitement, but an impersonal declaration of the allness of the power and presence of God, together with an intuition born of spiritual understanding, proved that God was with us. Within three hours a change for the better had taken place, and within three days every vestige of fever had left the child and every symptom of the kidney disease had disappeared. On the fourth day it was my privilege to hear this same physician say to the mother, "The baby is all right; take him out for a drive." This healing took place in the summer of 1909, and since that time the child has been in better health, so his father writes, than ever before.

Another nephew, at the age of twelve years, was stricken with what is called spinal meningitis, accompanied by its many distressing symptoms. He was placed under the care of a Christian Science practitioner and within five days was completely healed. Besides this, a sister was suddenly attacked with what *materia medica* would term a stroke of facial paralysis, accompanied by intense pain and marked rigidity, though affecting only one side of her face. The ordeal, to be sure, was a trying one, but she recognized the superiority of spiritual power over material methods, refused medical aid, and was perfectly healed in Christian Science within five days. Then I have been healed of several minor difficulties, one of which was seasickness, also of a serious throat affection, an acute attack of lung trouble, a chronic stomach affection, and an abscess of the inner ear.

While these instances of healing are only a few of the many blessings which have come to me through a knowledge of Christian Science, I value each one of them, and rejoice in the knowledge which makes it possible for each and every one to prove the practical application of this great Life-principle by demonstration. And no less do I rejoice in this same knowledge which has brought me an indescribable spiritual awakening, a sense of peace hitherto unknown. Christian Science has indeed been to me the "Comforter," and I am grateful to God for its gift to this age; grateful for the pure, unselfish life of its Founder, whose untiring efforts, in the face of the greatest odds, enabled her to look beyond the fading finite sense of things and to perceive the facts of being in its science, and so take of the things of God and show them to humanity. I can indeed say, in all sincerity and truth, that I desire no greater privilege than to be found worthy to serve in truth the cause of Christian Science.—ELIZABETH WHEATELY PETERS, New York, N. Y.

[Translated from the German.]

In writing this testimony I am filled with deep gratitude. Our attention was called to Christian Science by my brother, who had heard of this teaching through the healing of a friend. He would often ask us to attend a Wednesday evening meeting, but we could not make up our minds to do so, until distress over a disease with which my husband was afflicted finally drove us to investigate Christian Science. The trouble was inflammation of the knee-joint, which first manifested itself in 1906 and suddenly reappeared two years later. Fear lest we should have to go through terrible suffering led us to resort to Christian Science, and we called upon a practitioner. My husband, my five-year-old daughter, and myself, went together, for we all intended to ask for help. As we knew practically nothing about Christian Science, the practitioner started by giving us some explanation regarding this wonderful subject and asked us to call again on the following day.

I shall never forget my first hour's conversation with this practitioner. She said to me that God does not send disease and suffering, but that He is divine Love, who created all things perfect, and He never afflicts His children. An indescribable feeling of joy came over me, for I knew that I had found the truth, and the God whom I had vainly sought heretofore. I was filled with gratitude to know that when Truth is discerned and we are willing to turn with firm trust and confidence to God, divine Love, He is indeed an ever-present help and power.

Christian Science healed my husband at that time of his affliction. I myself had been suffering with a bowel trouble since the age of thirteen, and the various physicians who were consulted seemed unable to help me, so I was obliged to take medicine daily; but a single treatment in Christian Science healed me of this ailment, and I have enjoyed good health ever since without using material means. The way in which I experienced the power of divine Love was wonderful, and I feel that I cannot be too grateful for all these benefits. Our daughter had labored under this same difficulty since she was one year old, and she submitted to an operation in 1906. The physicians expected it to be successful, but it proved a failure. Christian Science, however, healed her, though the healing was not so quick in her case as in my own; but this may have been due to the fact that my husband and myself observed her too much and seemed unable to get over our sense of fear. It was not until we got rid of all such thoughts and learned that divine Love alone governs our child, and that it was our duty to leave her entirely under His care, that she was healed. She has since grown to be a healthy girl and is nine years of age.

Our little son has been healed of an eruption on the face with a few treatments in Christian Science. We frequently felt obliged to have medical assistance in times past, but since we have been in Christian Science we have always derived help through this wonderful truth. Through the

Digitized by Google

reading of *Der Herold der Christian Science,* as well as by attending the meetings and Sunday services, I am constantly gaining in the understanding of the truth, and I have often been enabled to overcome ailments which manifested themselves in our family, especially in the case of the children. Though we have often had severe struggles with the fear of disease, and it has seemed as if error would get the better of us, I have always tried to be mindful of the many proofs of divine Love which have been ours, knowing that our Father-Mother God helps us if we have a firm trust in Him. The verse from the twenty-third psalm: "Yea, though I walk through the valley of the shadow of death, I will fear no evil: for thou art with me; thy rod and thy staff they comfort me," always renews my sense of joy and trust.

My husband and myself are now learning English in order to be able to study Science and Health in the original, and my most sincere desire is to understand the truth and to be able to apply it. I am deeply grateful to God for having found Christian Science, and I wish to express my sincere appreciation of our revered Leader's great life-work.

FRAU MARIE ZWANZIG, Berlin-Lichtenberg, Germany.

The privilege of expressing gratitude for what Christian Science has done for me is one of which I should have availed myself long before this. The blessing of an instantaneous healing of organic trouble of many years' standing, was mine five years ago. Every remedy known to *materia medica,* including operations, had been tried, all to no purpose, with the result that existence seemed a failure; but from this darkened sense the light of Christian Science restored me to the true consciousness of life and health. A year ago a seriously injured arm was also healed, with minor ills too numerous to mention; but over and above all that human language can express, is an overwhelming sense of gratitude for what Christian Science has done and is doing for me spiritually. The gradual insight and unfoldment of the Bible through the study of "Science and Health with Key to the Scriptures," also the help derived from our other literature, fills my consciousness with the desire to be obedient to the law of God, "from whom all blessings flow." I am also grateful to Mrs. Eddy for her consecrated life and selflessness in elucidating this truth which heals and uplifts.—HELEN LINDROTH, Providence, R. I.

For those who have doubted the efficacy of Christian Science in the healing of disease, I rejoice to send this testimony. I had suffered for a number of years from an abnormal growth without fully realizing my condition, but finally, when plans were matured for a year of foreign study, a physician's diagnosis made an operation seem imperative. I, however, resorted at once to Christian Science treatment, and was healed some months later in Munich, Germany. While there, during the winter of 1910-11, I consented, at the urgent solicitation of anxious friends, to submit to a medical examination, with the result that the healing was frankly acknowledged by an eminent specialist of that city.

To the student of Christian Science, physical healing, marvelous as it seems, is but the visible sign of spiritual regeneration, which is the unspeakable gift, the sure heritage, of the Christian Scientist.

LILIAN ALDRICH THAYER, Oxford, Ohio.

I wish to express my gratitude for Christian Science and what it has done for me; for our dear Leader who was brave enough and loving enough to make known the truth to us; for our wonderful periodicals, and for those who have so lovingly helped to show me the way.

I was religiously brought up and thought I knew something of the Bible, but having been sickly all my life and weighed down with many fears, I finally turned from my own seemingly fruitless prayers, determined to use only what I understood of the Lord's Prayer: "Thy kingdom come. Thy will be done on earth, as it is in heaven." I was, however, all confused as to God's will, but within a week some Christian Science literature was given me to read, and I knew that my prayer was answered, for the true import of the words omnipotent and omnipresent so appealed to me that I was healed while reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. I accepted it all as a child takes food, and words cannot express the joy which was mine at that time. The Bible became a new book to me. This was some years ago, and it has seemed necessary for me to go through very deep waters to "prove all things," but I have surely learned that God is what the Scriptures declare Him to be, namely, "All in all."

CAROLINE VIRGINIA BILLON, Davenport, Iowa.

Since we began the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, we have had many proofs in our family of God's power to heal, for which words fail to express my gratitude. The demonstration which revealed the truth to me most clearly was the healing of our baby boy of acute lung trouble. On Monday I called a practitioner, and the child seemed to receive help, but still the illness did not yield as it should. Wednesday morning I called another practitioner, for the baby's breathing was labored, and he coughed almost constantly. Thursday morning, about four o'clock, he seemed to be worse, and I decided to call a doctor to examine him; so I telephoned to the practitioner and the doctor to come at once, and they arrived early in the morning. The doctor made the examination and said the left lung was badly affected, but he gave no medicine, and did not offer any, as he knew we were Christian Scientists.

In ten minutes after the doctor left, the baby breathed easier. When the practitioner left, she said that I should stop looking for any change; that the baby was governed by spiritual law, as he always had been and always would be. Then the light began to shine a little for me, and I could see that it was I who needed the change in my own thought. The practitioner also said that I should rejoice, and I tried to do so. Late in the afternoon, when I read an article in the *Monitor,* I jumped up and said, "He is healed, he is well! Now I can rejoice!" I was so happy, and such peace came over me as I have never experienced before! I could indeed feel the presence and power of God. Error tried hard to tempt me, but I remembered Jesus' words, "Get thee behind me, Satan," and quickly put away the temptation to doubt the power of Truth.

The baby began to show marked signs of improvement at once, and slept well. That night he ate some supper and played as usual, while within twenty-four hours from the time the practitioner and the doctor came, he manifested perfect health. I could see so plainly how the disease never had been true, and that it was always a falsity, a lie. Two days later, when I saw the doctor and told him the baby was perfectly well, he said it was grand; it was fine, for he had been a very sick baby.

I am so thankful for Christian Science, and I pray that all may see the light of Truth as plainly as it came to me. I cannot describe it, but would advise every one that thirsteth, to come to "the fountain of living waters" and be healed.—MRS. KITTIE A. QUAIF, Grand Rapids, Mich.

It is with great joy that I testify to what Christian Science has done for me, though words fail to tell the whole of it. It has been a light upon my path, which has revealed the way out of material beliefs unto a more perfect knowledge of the Life that is God, good. It has taught me the significance of Jesus' words, "Take no thought for your life,"

Digitized by Google

and from having to take thought for what I should eat, and what I should drink, I have learned that to seek "first the kingdom of God, and his righteousness," does add "all these things" unto us. And how much more profitable is the occupation of seeking God and His righteousness than the pursuit of materiality! How true are the words, "Acquaint now thyself with him, and be at peace," for this is "the peace . . . which passeth all understanding"! So many discordant conditions in my experience have vanished, that it now seems but a dream. Christian Science has set my feet upon a rock, the rock of spiritual understanding, which reveals a perfect creator and His perfect creation, and this has sent me on my way rejoicing.

Can we ever be too grateful for the wonderful light which now shines upon our path, the same light that has been shining in darkness down through the ages, though the darkness comprehended it not? And can we ever be grateful enough to the one who, waiting and watching, saw the light of Truth, and proclaimed its joyful significance to a weary world?

Since coming into Christian Science, three years ago, I have had many beautiful demonstrations of the power of Truth over error, and have seen the truth reflected in the lives of many others. I am truly grateful for this revelation of Truth, the "Christ, who is our life," and to whose fulness we must and will attain, and my earnest desire is that my light may so shine that it will reflect "peace, good will toward men."—RUBY S. TINSLEY, Roanoke, Va.

[Translated from the German.]

Deep gratitude impels me to testify to the blessings which my family and myself have experienced through Christian Science. Before this truth came into my life I was of the opinion that the universe is governed by chance, and through the activities of material law. I recognized no power of a higher order and abhorred everything of a religious nature, and in this mire of godlessness I seemed to feel at ease.

After I had lived long in this delusion of inharmonious beliefs, Christian Science came to me, teaching the exact opposite of what I had believed to be irrefutably true. My progress at first seemed almost imperceptible, for the right recognition of being dawned quite gradually. The thought that there is a God, an intelligence governing all true being, and that matter is but a false sense or concept entertained by mortals, seemed beyond my grasp. The earnest study of Christian Science, however, and the forcible and thoroughly logical arguments which we find in our text-book, "Science and Health with Key to the Scriptures," eventually refuted human logic and reasoning, and little by little I realized with increasing joy that there is a divine Principle, Love, governing all in absolute harmony.

It was not disease which led me to seek Christian Science, though I cannot say that I had always enjoyed good health; rather was it a longing for spiritual truth which led me to it. Strange to say, although I had maintained such widely different views, the question never seemed to arise in my mind as to whether Christian Science really were true. This is to me a further proof that God guides us all, and that we must all sooner or later tread the path which leads to Him.

That the assiduous study of this wonderful, unique Science has freed me of all physical disturbances, such as chronic colds, headaches, and other ills, I herewith testify with deep-felt gratitude. Yet I am far more grateful for the deep insight which I have gained, as I now know that error, in whatever form it may appear, is nothing but the result of erroneous thought, a phantasm of the human mind, and that one may always meet it successfully through the proper understanding of Christian Science. Our text-book says: "Truth brings the elements of liberty. On its banner is the Soul-inspired motto, 'Slavery is abolished'" (Science and Health, p. 224), and we shall no more make bricks for Pharaoh, but serve God alone.

It would lead me too far to tell here of the demonstrations which I have witnessed; suffice it to say, that for three years Christian Science has brought my family and myself innumerable blessings and great peace, and I am sincerely grateful to Mrs. Eddy for having made this priceless gift to the world. Whoever earnestly endeavors to study the Christian Science text-book and puts into practise the teachings contained therein, will find his heart overflowing with gratitude.

DR. H. MAYER-STIHL, Berlin-Charlottenburg, Germany.

I feel it my duty to say a few words about what Christian Science has done for me. It is now four years since I gave up the use of medicine and have trusted to God for all my help. One of the healings for which I am most grateful is that of a double hernia. I had worn a double truss for years, but about three years ago I discovered one morning that I was entirely healed. I threw away the appliance and, thank God, I have never had need of it since, although I have done much hard work and heavy lifting since that time. I have had numerous other marked demonstrations of the power of Truth over error and have been healed of many bad habits. I am still striving to learn more and to get a better understanding of God, good. I am thankful to God for Christian Science, and grateful to Mrs. Eddy for giving us the text-book, "Science and Health with Key to the Scriptures," and other books which bring to us a clearer knowledge of God.

H. W. GILBERT, Kansas City, Mo.

Like many others, I came to Christian Science for physical healing. I had been troubled with a bowel disorder for eight years, and also another ailment which one doctor called abscess in the bowels, while another pronounced it ulceration. As I received no help from material remedies, I turned to Christian Science as a last hope, and was healed. I always study the Lesson-Sermon daily, and think it as necessary as my daily food. I feel very grateful to Mrs. Eddy for giving us this true understanding of the Bible, of that "Word" which is the power of God.

MRS. ALBERT V. NELSON, Sheffield, Ill.

About three years ago I had a bad growth on my face, which had been developing for four years. During the last six months it became so much worse that I had no rest either day or night. My husband wanted me to go to a doctor, but I hesitated because I was afraid of an operation. I did go finally, and the doctor said that the growth should be removed as soon as I could get ready. This was a few days before Christmas, so I made arrangements for the operation the week after Christmas. In the mean time I was down-town and met a friend, who asked why I did not try Christian Science. I said I had not faith enough in it. I knew it was good, but I did not think it could help me. She said, "Why not try a few treatments, and then if you do not get any help, you can go to the hospital."

Well, I came home, and the more I thought of it the more I felt I would try Christian Science. I was suffering till I thought I could not bear it any longer, so I got up and put on my wraps and went to see a friend who is a practitioner, and I told her all about it and how I felt toward Christian Science. She said there was no need for me to go to the hospital or to have my face cut, so I decided to take treatment, and in about two hours after I went home I felt the pain gently go out of my face, and it has never returned, thanks to Christian Science. My husband came home after a while, and as he looked at me he said, "Why, that purple is all going out of your face; maybe it is going to get better;" but I did not tell him I had been to see a practitioner. I had not slept for weeks, but when I lay down in my bed that night, sweet sleep came to me, and I did not

Digitized by Google

wake until morning. When I did awake, my husband was walking around on his toes for fear he would wake me; but I got up, and at breakfast I told him all, and it made him very happy. My face got better, and how grand the healing is!

Since that time I have had a bad fall, and though no bones were broken I was much bruised. I had Christian Science treatment and was able to be up very soon. I hope my testimony may help others, for I know that God is good.

MRS. J. FLANDERS, Aurora, Ill.

Many times we have been helped by the understanding of Christian Science. Not long ago our baby, a year and a half old, seemed to be suffering great pain. We were unable to meet the difficulty ourselves, so we telephoned a Christian Science practitioner at eleven o'clock at night. In a short time the child went to sleep and slept several hours without waking. There were only a few slight returns of the trouble that night, and he awoke in the morning perfectly well and happy. Another night his throat began to trouble him, and he seemed unable to sleep on account of it; but we began to use our understanding of Christian Science and were able to overcome the trouble, so that he finally went to sleep and awoke in the morning without a trace of the ailment. Upon another occasion, our oldest boy had a bad attack of croup. As the conditions grew alarming, I telephoned the same faithful practitioner, and the choking stopped immediately, while all symptoms of the disease soon vanished. Once, when the same child was younger, he became very feverish. We called for help, and this trouble was entirely overcome by morning.

These cases of healing are only a few of our many blessings received in Christian Science, for all of which we are truly grateful. "Surely he shall deliver thee."

MRS. HALLIE S. NOYES, Bradshaw, Neb.

I fully corroborate my wife's statements in the accompanying testimony of the healing of our dear little boys. I have also seen some other wonderful demonstrations of the power of God to heal all manner of discord.

ARTHUR R. NOYES, Bradshaw, Neb.

I am glad to tell of my healing, with the hope that some other sufferer may be led to accept this great truth, Christian Science. For fifteen years I was an invalid, and was gradually growing worse. Seven different physicians pronounced my illness a serious lung trouble, and they said that every organ in my body was affected. At times I would have severe distressed spells, when I was obliged to take an opiate. A cousin came to visit me in July, 1910, and she asked me why I did not try Christian Science, saying that it would surely help me. I inquired what it was and said I would try anything. On her return home she sent me some books. I read and studied them, and found myself gradually gaining. I can now truthfully say that I am a well woman, doing my own housework, washing included. My husband has been cured of the tobacco habit.

I wish to express my gratitude to God, and my thankfulness to Mrs. Eddy for showing us how to know God aright.

MRS. STEPHEN D. WOOD, North Brewster, Mass.

Christian Science found me when I was a great sufferer from a complication of diseases, the most severe being rheumatism, but thanks to a near neighbor who was a Christian Scientist, through the power of God I was healed in a short time. Were I to attempt to tell of the many blessings which have come to me during the last year, I should utterly fail. Science is everything to me; it brings harmony where all else fails. For this healing, and for the noble work of Christian Science, I thank God.

F. M. AMEN, Carson, Wash.

FROM OUR EXCHANGES.

[*The Universalist Leader.*]

John Robinson of Scrooby, Amsterdam, and Leyden, was a truer prophet than most men who have essayed the rôle. More light has broken from "His Holy Word." The conceit of sects which Robinson condemned has found its grave. The conception of truth on which they built their infallibilities has passed away wherever the modern spirit has done its work among the intellectual processes of men. The dream of this poet-preacher of early Puritanism has become an axiom of all great faith. A single century has flooded the world with new revelations from the Book which had been supposed to be signed, sealed, delivered, and interpreted, against all possible change. When John Robinson spoke his farewell words to those who were leaving Holland forever, he alone seems to have pierced the future far enough to anticipate God's ways with coming generations; for in that single expectation he raised himself above his age, and stated a principle of progress which has done its greatest work on this side of the world, when his name is only a memory. More light came forth from the Scripture during the nineteenth century than during the previous thousand years, and that light transformed the Book itself.

The very idea of what Biblical truth is which prevailed in the days of Robinson, has passed away. The notion that the Bible deals in abstract, dogmatic, "revealed" truth, primarily, has gone to the lumber-room of intellectual mechanics. It is being "junked" as fast as the human mind is able to comprehend the meaning of living truth. "I am the way, the truth, and the life" is coming to be understood.

We understand now that the Bible is a book of religion rather than a book of theology. The difference is the difference between Gideon's army and Ezekiel's valley of dry bones. There is flesh and blood on the skeletons of Biblical ideas; they walk, they talk, they pray, they hope, they serve, they love. Thought is incarnated. What Moses and Isaiah and Jesus said was the result of what they felt and understood. They worked with God; they communed with the Eternal. The travail and this communion gave forth wonderful anticipations. They felt the influence of the soul of things, and with tongue and lips and minds they gave expression to this feeling. They were energies of spiritual power rather than encyclopedias of abstract truth; they lived and moved and had their being in God. This eternal life of theirs, this inward compulsion, this consciousness of the divine presence, all came forth in their interpretation of the world, of life, and of conduct.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth.*]

Jesus has exposed the sinfulness of sin as no one else has ever done, and yet we hardly know how; it is not that he said much about it, but somehow his very presence in the world has produced that result. Men have felt him to be far above them,—he is indeed their Prince. And he has also shown himself able to deal effectually with the terrible problem of sin; he is not only Prince, but Saviour. Let me emphasize the point I am making. This is not speculation, but fact. Doctrine or no doctrine, this is what has happened through the preaching of Christ. He has made us want a savior, and no one but himself can meet that want.

If, then, one were asked to say in what the Messiahship of Christ consists, I do not know that one could find a better answer than that he is our hope of deliverance from everything that holds our souls in bondage, but especially from the dominion of sin. If we could only cut at the root of the power of sin, all the rest of our problems would be solved in the process; and in our individual experience Jesus has proved himself able to do that. Again, you see, I am simply stating a fact, not a theory about it. Jesus is without a rival in this field. Whether we want him for our savior or

Digitized by Google

not, whether he can do what millions have trusted him to do or not, he is the only one who has ever been credited with the ability. This alone is an important consideration. Here is a great need, the greatest need on earth; and here is a being who is said to be able to satisfy that need, and has satisfied it for thousands of people in every generation since the gospel was first preached. Is not this proof presumptive that that gospel is fundamentally true, whatever we may say of the theologies which have come and gone in reference to it?

[*The Christian Work and Evangelist.*]

And why is Palestine so great? Simply because it gave the world, along with its great men, a great foundation truth on which our Christian civilization has been reared. It taught the world that back of and running through all creation was the eternal goodness, and that His right name was Father; that men were the offspring of this Father, made in His image, therefore sons of God; that all mankind was comprehended in the infinite love and purposes of God; that the world was not at the sport of fitful fates and blind matter, but that it moved onward and upward to some divine consummation under the impulse and guidance of the indwelling Spirit; that all creation groaneth and travaileth to bring forth perfect man and the final kingdom of service, peace, and good will among men; that the soul was the final wealth of great worth; that all the resources of heaven and earth existed to free this soul and exalt it, and that it was immortal. This message has made the very mental and spiritual atmosphere in which we live. It has determined the lives of countless millions, and shaped their whole conduct and outlook upon life. On it our institutions have been based, and out of it has sprung most of our literature. It has become a part of our language, and it is the one word which today will be spoken where any man is talking of the common life. This is what it is to be a great nation, to give the world such truth as Greece and Palestine have given it. And what greatness even Germany and England have today, is it not really based on the men they have reared and the truth their prophets, philosophers, scientists, and poets have given the nations? But that nation is greatest which gives the world a truth that makes its very social structure new.

[*The Advance.*]

John named the city he saw, and we have quite as good a right to name our vision as he had. We are entirely at liberty to discover our own holy city "coming down from God out of heaven," and give it its name. We are permitted to name it as John did, after something that we know. The city of God is to be established wherever people learn to live together in the love of Jesus Christ. The holy city may as well be located in your neighborhood as anywhere. There is no reason why it should be remote from the place where you live. When men and women begin to live together in the spirit of Jesus Christ, the holy city establishes a new ward or precinct. Whenever the people of any community determine that they will move unitedly toward any worthy end, there has been an election day in the holy city. There will be beauties and wonders in heaven; but God intends that men shall learn to live together here in the spirit of heaven. It is the divine plan that the spirit of Jesus shall come into all human relationships. Then the holy city, which is now up in heaven and is not needed there, will descend. Is there any place in your neighborhood into which it could descend?

[Rev. Lee S. McCollester in *The Christian Register.*]

The more imperative call of the hour is to awaken men morally and spiritually. We are in a period of tremendous technical activity. We measure success by material possessions, and we measure even religion by material effects; but it is because of this varied and materialistic situation that there is the more need for the church to show that the real man is soul, not body.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal,* printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by bank draft, express order, or postal money order payable at Boston post-office. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ .05	$ .06	$ .07
Twenty-five copies . .	1.00	1.15	1.30
Fifty copies . . .	1.80	2.05	2.40
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913; XIIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

Make all remittances payable to The Christian Science Publishing Society.

Entered at Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Within the last few weeks the United States reclamation service has started building what is to be the largest reservoir in the world. This is the Elephant Butte reservoir, which is to form the head of the long-planned Rio Grande irrigation project and make possible the settlement and cultivation of two hundred thousand acres of land on each side of the narrow gorge that winds its way through the arid hills of New Mexico and Texas. This latest reservoir of the United States government will have a capacity of over one hundred and twenty billion cubic feet, which means that it will be large enough to store all the rainfall of two years on the vast Rio Grande watershed and will hold enough water to cover the state of Connecticut to the depth of ten inches. The proposed dam will form a concrete wall 265 feet high and 1450 feet long. This will back up the flow of the river so as to form an irregular lake some forty miles long and not over four miles wide at its greatest expanse. The expense of the project is estimated at seven million five hundred thousand dollars.

The machinery by which the government collects three hundred million dollars annually in tariff duties was revolutionized last week by the drastic reorganization of the customs service. The number of customs districts, grown to one hundred and sixty-two during the nation's history, has been reduced to forty-nine, and one hundred and thirteen collectors of customs lose their positions. Officials estimate that the reorganization will result in an annual saving of between four and five hundred thousand dollars in the cost of collecting the duties.

The existence of serious forest fires in the Chugach national forest in Alaska, recently, was taken by the forest service as a text to answer critics who have contended that there is no fire risk and no timber worth protecting in Alaska. The service pointed out that in the Chugach forest alone there were twenty-eight billion feet of lumber, and that its destruction was prevented only by the timely action and work of the forest service rangers.

The House rules committee last week agreed on a rule by which the deficiency appropriation bill, to be reported early in July, will carry a specific provision to abolish the commerce court and to vest its jurisdiction in the United States district courts. Representatives of big shipping interests are opposed to the stand taken.

The district court of the United States has approved the plans agreed upon by Attorney-General McReynolds and attorneys for the Union Pacific railroad. The famous Union Pacific-Southern Pacific merger, known as the great Harriman combine, thus practically comes to an end.

The sluice gates of the Gatun spillway were closed July 1 to allow the water of the lake to rise to what will be its permanent level. The lake stage on June 22 was forty-eight and one half feet, and the maximum level, about eighty-five feet, will probably be attained by December.

Veterans of both the blue and the gray who fought in the battle of Gettysburg fifty years ago, met there again July 1 in a reunion remarkable for its good feeling and fraternal spirit.

Parcel post stamps became valid on all classes of mail on July 1, and ordinary stamps, including commemorative issues, will be good for postage on parcel post packages.

Postmaster-General Burleson has ordered, through the secretary of the treasury, 12,071,481,000 postage stamps for the fiscal year beginning July 1.

International.

The international electrotechnical commission at its meeting in Turin in 1911, when nineteen nations were represented, appointed a certain number of special committees to discuss preliminary details and to formulate definite proposals. These committees met in Paris in the spring of 1912, and again in January last at Zurich, Switzerland. The work of these Zurich meetings, comprising the drafting of reports on international symbology on electrical and turbine machinery, after due consideration in the different national committees, will, it is understood, be ratified at a full meeting of the commission to be held in Berlin in September next. It is expected that on this occasion twenty-five countries of the world will be represented.

Germany's new increased taxes, necessitated by the extraordinary increased annual army expenditure, and now certain to become law, are arousing a great storm of protest all over the empire, especially those on the income of property and inheritance. Enormous public meetings are being held everywhere. Opposition is daily growing, especially in the agrarian centers. Already no fewer than one hundred and eighteen petitions protesting against the imposts have been received by the government from powerful associations of all kinds in every part of the country. Such a number of petitions on the subject has never before been known in Germany.

With the purpose of taking the last step necessary to crush out the international traffic in smoking opium, cocaine, and other noxious and habit-forming drugs, representatives of nearly all the nations of the world gathered at The Hague last week to continue the international conference which adjourned in that capital Jan. 23, 1912. The purpose of the gathering is to ascertain whether a sufficient number of powers will join in ratifying the international convention looking to the suppression of the opium traffic, drafted by that conference, to ensure its successful operation.

The German army bills have passed in the Reichstag. They were opposed to the last by the Poles and Alsatians, but the Socialists, while opposing an increase of the army, voted in favor of the special war levy on the ground that, falling on the propertied classes, it would tend to make them less anxious to indulge in militarism, Herr Hasse declaring that the army bill having passed, a finance bill was necessary to pay for it, and the people to pay for it were the propertied classes who had supported it.

The area of crown lands selected in Australia during March totaled 598,341 acres, which is a record for the past five years. The minister for lands has given notice of his intention to resume on Nov. 1, next, 23 square miles of Bodumba holding in the Inglewood district. An area of 29 square miles of the Laglan East forfeited holding, Clermont district, is open for pastoral lease; also an area of 268 square miles in Cape York peninsula, Cook district, in nine lots, varying from 210 to 48 square miles.

At a recent meeting the London county council considered the education estimates for the current financial year. Expenditure on current account was estimated to amount to at least one million pounds, which is considerably in excess of the expenditure in previous years.

Vessels equipped with wireless on July 1 adopted the international Morse code and conventional signals agreed upon at the London meeting of the International Radiotelegraphic convention.

Industrial and Commercial.

The Chamber of Deputies of the Argentine Republic is continuing its discussion of the meat industry. The deputies generally seem in favor of the attitude of the government as expressed recently by the minister of agriculture, namely, that the government did not consider that it was called upon to modify the existing régime of liberty which permitted the development of industry in Argentina. This statement was issued as the result of a protest by the leading Anglo-Argentine chilled beef companies against the invasion of Argentina by American beef interests, which they alleged were trying to create a monopoly of the trade. In a speech in the Chamber, former Minister of Public Works Frias urged the maintenance of the liberty of industry and commerce in Argentina.

The United States Steel Corporation has been granted the right to enter Canada and to operate under letters patent of the Dominion of Canada issued to a corporation to be known as the Canada Steel Corporation, Limited. The capital of the new concern is twenty million dollars.

It is reported that a satisfactory pulp for paper-making has been made from Sudan papyrus with the aid of a new bleaching process. Earlier attempts to bleach papyrus pulp were unsuccessful, the fiber being destroyed by the bleaching solution.

On June 11, the Storthing of Norway unanimously voted in favor of granting universal political suffrage to women, both married and unmarried. As a result of this important decision all Norwegian men and women over twenty-five years of age are now enfranchised.

Raymond Poincaré, president of the French republic, after being the guest of King George and the British nation four days last week, left for France amid a great display of cordial enthusiasm.

Minnesota creameries, 883 in number, produced 116,500,000 pounds of butter in 1912, adding thirty-five million dollars to the state's wealth. This is an increase of about six million dollars over 1911.

Four thousand emigrants from Glasgow sailed for Canada recently, bringing the total for this season up to thirty-six thousand. The shipping companies in the Clyde are fully booked up for months to come.

The Loetschberg tunnel, connecting the Loetschen valley with the Rhone valley, was opened Saturday, June 28. The tunnel itself is eight and one half miles long.

The total gold output of the mines of the Transvaal for May amounted to 794,306 ounces, of the value of £3,373,998.

Hostilities have begun between Bulgaria and her former allies in the war with Turkey.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

WORKING WITH GOD.

SAMUEL GREENWOOD.

IN his second letter to the Corinthians St. Paul speaks of himself and his fellow Christians as workers together with God; and St. Mark records of the disciples, that after the ascension "they went forth, . . . the Lord working with them." According to Scriptural record and teaching, the privilege of intelligently working with God in the overcoming of a sense of evil, is available to all mankind, but this is not generally appreciated or believed possible because the popular concept of Deity, as formulated in human doctrines, is not such as to lead to the practical recognition of the divine presence, and of His ever-presence in time of need. Mortals have been nurtured in the belief that man exists in a state of estrangement from his Maker, hence their constant fear of calamity; but Christian Science makes plain the impossibility of God's ideas being separated from their divine Principle, and this understanding destroys mortal fear. It is but a sense of evil, or an evil sense, and not the dictum of Truth, which declares an existence separate from God, for it is evident that if man is the image of God, as the Scriptures teach, he could not live an instant apart from his divine source.

In "Science and Health with Key to the Scriptures" Mrs. Eddy speaks of Christian Science as "the revelation of Immanuel, 'God with us,'" not as the sender of disease and death, as is sometimes wrongly taught, but as "delivering the children of men from every ill 'that flesh is heir to'" (p. 107). This revelation of God's omnipresence as the creating and governing Principle of being, illumines human consciousness and dissipates the false notion that man's connection with his creator has been severed. Both reason and revelation declare the inseparability of Principle and idea, neither having existence without the other, even as on the human plane one cannot conceive of the sun apart from its light, or of the sun's rays as capable of reflecting that light when separated from their source.

The psalmist says, "The Lord is on my side; I will not fear: what can man do unto me?" On the night of his betrayal, after foretelling the desertion of his friends and followers, Jesus said, "Yet I am not alone, because the Father is with me." What should it be worth to a Christian to have such assurances as these, actually to know that God is working with him and for him, and that "the power of the Highest" is available in his behalf? What would it be worth to a man in business, for example, who is facing financial difficulties, to know that a great banker was ever ready to come to his relief? Or who would be disturbed over the increasing cost of living, as it is called, if he were reliably informed that the treasury of the nation was at his command? Wherefore, then, should a Christian fear when he may have the positive assurance that God and His law, with all that this implies, is on his side, and therefore that there is nothing against him?

The problem is, how to have this assurance, how to know within ourselves that we are working with God and God with us. Plainly it must come through our own demonstration of the divine nature of man as the reflection of God, that is, through our actual consciousness of goodness as constituting our real being. If we are loyally seeking to acknowledge only good in all our ways, in thoughts, words, and deeds, and to know ourselves only as the children of God, we are in that measure working with God and realizing His presence with us. But, on the other hand, if we are admitting the claims of evil, if we are serving or fearing the belief of a power apart from God, believing in its asserted ability to harm more than in the power of good to protect, we are working with evil rather than with good, against God rather than with Him, and to that extent and in that state of consciousness God is not on our side.

To work with God means that the omnipotent is behind our prayers, our good thoughts and efforts, and is always ready to come to our rescue; that God has promised to be with us in trouble, to deliver from famine and pestilence, from fire and flood, and to be our guide and protection through the shadow of earth's darkest and dreariest illusion. To work with God means to feel at-one with Him, to be in full accord with all that He is, to know that, through reflection, divine Mind is our Mind, that infinite power is our power, that eternal Life is our Life, now and ever. It naturally follows that as we acknowledge and understand God to be the only power and all power, we not only know that we can do nothing without Him, but that with Him "all things are possible." If we realize the full significance of our position, namely, that the infinite God is our intelligence and strength, our salvation and defense, then we shall not be found declaring for the inefficacy of our prayers or the fearfulness or discouragement of our thought, or for any other thing that does not exist in God.

The scientific application of the truth of man's divine sonship, his unity with God, is that we shall acknowledge no other source of life, and shall look to God alone for all that makes up our well-being. There can be no deliverance from evil while we regard as our own a mind that is capable of evil, or while we rely upon a source of supply that is as liable to fail as to satisfy, for that is equivalent to an acknowledgment of unity with what God is not. It was to the unseen Principle and not to the loaves and fishes that the Master looked to meet the need of the multitude; then wherefore should we as his followers look to materiality for our supply, or to muscles and brain for strength and intelligence? Does not the Father and creator of all say to each of His children, "All that I have is thine"? When we are ready to see that man is God's child, and therefore inheritor only of what is good, we shall be ready to see that even here and now we have undisputed access to all that is good, to infinite love and wisdom and joy.

That man is helpless to accomplish anything alone, the Master made clear in his well-known saying, "I can of mine own self do nothing," declaring that the Father, or divine Principle, did the work. This understanding made it possible and natural for the perfection of God's creation to become manifest through Christ Jesus. It is in the same sense, the sense of letting the perfect, divine idea appear, that we can likewise become workers with God, not in the

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

sense that something can be brought about which God has not already done. When we look from God's standpoint, we can see that a creator or power working in opposition to Him would be impossible, and therefore never has existed; from the same standpoint we can see that the false belief of such a power has never brought a sick and sinful race of men into being, nor turned chaos and disorder into God's universe. Paul could well call himself a worker with God in healing the sick and sinful, although at the same time he knew that the real and only man is incapable of either sin or sickness, for it was just this knowledge that fitted him to be a disciple of the Master.

It is written of the Queen of Sheba that she marveled at the wisdom and glory and wealth of Solomon, but Jesus said, "A greater than Solomon is here." The gold in the world's treasuries may be able to procure all that material sense claims to supply, and the kings and ruling powers of the earth may seem to hold the destinies of nations in their hands; but nothing that is mortal is capable of meeting our least need or of making us acquainted with God. Truly a greater than Solomon is needed to establish the kingdom of righteousness and harmony among men, and this greater than human wisdom or worldly power is here in the demonstrable knowledge of God which Christian Science is bringing within reach of human understanding. It is evident that the only hope of mankind is to take refuge on the side of God, against whom is no law of failure or weakness, disease or death. To work with God, as is apparent throughout human history, is to be on the winning side, for He hath said, "I am with thee to save thee and to deliver thee."

UNIQUE MISSION OF THE MONITOR.

AGNES M. BISHOP.

REFERRING to the establishment of *The Christian Science Journal* in 1883, Mrs. Eddy says: "It is not alone the mission of Christian Science to heal the sick, but to destroy sin in mortal thought. This work well done will elevate and purify the race" (Miscellaneous Writings, p. 4). On page 7 in the same article she says: "Looking over the newspapers of the day, one naturally reflects that it is dangerous to live, so loaded with disease seems the very air. . . . A periodical of our own will counteract to some extent this public nuisance."

To present the merits of the *Monitor* in a manner that shall enlist the interest not only of the Christian Scientist but of the whole world, we must ourselves first come to an appreciation of it from the broad outlook of our Leader's standpoint. Her prophetic vision saw that a change of great magnitude must take place in human thought before mankind at large would be ready for the spiritual teachings of Christian Science. Though we today have reason to rejoice at the great growth of our cause, the number who are as yet consciously influenced by Christian Science is relatively small, and when our daily paper is more generally circulated, it will care for the unprepared thought by lifting human thinking up to that plane upon which it may become receptive to a higher understanding of man's destiny.

There is no agency of thought which today reaches the multitude as surely and with the same influence as the daily newspaper. That this influence has not always been used in the interest of the good of mankind cannot be gainsaid. That it is sometimes used in the interest of most pernicious influences and purposes is generally acknowledged. Now the *Monitor* stands for the very antipode of all these influences. It is not subsidized by any financial control. It is not contaminated by any commercial interest. It is not the agency of any ecclesiastical despotism. It is not fettered by political ambition. It is not a publicity bureau for the criminal nor a press agency for the pugilist. Neither does it mercilessly hound the wrong-doer until he may be goaded to greater crimes. It does not measure its news by the standard of the counting-room nor by the degree of human misfortune it entails. It does not disseminate in human thought pictures of crime or disease. It has no dividend-producing affiliations to be palliated by the suppression or the falsifying of news. It stands for truth and an unbiased discussion of subjects engaging the thoughtful interest of mankind. It stands for honesty in business, and accepts no advertisements which will not pass inspection on that basis. It stands for the inculcation of right thinking and right living for the individual, of integrity in social and business affairs, of peace and honorable advancement among nations. It stands for the regeneration of human thought and for the counteraction of existing forces of evil.

Can we afford not to support such a force for good? Our Leader says: "The march of mind and of honest investigation will bring the hour when the people will chain, with fetters of some sort, the growing occultism of this period. The present apathy as to the tendency of certain active yet unseen mental agencies will finally be shocked into another extreme mortal mood,—into human indignation; for one extreme follows another" (Science and Health, p. 570). Can we look upon the support of such a force for combating evil as the demonstration of the healing truth supplies, merely as a duty? Mrs. Eddy has never asked our obedience on personal grounds. She has wished us to be awake to a righteous reason for our compliance with the dictates of a wise, far-reaching educational enterprise. We are not to use our instrumentalities for good merely from a sense of obedience, but because we are inspired by a love for our fellow men and a desire to share our richest blessings. Neither should we support the *Monitor* merely for what we get out of it, for the good it brings to our own hearthstones, but for its world-wide work in leavening human thought.

It is significant that the members of the newspaper profession were the first to see and acknowledge the merits of the *Monitor*. For a long time, criticism of the policy of "yellow journalism" has been met with the answer that the papers are not to blame, that they are giving their patrons what they demand. It is probably more nearly the truth that their sensational policy is caused by the demand of their financial and political masters rather than by their patrons. The value of the *Monitor* as a newspaper, not a religious organ, is to decide what constitutes news. To turn the depraved appetite for mental poison to a desire for pure food for thought, and to cultivate a more wholesome taste, is an important purpose in a wider circulation of the *Monitor*. Paul's admonition, "Whatsoever things are true, whatsoever things are honest, . . . whatsoever things are of good report; . . . think on these things," is good twentieth-century worldly wisdom.

News is an intelligent array of facts concerning the vital occurrences of the day that are of interest to mankind. As examples of news from the *Monitor's* standpoint, let us consider a few of the important matters which have been engaging the intelligent interest of the reading public. In the matter of the Ulster campaign, the *Monitor* gave an unbiased account which showed that the principle of religious freedom was a fundamental cause of the contest. In the matter of the Panama canal, a stupendous example of the possibility of human achievement, we were given a splendid concept both of the magnitude and the significance of this great work. Moreover, through its twice-a-week South American page, the *Monitor* is bringing us into an acquaintance with our nearest neighbors, of whom we have heretofore known less than of the remotest nations of Asia. Is not this news—news even in the most restricted meaning of the word? In the matter of the Turkish-Balkan difficulty, the *Monitor* made an intelligent understanding of the situation possible by a series of articles which began with its very first issue. These articles were not written in the local office on the spur of the moment to meet a momentary demand, but they were special articles by an authority on the subject. Again, the *Monitor* appeals to

Digitized by Google

the business world through a financial page uncontrolled by a stock-exchange interest. When its reliability in this regard is fully known, the business man will realize that he cannot afford to be without it.

Many parents feel it necessary to censor their daily paper before allowing it to pass into the hands of the children of the household, because there is so much in the daily press that is contaminating to the purity of their thought. Our young people enjoy news of the athletics of the day, and in the *Monitor's* page of sports they have an epitome of clean, innocent athletics, and nothing that might lead into undesirable diversions. The exalted tone of the entire paper makes it a valuable educational agency to them. If the interest of the fresh-water college is somewhat slighted at present in favor of the better known seaboard institution, that is a matter which will doubtless be remedied when attention is called to it, since it is the aim of the *Monitor* to be a universal newspaper.

As a medium of condensed information to the busy men and women who must take their news in this form, our daily paper is especially valuable, and as to the cost of the paper, we have tried to prove that its news features are of sufficient importance to justify its annual subscription price, which is a little less than ten cents a week. Surely no Scientist will say that he cannot afford that much for the advocate of clean journalism. In presenting the merits of the *Monitor,* let us above all else remember the broad purpose of our Leader, whose interest embraced all humanity; and that the *Monitor* is essentially a newspaper in the truest sense of the word.

THE RUGGED WAY.

D. M. LEAKE.

THE character of the Carpathian mountains is described in the guide-books as rugged, bold, and forbidding, with mountain scenery of the wildest description,—"barren fissured rocks, precipitous and inaccessible crests, and bleak, rock-cumbered valleys containing deep and lonely tarns." On gazing at these wonderful mountains, the writer could only affirm all that is said of them, and an expedition over the heights and down through the valleys of the black lakes made one realize the roughness of the way. Rugged indeed it is, with sharp stones and ascents that one can only climb hand over hand by a clamp in the rock; but every moment of the way is a delight and a rejoicing, as the scene opens out and changes from one glory to another. Forms of magnificent beauty loom above one; the distance melts into softness or merges into sunshine; the play of light and shade reveals unthought-of colors and beauty; the strong air makes one feel it is no difficulty to climb, and everything lures to a higher plane, where we pause and give vent to our joy. There is no effort at rejoicing, no trying to be happy; we simply cannot help it.

We should be very much surprised if in mountain climbing any one was to grumble at the path, and we should advise any one so unsportsmanlike to stay below. Sometimes we remark that it is difficult, but we add vigorously, "It is well worth it," and go on till our limbs get accustomed to the new work we are demanding of them. One thing is important, and that is, to be well shod. To attempt these mountain paths in thin shoes would be fatal, but with good thick boots we walk through watercourses and stride from boulder to boulder without trouble.

Mrs. Eddy tells us, in her beautiful hymn, "Shepherd, show me how to go" (Poems, p. 14), that in climbing the heights of Science, we should also rejoice "all the rugged way," and she knew that she was telling us to do only what was natural and fitting, because there is always cause for rejoicing in the path where divine Love is leading us. At a distance we may shudder at the sinister look of the difficulties in our way, but as we come near we find them not half so difficult as we thought, and this added spirit of rejoicing is like a new gift to us, while a beauty beyond all our dreams appears.

Our feet must be shod "with the preparation of the gospel of peace." St. Paul tells us, and we know, that in the understanding of the ever-present Christ is our peace, and that as we get to know the power of Truth we shall be equipped for our climb to higher altitudes. The study of the Bible, also "Science and Health with Key to the Scriptures," with *The Christian Science Quarterly,* and other Christian Science periodicals, will prove a good preparation for our every undertaking, and nothing can hurt or disturb us, or prevent our rejoicing "all the rugged way."

ONE INFINITE CAUSE.

JOHN W. WILSON.

IN a book of selections from the Talmud there is a quaint tradition of the early life of Abraham which has a close parallel in the experience of many of those who turn to the Christian Science concept of God for relief from the woes of sense. It runs as follows:—

"From his earliest childhood Abram was a lover of the Lord. God had granted him a wise heart, ready to comprehend and understand the majesty of the eternal, and able to despise the vanity of idolatry. When quite a child, beholding the brilliant splendor of the noonday sun and the reflected glory which it cast upon all objects around, he said, 'Surely this brilliant light must be a god; to him will I render worship.' And he worshiped the sun and prayed to it.

"But as the day lengthened the sun's brightness faded, the radiance which it cast upon the earth was lost in the lowering clouds of night, and as the twilight deepened the youth ceased his supplications, saying, 'No, this cannot be a god. Where then can I find the creator, He who made the heavens and the earth?' He looked toward the west, the south, the north, and the east. The sun disappeared from his view, nature became enveloped in the pall of a past day. Then the moon rose, and when Abram saw it shining in the heavens surrounded by myriads of stars, he said, 'Perhaps these are the gods who have created all things,' and he uttered prayers to them. But when the morning dawned and the stars paled, and the moon faded into silvery whiteness and was lost in the returning glory of the sun, Abram knew God, and said, 'There is a higher power, a Supreme Being, and these luminaries are but His servants, the work of His hands.' From that day, even until the day of his death, Abram knew the Lord and walked in all His ways."

How truly does this typify the experience of each one of us! While the civilized portion of the human race with the advance of education and learning has outgrown the worship of what is now known to be inert and lifeless matter, can it be said to have surrendered its purely material conceptions of Deity? Puzzled by the allurements of mortal sense, we cling to our false gods, whether they be senseless drugs, so-called material laws, the worship of a human personality or of an anthropomorphic God, or belief in the power of the human will, in the existence of minds many and gods many,—in fact any of those varied false opinions and beliefs which the carnal mind offers in place of the true concept of God. Then, when these fail us, as fail they must, unwilling as yet to give up our belief of power resident in matter, we transfer our allegiance to some other manifestation of the human mind, or else drift into the shallows of agnosticism. Finally, when the truths of Christian Science dawn upon our consciousness, comes the awakening to the fact that we have been placing our confidence in broken reeds, mere wraiths of corporeal sense, and we too learn to "know God" as "a higher power, a Supreme Being," as the one infinite, spiritual cause and creator, an unfailing source of strength in our every need.

Digitized by Google

Well may we be grateful to God that there was one in this age who, like Abraham, was from earliest childhood a lover of the Lord, and who too had "a wise heart, ready to comprehend and understand the majesty of the eternal, and able to despise the vanity of idolatry,"—one with a consciousness clear enough to perceive the deep import of our Master's saying, "It is the spirit that quickeneth; the flesh profiteth nothing," and who, moreover, was enabled to give forth the vital message that "all is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468), in such a way that mankind may read and, reading, understand.

TRUTH PRACTICALLY APPLIED.

S. A. HARDING.

As one who has gained much happiness as well as success in business through the application of the Principle of Christian Science, I am glad of the privilege of relating how this has been brought about, more especially as my experience may be of assistance to those who are in business trouble. About eight years ago I first became interested in Christian Science. I had been suffering for over twenty years from an illness which according to the medical fraternity is considered incurable, and it was only when I found that they could not offer me any relief that I turned to Christian Science and was healed.

My business at that time was in a bad condition, for the returns had been falling off for some years, perhaps partly owing to apathy and inefficiency on my part, and partly to greatly increased competition. Finding that the earnings were not sufficient to meet my needs and those of a growing family, I endeavored to increase my income by speculation on the stock exchange, with the result that I not only did not add to my supply, but lost a very considerable portion of my capital, and finished by getting heavily into debt. Then, when I took up the study of our text-book, "Science and Health with Key to the Scriptures," it became evident that if what Mrs. Eddy said is correct, Christian Science, when properly applied, can heal not only sickness and disease, but will overcome lack and limitation of every description; and seeing that my financial condition was almost as bad as my physical, I decided to try Christian Science for both.

In his Sermon on the Mount, Jesus gave us the rule which, when understood and intelligently applied, will solve all our difficulties, namely: "Therefore take no thought, saying, What shall we eat? or, What shall we drink? or, Wherewithal shall we be clothed? But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." It was not, however, until I took up the study of Science and Health that I found a way of putting this teaching into practise, since until that time I had no conception of what constituted the kingdom of God. Mrs. Eddy says on page 518 of Science and Health, "Blessed is that man who seeth his brother's need and supplieth it, seeking his own in another's good." Now I found upon investigation that the needs and cares of our work-people were often far greater than mine, and it was in trying to make their lives a little happier and brighter that I myself found greater happiness and contentment than words can possibly convey.

After all, it is not difficult for a business manager to take a kindly interest in his work-people, to give them an encouraging word and a helping hand. Our first endeavor was to do what we could for their personal comfort, so we provided them with a nice mess-room for their meals, and a plentiful supply of current literature, not forgetting our Christian Science periodicals, including, of course, *The Christian Science Monitor*. We went through the wages sheets and did what we could to advance along this line; then we turned our attention to the office, and improved the position of the clerks by giving them more responsibility and scope to prove their initiative. As they began to respond, it became possible for me to do some traveling for the firm, because it seemed but right that if they were working for me, it was my duty to do my best for them. I started in the provinces in England, and then went to the Continent, and finding that my trust in my employees had not been misplaced, I took a trip to Canada, and worked that country from Quebec to Victoria.

On my return I found things much improved, for a new life seemed to have entered the place. The men were more interested and keener in their work, and were taking more pride in doing it well; while we were getting a good name, and our customers seemed glad to place their work with us. As things were improving, we decided to try to interest our work-people still further, and as it was impossible to raise their wages to any great extent on account of the cost of production, we decided to put aside a proportion of the profits every year to be divided among them according to their wages.

This method was adopted about four years ago, and although in its inception the amount divided was small, every one in our employ today, from our secretary to the errand boy, has a direct interest in the business, and every workman has drawn this year a full month's wages besides his regular salary, as his share of the improved business. Then, too, last year I was able to travel over the whole of South Africa, the Soudan, and Egypt, and I know it has been a source of wonderment to many of my friends that I can leave the firm for four consecutive months to "look after itself," as they call it.

In conclusion, through Christian Science our business in the short space of eight years has been transformed from a poor, mediocre, uninteresting affair into one of the largest enterprises of its kind in England today. It is being operated under the most harmonious conditions, and instead of being a task, it is a joy and happiness to work, and above all to realize that those who are working with us are also happy and contented.

I cannot claim any personal merit, though, for this great change that has taken place. As a boy at school, when given a problem to solve, I had to employ a law or rule in order to arrive at the correct solution; so too the Christian Scientist has to obey a Principle or law in order to overcome his daily difficulties and fears. The law employed by the boy is the law of mathematics; the Principle obeyed by the Christian Scientist is the Principle of love. This Principle is not controlled by any one person or individual, as it is infinite and universal, and there is no man today who may not bring his understanding of its mighty power into his daily experience and partake of the blessings which this inevitably brings in its train.

[Written for the *Sentinel*.]

OBEDIENCE.

MINNA MATHISON.

LORD, not for bowered ease we ask
  Who hark to Truth's exalted word,—
Place in the ranks, the lowliest task,
  A niche where we may serve thee, Lord.
Nor would thy children ever bask
  In favoring air, but where the sword
Leaps forth, till error doth unmask
  Before Love's exquisite accord.

And if it be a thorny way
  That leads up to the path of peace;
If better pain than pleasure may
  The heart instruct, till sense dreams cease,—
We pause, we wait the voice of God,
And blossoms burst upon the rod.

SELECTED ARTICLES.

[H. Cornell Wilson in *The Flushing* (N. Y.) *Daily Times.*]

An item in the *Daily Times* reporting a recent talk by Miss Elizabeth D. Vermilye, given before an audience of women in the Reformed Church, Flushing, expresses views of Christian Science quite the reverse of its teachings, views which are the result of a manifest ignorance of the subject. Had the speaker known that Christian Science bears no likeness whatever to Hinduism, but is the exact antithesis of it in all essential respects, it is to be assumed, in justice to her, that she would not have likened Christian Science to "modern Hinduism." On a previous occasion a newspaper writer had this to say in reporting her talk: "This linking of the teachings of Christian Science and the mysticism of the Asiatic Hindu was something new." Permit me, therefore, to state with emphasis, howbeit with all kindliness of feeling, that Christian Science has been grossly misrepresented, not only in this respect but in others as well.

The definition of God given in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, reads: "The great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence" (p. 587). If one will contrast this explanation, the authority for which is clearly derived from the Scriptures, with the perverted statement of our critic, used evidently to discredit Christian Science, a good reason will be seen, by persons desiring to know about its teachings, why they should go directly to the text-book.

The incident this critic relates, of having "produced a swelling by thinking a pain into her finger to prove the power of mind over the body," clearly illustrates that pain and suffering, in fact all sin, disease, and death, originate in the human or mortal mind, but this is not the Mind which is invoked by Christian Scientists. To overcome suffering, actually to heal disease and thus destroy it, in obedience to the Master's command to "heal the sick, cleanse the lepers, raise the dead, cast out devils," one must understand that Mind which was in Christ Jesus. "To be carnally minded," Paul says, "is death [with all that pertains or leads to this enemy]; but to be spiritually minded is life and peace." Can any one imagine Jesus "thinking a pain" into himself or another? He was renowned throughout his travels because he made the lame to walk, the deaf to hear, the blind to see; because he healed the lepers, restored the paralytics, and raised the dead. This he accomplished by doing the will of the Father. With the thought fixed on God, no opportunity would occur for "thinking a pain," for He healeth all our diseases. "God is light, and in him is no darkness at all."

Addressing Christian Scientists, Mrs. Eddy says: "Keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them. It is plain that nothing can be added to the mind already full. There is no door through which evil can enter, and no space for evil to fill in a mind filled with goodness. Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort. And not only yourselves are safe, but all whom your thoughts rest upon are thereby benefited" (Pamphlet, What Our Leader Says). Thus it will be seen that Christian Scientists depend upon the presence of God, divine Mind, Life, Truth, Love, in their consciousness to heal them mentally, morally, and physically.

When the unknowing traducers accused Jesus of casting out devils (evils of the order of sin, pain, and disease) by Beelzebub, he replied, "If I by Beelzebub [the prince of the devils] cast out devils, by whom do your children cast them out? therefore they shall be your judges. But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you." Our critic is mistaken in thinking that psychology, which may be likened to Beelzebub, can "cure us of many pains and ills," as she frankly acknowledges Christian Science can do. She may be able to "think pain into her body" by psychology, but never by Christian Science. There is no more in common between such psychology and Christian Science than there was between the Beelzebub of the Pharisees and the power of the Christ which Jesus manifested. The way in Christian Science is the way clearly laid down by the Master, which is summed up in these words: "Ye shall know the truth, and the truth shall make you free."

Just as the disciples' obedience to the precepts of the Master made them proficient in the works of healing, so today Christian Science is proving that a right apprehension of the spiritual laws which animated Jesus, produces results similar to the fruits of his ministry, success following always in the ratio of one's spiritual understanding.

[William Clarence Ferguson in *The Calgary* (Alberta) *Herald.*]

Our critic has an unusually large number of misconceptions concerning the teachings of Christian Science. The first point to which he takes exception, as being contrary to the teaching of the Scriptures, is that relative to the visiting of the sins of the fathers upon the children. In connection with this point I would like to refer to that saying of Jesus: "Call no man your father upon the earth: for one is your Father, which is in heaven." Now, Christian Science holds this declaration to be a fact. Its teachings maintain that there is one Father, or creative Principle, and as this Father never committed any sin, His children cannot suffer. It also teaches that one does not suffer for another's sins.

Next, our critic declares that Christian Science teaches that "all unlawful desire may be conquered by simply learning that the objects of our passion are not good for us." Nothing could be further from the teachings of Christian Science. In "Science and Health with Key to the Scriptures" by Mrs. Eddy, we read: "This conviction, that there is no real pleasure in sin, is one of the most important points in the theology of Christian Science" (p. 404). It is maintained that there is no real pleasure or happiness to be obtained from the gratification of the senses, and that as soon as this fact is perceived the desire for the gratification leaves spontaneously.

Possibly an illustration may be of value in explaining the operation of this law. A small boy takes a great deal of pleasure in playing marbles, but as he develops and becomes interested in more useful occupations, he no longer sees any pleasure in playing marbles, and consequently quits. And so it is with the man who believes he finds pleasure in the gratification of the senses; as his mind becomes filled with more lofty ideals he begins to see that there is no real or lasting pleasure in sense gratification, and as a consequence he cares for those things no longer.

Our friend next takes issue with Christian Science on account of its teaching that disease is mental; and so it does teach, for in the text-book previously referred to we read: "Science not only reveals the origin of all disease as mental, but it also declares that all disease is cured by divine Mind" (p. 169). Now Christian Scientists do not condemn any one who does not agree with their ideas, and they should receive the same consideration. So, then, as far as Christian Scientists are concerned, our friend can hold such ideas regarding the nature of disease as he sees fit. However, as we have touched on this point, perhaps an observation may not be amiss.

Suppose a person were to assert that the principle of the cantilever bridge was entirely erroneous, that a cantilever bridge could not be built, and that it would not stand up if it were built, would it not be necessary for that man, as a thinking person, to explain to himself how it is that canti-

Digitized by Google

lever bridges have been built and are standing up all over the world today? Well, so it must be with one who asserts that disease cannot be healed on the basis that it is mental. If he is a reasoning man, he must first explain how it happens that all over this earth there are thousands upon thousands of persons who have been healed on the basis that disease is mental, and are today "living monuments" to the verity of that fact.

Again, it is asserted that "Mrs. Eddy plainly contradicts the Bible." To quote directly: "It does not matter if Christ has said, 'Lazarus is dead,' Mrs. Eddy tells us that Lazarus was not dead, and makes our Lord guilty of falsehood and deception." Now, if our friend will take the trouble to read the entire eleventh chapter of John, he will discover that in the eleventh verse the first remark Jesus made on this subject was: "Our friend Lazarus sleepeth; but I go, that I may awake him out of sleep." And it was only after the disciples continued to misunderstand and question him that he finally said, "Lazarus is dead." Is it any more contradictory to the Bible to take the first statement as the fact in the case than it is to take the second?

And finally, as a sort of finishing touch, our critic says that "Science and Health with Key to the Scriptures" is not founded on the Bible, for its teachings are contrary thereto. Now haggling over a difference of opinion in a matter of this sort accomplishes no good. Jesus recognized this fact, and gave a rule by which to arrive at a decision concerning the righteousness of the teaching of any man, when he said, "Ye shall know them by their fruits." So let us consider this matter from its practical results. The writer has known men who had not touched a Bible for years, who, after being healed by Christian Science, began to read the Scriptures and gradually grew more interested each day, until now the reading of that book is one of the greatest pleasures of their lives. He has also known men who had been engaged in church work and who had read the Bible since early boyhood, who, after becoming interested in Christian Science, have found the inspired Word absolutely new to them, and instead of reading the Bible from a sense of duty, they are now studying it with the conviction that within its pages lies the solution, not of mysteries beyond the grave, but of all the problems of their daily life; and finally, he has never known an earnest, working Christian Scientist to whom the Bible was not each day becoming a dearer and more precious book. Is it possible that any teaching which is not founded on the Bible or which is contrary thereto can have such results as these? If we are to judge by practical results, our friend must certainly be mistaken in his assertions.

[John W. Harwood in *Blackpool* (England) *Times.*]

The parallel between the present ministerial attack on Christian Science and the attack made by the same class of people nineteen centuries ago on the teachings of Christ Jesus is indeed striking. The reverend critic declares that Christian Science is a new religion, and not in any sense a Christian religion. Surely a Christian is one who believes in the teaching of Christ Jesus and follows his precepts as far as they are understood. Jesus himself gave the test by which a follower of him might be identified, in these words: "Verily, verily, I say unto you, He that believeth on me [understands my teaching], the works that I do shall he do also." When the teaching seemed too difficult, Jesus referred to the works and said, "Believe me for the very works' sake." When the works of Christian Science are cited as proofs of the correct reiteration of Jesus' teaching, there is hurled back, as of old, the reply that these works are the works of the devil, or Beelzebub, or hypnotic suggestion, which are synonymous terms.

No one can state how the works of healing, of which there is abundant proof, are done through Christian Science except those who are doing them. For an outsider, who is entirely ignorant of Christian Science and its method of healing, to declare how they are done, is, to say the least, presumptuous, and is just what the Pharisees did. Jesus told the people how they were done when he said: "If I with the finger of God [the power of God] cast out devils, no doubt the kingdom of God is come upon you." There is abundant proof in Blackpool, as well as in all parts of the world, of the healing of all manner of diseases and evils, of drunkenness, gambling, and all kinds of vice, through Christian Science. Surely, if Satan, or the devil, were destroying these, it would indeed be a house divided against itself, and would fall. But just because it is having these good results, and the beneficiaries are rising up with grateful hearts and giving thanks to God for this discovery of the practical teaching of our Saviour made by Mrs. Eddy, and named Christian Science, the movement is growing with astounding rapidity.

When Jesus sent out his disciples, it was not to teach any creed or ceremony, but his command was to "preach the gospel" and "heal the sick;" and he did not say to do it for nothing, but he did say, "The laborer is worthy of his hire." Although our critic ridicules the charge made by Mrs. Eddy for teaching, it does not alter the fact that her teaching was more than worth it. I do not think that the reverend gentleman has refused his salary for what he considers to be God's work.

Christian Scientists do not need to be made to deny or to accept Mrs. Eddy's interpretations of the Scriptures. The correct interpretation must be provable. If a decision had to be made between two interpretations of one passage of Scripture, any thinking man would accept the one where the healing of the sick followed, as when Jesus opened the Scriptures. The healing of Christian Science is wrought through prayer, not a prayer that asks God to change His eternal invariableness, but prayer in which is realized the omnipresence and omnipotence of infinite, divine Love, in whose presence evil, disease, sorrow, and pain have no existence. "The kingdom of God is within you," said Jesus, and is not attained through death, but through spiritual-mindedness. "To say," says our critic, "that sin, disease, and death are not real, or do not exist, is an insult to common sense, and would disprove the universal need of hospitals." If so-called Christians were really obeying the commands of Jesus, and healing all manner of disease as he did, this would certainly destroy the seeming need of hospitals. Hospitals are an evidence of the lack of practical Christianity.

To believe in the seeming power of evil, whether manifested as matter, sin, disease, or death, is to break the first commandment, and we never find Jesus making a reality of evil. The raising of Jairus' daughter shows clearly Jesus' attitude toward death when he said, in the face of the seeming evidence of the senses, "The maid is not dead," at which they laughed him to scorn. The statements of Christian Science regarding the unreality of matter raise the same kind of laughter, and our critic attempts to prove matter's reality by citing the existence of tables, chairs, and flowers. His friend, another reverend gentleman, attempts to prove the same thing by the evidence he would receive if he banged his head against the wall; but again, Jesus furnished the undeniable evidence of the unsubstantiality of matter by passing through walls.

In the statement made by the critic that Mrs. Eddy denies the "personality of God," of "the need of prayer," etc., any one who will get the text-book of Christian Science, "Science and Health with Key to the Scriptures," and study it, will very quickly find out what she denies and what she affirms. They will find that the very first chapter is entitled Prayer, and many people have been healed by the reading of this chapter alone. Mrs. Eddy writes on page 138 of Science and

Digitized by Google

Health: "Jesus established in the Christian era the precedent for all Christianity, theology, and healing. Christians are under as direct orders now as they were then, to be Christ-like, to possess the Christ-spirit, to follow the Christ-example, and to heal the sick as well as the sinning." Our Master said to every follower: "Go ye into all the world, and preach the gospel to every creature;" "Heal the sick;" "Love thy neighbor as thyself." It was this theology of Jesus which healed the sick and the sinning. It is his theology in Science and Health, and the spiritual meaning of this theology, which heals the sick and causes the wicked, as the prophet has said, to "forsake his way, and the unrighteous man his thoughts."

[David Anderson in *The Reporter*, Box Hill, Australia.]

In a recent article on Easter in the Presbyterian *Messenger*, Christian Science is bracketed with theosophy, new thought, etc., and is indicated as one of the sources to which, according to the writer of the article, mistaken people of all grades of life and learning, dissatisfied with previous experiences and groping after higher things, are being driven, and presumably for that rest and spiritual refreshing which they have failed to find in theory, creed, and dogma. May I venture again to appeal to your impartiality for space in your "Open Column" for comment to which the *Messenger* refuses publicity; and I would desire also to state that there is very much in the article referred to with which Christian Scientists are fully and most heartily in accord. Especially can they affirm that their victories are due to the living Christ, and that their faith is verified in their personal experience, thus reversing the sequence of one of the sentences quoted by the *Messenger* writer,—the Christian Scientist, having discovered through his religion the truth of immortal life, finds that he is of necessity impelled to practise the truth as the basis of immortality. Christ, Truth, has opened wide to him the prison door of mortality. "It is the living Christ, the practical Truth, which makes Jesus 'the resurrection and the life' to all who follow him in deed" (Science and Health, p. 31).

While Christian Science is new to the thought of the present age, it is not to be confounded with any semimetaphysical system of new thought which, resting on belief in a material basis, fails to recognize the omnipotence of an infinite God, and so leaves the grand point of Christian Science untouched. From theosophy and spiritualism Christian Science is clearly differentiated in Mrs. Eddy's writings, a full chapter being given by her to Christian Science versus Spiritualism in "Science and Health with Key to the Scriptures." From the day when she stood a solitary Christian Scientist in a world given up to a belief of life, power, and intelligence in matter, and suffering the direful results of such belief, critics have not been slow to speak and write as authoritatively of that Christian Science which they have taken no adequate pains to investigate. Most of them, indeed, have been content to accept as verified fact the similarly formed opinion of others.

The phenomenal progress of Christian Science, from that pioneer time to the present, is only explicable on the hypothesis that it is meeting the need of mankind for something more satisfying than they have been able to find elsewhere. It has attracted, and is ever attracting, churchgoers of every commonly classified religious denomination, very many of whom were active workers in their former church organizations; and it has likewise drawn to its fold atheists, infidels, agnostics, theosophists, spiritualists, and representatives of the religiously spineless type who "do not bother about these things," and who consequently gave little previous heed to Christ and Christianity. That the spiritual necessities of all of them are now being fully met is evidenced by personal testimonies every Wednesday evening in thousands of meeting places all over the civilized world. Some no doubt equally sincere religionists, who may not, however, have felt the same spiritual lack and experienced similarly satisfactory supply, may think they are all a mistaken crowd, but that is hardly likely; and, after all, the proof of quality, so far as our food is concerned, is found in the eating, and not the worst judges of spiritual pabulum are those who are daily proving its nourishing and sustaining qualities.

[Willis D. McKinstry in *The Sun*, Coffeyville, Kan.]

I have just read with interest your friendly comment on Christian Science and *The Christian Science Monitor* in a recent issue of *The Sun*, in which you say, "We believe there are such things as poverty, misfortune, crime, disease, and death." This statement would convey the impression to the uninformed that the teachings of Christian Science ignore or overlook these evil conditions. This is not the case; Christian Science does not teach that these conditions do not exist in appearance, or as human phenomena as opposed to the real or spiritual creation. It reiterates the words of St. Paul: "We look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal."

Christian Science acquaints mankind with the spiritual facts of existence, and through Principle and rule, if faithfully applied, it replaces poverty with affluence, misfortune with protection and success, crime with virtue, disease with health, and death with immortality, all of which is in accord with the words of Christ Jesus: "He that believeth on me, the works that I do shall he do also." It teaches that being is, that existence is a fact, that the universe is a spiritual reality, therefore it is not what the human or mortal mind would have us believe it to be. The way of salvation from all human discord is transformation, not annihilation; it is to possess that Mind which was in Christ Jesus. One may experience the belief that two times two is five, but he can never know it. The human belief of existence maintains that mankind and the universe are subject to all kinds of calamities. It was to save mortals from these false beliefs that Christ Jesus came into the world.

Now a word as to *The Christian Science Monitor*. You say, "It hides a certain kind of news from its readers and presents just what it thinks they ought to have." Cannot this be said of all newspapers, as their editors and staff of reporters have the selecting of all matter that goes into the columns of their papers? The newspaper has a much broader and higher field of activity than the mere publishing of events or the happenings of the times. The newspaper is a powerful educator; its influence molds the thought in the community in which it is published to a greater degree than the public school or even the pulpit; hence care should be exercised in the selection of news matter, whether it be for good or for evil.

It is not the purpose of the *Monitor* to hide or cover up any matter of news that is of general value, but its methods of dealing with many incidents that occur differ from those of other publications. It does not exploit with glowing headlines the evil events of the day, or publish long columns of a sensational nature. A child, if educated in that which is wholly pure and good, is not inclined to have a desire for or indulge in that which is not productive of good; and this will apply to all humanity. It may seem an endless task to undertake to reeducate the world into the knowledge of the fact that there is no profit or pleasure in wrong-doing; but it is worth the effort, and the success of the *Monitor* proves that humanity is awakening to a desire for that which is constructive, pure, and clean in journalism. Since the establishment of this paper a number of leading dailies have begun to pursue a similar course.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"IN ALL THY WAYS."

In our Wednesday evening meetings and in our periodicals many testimonies are given of the betterment of social and business conditions through the application of the rule of Christian Science to every problem that presents itself in human experience, and to the person who analyzes these testimonies it is very apparent that to the extent in which unselfishness and right desire prevail in the thought of the Christian Scientist, to that extent is a blessing received. This result is in logical accord with the teaching of Christ Jesus, who, rebuking the thought which desires only the temporal, said to his followers: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." It is plain, therefore, that unless this kingdom is first in our thought, and most desired of all the good things of the universe, even our seeming successes may, like apples of Sodom, turn to ashes on our lips.

To the person who is not a student of Christian Science, it may seem strange that followers of this teaching give thanks to God for what seems to be material success, but this should not be so, provided this success has been attained from a right basis. The teaching of Christian Science is very clear on this point. "Let it be understood," Mrs. Eddy writes, "that success in error is defeat in Truth. The watchword of Christian Science is Scriptural: 'Let the wicked forsake his way, and the unrighteous man his thoughts'" (Science and Health, p. 239). It should be apparent, therefore, to every thinking person, that the only success worth having is that which is permanent, that which is founded upon right desire, that which does not seek to fill its own coffers through robbery or impoverishment of another, that which is not a Juggernaut crushing its helpless victims.

It has been said that observance of the golden rule is incompatible with success in business; but this is not true, unless there is something more precious and more to be desired than the kingdom of God. If business is done upon any other basis than that prescribed by the Master, "Whatsoever ye would that men should do to you, do ye even so to them," then it is done on the basis of power in evil, on the basis of an intelligence superior to that which God bestows, and can bring only an ephemeral success. Can any business man of righteous desire and Christian intent do otherwise than trust God in all his affairs, and give thanks to Him for all things of real value? What business man is there who does not wish to be guided by intelligence? If God is supreme intelligence, then His is the guidance which all desire, whether they know it or not.

Fortunate and happy, then, may we call that man who knows, because he has demonstrated it in his own experience, that God is omnipotent, omniscient, and omnipresent, and who seeks Him at all times, asking with unwavering faith for that wisdom which God "giveth to all men liberally." He who is endued with this God-bestowed wisdom will be able to distinguish between the true and the false in business as in all other things. He will be able to avoid the wolves in sheep's clothing, who would make religion a cloak for double-dealing and dishonesty in business, those who cry, "Lord, Lord," but seek not the kingdom of heaven. Let us not hesitate, then, or fear to turn to our Father for guidance in our every perplexity. Does not the promise to him that "dwelleth in the secret place of the most High," read, "He shall give his angels charge over thee, to keep thee in all thy ways"?

ARCHIBALD MCLELLAN.

"UNIVERSAL LOVE."

In the chapter on Creation, in Science and Health, Mrs. Eddy tells us how spirituality is to be gained, and after uncovering the false concepts of God and man which have so long been prevalent to mortal sense, she says that we must learn what it means to live "without personal friends," this statement leading up to the conclusion, "Universal Love is the divine way in Christian Science" (p. 266). This teaching is very startling to the human mind, and mortals are inclined to say in the words of the psalmist, "Such knowledge is too wonderful for me; it is high, I cannot attain unto it." The finite sense would fain cling to a personal sense of God, man, and the universe, of friendship, joy, and affection, but on the page of our text-book already quoted we find this assurance: "Spiritual Love will force you to accept what best promotes your growth," this being followed by the counsel to "follow Jesus' sayings and his demonstrations, which dominate the flesh."

It can hardly be denied that all true happiness springs from the consciousness of love and its manifestation. On the other hand, it is no less true to mortal sense, that the very depths of suffering are sounded through the affections. Ask the parent who has lost a child what woe can compare with this sorrow, which calls to mind David's cry over the loss of his erring son, "Would God I had died for thee, O Absalom, my son"! It is possible that some students of Christian Science would say that this grief was wrong, that it sprang from a personal and material sense; which is too true, but since the lesson is so vital to each of us, let us never think that the depth and intensity of the affection were at fault, but that the mistake lay in a finite sense of love, which holds the object of its affection as existing in matter rather than in Spirit, God.

Because of this blindness to spiritual reality, the mother suffers untold and needless anguish as she bends over the cradle of her child, her fear stronger than her love, as a result of the belief that the child is governed by material law, and that it is subject to sin, sickness, and death, while God is too far away to care for it, and yet ages ago Jeremiah declared that the tender mother might forget, but God never! What divine Love can do for every child was exemplified by Christ Jesus, who gave back to the widow of Nain her only son, and awaked Jairus' daughter from the dream of death, and this same Love, understood through Christian Science, casts out fear and destroys hate, as we read in the first epistle of St. John.

In all the relationships of life a false and limited sense of love mars the harmony of human existence and lights its hopes because of fetters imposed by material belief, until Christ, Truth, sets us free, and then we are free indeed. When the beginner in Christian Science is told that a personal sense of affection is wrong, that at best it is never satisfying, and that it should be given up, there is apt to be distress, if not rebellion, against the demand, which can never be clearly understood until we grow in spirituality. When we do, we shall see that our sense of love needs to be purified, exalted, and enlarged, in a word, to be healed. George Macdonald says that God has little reason to be jealous of the affection which mortals have for one another; and this is true, for it is largely made up of fear and selfishness. It cannot for a moment be compared with that expressed in the tender assurance of the infinite Father, "I have loved thee with an everlasting love."

To reach the spiritual height where "universal Love" is realized, we must begin by loving more, not less, those with whom we are most closely associated. As Paul says, the "whole creation groaneth and travaileth in pain," waiting to be delivered from "the bondage of corruption," the impurity and deadening beliefs of the flesh; the deluded and limited sense which knows not the extent and power of Love's pure reflection; and those who have what the apostle calls the "firstfruits of the Spirit," must each day prove for

Digitized by Google

themselves and an awakening humanity the might of universal Love. Bonar's beautiful lines come as a gentle echo of the apostle's words,—

Where the love that here we lavish
On the withering leaves of time,
Shall have fadeless flowers to fix on
In an ever spring-bright clime:
Where we find the joy of loving,
As we never loved before,
Loving on, unchilled, unhindered,
Loving once and evermore.

ANNIE M. KNOTT.

EFFECTIVE PREACHING.

LONG-TIME familiarity with the sermonic feature of the customary religious service is likely to bring one a great surprise when he discovers, on first attending a Christian Science church, that personal preaching has been eliminated from the order of exercises. As a constant church attendant in earlier years, and as a long-time preacher herself, Mrs. Eddy knew full well the value of the opportunity presented by the pulpit, and always expressed herself in the most appreciative terms respecting it. She had come to see, however, that the personal factor was not essential to effective gospel preaching.

In this connection it is interesting to note that the order which has obtained for centuries among Christians of every faith, is very far removed from that of the first Christian congregations. Speaking of this matter, an authority on the organization of the primitive churches has said: "We are apt to transfer our own conditions back to the first century and to assume that the elders and bishops, like the modern pastor, existed primarily for teaching and preaching. But religious utterance was then the common right of all Christians. . . . The officers of the primitive churches were executive and administrative officers and not preachers. . . . It was only toward the close of the second century that the bishops added the control of the teaching function to their other growing powers."

This fact, that in the early church the preacher was one who proved himself "possessed of God," capable of "prophesying," as they described his spiritual declaration, is of the greatest interest to Christian Scientists as it is becoming of the greatest significance to all the world. The preacher came upon the scene under a divine impulsion. The personal element was thus reduced to its minimum, and the inspired word became the teacher. The hazard of the personal element inheres in the fact that erudition, oratory, enthusiasm, emotional appeal, etc.,—all that goes to make up that rather indefinite somewhat called personal magnetism,—frequently comes to have a place and influence which intensifies a sense of the ministry that was not the original sense, and that has proved a handicap rather than a help to the spiritual interests of all concerned.

The supreme need is that we acquire the habit of listening to and being governed by that word of Truth which Jesus verified, and which we may verify in the overcoming of sickness and sin. That divine guidance is available through spiritual illumination, and that we may thus demonstrate our at-one-ment with Truth, has little place in the thought and expectant endeavor of the average Christian, and Christian Science is contributing in a most vital way to the uplift of religious experience, the advance of spirituality, by reawakening in Christian consciousness a sense of the accessibility of the word of God to each individual. When we are impelled to go to church by the expectation of being divinely instructed, and thus enabled to solve our immediate problems, our feet have entered upon the ascending path. The democracy of genuine faith is expressed in Mrs. Eddy's statement that "the best sermon ever preached is Truth practised" (Science and Health, p. 201).

When Jesus went into his home synagogue at Nazareth, he profited by a common privilege when he read the Scriptures and then interpreted them in terms which he had abundantly proved true. Having in a kindred way demonstrated the verity of her apprehension of the Master's teaching, the Discoverer of Christian Science pursued the same course, and ordained that all who come after her should turn away from personal opinions and build upon the foundation of divine Principle, as demonstrated by the great Wayshower. This speaks for the sacredness, the dignity of the work to which readers are called, and no one can worthily enter upon it who is not seeking to be so pure-minded, so humble, and so spiritually aspiring as to offer no impediment to the effectiveness of the word of God as it is being voiced in Christian Science churches today.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

MELBOURNE, AUSTRALIA.—The first Christian Science services in Australian prisons have just been held, thus marking an epoch in the local history of Christian Science and of First Church of Christ, Scientist, Melbourne. Sanction of the chief secretary was recently obtained for an initial service to be held in the Melbourne jail and in the penal prison at Pentridge stockade, and arrangements were made with the authorities for holding the former on Wednesday, April 16, and the latter on the Sunday following. These initial services were regarded by the authorities as experimental. Announcement was made to the prisoners by the jail officials, and the attendance, which numbered about fifty at Melbourne jail and one hundred and twenty at Pentridge, was purely voluntary. On both occasions those present evinced great interest and attention. The singing was especially hearty, and the offer of a supply of hymn-books for the prisoners' choirs was gratefully accepted.

At the Wednesday service the lesson for Sunday, April 13, was read; and afterward the first reader briefly pointed out that healing was a great part of the Master's work on earth, and that his injunctions to his followers to preach the gospel were always coupled with the command to heal the sick. For over three hundred years after his ascension, the combined injunction was obeyed by the Christian church, but for the following fifteen centuries the healing of sickness as Jesus healed was lost to the world, until, less than fifty years ago, Mrs. Eddy, a pure and noble woman, discovered that the healing power of Christ was still available for humanity, and in her book entitled "Science and Health with Key to the Scriptures," she has shown that Christian healing includes the cure of sickness as well as of sin. This book has been on the shelves of the prison library for some time, for the use of the inmates.

It is anticipated that the reports of those in charge will be of such a nature that official sanction will be given to hold regular church services in the Victorian jails. In connection with the preliminary sanction, the Melbourne church is indebted to the courtesy and good offices of the under secretary, whose breadth of view and freedom from sectarian bias enabled him readily to recognize in the *Monitor* a newspaper especially suitable for prison circulation, and admission of the paper to the Victorian jails followed. At present the *Monitor* is in such demand by the Pentridge prisoners that it has to be passed around in single sheets. Even in that way it only covers one division, and steps will be taken immediately to increase the number of copies supplied.—*Correspondence.*

SHAWNEE, OKLA.—First Church of Christ, Scientist, has completed and is now occupying its new building, a frame structure somewhat of the bungalow style, and situated at the corner of Tenth and Market streets, with a west front. The seating capacity of the auditorium is about one hundred and seventy-five. The reading-room, which is 14 x 22 feet, is located in the rear of the building and has a north entrance.

THE LECTURES.

CHICAGO, ILL.

Judge Clifford P. Smith delivered two lectures on Christian Science under the auspices of Fifth Church. The introductory remarks of D. A. Clippinger, first reader, at the first lecture, were as follows:—

We are living in a practical age, an age in which mere theorizing counts for little, an age in which systems of government, business, education, teaching, are subjected to the keenest scrutiny, the most searching analysis, and their value is measured by their usefulness. In this age nothing counts but results. It is a hopeful sign of the times that mankind is beginning to apply the test of efficiency to religion, and dogma and platitude are losing their hold. The age is demanding a practical religion; it is beginning to grasp the meaning of Paul's saying, "Now is the day of salvation." For nearly half a century Christian Science has stood the test of efficiency, and has brought to multitudes of people health, happiness, and success.

At the second lecture Mrs. Rosalie G. Amory, in introducing the lecturer, said in part,—

On behalf of Fifth Church I bid you welcome. I am sure that you have not come here tonight to listen to me or to my opinions; moreover, I do not believe you have come to hear the mere opinions of any one. The world through all the centuries has been getting along and, for the most part, has been doing as well as it could upon opinions, especially opinions about God. The incessant cry for "more light" is clear evidence that these opinions have not satisfied. Our revered Leader, Mrs. Eddy, tells us in Science and Health that "the time for thinkers has come" (Pref., p. vii). She, the most profound thinker of the age, does not offer to you and to me, either in the text-book of Christian Science, "Science and Health with Key to the Scriptures," or in her lesser writings, her own opinions. On the contrary, she first discerned, then proved, then taught, a perfectly simple, logical, demonstrable, divine Science—the Science of being. It is in this great fact, namely, that Christian Science is science and not merely one more opinion or human philosophy, that its indestructible vitality consists. Here lies the secret of its irresistible growth in the hearts of men. This accounts, too, for the conviction with which Christian Scientists look forward to its ultimate establishment "on earth, as it is in heaven."

Correspondence.

STOKE NEWINGTON, ENGLAND.

A lecture on Christian Science was delivered by Bicknell Young in Library hall, which was full to the doors. He was introduced by Frederick J. Mann, who said:—

Although not a member of the Christian Science church, I am much interested in the subject and a student of its teaching. In my own immediate circle, as well as in a wider circle outside, I have seen its beneficent effects. Christian Science brings religion into our every-day life; it helps us in our daily trials and difficulties; it is a present help in time of trouble; it brings a note of hope into our lives and gives us a brighter outlook; it teaches the brotherhood of man and the fatherhood of God. Ignoring creeds and dogmas, it enunciates the simple truths taught by our Lord and Master Jesus Christ when on earth, the truth that makes free, the love that casts out fear. Christian Scientists preach the gospel of salvation from sin and sickness by the manifestation of the truth in their lives. They carry out the injunction of Christ Jesus to his followers, to "preach the gospel" and "heal the sick." The early Christians carried on this blessed mission of healing for over two hundred years after the Master left the earth. All down the centuries it remained hidden and forgotten, until less than fifty years ago Mrs. Eddy, the Founder of Christian Science, rediscovered the healing truth, and again preached the gospel of salvation from sin and sickness. Leaving out creeds and dogmas, she taught the simple gospel truth, and today thousands of earnest men and women are carrying the good news into every part of the known world, bringing peace, health, and happiness in its train. If the churches of the land hope to win the people to their side, they must again carry on this healing mission enjoined by Christ Jesus, and prove to mankind that religion is interested to help them here and now, and will both heal and save, help in every circumstance and condition of their lives.

Correspondence.

NEWPORT, N. H.

Virgil O. Strickler gave a lecture on Christian Science in the opera house. There were over three hundred people who grasped the opportunity to be present, and they were amply repaid for their effort. F. O. Chellis of this town introduced the speaker, and said in part,—

It ought to be true that a person may deem it an honor to be called upon to preside at a public meeting of any religious organization, and I certainly esteem it a special act of courtesy to be asked to perform such a service at what may properly be said to be the first public meeting of importance held by the Christian Science church in the town of Newport; for if this event should prove to be the laying of the foundation of a permanent branch of this mighty Christian movement that has astonished the civilized world by its growth and power in the last quarter of a century, I may well say that this is a most important and significant gathering.

The fact that I am not a Christian Scientist myself, and that many of those before me are not disciples of this church, is also another very important and significant fact. It is proof conclusive of the wonderful spirit of liberality and toleration that is found among all classes of people today. Twenty-five years ago it would have been regarded as sacrilegious for an orthodox minister to exchange pulpits with a Universalist or a Unitarian pastor, but today this is a common occurrence. We no longer think we know it all ourselves; and we have come to admit that our club, our society, our political party, and our church do not possess all of the knowledge, all of the virtue, and all of the goodness there is in the world. And it is with the spirit of liberality and generosity that we have come here tonight to listen to the message from this new church—this new-born religious denomination that, from personal observation we are glad to say, appears to be transforming and renewing the health and moral life and character of so many thousands in this land today.

Republican Champion.

ST. LOUIS, MO.

Judge Clifford P. Smith, who delivered a lecture on Christian Science for Second Church of Christ, Scientist, was introduced as follows by Clarence P. Sawyer:—

Throughout the world today there is a constantly growing desire for a more definite knowledge of man's relationship to God, knowledge of what is real, lasting, and beneficial. This same desire has been manifested by civilized peoples since the beginning of recorded time, and has resulted in almost countless forms of religious theories or faiths, the great majority of which have at least had the quality of being sincere attempts to elevate mankind through spiritual teaching. During the last half century, however, there has been discovered, or uncovered, a religion which teaches a practical, provable Christianity, which fulfils Scriptural promise and prophecy, which presents to all

Digitized by Google

who will hear the beautiful lessons taught by Jesus of Nazareth, and which is supporting these lessons by proofs of the most satisfying nature.

Christian Science, so named by its Discoverer, Mrs. Eddy, a wonderfully inspired woman, offers proofs in support of its statements. It does not deal in emotion, hysteria, or human beliefs, but, resting on the solid rock of one God, the creator of all good and no evil, teaches the never-failing healing power of divine Love understood and applied to both mental and physical needs. It comes with a message of peace to mankind, with glad tidings of health, happiness, and harmony now. It removes religion forever from the realm of perhaps or maybe, and places it at the very head of the exact sciences. Its disciples are penetrating every nook and corner of the globe, waging unceasing war on evil, redeeming men from the bondage of vicious habits and physical ills, and spreading the gospel that is destined to unite all mankind in the brotherhood of universal peace and prosperity.—*Correspondence.*

PARSONS, KAN.

A large audience heard the Christian Science lecture by William R. Rathvon at the Elks' theater. He was introduced by Attorney J. W. Iden, who said in part,—

It has been well said that the problem of life is the formation of character; but the formation of a truly admirable character requires and presupposes an ideal, and nowhere outside of the "Book of books" may such ideal be found. And so we find religion a necessity, and a knowledge of our relation to the divine absolutely essential. The power of man, working in harmony with the laws of his author, are most strikingly illustrated by the great Teacher of Galilee, who spoke of himself as the "Son of man." How far can we follow and to what extent may we hope to imitate him in his work of healing, not only the souls but the bodies of those about him; how far may we be enabled by a knowledge of the true Science of life to rise above the clouds that veil the material, and bask in the light that comes from the spiritual, the eternal, and recognize that life, love, goodness, and truth are the only realities,—these are some of the questions which Christian Science claims to answer.

Parsons Eclipse.

ONEIDA, N. Y.

About four hundred people listened with close attention to the lecture on Christian Science by Virgil O. Strickler in Madison theater. He was introduced by Edwin Park of the local Christian Science church, who said in part,—

To the Christian Scientist, Christian Science is the most interesting and most vital thing in human experience. It brings to him a realizing sense of the actual presence of God as infinite, divine Love, that presence which is "a very present help" in time of need, a help in times which are not troublous, and a present and practical help in growing up into the perfect manhood which is manifested in Christ Jesus.—*Oneida Dispatch.*

HUNTINGTON BEACH, CAL.

Prof. Hermann S. Hering lectured to a large and very attentive audience at Odd Fellows hall. The lecturer was introduced by the second reader, A. R. Stedman, who said in part,—

To those of you who as yet have been unable to see any virtue in Christian Science, I would say that these lectures are given primarily for you, in order that you may hear from an authorized source the truth about Christian Science. There is one bit of evidence that we wish you always to consider in the future years as this subject is brought to your attention, for it concerns the veracity of your neighbors who are Christian Scientists, and that is this: A great majority of Scientists have been made so by first having had it proven to them by way of physical healing, and having had the proof they have remained in this veritable Eden to profit, in the only way that one can profit in Christian Science, namely, by doing good and believing good.

Correspondence.

PARIS, TEXAS.

William R. Rathvon lectured to a large audience on Christian Science at the high school auditorium. He was introduced by A. P. Park, who said in part,—

Nearly a half century ago Mrs. Eddy gave to the world what she denominated the Christ Science, or divine laws of Life, Truth, and Love, which she named Christian Science, the fundamentals of which are set forth in her wonderful book, "Science and Health with Key to the Scriptures." Because this book corrected many false views of the Bible, of God, and of man, it did not at first meet with a cordial reception; because it did illumine the Scriptures and show God to be in deed and in truth what the "good Book" represented Him to be, it attracted and is today attracting to its standard many thousands of intelligent noble men and women throughout the world who are hungering and thirsting after righteousness. With these are coming those who are sin-sick and heartsore, those who are bound by the cruel chains of discord and disease, and who in exchange have received peace, healing, salvation. These great hosts are learning to love God supremely, to love their neighbors as themselves, and to do unto others as they would have others do unto them.—*Paris Advocate.*

WESTFIELD, N. Y.

The Rev. William F. Furman presided at the Christian Science lecture by Frank H. Leonard, and in introducing him said:—

We are here by invitation of the Christian Science Society of Westfield, to listen to an address upon the subject of Christian Science. Our presence does not imply that we all think alike upon this, or, for that matter, upon any other subject. I have not been asked to introduce the speaker of the evening because I am a Christian Scientist, though I am free to confess that I am to this extent: I believe in Christianity and I believe in science, and I believe in any combination of the two which is calculated to promote the welfare of humanity. I am not at all interested in any Christianity which is not scientific or in any science which is not Christian. Just in what sense these two words are used and combined in the title of the Christian Science movement doubtless will be explained by the speaker of the evening.—*Westfield Republican.*

VINELAND, N. J.

An audience of about five hundred people heard Frank H. Leonard speak at the Auditorium on Christian Science. The introductory remarks of Attorney Herbert Bartlett were as follows:—

I think all of us, whether we are members of the Christian Science movement or not, have been struck with the remarkable advance of this movement in the past few years, especially by the membership, which comes from all walks of life. Another singular fact is, that none of the members are half-hearted; they are all enthusiastic and sincere; and we who are not members, it is certain, are interested to know the secret of these facts. Any one who has been in The First Church of Christ, Scientist, in Boston, and listened to the experiences given by men and women from all over the United States, of the help that Christian Science has been to them, must have been impressed with the greatness and vital significance of this movement.—*Correspondence.*

LECTURES TO BE DELIVERED.

Durban, Natal, South Africa.—William D. McCrackan, M.A., Masonic hall, 8 p.m., July 22.

Digitized by Google

TESTIMONIES OF HEALING.

I wish to tell what Christian Science has done for me and mine, with the hope that some one in need may also be led to try it. For ten years I had been ailing, and had spent hundreds of dollars for medical treatment. I had tried the leading doctors of several cities and was operated on for an abnormal growth. I had also tried electric treatment, hot springs, etc., but with no favorable results. I was told that I had a malignant disease of the stomach, paralysis of the lower bowels, a hardened liver, and gall-stones.

At this time I was living at Edmore, N. Dak. I was told by the doctors that I could not live another winter unless I went to a warmer climate, so in the fall of 1907 I went West in search of health. When I arrived at Independence, Ore., my mother and sister, who live there, advised me to try a doctor in Portland who, they believed, could help me. I accordingly did, having three months' treatment, and with the result that I grew weaker every day; then I gave up, with the wish that I might at least be able to reach my home and family. This was in the latter part of April, and just before starting for home I called on some old friends in McMinnville, and there heard of Christian Science. I got a copy of "Science and Health with Key to the Scriptures" to read on my way home, as my friend said it would help me.

I returned to my mother's, intending to start for home the next morning, but that night I had another bad spell. Mother and sister thought I was passing away, and sent word to my wife that they doubted very much if I would ever reach home alive. These spells usually lasted two weeks, but the second day I was feeling easier and asked for Science and Health. I began to read the chapter on Prayer and was very much impressed by it, so the next day I arose and threw my pipe and tobacco into the stove. I had read enough to know that this truth was what I wanted, and I again went to my friend's home to learn more of it. Christian Science was lovingly explained to me, and it looked very reasonable. In all, I had three present treatments and about two weeks' absent treatment, and I returned home on May 10, healed. Since that time my stomach and bowels have not troubled me, and I have eaten anything I wished.

My wife and family seeing me, and being told that it was Christian Science which had healed me, gladly took up its study, and ever since then we have been able to overcome all sickness that has occurred in the family, generally alone, but with the aid of a practitioner a few times. We have nine children, and since embracing Christian Science there has not been a drop of medicine or a doctor in our house.

Besides the physical relief which we have received, I have been helped morally and spiritually. I was a very profane man, and was addicted to the use of liquor, but since my healing I have had no desire either to drink or to swear. I have wished we could live where there is a Christian Science church, yet it may be my duty to stay here, where people know without my telling them what Christian Science has done for me and my family. As there is no church, we and another Scientist family study the Lesson-Sermon together each Sunday. I now know there is a God, but in the past I had often doubted it. There is no language or tongue that can adequately express the gratitude I feel for the benefits we have received through Christian Science.

J. W. WHEELER, Edmore, N. Dak.

As I look over the past year, my gratitude and love to God for all that Christian Science has done for me is so great that I esteem it a privilege to tell others of it, for I had been doomed to a life of total blindness by *materia medica*. I had been reared very carefully in an orthodox church by God-loving parents, and was considered a fine Bible student, as I had been taught to study the Scriptures, besides the different commentaries, since my earliest childhood; and yet it was in reading the Bible that I became totally blind.

I did not give up *materia medica*, but it gave me up, declaring my case to be hopeless; then as a last resort, and without any faith whatever in Christian Science, I was persuaded to try it, and in three months I was healed! This was over fifteen years ago, and I have never worn a pair of glasses or used any material remedy whatever during all these years, for my eyes are strong and perfectly well. During the past year I have read *The Christian Science Monitor* each day, the *Sentinel* each week, and the *Journal* each month. Besides this I have studied every word of the Lesson-Sermon each day. I have also read Science and Health and Mrs. Eddy's other writings, and I have carefully read the Bible from Genesis to Revelation. The greater part of this reading I have accomplished at night, simply because as a Christian Science practitioner I have very little time for reading during the day.

For this great blessing of my sight restored I am most thankful to God, the only Mind, and I bow before Him in meekness and humility for this great gift. I am also deeply grateful to our beloved Leader, Mrs. Eddy, for giving to the world "Science and Health with Key to the Scriptures." Through her teachings I was completely healed, and for her my love and gratitude are unbounded. Today I stand as a living witness to the power of God to heal, and my earnest desire is that every one may see this great light of divine Truth as revealed through Christian Science, which in this day and age is healing all manner of disease, physical and mental; for God is Love, and is ever ready to bestow His blessings on all who will receive them.

MRS. FANNY CARSTARPHEN BRADY, Kansas City, Mo.

[Translated from the German.]

"Seek, and ye shall find," spake the Master, teaching on the shores of Galilee; and the truth of these words was made manifest in my own experience in a wonderful way. Four years have elapsed since I first attended a Wednesday evening meeting upon the request of a good friend of mine, and I did so not because of physical troubles, but rather because I was in search of something higher and better than theories and theological teachings had to offer. I had looked into various religious societies, but had found satisfaction nowhere until I was led to Christian Science, which gave me what I sought. Although I could not grasp much of its teachings at first, yet I felt that I had been led to find something which was adequate to lift me above the condition or plane of thought on which I was moving.

A careful study of the Christian Science literature, of "Science and Health with Key to the Scriptures" by Mrs. Eddy, *Der Herold der Christian Science*, and the *Sentinel*, soon brought with it a new concept of God and man, and showed me the Bible in a light which revealed the availability of its teachings and their practical application to the affairs of daily life. I was thus enabled within a comparatively short time to put these teachings into practise, to overcome bad habits, and my thoughts were "turned into new and healthy channels" (Science and Health, p. 276). I drew fresh energy from this inexhaustible source, and nobler aims were put before me. It became possible for me to attend higher educational institutions for my further instruction, and there I experienced many a proof of the ever-presence of divine intelligence which it is our duty to reflect in all our activities.

I also repeatedly experienced the healing power of Christian Science in my own case as well as in that of others, and it became possible for me to overcome all kinds of ills through my own understanding, small though it was. Wounds which I sustained now and then in my business

Digitized by Google

as a locksmith, before I took up my present studies, healed in a surprisingly short time, even when of a serious nature, and Science has proved itself to be a never-failing help in many ways, when correctly applied.

Knowing that I can express my gratitude for all these blessings only by trying to be a Christian Scientist in deed and in truth, it is my most sincere desire to assimilate more of this glorious teaching, in order that I may prove in a growing measure through daily life that Christian Science is the promised Comforter. May this little testimony make appeal to those who believe that they are not in need of Christian Science because they are not afflicted in a physical way, and may it be a means of showing them that they too can be greatly blessed through the study of the Bible, and of the text-book which Mrs. Eddy has left us as a priceless heritage.—ROBERT STEIGER, Winterthur, Switzerland.

Desiring to express my gratitude, I will tell of some of the benefits I have received through Christian Science. Before I came to this truth I had been subject to chills and fever for several months, therefore I would like to call attention to a very remarkable demonstration in my case. One morning, about nine o'clock, I was taken with a very bad chill. A practitioner was called, and by eleven o'clock the chill was gone, with no fever following it. By noon I was able to eat a hearty dinner, and in the afternoon to go to town. Always before, the chill had been followed by a very high fever and a severe headache, necessitating my remaining in bed for several days. Another demonstration was that made for my brother. The teacher sent him home from school, saying he had typhoid fever. The same practitioner was called as in my case, and with a few treatments the boy was as sound and well as ever.

Christian Science has been our reliance for five years, and it has proved successful in overcoming all the ills that have appeared in our family of eight. I am grateful to God for Christian Science, not only for what it has done for me, but for what it has done for others.

MISS SIERA BAKER, Chanute, Kan.

I wish to express my gratitude for the many benefits I have received through the study of Christian Science. It was not through physical healing that I became interested, but because I reached through its teaching an understanding of Life, God, that He is "divine Principle, Mind, Soul, Spirit" (Science and Health, p. 468), and soon found in this knowledge of an ever-active divine Principle the healing power of Truth. One day I stepped upon a nail with such force that it penetrated through the sole of my shoe into my foot, and so deeply embedded was it, that it required a great effort to withdraw the foot. Much swelling and pain appeared for a day, but two days later I was able to wear my shoe and walk about. The next healing was in a case of poisoning, which was overcome without any unpleasant after results. In both cases I had the loving help of a practitioner.

For these proofs of the power of Truth and the spiritual blessings I have received, I am truly grateful to God, also to Mrs. Eddy, who has shown to the world the way to divine Truth and Love.

EMILY BLAKENEY FRAYSER, Memphis, Tenn.

I give grateful testimony to some of the many blessings which we have received since we found Christian Science. My first healing, some twelve years ago, opened my eyes to the unreality of disease and sin. I had always wondered why the churches did not do the healing works that Jesus bade his disciples do; but Mrs. Eddy has made plain to us that to do these we must understand, not merely believe. I first heard of Christian Science from a neighbor who came home from the city where she had gone for medical treatment. She had been troubled for a number of years, and was told by the doctors that she could never be well without submitting to an operation; but the truth, God's message to this age, had made her free, and she was in good health. I also knew of a man who had been healed; and a girl who had always been weakly is now a strong, healthy woman through Christian Science. In our immediate family, headaches, fainting spells, goiter, lung trouble, and many other ills have been overcome, besides great discord; and this is not even a beginning of all the good works done here among us, and some others farther away.

We could not be other than thankful, even if the physical healing were all; but the greatest blessing is the spiritual light, the spiritual understanding which comes with the healing. We can best prove our thankfulness by faithful work, and by daily giving thanks to God and to His Christ. We are grateful for Mrs. Eddy and for all those who are working so patiently and unceasingly to bring this truth to mankind.—MRS. ETTA RADDER, Plymouth, Wis.

[Translated from the German.]

My youngest son, born four years ago, manifested several ailments which induced me, in accordance with the advice of our country physician, to take him to a clinique in town. A consultation of physicians disclosed the fact that the little fellow was suffering from two forms of hernia, one being very painful, and for which, after a period of from two to four years, when the child would have grown stronger, an operation would have to be performed. They recommended that special attention be paid to the wearing of a truss, since leaving the child without it might lead to serious consequences, and they also said that he must be otherwise well cared for. After the child had been at the clinique for two months, I took him to his grandmother, who lives in the country, where he had excellent care besides being under medical observation. Still, his condition continued to grow worse; he could retain but little nourishment, had severe attacks of vomiting, and the inaction of the bowels with which he had always been troubled took on very serious proportions and seemed to cause him great suffering. He was losing strength very fast, and although the physicians tried every means of cure, their efforts remained unsuccessful; the attacks became more frequent, and the child was pining away.

But man's extremity is indeed God's opportunity. I had heard and read a few things about Christian Science which had appealed to me quite strongly, and I secured a copy of "Science and Health with Key to the Scriptures." Being very much impressed by the child's serious condition, and feeling that no human being was able to help him, I turned to Christian Science as my last hope. I knew the address of a practitioner in Dresden and applied for treatment, which was taken up immediately. From the day on which my letter reached the practitioner the child improved. Our household being broken up at that time, as we intended to move to another estate after a while, the boy remained with his grandmother, who was then averse to Christian Science. The thoughts of worry and anxiety surrounding him may have been a hindrance to quick healing, but when he came under my care I took off the truss and held to the truth of being, and all symptoms of the hernia quickly disappeared. After two or three weeks had elapsed he was a perfectly well child. His appetite was good, he ate everything that was given him, and everything agreed with him. He is now four years old, and is a healthy, strong, well-developed boy. There are no indications whatever of his former troubles, and it is remarkable how unconscious of pain he seems to be.

Since we have had this proof of grace and Truth, which, as Mrs. Eddy says in Science and Health (p. 67), "are potent beyond all other means and methods," we have

Digitized by Google

resorted to no other method of cure and are deeply grateful for the understanding of the truth. My other three children, my husband, and myself, have also found healing in Christian Science. Measles, throat trouble, whooping-cough, dental trouble, imperfect bowel action, have all been quickly overcome with the help of Christian Science. In all cases the healing came about through absent treatment, since, as Mrs. Eddy says, "space is no obstacle to Mind" (Science and Health, p. 179).

It would be impossible to enumerate all the benefits received through Christian Science in our home during the last three years and a half. Christian Science has not only proved to be a never-failing help as a healing agent, but has also brought me wonderful experiences in a moral, mental, and spiritual way. It is to me an inexhaustible source of strength for the performing of my daily tasks and the removing of difficulties presenting themselves in daily life. Fear has been banished from my thought, and I have come to see and gratefully acknowledge the truth contained in the words, "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind."

ELLEN VON STRYK, Arras per Rujen, Livland, Russia.

The study of Christian Science has made such a vast difference in my life, in a year and a half, that I feel it a privilege to tell of the change. Space could not be allotted me to narrate my ten years' struggle for health; my faithful trial of system after system, none of which ever did me any good after the first spurt of faith had been exhausted. Then came a time when my fears were many and great, from those of contagion and colds to that of being pursued by some relentless fate. While all this seemed bad enough, there was something worse,—a growing sense that God did not exist for me, and my final abandonment of the church I had attended and loved, but in which I found no comfort in time of need.

At last a friend loaned me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and though my interest was aroused and I read with avidity, my troubles seemed to increase until the book was finished; nevertheless I determined to visit a practitioner in order to learn something of this faith. His clear statements and spiritual guidance started me immediately on the right road; and through study and application, I have gradually come to see that there is a daily supply of strength for every need. A supposedly inherited and incurable trouble connected with the bladder and the intestines has disappeared; the fear of colds has been overcome; glasses worn since childhood have been laid aside; nervousness and exhaustion, and in fact all of my beliefs in extreme delicacy of health, have vanished; my resentments, lurking malice, and all so-called "harmless little vices" of the worldly-minded have faded away.

My gratitude to Mrs. Eddy is very great, and can only be expressed by a life devoted to the cause of Christian Science.

MRS. ADELAIDE ROGERS CALKINS, Tacoma, Wash.

I feel that the time has come for me to give utterance, through the columns of the *Sentinel,* to what Christian Science has done for me and my family, hoping that the seed will not be sown in vain. When through a dear friend who had been healed in Science the truth was presented to me six years ago, it found me both mentally and physically ill. I was willing to investigate it, thinking that in this there might be a ray of hope for me. Soon after beginning the careful reading of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, loaned to me by this same friend, the clouds were lifted in proportion as the truth of the statements contained therein dawned upon me. From time to time I asked for absent treatment for some very painful and annoying ailments, and one by one they gradually disappeared. Among these were stomach, kidney, and ovarian troubles, for which I had taken much medicine and been treated by doctors, but had received no benefit. I had also severe attacks of throat trouble, usually during the winter months, which confined me to the house for several days at a time; but these, too, have disappeared.

On the part of my husband, the desire for liquor and the smoking habit have yielded to the influence of *Truth* as revealed in Mrs. Eddy's writings, for which he feels that he owes much to Christian Science. Our children have also received much benefit from the same source. On one occasion, when my eldest son was thrown from a horse on which he was riding, and was kicked and dangerously cut on the head, I was able to overcome fear in myself by repeating and realizing the truth of these words, found on page 283 of the Christian Science text-book: "Mind is the source of all movement, and there is no inertia to retard or check its perpetual and harmonious action." I was able to cling to the truth for him, and in one hour from the time he was laid on the couch he was able to sit at the table with the family, eating his usual meal without pain or discomfort. The deep cut in his scalp soon healed without applying any material remedy.

For the above-mentioned proofs of the healing power of Christian Science, and many more not here related, I am grateful. And last, but not least, I am grateful for a better understanding of the once unread Bible in our home. I have yet some problems to work out, but I know this will be accomplished as I rely upon divine Principle and endeavor to live obedient to Truth. I thank God, and am grateful to Mrs. Eddy for showing us the true and only way, and explaining the Master's words, so often quoted by Christian Scientists, "Ye shall know the truth, and the truth shall make you free."—CLARA B. KELLEY, Auburn, Cal.

[Translated from the German.]

Deep gratitude to God is the motive actuating me in giving this testimony. In the beginning of January, 1912, our little daughter came home from school one day and complained of feeling ill. She attended school, however, on the following day, my husband and myself having persistently declared the truth according to Christian Science, but she returned home at the end of the day suffering intensely. We then asked a Christian Science practitioner for help, and thanks be to God, the child was able to attend school the next day without experiencing the least trouble, and she never missed one lesson.

About that time I was taken with a rather serious cold, which was seemingly quickly overcome; but it only assumed another form, so that I had to stay in bed. We therefore again asked the practitioner for treatment, but I suffered greatly during the following days and nights, and lost the use of my voice. Treatment was continued by the practitioner, however, and the truth was constantly realized by my husband. On the fifth day there was a sudden discharge from the throat, and I experienced such relief that a couple of hours later I was able to talk and to take some nourishment, which had been impossible during the preceding days. From then on my condition rapidly improved, and I was soon able to attend to my household duties. When but thirteen years of age I had experienced a similar attack, and for nearly five months could talk only in whispers, suffering constantly with my throat; but in this later attack my voice was soon clear, and I was free from pain.

Words are indeed inadequate to express my gratitude for this renewed proof of the power of divine Love; but I shall strive daily to advance along the path which Jesus trod and which Mrs. Eddy has pointed out anew. My husband joins

Digitized by Google

me in expressing sincere thanks for the great benefit which Mrs. Eddy has bestowed upon the German-speaking people through the translation of the text-book into their language.

FRAU EMILIE ATZLER, Berlin, Germany.

I desire to express my thankfulness to God for Christian Science, but it would take too long if I were to tell all that has been done for me since over a year ago. I was led by Truth to go into a Christian Science reading-room. I want to make it plain that I was divinely led, for no one had ever spoken of Christian Science to me. I was a very sick woman, said to be suffering from Bright's disease and heart trouble, and the doctor had told my husband I must not be left alone, for I did not know how ill I was. After having gone to this doctor every day, and sometimes twice a day, for over eight months, he said that I must go to bed and not walk, because he was afraid I would fall on the street. On my way to his office I had to get out of the car near the Christian Science church, and one day, without thinking what I was doing, I walked in. A lady sitting at the desk spoke kindly to me and asked if I was a Christian Scientist. I said no, adding that I did not know anything about it. I was feeling very ill at the time, and as she saw my condition, she said she would try to help me. I told her that no one could help me, for I had heart disease. She said, "But God can," and after saying the Lord's Prayer as she bade me do, I looked at her, but her eyes were closed, so I knew that she was still praying. The thought then came to me, Does she think that prayer will ever make my heart strong? Thank God, before I got in the car to go home, I was better. Since that time I have been able to work hard, and my husband and friends think it was the most wonderful cure of which they had ever heard.

I hope I can soon give my testimony at the Wednesday evening meeting. The practitioner who was so kind to me has taught me how to be a better woman and to forgive one who had done me a great wrong; in consequence, all hate has gone out of my heart. I thank God for the help I have received, but am especially grateful for the knowledge that God is a loving Father.

MARY A. COYLE, Ventnor City, N. J.

I have been healed in Christian Science of a nervous trouble in its various phases. About eight years ago I had an important operation, after having previously had a number of minor ones for headache and spinal congestion which kept me in bed days and sometimes weeks at a time, the pain being so severe I hardly knew what I was doing. I overheard the two surgeons say that I would lose my reason if the operation were not performed, though that might hasten such a condition; but there was nothing else left to be done. Six months afterward the headaches were as severe as ever, and I was in despair; but just as I was able to walk I injured my ankle very badly. Then Christian Science came to me, and in three treatments the ankle was entirely healed, much to the surprise of the physician who came to put it in a cast. Slowly, one by one, other ills disappeared, among which were rheumatism, a functional heart trouble, a most distressing intestinal disorder, also a structural defect of the eyes. Finally, the congestion and headaches vanished, with the attendant enlargement of the throat.

Before coming to Christian Science I went to many physicians, all good, honorable men, including my father and two brothers, who tried to help me; but my hope was absolutely gone when this living truth came to me, and now I am beginning to express in this improved condition something of man's birthright. I am more grateful than I can say to our dear Mrs. Eddy for having unfolded to us this knowledge of God who is good, this truth that heals.

L. ALICE ENGLISCH, Chicago, Ill.

FROM OUR EXCHANGES.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth.*]

"Him hath God exalted with his right hand to be a Prince and a Saviour." The man who used these words meant far more by them than that Jesus was only a human being who had been divinely chosen for the work of delivering Judea from her foreign oppressors and instituting an era of freedom and righteous government. Indeed, I question if he was thinking about that at all. By "a Prince" he meant a person preeminent over all human beings; and by "a Saviour" he meant a spiritual deliverer. This assumption is strengthened by what follows. He was to "give repentance to Israel and forgiveness of sins."

And here I should like to observe that doctrines grow out of psychological experiences, not *vice versa*. The experience comes first, the doctrine after. It is not the place of Christ in the Godhead that we have to reckon with at the beginning of our spiritual life, so much as his saviorhood. Do we need a savior or do we not? What do we need one for?—that is, if we need one at all. This is a point on which today, as at the beginnings of Christianity, a great variety of experience exists. The world needs saving in many ways. We still have with us those who long chiefly for social salvation, the setting to rights of our national and international relations; you could hardly interest them in anything else; they feel, and quite genuinely, that if we could only secure a better adjustment of material conditions there would not be much left to trouble about. In this, you see, they are very like the enthusiastic patriots of Palestine in Jesus' day. Then there are those who are oppressed by the thought of the world's suffering; they would like to abolish it utterly; if only pain could go, if only the miseries and inharmonies due to the infirmities of the flesh could be removed, anything further in the way of salvation, they think, could be left to take care of itself. Perhaps I am not stating this quite fairly. It might be better to say that when thinking about the subject of saviorhood there are many sensitive and generous natures in our midst who instinctively feel that what is most wanted is salvation from suffering. And I am not indisposed to agree with them,—at any rate up to a point. It is one's pity for the sorrow and pain of the world that makes one long for a root remedy.

But there is something deeper still, and that is the burden of the world's sin. Not everybody feels this keenly, but many do. There were some who did before Jesus came. The language of the penitential psalms shows this; but somehow the presence of Jesus in the world has intensified the perception that sin is our greatest enemy. This is an absolute fact, and not merely a matter of opinion. Jesus has quickened the sense of sin in the human heart; those who have come most profoundly under his influence have been those who realize most deeply their sinfulness and their need of his saviorhood in this respect. In other words, Jesus has himself awakened the very need his gospel professes to satisfy.

[Rev. William T. McElveen, Ph.D., in *The Advance.*]

Through His prophets and saints God tried to teach Judea that it was elected to serve mankind, but Judea misunderstood and so misstated the idea. It regarded itself as an elect nation. It regarded all other nations as rejected nations. Instead of being serviceable, it was arrogant; instead of being useful, it was exclusive. To the Jew the term Gentile was as much a term of reproach as the term Barbarian was to the Greek.

And the Christian church for many centuries misinterpreted this great idea. For too many years the thought we call election meant to the Christian church what it had meant to Judea. It meant that some few men were predestined to be saved, but that the majority were doomed to

Digitized by Google

be lost. Indeed, some of the great teachers of the church taught that mankind was not only divided into two groups, the saved and the lost, but that the number in each group was so accurately predetermined that no one by any moral effort could discharge himself from one group or promote himself into the other group. The Christian church, if you can call a church Christian when it fails to preach the basal verities of the gospel, forgot what Jesus said about our Father. He said that God loved humanity, and that it was not His will that any one should perish. The church not only dealt inhumanly with men, but it caricatured God. It misfeatured Him by picturing Him as an arbitrary, partial, unjust, capricious, irresponsible God. It substantially said that the God of love and grace was under no obligations to be good to everybody. It failed to see that God by His very nature was a seeking, saving, reconciling, renovating God, and that no man was lost save by his own deliberate, continuous resistance of all of God's overtures.

And the Christian church, because it believed in a God who was a respecter of persons, created castes in its own membership. It separated the clergy from the laity. To set certain men apart as religious leaders and spiritual guides is proper enough; but to say that certain men because they are clergymen have rights and privileges with God, which other men can not and do not have, is contrary to the spirit and teaching of the New Testament. The New Testament knows nothing of an exclusive ministry or a secularized membership. The words clergy and laity and the ideas they represent are not to be found in the New Testament. The New Testament never speaks of any man being a priest of God in any sense in which all saved men are not priests of God. When Peter says, "Ye . . . are . . . an holy priesthood," he is addressing not the apostles or any group of leaders, but the entire membership of the church. A truth which the New Testament emphasizes and which Christians need ever to keep in mind, is the truth which has been called "the priesthood of all believers," and that truth is that every child of God is a coworker with God. We are saved to serve; we are blessed that we may be a blessing; we receive that we may give. All are stewards of God's grace; all are responsible for the extension of the heavenly kingdom. We are all prophets, priests, and kings.

[*The Christian Work and Evangelist.*]

The United States will be the greatest nation in the world if, like Greece and Palestine in ancient days, it can in these modern days give the world another truth that shall be woven into the very warp and woof of its destiny. And some of us dare venture to believe that God has called her to speak some such great word just as much as He called Greece to teach the ideal, or Palestine to teach of a righteous God seeking to make His children righteous, or Rome to teach order and organization under law. And is not this great truth the one truth for which all the world is just now asking, praying, and seeking,—the truth of the brotherhood of man? And this is not the mere saying of it, not the truth as a beautiful desirability and distant aspiration, and not as an unattainable ideal to be always approximated, but as a possibility, a reality, an achievement, an object-lesson to all other nations. The very situation is God's voice calling America to this high destiny.

[*The Christian Register.*]

The spirit of God is a new spirit. It cuts fresh channels for inspiration to flow in. The bearer of a divine message is not often known and honored; he comes as a surprise, and in time is found to be accredited of God. Let us be careful how we scorn or distrust the message or the messenger because both are new and surprising. Let us not shut our ears. A prophet may live round the corner in the next street, or even next door, but his appearance may be as strange and unaccountable to us as if he had lived five centuries ago. It is hard to believe that the fount of God's inspiration is always flowing and was not dried up ages ago.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal*, printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien"), and it is now printed and ready for distribution. Thirty-six pages and cover.

Two new translations into German have been made and are now on sale. "Die Christliche Wissenschaft: Das Evangelium von dem Reich" ("Christian Science: The Gospel of the Kingdom"), a lecture by Judge Clifford P. Smith. "Im Dienste des Vaters" ("The Father's Business"), containing five articles.

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by bank draft, express order, or postal money order payable at Boston post-office. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

Digitized by Google

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

ROUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

Bids have been received by the forest service for three hundred million feet of timber advertised for sale on the Tongass national forest in Alaska, and an additional three hundred million feet from the same forest has been applied for. A large part of this timber is Sitka spruce, which will be made into paper pulp, not only for the Pacific coast and the Orient, but for the general pulp market. The latest estimates available show that there is a stand of approximately seventy billion feet on the Tongass national forest, and approximately twenty-eight billion feet on the Chugach national forest in Alaska. The annual cut on the Tongass forest has gradually increased from zero at its creation in 1902, until it amounted to approximately forty-three million feet in the year 1912. All of this has been cut for local uses, largely for boxes to contain canned salmon. On the area on the Stikeen river, for which bids have been received, the species to be cut include Sitka spruce, hemlock, red cedar, cottonwood, and yellow cedar, and the minimum stumpage rates range from two dollars and a half to one dollar a thousand feet, according to species, the yellow cedar bringing the highest price. A cutting period of twenty years will be allowed, with two years additional for construction work. The prices may be adjusted at five-year intervals to take care of possible advances in lumber values.

In an effort to end the prolonged ice strike, which has caused much suffering in Cincinnati, Ohio, Mayor Henry T. Hunt seized seven of the large non-union ice-making plants as a result of the refusal of the ice manufacturers to arbitrate with their striking employees. The formal seizure of the plants was ordered by the board of health in the interests of the city. Mayor Hunt gave the ice-makers a certain time within which either to operate the plants or to turn them over to the city. The manufacturers declared that they would do neither, and threatened injunction proceedings. The police seized the plants, and union officials then ordered engineers and firemen back to their former jobs, when work was immediately resumed. The first step by the ice manufacturers to regain possession of their plants was taken by the Cincinnati Ice Company, which applied to Judge Spiegel in the common pleas court for an injunction to restrain the city "from trespassing further on the property of the company." The petition asked that a temporary injunction be granted, and that it be made permanent. Mayor Hunt has sent a message to Attorney-General McReynolds urging him to order an investigation of the Middle State Ice Producers' Exchange, claiming that it is a combination in restraint of trade.

The interstate commerce commission, in the report on its investigation of the New York, New Haven & Hartford railroad and its allied roads, vigorously condemned their handling of affairs. The commission's conclusions are, that the "outside" financial management has been "wasteful in the extreme;" that had the New Haven confined itself to actual railroad activities under the same conditions that prevailed in other respects, "it could have paid a dividend of 8 per cent for the fiscal year 1912 and carried nearly two million dollars to surplus account, instead of showing a deficit of nearly a million dollars;" that the New Haven's agreement with the Boston & Albany is "violative of the spirit of the statute against the restraint of competition and should be canceled;" that "in our opinion this line should be kept entirely free from New Haven control;" that the New Haven should divest itself of its trolley lines, not because the present ownership is in violation of law, but because such ownership might be used to prevent the building of competing lines in the future; that the Boston & Maine merger with the New Haven, if permitted to stand, will result in "an almost exclusive monopoly of transportation facilities by railroad in the greater part of New England."

Federal patronage, including every government position except those under civil service, will be taken out of the hands of politicians and members of Congress and delegated to a commission of three men, if a bill introduced in the Senate should become law. The bill provides for a commission consisting of three members, to be appointed by the President *with the advice and consent of the Senate*, their duty being the recommendation to the President and the Senate of candidates for appointment to government positions. The bill expressly forbids a senator, a representative, or other federal office-holder recommending any person for a position in the government service, and equally prohibits any applicant from seeking the aid of officials to this end. The bill is designed to increase the efficiency of federal appointments and to relieve members of Congress of the burden of seeking positions for their constituents or friends.

The first forest reserve on the watershed of the Ohio river to be secured for the government was approved for purchase by the national forest reservation commission last week. It is included in what is known as the Monongahela area, at the head of the Monongahela river, and embraces two tracts aggregating 20,567 acres, for which an average price of $3.06 an acre is to be paid. Three other areas were also approved, the total acreage being 113,900, the largest purchase ever passed upon by the commission at one time. These were the White Top area, 10,437 acres near the junction of Virginia, North Carolina, and Tennessee, at about $5.18 per acre; the Natural Bridge area, near the Virginia Natural Bridge, 3,420 acres, at $6.64; and the Shenandoah area, 77,464 acres, at the headwaters of the James and Shenandoah rivers, at $3.01.

The creation of a forest reserve between the cities of Washington and Baltimore is the object of an organization formed by people from Maryland and the District of Columbia. This organization, which will be known as the National Forest and Park Association of Maryland, will probably be incorporated by act of Congress. Letters announcing its object have already been sent out from Baltimore, and local business men and citizens have pledged their aid to the project. The forty miles of country between the national capital and the Maryland metropolis has long been neglected in an agricultural way, although the stretch of road between the two cities has been a favorite automobile route.

International.

The members of the American Chamber of Commerce of Paris and their American and French friends celebrated the Fourth of July by dining together. The French government honored the occasion by sending a detachment of Republican guards, who, in their picturesque uniforms, were disposed at intervals behind the long guest table. The minister of commerce, Louis Masse, and representatives of nearly all the departments of the government of France, were present. Nearly every down-town business house in Paris was decorated with the stars and stripes in recognition of the Fourth of July. The American ambassador afterward received fifteen hundred American residents and visitors.

According to a despatch from Berne, important reforms are contemplated by the Swiss government. Hitherto, practically all political power in the Swiss government has been in the hands of the President of the Confederation, and as the President's term of office is for only one year, it follows that it has been impossible to pursue any continuous line of policy in the more important of the Swiss government departments. For some time it has been felt that a change in the organization of the government in this respect would be most advisable, and a project of reform, the result of the labors of two commissions of the National Council, has just been voted by 107 votes to 14.

General satisfaction is expressed with the final passing by the Senate of Uruguay of the arbitration treaty with the United States. In the course of the debate Senator Varela Acevedo regretted the fact that the treaty contained only a promise, not an actual provision of arbitration, in which respect, he said, it compared altogether unfavorably with the arbitration treaty signed between Uruguay and Argentina.

The third reading of the home rule bill was carried in the House of Commons by a majority of 109, and was sent automatically to the House of Lords, where it will undoubtedly be rejected a second time. If at the session of Parliament next year it is again passed, it becomes law without action from the House of Lords.

Robert Bridges has been appointed poet laureate of England, to succeed the late Alfred Austin.

Industrial and Commercial.

The beginning of this month witnessed the completion of one of the greatest electrical enterprises upon the continent,—that of the Mexican Light & Power Company. At a cost of approximately eighty million dollars, gold, this company has just finished installing at Necaxa, about one hundred and ten miles from the City of Mexico, two hydroelectric plants that have an aggregate capacity of one hundred and twenty-seven thousand five hundred horse-power, and has constructed an extensive system of power transmission lines. Besides these two main power stations, the company has erected auxiliary hydroelectric plants at Texcapa, Laguna, Irrigador, and San Ildefonso, all of which are situated in this territory and are embraced in what is known as the general Necaxa power scheme. These various plants have an aggregate capacity of one hundred and forty-eight thousand nine hundred horse-power.

The two-cent passenger rate became effective in Missouri on the Chicago & Alton, the Chicago, Burlington & Quincy, and the Wabash railroads, July 1. The Missouri Pacific and the Chicago, Rock Island & Pacific also made a two-cent rate between Kansas City and St. Louis at the same time to meet this reduction. The morning of July 4, the two-cent rate became effective on all other lines in Missouri.

The bill abolishing the King's right of veto on constitutional acts, in Norway, was passed in the Storthing by 99 votes to 13.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

FEAR OVERCOME.

WILLIAM D. MC CRACKAN, M.A.

THE beginner in Christian Science sometimes wonders at the approval given to "the fear of the Lord" in the Scriptures. He perhaps recalls the text, "The fear of the Lord is the beginning of wisdom," or similar texts, when he asks an older student how such approval is possible when Christian Science expressly declares fear to be evil.

In answering such a question, it should be recognized that when the fear of the Lord is recommended, such a statement does not mean that men are to be afraid of the Almighty, that they are to dread His presence and power. John makes it plain that "perfect love casteth out fear." If men were advised to be afraid of God, they could not be expected to love Him. The word fear thus used to explain man's proper mental attitude toward God, is evidently equivalent to the word respect or reverence, certainly not to fright or terror. We are bidden to stand in obedient awe before the Principle governing the universe, but this awe is akin to unquestioning confidence, deep-seated joy, profound love. This point of view is in accord with the psalmist's joyous verse, "The Lord is my light and my salvation; whom shall I fear? the Lord is the strength of my life; of whom shall I be afraid?" also with Jesus' touching injunction to his disciples, "Fear not, little flock; for it is your Father's good pleasure to give you the kingdom."

The mental fault which is described as fear and stigmatized as evil by Mrs. Eddy in Science and Health, is something quite different from the fear of the Lord which the Scriptures approve, for here we read: "Fear is the fountain of sickness, and you master fear and sin through divine Mind; hence it is through divine Mind that you overcome disease" (p. 391). That false belief which is a component part of every sin and every case of sickness, and also (as is beginning to be more generally understood by mankind at large) of every disaster and calamity, is thus exposed for destruction by Truth. This fear is based upon the belief of life in matter. It relies upon the allurement of personal sense and desire; upon a supposed validity of material or physical law; and it admits the existence of a government apart from God which is believed to be ruthless and relentless, of a blind force handling man as a defenseless being separated from Principle, Life, Truth, and Love, and thus the mere sport of circumstance.

It would seem as though at the present time public opinion was passing through the educational experience of having its courage and common sense thoroughly tested. Hardly a day passes but some new peril to public health and morals is being conjured up and exploited. Hardly a day but some old bogy is pulled out of the garret of forgotten beliefs and dressed up to pretend that it has power and presence. This present-day process is marked by plausible pseudo-scientific methods and names, and so wins temporary attention. But when sifted down to its essential nature, this process is found to be the same old and familiar method of trying to frighten people into being good or healthy.

Christian Science teaches clearly that the world can never be saved by fear. Neither the sinning nor the sick can be brought through fear to a realization that the kingdom of heaven is at hand. Mrs. Eddy says, "Fear of punishment never made man truly honest" (Science and Health, p. 327). In so far as the present-day methods of trying to establish public health and morals are based upon fear, they are unwholesome and produce the opposite effect from that which they are intended to produce. In so far, however, as they proceed from the desire for cleanliness, they are based upon a right mental stimulus, namely, upon clean thinking, and as such are wholesome. It is therefore easy to separate the proposed hygienic and sanitary measures into groups based either upon the wrong motive of fear or on the righteous motive of cleanliness. The first group necessarily increases the apparent stock of sin and sickness in the world by conceding power to evil, while the second group is salutary because it expresses wholesome thinking.

The cure for fear and its attendant evils is clearly indicated in the Scriptures and in the Christian Science textbook. As fear is based upon ignorance of God, so its cure consists in knowing Him. This spiritual understanding provides the one unfailing antidote for fear in all its forms, and for the multitudinous evils springing from fear. A fruitful source of sin and sickness will be found in false theology, because the latter inculcates fear. A theology which would have us believe in God as the creator of evil, attempts to give evil divine origin, and so prepares the way for the despair which ultimates in hopeless sin or incurable sickness. A theology which tries to erect a solid pedestal for evil to stand upon, tends to produce a veritable worship of evil. The fear of evil can become so great that it manifests itself in the desire to placate evil, a condition of mind which is little short of idolatry. How comforting to one seemingly obsessed by the fear of evil to turn to Mrs. Eddy's simple scientific method of dethroning evil, based on the following unanswerable statements: "*First:* God never made evil. *Second:* He knows it not. *Third:* We therefore need not fear it" (Unity of Good, p. 20).

Those who tread the narrow way from sense to Soul win many a victory over fear with the weapon of this conclusion. We need not fear evil, because it has no real origin or entity, no real law of procedure, hence is incapable of producing a real result. As the true Christian progresses on his way, he is frequently startled by seeming surprises, darting out from ambush. Indeed, it would seem as though his growth in the Science of Christianity were dependent upon his spiritual resourcefulness in meeting and unmasking the new forms of fear which spring upon him from time to time. It is the apparent purpose of these attacks to break down the control of divine Mind over him and to unsettle his metaphysical poise. But trusting in the great captain of his salvation, in the perfect balance of the law of God, in the protection of Love's sheltering arms, the pilgrim marches calmly on, supported by the right understanding of Principle, Life, substance, reality, which is able to defeat every obstacle and overcome every fear.

"IN HONOR PREFERRING ONE ANOTHER."

SADIE KIEKINTVELD.

IMMEDIATELY following his exhortation to "be kindly affectioned one to another with brotherly love," Paul adds that bit of advice over which many a mortal has stumbled, "in honor preferring one another." Had he in mind the many instances in which the spirit of envy and rivalry have seemingly quenched the feeling of brotherly love? This spirit claims to have entered the very first human family. We read that Abel was a "keeper of sheep" and that Cain was a "tiller of the ground." When both brought an offering to the Lord, Abel "of the firstlings of his flock," and Cain "of the fruit of the ground," God "had respect unto Abel and to his offering; but unto Cain and to his offering he had not respect."

Accepting this statement literally might lead to the thought of a partial and unjust Deity, who bestowed favor on one worshiper and not on another; but much of the Bible teaching is by symbols, and a clear analysis of the incident discloses the lesson to be learned. First one needs to give up his thought of a personal or anthropomorphic God, and to think of Him as unchanging divine Love that can never be conscious of evil. Next, it is necessary to examine the character of the two offerings. A lamb has always been recognized as the symbol of innocence and obedience. Abel evidently brought thoughts which were pure and obedient to Truth as an offering to God. Bringing himself thus into harmony with the eternal Principle of the universe, he received the natural reward of his right thinking. This was not because God gives more liberally to one of His children than to another, but because Abel had fitted himself to receive abundantly.

Cain, for his offering, "brought of the fruit of the ground." While Abel's sacrifice symbolized what is spiritual and good, Cain's evidently typified what is material. In Science and Health (p. 541) Mrs. Eddy says, "The lamb was a more spiritual type of even the human concept of Love than the herbs of the ground could be." The sequel shows that Cain's mental attitude was self-seeking rather than receptivity to truth; therefore when Cain sought a blessing, it was not conferred, as it was impossible for God, who is "of purer eyes than to behold evil," to recognize his appeal. Did Cain see his error and abandon his evil thought? Evidently not, for he became angry and killed his brother.

In the life of Jesus we have another instance of the relentless manner in which evil hurls itself against the highest idea of good. The hatred of the scribes and Pharisees for this lowly Nazarene, who calmly denounced their selfishness and hypocrisy and made clear by his example what should be the life of a truly spiritual man, showed itself in the most cruel injustice and persecution. Probably the average mortal is now more tolerant and kindly disposed than were those of Jesus' day. A man who strives to keep the golden rule is no longer so unique in his attitude toward life as to stir up any violent display of animosity; but the same old error, which seen in its worst form would be abhorred, is admitted in the form of petty jealousies, gossip, grudging commendation of others' good, repining, heartburning, rivalry, and a host of other seemingly little foxes which steal away peace and harmony among friends and associates.

If all Christians were truly studying to show themselves approved unto God, were sincerely working for the unfoldment of good, they would rejoice in every step of progress made, whether or not they had any share in the glory. The successes of others would be cause for rejoicing and an incentive to keep on trying. The fact that some have proved through Christian Science the unreality of sickness and sin, is a glad promise that all men will in time shake off the limitations that bind them and find the freedom of the sons of God.

Until human nature is entirely regenerated, however, all need some protection against the attacks of envy, lest they unwittingly direct it against another, thus doing him a great injustice, and also lest they allow the petty jealousies of others to disturb their tranquillity and arouse resentment. Modesty and humility are a sure protection against this foe; meekness, contentment, and gratitude lift one above the clouds. It is easy enough to see how the belief in a limited material supply might cause envy, for each would have to profit at the expense of another; but surely when it is seen that the spiritual possessions of love, joy, peace, and kindliness are universal, and the more one has the more there is for all, there should be no room for rivalry or ill-feeling.

There is a positive as well as the usually accepted negative side to the oft-quoted Bible verse, "With what measure ye mete, it shall be measured to you again." While it is undoubtedly true that evil brings its own punishment, this saying may be read rather as a promise than as a threat. With what measure of love, what measure of forgiveness, of kindness, of helpfulness, of glad rejoicing at the progress and success of others, ye mete, it shall be measured to you again, "good measure, pressed down, and shaken together, and running over." Love for one another was the sign by which Jesus' disciples were to be known. Surely no personal grievance should ever loom large enough to hide from us our most precious possession, love for God and man.

DOING THE NEXT THING.

JOSEPH B. BAKER.

THE next thing is all that we have to do. In every juncture we can always find and take the very next step, though it may be a short one. It is enough to give attention to the things of the present, which is ours for right thinking and right doing. We do not have either to review the past or to go into the future; such unprofitable thoughts are not legitimate burdens upon man. If we practically acknowledge God's ever-presence, we shall put off such mortal bondage, and then find that the resources which we already know to be ours are ample to deal with the lessened problem. Doing the next thing with the whole heart, free from shadows of the past and fears for the future, is concentration and consecration; it is being alive in that consciousness of good which is life eternal. He who has thus freed and purified his thought is equipped to win in the race. He is minding his business by welcoming each instant the messengers of God, "God's thoughts," which our Leader teaches us "are perfect and eternal, are substance and Life" (Science and Health, p. 286); and is watchfully and obediently entertaining them in consciousness.

Doing the next thing opens the way. There is only one step to be taken at a time, and he who with clear vision purged of self examines every thought to determine whether it be from God, can take this next step, setting foot on firm ground, whither divine Truth bids him come, though to mortal sense—pride, prejudice, convention, tradition—it may seem but yielding water. One step taken, he is ready for further guidance, and strong to follow it.

Let us not despise the little steps, for each one, taken cheerfully and promptly, constitutes that moment's obedience to our Father. Taken in the forward direction, it makes for progress, and it places us in continual readiness to do His will, because it advances us just to the point where He would find us. Each step, taken in loving understanding of divine guidance, excluding all intimations that would turn us aside, leads us by the law of Love to opportunities of service and to means of fulfilling them, to the possession of those things which it hath not "entered into the heart of man" to conceive.

"THE DAY OF SALVATION."

FLORIA A. MOCATTA.

GREAT truths reveal themselves gradually to human consciousness. They are at first but dimly discerned, yet sometimes, like a meteor flashing through the summer sky, an illuminating idea will suddenly light up the somberness of material conception and a clearer vision is won. In this more vivid understanding of Truth, familiar words of the Bible unfold their fuller meaning, and it is this quickened thought which gives the students of Christian Science such vantage in their study of the Word.

One of the best known utterances of St. Paul is his declaration "Behold, now is the day of salvation." The spontaneity and incisiveness of the words stir apathetic human sense to more positive conclusions and destroy the dreamy abstraction of languid mentality. Thought is diverted from the misleading "some day" which snares the unwary into somnolence, and is impelled toward the source of true illumination and progress, beholding the everlasting "now" as the only field of spiritual action. Filled with this higher sense, time limitations are gradually removed. Haste and hurry disappear, because they are the progeny of fear and unwarranted anticipations.

The perpetual discontent and discord which human consciousness engenders, is the outcome of mortal man's belief in those limitations which he has labeled days and years. Whenever men recognize and discard these barriers, then that broader horizon opens out which was upheld by Paul as infinite actuality. The apostle does not say, You will have to work through a great deal before you come out on the other side, or You will see clearly some time or other, and kindred phrases. He says, "now"—this, the only period known to omnipresent Mind—is when you can be saved. You can be safe at this very minute from the attacks of evil through the understanding of divine Truth.

Procrastination and its crew of well-disguised relatives have no place in the divine activity. These crowd the winding paths of aimless endeavor, and waylay the weary, beckoning them into by-paths which lead to the jungle of despair. If, however, we are able to perceive something of what Paul saw when he made his remarkably bold assertion, we shall not wander in the maze of mortal experience, we shall avoid the complications of mortal ways and means, because we shall know their futility and nothingness. Worry-filled days and hours are often spent in needless contemplation of possibilities which may never occur. The "ifs" of an endless alternative appear and disappear in some imperfect program, prepared by human hopes and fears.

Christian Science declares that we need not look back regretfully on that which might have been. Omnipresence fills all space, and the eternal "now" is that measureless period which holds the hidden wisdom of the world, the hope of all the ages, within the boundless range of infinite, all-knowing Mind; and so we learn that salvation means freedom,—freedom from fear, sin, and sickness, through the perception of "the glorious liberty of the children of God," through that unity with Love, that close compact with divine Principle which leaves no channel open into which error can intrude itself. "Now," Mrs. Eddy tells us, "is the time in which to experience that salvation in spirit and in life. Now is the time for so-called material pains and material pleasures to pass away, for both are unreal, because impossible in Science" (Science and Health, p. 39).

This brings a realization of salvation, of the safety which the psalmist describes as an abiding "under the shadow of the Almighty." Here is no sense of separation, no crying out for loved ones across earth's wilderness, because we meet and understand now and always in God's own kingdom. Here is no waning of Love's golden light, for the ever-presence dispels all earth-glooms; there is no more sighing, and no more pain, for the clouds of sense have rolled away, and Paul's inspiring vision has become our own.

INTERPRETING THE MATERIAL.

GRACE SQUIRES.

THE interpretation of material terms to serve a spiritual rendering is the first step for the would-be Scientist, since Christian Science in common with physical sciences has its own nomenclature which must be understood. To proceed without this understanding to the point of demonstration, is like attempting to square the hypotenuse of a right-angled triangle without knowing what the angle or the hypotenuse is. The understanding of spiritual terms or truths is not attained as so-called human knowledge is attained; it is the result of that new birth Jesus commended to Nicodemus. As Mrs. Eddy says, "The spiritual sense of truth must be gained before Truth can be understood" (Science and Health, p. 272).

No one term in Christian Science may be said to be more important than another, but certain terms seem more difficult of apprehension, and in the experience of many, "substance" seems to be one of them. To the average mentality, substance stands for that which is tangible and ponderous, that which may be grasped, felt, and weighed. To leave this material or matter base for a mental base is likely to trip one. We do not understand the substance of mental phenomena, do not see that the human mind misinterprets God's spiritual thought, while objectifying its own, seemingly, in a false concept of substance; that is, in a physical or material universe.

In Science and Health (p. 301) Mrs. Eddy writes: "Few persons comprehend what Christian Science means by the word *reflection*. To himself, mortal and material man seems to be substance, but his sense of substance involves error and therefore is material, temporal. On the other hand, the immortal, spiritual man is really substantial, and reflects the eternal substance, or Spirit. . . . This reflection seems to mortal sense transcendental, because the spiritual man's substantiality transcends mortal vision." In answer to the question, "What is substance?" she says, "Substance is that which is eternal and incapable of discord and decay. Truth, Life, and Love are substance." "God's thoughts . . . are substance" (pp. 468, 286).

In trying to gain an immaterial sense of substance, perhaps the most helpful illustration may be found in a simple mathematical fact, such as twice two equals four. This is certainly not material, though it is as certainly substantial, that is, derived from basic law. It is eternal, and incapable of discord and decay. It is true, and lastly and most profound, it is thought. No one ever complained of the transcendentalism of this fact, but when we further say that a tree, a man, the universe, is thought, then the false sense of substance asserts itself and disturbs us. The understanding of God as intelligence, or Mind, which is practically universal, admits of no other manifestation than a thought universe; and when this mental nature of substance is apprehended even as is a simple mathematical fact, then the spiritual sense of substance is awakened. Man, as the image or idea of God, is mentally conceived and brought forth. He exists in divine Mind, and nowhere else. There can be no more matter to him than to a multiple of two, and yet he is eternal, perfect, and not subject to decay or death. The actuality and reality of the spiritual universe express the activity of Mind, which includes within itself both noumenon and phenomena. Like a stereopticon, which objectifies or projects the causative image within itself, so the real thought universe is Mind's own selfhood or expression; it grounds that truth of man's unity with God, which is affirmed in the words of Christ Jesus, "I and my Father are one," for Mind and thought are one.

The discernment of the real or spiritual universe as perfect thought, embraced by the Mind conceiving it, leaves no support for an opposing universe of matter expressed in sin, sickness, and death. They (sin, sickness, and death)

Digitized by Google

may be said to be thoughts without a mind, a self-evident impossibility. The destruction of this trio of the world's tribulation is not, therefore, the destruction of substance or reality; it is simply the replacement of erroneous thought with true thought. Let the metaphysician see clearly the mental nature of the phenomena before him, and the healing is no more difficult to account for than the mental relinquishment of any false concept. The belief of a flat earth has been replaced in the world-thought by the scientific understanding of its rotundity, and no one now asks what has become of the flat earth. But the human mind does ask how existent and visible disease can be destroyed, not understanding that disease is no more existent and visible than is the flat earth. Let one see the mental nature of all phenomena, and in time he will learn to discriminate between false suppositions and the truth.

The spiritual universe expresses the perfect thought of God, and is shaped and sustained by the Mind conceiving it. This universe constitutes reality. Mind is the good fountain which does not send forth bitter waters, but the living water of perfect thought which Christ commended as appeasing all thirst. Spiritual thought alone is the basis of reality, and it is not subject to or mastered by so-called mortal thought, breathing sin, sickness, and death. The spiritual and perfect man is no more touched by these false concepts than was the earth's form by ignorant beliefs respecting it. In Science and Health (p. 369) Mrs. Eddy writes, "In proportion as matter loses to human sense all entity as man, in that proportion does man become its master." That is, as the mental nature of all phenomena, whether illusive or real, is grasped, the next step, the perception of either its falsity or truth, is easy of compass. The mental exchange of error for truth does not confound one, but the physical metamorphosis of a flat earth into a round one, or the physical metamorphosis of sickness to health, certainly seems to confound many.

Clearly perceiving that a mental process is the explanation of all healing, a process which necessarily involves the understanding of the true nature of substance, the disciple turns to the life of the Master with a comprehension and a spirit of emulation never felt before. His unparalleled works become natural, hence possible: they are the Horeb height for each humble follower reverently to climb. Perceiving an imperative injunction in his words, "The works that I do shall he do also," he turns from the flesh-pots of material belief and compasses with patient labor the works of Spirit, thus establishing that spiritual consciousness which ultimates in a new birth, his entry upon life eternal.

THE SINGLE EYE.

ADA JANE MILLER.

In the Sermon on the Mount Christ Jesus said: "The light of the body is the eye: if therefore thine eye be single, thy whole body shall be full of light." Spiritual light is the natural illuminator of consciousness, and it is possible to dwell in constant light. We may have periods of darkness, or continuous darkness, which we may attempt to efface by means of various humanly conceived devices or philosophies; but these, being of mortal conception, are dependent upon the ever-varying conditions of environment. Spiritual light has no varying quality; any variation that it may seem to have is due to but one cause,—a wavering thought, an eye that is not single. No obstruction of this light is so dense as a selfish or sensual thought. When the eye is turned inward, it looks into darkness, vacuity; not a ray of light illumines consciousness, and in this darkness is conceived all that prevents the world from having a present realization of peace, harmony, heaven.

This darkness in individual consciousness has been multiplied and multiplied until we have a world to be saved from the darkness of error. The Saviour, or Christ, is the coming to the individual consciousness of a light which reveals the true relation of God and man; which reveals the futility of human devices for illuminating thought, no matter how time-honored they may be; which reveals the unsatisfying quality of all that materiality gives,—unsatisfying, because without real substance.

Sometimes this spiritual light floods consciousness. This occurs when there is a complete turning from the material to the spiritual through the understanding gained in Christian Science, and it is usually expressed in healing, for, as Mrs. Eddy tells us (Science and Health, p. 503), "God, Spirit, dwelling in infinite light and harmony from which emanates the true idea, is never reflected by aught but the good." Again, this light comes as comes the day: first the morning star, then the strange stillness of the dawn, and then—day! Whether the light comes in a flood, as when a sleeper awakens to find his room sunlit, or whether it comes as comes the star, the dawn, and then the day, it can be kept, lived in continuously, only as we discern that our sense of its permanence depends entirely upon our faithfulness to the truth. When shadows fall, when darkness comes, we are apt to think that the obstructions are due to the fact that others are standing in our light; but in truth these shadows are usually from within, and as we multiply them our darkness increases.

If we would dwell in the light, we have only to keep our eye single; and this is not difficult when we realize that nothing but wrong thought can separate us from God and from the light and joy, the strength and power, that are ours by reflection. In proportion as we bring every thought into captivity to Christ, as we keep our eye single, as we learn to demonstrate daily that in which we say we believe,—the omnipresence, the omniscience of God,—in that proportion is our whole body full of light.

REASON FOR REJOICING.

WILLIAM O. FREEMAN.

To rejoice always may seem difficult to one struggling under the weight of some problem in human affairs which he has not been able to solve, while discouragement is the most prevalent thought. The writer had battled for some time with a sense of discouragement, for which he seemed to have cause. Weeks became months, and no change; but one day, while thinking the matter over with a great deal of self-love and self-pity, the thought came, What is it that is discouraged; is it God? The answer was No. Then came the demand of Science, Is it God's image or likeness, man? The answer was again No. Then what is it that is discouraged? Scientific deduction showed that if there was anything which was discouraged, it must be God's unlikeness, the devil, the lie. It followed that if the devil was discouraged, there must be a reason for it. So long as one is serving error, the devil, mortal mind is very well satisfied with us and is not discouraged; but when we break faith with error and turn our back upon it, then is when it says, "I am discouraged."

Christ Jesus said, "Ye shall know the truth, and the truth shall make you free." And the truth is that God knows! There can therefore be no discouragement, and His image and likeness, man, is never discouraged,—never was and never will be. This is surely cause for rejoicing! A study of the Scriptures in the light of "Science and Health with Key to the Scriptures" by Mrs. Eddy, makes it possible to work out every problem which confronts us. On page 258 she writes, "God expresses in man the infinite idea forever developing itself, broadening and rising higher and higher from a boundless basis. Mind manifests all that exists in the infinitude of Truth." As we come to understand more of this divine Mind, it will be clearly seen that there is never any cause for discouragement, and that the remedy for its asserted presence is a fuller realization of the truth of being.

SELECTED ARTICLES.

[David Anderson in *The Reporter*, Box Hill, Australia.]

A Melbourne daily recently gave, in an extract from the London *Daily News*, certain views of ritualism by a well-known London writer covering lines outside the usual connotation of the term, and in the course of which he says: "It is notorious, of course, that the Christian Scientists would cure all sickness by proclaiming that there is none to cure," a position which, he justly claims, would be as false as that the social problem can be solved by saying that it is solving itself. Why this should have been asserted as a statement "of course," is not clear; but a distinctly notorious fact in connection with Christian Science is that a majority of its aggressive critics manifest complete lack of knowledge of its teachings, as well as a willingness to accept and argue from the opinions of others who know as little, and who have made as little effort to know, about the subject as themselves. Proceeding in the statement of his views, the London essayist says, "You do not sympathize with the sick man at all if you do not sympathize with the reality of his sickness;" and although he does not specially associate sympathy with Christian Science, its attitude is always one of sympathy with the one in bondage to the belief of sin, though never with the sin; also with the sick, though never with sickness. In both cases its sympathy is intensely practical, for its teachings show demonstrably how freedom from these abnormal conditions is to be obtained.

Christian Science denies to evil that reality which it attributes only to the God-created and eternal, and it refuses to regard evil as an entity or as possessing power to bring sin or sickness to the children of God, made in God's image and likeness. The overcoming of sin and sickness constitutes the *raison d'être* of Christian Science, and it nowhere teaches that they are to be ignored or overlooked. Its text-book, "Science and Health with Key to the Scriptures," shows how these temporary and evil conditions are to be destroyed by the power of God, the supremacy of Spirit over the flesh, and in it we read that Christians "must grapple with sin in themselves and in others, and continue this warfare until they have finished their course" (p. 29). If the opponents of Christian Science would cease denouncing and posing as authorities on that which their utterances prove they have made no sincere attempt to understand, and would devote a corresponding effort to furnish a more practical and satisfying religion to their weary, sick, and heart-sore fellow men, commensurate benefit would accrue to themselves and to the world at large. But until they can show that the world is worse because of Christian Science, or that its teaching has been other than beneficial in result, they will strive in vain to check its progress; and if this Kensingtonian mentor, instead of adhering to his expressed resolution of keeping one eye open, will open both eyes wide and use them, he will readily find abundant evidence to show why Christian Science should not be included in the "new creeds and cures" which he declares are blind to chaos and error.

[John W. Doorly in *Blackpool* (England) *Gazette News*.]

Christian Science certainly does teach that to the Mind which was in Christ Jesus, sin was an illusion, as our Saviour himself described it when he declared, "Your father the devil, . . . abode not in the truth, because there is no truth in him;" but Christian Science also declares that the sinner makes a reality of sin, and nowhere in her teaching does Mrs. Eddy state that sin is not a reality as far as mortals are concerned. In fact, she declares in "Science and Health with Key to the Scriptures" (p. 203), that "sin kills the sinner and will continue to kill him so long as he sins." Of our critic's other remarks, there is only one that need be noticed, and that is his statement that Christian Science is akin to theosophy, spiritualism, etc. Theosophy and spiritualism are just about as much like Christian Science as our critic's own statements are like the truth about Christian Science, and that is, that they have absolutely nothing in common with it. Christian Science teaches the ever-presence of that one Mind or cause which men call God, and which is the same today, yesterday, and forever, and the utter falsity of any other so-called mind. Both theosophy and spiritualism teach and believe in different states and stages of this so-called mind, and deal purely in the action of the human mind. They are, therefore, direct opposites.

Today, the Christian Science movement is spreading over the whole world in a way that no other religion has ever done, calling on men and women to recognize the reality and permanence of spiritual things, and the utter falsity of so-called material conditions. It is everywhere healing the sick and reforming the sinner, in pursuance of Christ Jesus' direct commands and in demonstration of his teachings. It is showing mankind clearly that as there is but one cause, and that infinite good, there can be but one effect, and the effect must be like its cause, spiritual and perfect; and that the material sense of being is simply a false sense of being, which can be corrected through the understanding of that one cause and its effect, or what our Saviour termed "the truth." It is revealing that ever-present law "of the Spirit of life," which makes "free from the law of sin and death," and is teaching men to love and to appreciate as they never did before the teachings of the Bible. In fact, it is showing them that their salvation from every form of evil depends not on human theories, but on a correct understanding of the Bible. Its adherents are drawn from every walk of life and from every profession. It comes preaching the power and availability of good to deliver from every form of evil.

The attacks made upon this teaching have no power to interfere with this gospel; in fact, they compel honest people to find out what Christian Science really is. The Christian Science movement establishes an average of one hundred new churches in a year. If the critical brother will do as the Christian Science church is doing, that is, leave other people's religions alone, and try to save humanity by proving that true religion heals the sick and the sinning now, even as it did nineteen hundred years ago, he will be able to help his church.

[Thomas F. Watson in *The Stockton* (Cal.) *Mail*.]

The Bible teaches that a fountain cannot send forth sweet water and bitter, and Jesus the Christ said, "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit;" therefore the critic's statements in a recent issue of the Stockton *Letter* are inconsistent, for he condemns Christian Science as "illogical, ridiculous, absurd," etc., and yet he admits that he has "known persons to be cured of nervous disorders, and of selfishness, meanness, and unamiability by this very creed." A religion which proves its faith by its works, as Christian Science does, is a practical religion, and the world needs such, for it is tired of theories and human opinions, and is beginning to look for the "signs" which were to follow "them that believe." The great Teacher said, "Wherefore by their fruits ye shall know them;" then let Christian Science be judged by its fruits, namely, the healing of sin, sickness, disease, and all manner of evil.

Our critic greatly errs in supposing that Christian Science sprang from the human brain, or that Mrs. Eddy "constructed" it. Christian Science is the law of God, and originated in the infinite Mind, or God, and is to be found in His Word. Mrs. Eddy discovered it, but never claimed to have originated it, just as Newton discovered, but did not originate, the law of gravitation. It is a well-known fact, and acknowledged by hundreds of thousands who are not Christian Scientists, that Mrs. Eddy was in every sense a gentlewoman of the highest type, educated and refined, and acknowledged to be one of the foremost women of her age.

[Robert S. Ross in *The Auburn* (N. Y.) *Citizen.*]

I have no desire to trespass upon the work of the regularly appointed and authorized committee on publication of the Christian Science movement in New York state; nevertheless, as a former Auburnian visiting in your city, a former member of the *Citizen* staff, and as a beneficiary of the healing and regenerative power of Christian Science, I humbly ask for space enough in your paper to answer the recent attacks made by a clergyman and another critic upon Christian Science and its Discoverer and Founder, Mrs. Eddy. This task becomes particularly pleasing to me because of the fact that Christian Science came into my life at a time when I was sorely in need of help physically and morally. There are hundreds of my Auburn friends and acquaintances who will testify to the fact that since Christian Science came to me I have been a better man and a more useful citizen.

One of our critics is the pastor of a local church. In order the better to illustrate what I have to say, I ask him to let his thoughts wander back to those days when the meek Nazarene prophet trod the hills of Galilee and the valleys of Judea; to go back to Bethlehem, to Jerusalem, to Gethsemane, and to Calvary; also to go over the various events in the life of the Founder of Christianity—follow and study them. I ask him to consider the appearing to humanity of a higher order of worship, of the Messiah or Christ, whose teachings, it was prophesied, would overthrow the false teachings of entrenched religious and ethical systems of that day; also how Herod caused every male child in Bethlehem and the coasts thereof to be killed in the hope that prophecy might not be fulfilled and that Jesus and his troublesome truth might be among those slain. I ask him to consider the occultism of those days practised under various names; the charge brought against Jesus by the then religious leaders, namely, that he cast out devils by Beelzebub, the prince of devils, when he healed the sick, reformed the sinning, cleansed the lepers, raised the dead, assuring his followers that they and others throughout all time should be able to prove their discipleship only by repeating his works. Jesus said that we should know them by their works, and by their works alone. Referring to his marvelous demonstrations of the power of God, a God whom the faithful John defined as Love, Jesus said: "These signs shall follow them that believe [understand my teachings]; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

I ask this clergyman to consider how Jesus, the God-appointed, whom Mrs. Eddy in "Science and Health with Key to the Scriptures" describes as the best and most scientific man that ever trod the globe, was stoned, spat upon, tortured, and finally crucified, surely not because he was a bad man, but because his teachings were so pure and so far above the standards of his day that they caused sensualists to hate him. They said, Crucify him, because he maketh himself the son of God! Let our critic contemplate the experiences of Paul and his fellow apostles, whose followers for three hundred years performed many mighty works of Christian healing. Gibbon relates in his history of the Roman empire that the raising of the dead was a common occurrence among the early Christians, but that these works ceased in the third century.

I would also ask the clergyman to consider the time when pagan Rome usurped the power of primitive Christianity and so corrupted it that the healing element was wholly lost in gross materialism; and the spiritual barrenness of the centuries that followed, with here and there a ray of light bursting in upon the dungeonlike darkness. Let him consider all the foregoing,—the trials, the tribulations, and the persecutions of the righteous at the hand of the unrighteous,—and review the progress of religious reform from Bethlehem to Boston, and then ask himself what difference there is between the intolerance of the first and of the twentieth centuries. Is there any? Ah, no! The resistance to truth of popular systems of theology and medicine are much the same in every age. Christians have persecuted Christians; they who have endured the lash have in turn laid it on those who came after them, usually excusing their acts by arguing that they were doing it in the name of God in order to rid the world of heretics.

But thanks be to God and thanks to Mrs. Eddy, His messenger to this age, the voice of Truth is again being heard above the tumult and strife of error and old night, proclaiming the reappearing of the Science of Christ, a Science whereby religion shall become Christlike, turning our guns and swords into plowshares and pruning-hooks, and causing men actually to love their neighbors as themselves. Mrs. Eddy did not compile the Bible. She cannot be blamed for the demands it makes upon mortals for proofs rather than professions of Christian living; but she is responsible for the teaching that the Christianity of the Bible consists not of words, but of works, and that one is a Christian only to the degree that he emulates the works of Jesus. While Christian Scientists do not pretend to have attained to the understanding of God possessed by Jesus, nevertheless they realize that the responsibility of fulfilling all his commands must be shouldered instead of shirked. The first step must be taken before the second can be taken. Christian Science is not endeavoring to add anything to Christianity; it is merely restoring to us that element which has been lost since about the year 300.

If our critic believes that Christian Science is a system of mere "mind cure," a counterfeit of the real, and something that has been in use by reputable physicians for centuries, I presume that he, as a minister of the gospel, must have the original of the counterfeit. This being the case, why not apply it to scores of sufferers whom he doubtless knows in his immediate circle of acquaintances, perhaps in his own congregation? Many, we judge, who would refuse to be ministered unto by a Christian Science practitioner, would be glad to be helped by the clergyman's method. If he knows how to do the healing work as Jesus did it, yet fails to put it into practise, it would seem to indicate that he is remiss in his duty toward his fellow beings. Surely it is our Christian duty to help our fellow men in sickness as well as in sorrow and sin, when they are willing to be helped. But until the time comes when our critic can demonstrate his ability to approximate by his assertedly real methods what is being accomplished by what he calls the counterfeit method of Christian Science, it would be well for him not to throw missiles.

Our critic accuses Christian Scientists of cruelly neglecting little children who need medical attention. Permit me to call our reverend friend's attention to the fact that in the city of New York, where there are several hundred Christian Science practitioners, with more demands upon them than they can attend to, only one child passed away in a whole year under Christian Science treatment, while more than ten thousand children passed away in that city during the same period under *materia medica.* I know of cases right here in Auburn where children given up by physicians have been saved through Christian Science treatment. If our critics will take the time to investigate, they will find that Christian Science children are usually healthy and happy, and that Christian Science is the only physician in the families of which they are members. I make these statements with all due respect for the medical fraternity, among which are many noble men and women. Suffice it to say, there is no form of sin or disease which has not yielded to Christian Science treatment. Here in Auburn may be found scores of living monuments to its healing efficacy. Indeed, what else can account for the marvelous growth of the Christian Science movement when on all sides

Digitized by Google

we hear complaints about lack of interest in things spiritual? Christian Science is proving that the Christianity of the world changes with every generation, but that the Christianity of Jesus has never changed. Says Isaiah, "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee. For, behold, the darkness shall cover the earth, and gross darkness the people: but the Lord shall arise upon thee, and his glory shall be seen upon thee."

Christian Scientists endeavor to practise what they preach. They attack no other system of religion or medicine. They soon learn that the sole duty of a man is to correct himself, and that if he does this thoroughly, he will have no time to give to correcting others. Christian Scientists as a rule mind their own business and bear their own burdens. All they ask is that others do likewise.

[John L. Rendall in *Fairfield* (Iowa) *Republican.*]

Statements in a recent issue are so extremely unjust in their implications as to require correction. These statements are as follows: "If Christian Science would only sail under its own colors and pose as Hindu philosophy, it would not be so objectionable." "I wonder if the wish is father to the thought in the denial of the fact of sin and of the hell to which it leads."

In the first place, there is nothing in the text-book of Christian Science which in any way justifies the assumption that its teachings are akin to Hindu philosophy. On the contrary, there is everything in its teachings to convince any person of unbiased thought that it is essentially Christian. This fact is emphasized in the experiences of those who have to some extent proved the practical value of its teachings. They know positively that they have been healed of various manifestations of discord or disease, and that their whole lives have been made better because of the application of these teachings.

In the second place, no Christian Scientist denies that mortal man is a sinner, neither does he deny that the false sense makes its own hell; but Christian Science does deny, and in its denial it has Scriptural authority, that either sin or hell is any part of that which is the creation of God, who is infinite Love, or any part of eternity. Sin and hell being conditions of thought, they are destroyed or nullified and made of none effect through perfect and right conditions of thought. If the Bible does not teach this, then it teaches nothing of a positive nature.

Christian Science, like all other teachings which affect the welfare of humanity, must be judged by its results, not by some one's opinion of it, especially when such opinion is based upon misunderstanding and misconception of its objects and purpose. The fact that Christian Science has brought peace, joy, comfort, health, and harmony into thousands of lives, and is constantly doing so, is its sufficient justification.

[Frank Bell in *The Journal*, Peckville, Pa.]

A Christian Scientist is not one "who deliberately chooses to die without medical care." Christian Scientists share the common desire of humanity for long life and good health. In the case under discussion the person referred to did not elect to die, but instead sought the method of treatment which in his opinion was most likely to heal him. No question of the law as to whether a man's life is his own was involved in this case, because good law and good sense alike acknowledge the right of a sick man to seek relief in the best means of which he is aware.

The mistaken conclusion in this instance seems to proceed from the assumption that one who eschews medical treatment for Christian Science is thereby dispensing with all means of relief. Such an idea could be entertained only in disregard of abundant and unanswerable evidence that Christian Science treatment really does something for the sick, and does it as a rule most effectively and satisfactorily, in accordance with a well-defined and proved method. Its occasional failure should be considered in the light of the fact that its great growth has been founded on the preponderance of its successes.

The advocates of medical treatment for the sick are not of one mind on any important phase of the healing work. In no profession, except possibly theology, are there more widely divergent views as to fundamentals. Experimentation is no less a feature of medical practise today than it has been for some thousands of years. If therefore the law were to undertake to require medical treatment for the sick, it could not consistently refrain from designating the particular kind or kinds of medical treatment to be employed. We can fancy the interesting time a legislature would have in trying to frame such a law.

If it were right for the majority who now believe in medical treatment to force drugs on those who wish to be treated by Christian Science, it would be right for Christian Scientists when they become the majority to force their treatment on those who are still, to paraphrase our critic, "obsessed with the idea that life and health are dependent on inanimate drugs." Either proposition is abhorrent to a proper sense of individual liberty, but one is not more so than the other.

The Christian Scientist's preference for his method of treatment is the result of no fanatical prejudices, but is the logical outcome of his observations of the efficacy of Christian Science methods and others. Most Christian Scientists of today were once adherents of the drugging system, and they would be so still if they had not discovered a better system. Those who fail to see anything in the Christian Science method of treatment are usually those who have not given it a fair trial. But the character and extent of the Christian Science following has now become such as to demand for it the respectful consideration to which it is entitled by its manifold good works.

[Ezra W. Palmer in *The Pueblo* (Col.) *Chieftain.*]

An evangelist at one of the city churches thinks it is an evidence of "instability" for persons to accept Christian Science. Evidently the gentleman spoke from little personal knowledge of Christian Scientists or he would not entertain such an erroneous view. To denounce the religious views of others who differ from them has been a favorite method with disputatious theologians from time immemorial; but these verbal volleys have accomplished little of value, and their weakness is clearly apparent when measured by the life and work of Christ Jesus, who brushed aside theological dogmas and boldly declared that the test of a man's knowledge of God was results, and these results were to be manifested in healing the sick and reforming the sinner. Christian Scientists accept Jesus' standard of judgment, and through their teaching the divine method of healing the sick and the sinning is again reinstated, as in the time of primitive Christianity. It is furthermore evident that those who refuse to obey the command of Jesus to "heal the sick" can more rightly be charged with "instability" than Christian Scientists who strive to follow all the commands of the Master.

This critic further charges that Christian Science "binds the brains," whatever that may mean. If by this remark he means that Christian Science hinders the genuine intellectual and spiritual development of its students, he is greatly mistaken, since it has no such effect. An organization which has spread all over the civilized world in the short space of forty years, has built beautiful churches in our great cities, publishes a great metropolitan daily newspaper, and numbers among its adherents many eminent men and women in all walks of life, can hardly with sincerity be accused of mental stagnation.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

WHO SHALL DECIDE?

IN the *Spokesman-Review* (Spokane, Wash.) of June 26, there appears the account of the death of an eight-year-old boy as the immediate result of an operation performed on him for the removal of the tonsils, which had become enlarged. The newspaper report did not in any wise hint at lack of skill on the part of the surgeon, or of those who assisted him in the operation. It simply chronicled the facts, among which was information to the effect that the surgeon had performed the same operation several thousand times, and this was the first death that had resulted. Of this particular case the surgeon said, "The little fellow had always been well, and we had no reason to believe that the operation would result this way." On July 3 there appeared in the same paper a letter from another physician, inferentially at least of equal standing in his profession, who in commenting on this case stated that "cutting away the tonsils that are abnormally enlarged only mitigates (makes milder) the effect, and in no way removes the cause that produces the effect."

Evidently this is a case where "doctors disagree" as to what is the proper treatment to be administered for this ailment, and we need not attempt to decide between them, as it is not for this purpose, nor with the intention of condemnation, that we have referred to the incident. We desire simply to call attention to the fact that here was a case in which the doctors do not agree as to the merits of the form of treatment adopted, nor even as to its necessity. Nevertheless, although the direct result of the operation was fatal, it made no sensational copy for the reporter, because there was no coroner's inquest, no arrest, nor even a public protest, except that another physician gently and courteously stated in effect that he did not believe in a resort to the knife in such cases. In view of all this, may we not with entire propriety ask what would have happened had this boy been under Christian Science treatment at the time of his death. Is it not true that the only reason that such cases pass without more than casual comment is, as Mrs. Eddy long since pointed out, that "the schools have rendered faith in drugs the fashion, rather than faith in Deity. By trusting matter to destroy its own discord, health and harmony have been sacrificed" (Science and Health, p. 146). Would the explanation given by the doctor have been so readily accepted had it been offered by a Christian Science practitioner?

The apostle Peter said, "Be ready always to give an answer to every man that asketh you a reason of the hope that is in you," and Christian Scientists have ample warrant for the faith which is in them in the example of Christ Jesus, who neither administered drugs nor resorted to surgery for the marvelous cures which he performed; and in following his example they are not only within their rights as men and citizens, but also upon a much safer basis than are those who depend upon drugs or the knife. The parents of this boy pursued the course they believed best adapted to give him relief. Suppose, on the opinion of this other reputable physician that the operation was unnecessary, they had been deemed accessories to the child's death and the horror and anguish of an arrest and trial had been added to their grief: would not public sentiment have promptly acquitted them of being actuated by any other than the best of motives in subjecting their child to an operation?

It goes without saying that Christian Science parents are equally anxious for the welfare of their children, and when illness manifests itself the child is given the treatment which the parents have proved in previous experiences to be effective, even after *materia medica* has pronounced the case hopeless. Have they not an equal right to decide what is for their child's welfare, and why should a physician's statement that he believed a mistake had been made in the treatment (the child being presumably unnecessarily sacrificed) be ignored, as it was in this instance, and, as has happened more than once in cases of Christian Science treatment, be accepted as sufficient evidence to warrant an arrest, trial, and sentence in another? Where are our much-vaunted rights to "life, liberty, and the pursuit of happiness," in the presence of such unjust discrimination?

These are pertinent questions, and the Discoverer and Founder of Christian Science gives an equally pertinent answer to some of the objections urged against the practise of this teaching when she writes on page 342 of Science and Health: "If Christian Scientists were teaching or practising pharmacy or obstetrics according to the common theories, no denunciations would follow them, even if their treatment resulted in the death of a patient. The people are taught in such cases to say, Amen. Shall I then be smitten for healing and for teaching Truth as the Principle of healing, and for proving my word by my deed? James said, 'Show me thy faith without thy works, and I will show thee my faith by my works.' "

ARCHIBALD MCLELLAN.

WE MUST TRY TO FLY.

IN the case of their young, as in other things, the robins are governed by that unacquired impulse and ability which we call instinct, but they act very much as the wisdom of experience would impel human parents to act under kindred circumstances. When the time has come for the nestlings to enter upon a self-dependent life, they often exhibit the reserve of a needless fear; it is then that the interested observer notes how they are coaxed or compelled to essay those first little flights which have directly to do with the triumphs of a tireless wing.

This disposition to try has, for the most part, to be cultivated in boys as well as in birds, and the art of the wise parent or teacher resides not only in his discernment of aptitudes and his adjustment of tasks thereto, but in the patient positiveness of his requirement of effort toward the solution of problems which lie beyond the present's perfect mastery. Easy mastery demands technique, and technique in human experience demands capacity plus intelligent and continuous effort, and there is no other way. To act accordingly is the youngster's first need, and it is ours as well. Says our Leader, "The longing to be better and holier, expressed in daily watchfulness and in striving to assimilate more of the divine character, will mold and fashion us anew, until we awake in His likeness" (Science and Health, p. 4).

Christian Science has come not only to shed a great light upon the way of the spiritual life, but to stimulate and educate the practise of its expert performance, and no one can be a true Christian Scientist who is not awake to the fact that sometime he must work out his own problem with God's help alone; that Christ Jesus came not to do our work for us, but to show us how to do it for ourselves; that teachers and practitioners are doing a needed and legitimate work when they help us, upon occasion, to stand and to walk, but that they would hinder rather than help did they not insist that we learn to walk without their aid.

The source and authority of the law of increase which obtains in every field of human experience, is named, and its spiritual compass declared, in the teaching of Christian Science, that "growth is the eternal mandate of Mind" (Science and Health, p. 520). Inactivity always means atrophy, and the twelfth chapter of St. Paul's letter to the Romans, with innumerable other kindred passages, bears

Digitized by Google

witness to the vigor as well as the loving appeal with which the tendency to listlessness among the early Christians was combated by the apostles. The self-depreciation and the love of ease which counsel spiritual inaction, a looking to other persons rather than to God for wisdom and help in every time of need, was manifestly present in the early church, as it is present now to beget an abiding willingness to be fed and cared for by others, and to defer any serious address to the cultivation of the ability of each to demonstrate his own freedom in Christ. The possibility, or even probability, that we may not succeed today in a given struggle for spiritual sovereignty, in no way lessens our duty and obligation to put forth effort to do so. Present delays of success are usually directly related to past delays of endeavor, and "there is none other name under heaven given among men, whereby we must be saved."

Weakness and inefficiency in ten thousand instances is directly traceable to lack of the daring to do, and the impress of every true teacher and practitioner of Christian Science will be found in the student's or patient's growing habit of bravely tackling his own problems, the disposition and the initiative to "undertake" with God. This gives assertion to one's character, consistency to his profession, influence to his utterances, and that steady gain in strength and satisfaction which distinguishes the history of every wakeful and worthy Christian Scientist.

JOHN B. WILLIS.

TRUTH'S CLEANSING POWER.

IN the prophecy of Zechariah we are told of a fountain which was to be opened, or revealed, "for sin and for uncleanness;" and in the book of Proverbs we find a statement which readily relates itself to the first,—"The law of the wise is a fountain of life, to depart from the snares of death." We usually associate a fountain with the satisfying of thirst, rather than with cleansing, and the Scriptures present many such passages, but in that from Zechariah the abundance of the water is at once made apparent, and this recalls the oft-quoted words in Science and Health, "Divine Love always has met and always will meet every human need" (p. 494). It also brings before us the lines in our dear Leader's Communion Hymn, respecting the word of Truth (Christian Science Hymnal, No. 178),—

> Sinner, it calls you—come to this fountain;
> Cleanse the foul senses within;
> 'Tis the Spirit that makes pure,
> That exalts thee, and will cure
> All thy sorrow and sickness and sin.

In spite of much misapprehension on the part of outsiders respecting the question of sin and its overcoming, Christian Science deals with the entire belief of evil in a most radical way, and awakens those who are dreaming of the pleasures of sin, as well as the self-righteous who placidly entertain a false sense of God and man, until they are aroused, either by Science or suffering. The operation of Truth in human consciousness brings about a tremendous quickening, and those who can persist in wrong-doing after it has reached their thought, are indeed "dead in trespasses and sins;" but God, "who is rich in mercy," will, as Paul tells us, awaken even such through the ever-present power of Christ, Truth, until with their whole hearts they cry out for the cleansing fountain. We are assured that God is "not willing any should perish," and so the good work of redemption must go on until nothing remains in human consciousness which is unlike God.

To be "at ease" in sin is impossible to one who has awakened in any degree to the demands of Truth, and the sense of physical dis-ease is often a premonitory symptom that the morning is at hand, that the sleeper must arise and wash in the water which cleanses from all sense of sin and sickness. It is both needless and foolish to remain uncleansed when the fountain has been opened, and divine Science takes away the fear of sin as well as the love of it. It is an unhealthful sense which clings to sin, even as a memory, and it finds rebuke in the faith of the leper who said to our Master, "Lord, if thou wilt, thou canst make me clean." This faith called forth the loving response, "I will," and the cleansing was immediate. Can any doubt the divine power and willingness to do today all that was done by Christ Jesus for the sick and the sinful? It is, however, perfectly clear that something higher than mere belief is needed to realize this, as we think upon the poisoned mental and moral atmosphere of our cities, and recall the Master's words, "Ye will not come to me, that ye might have life"!

Christian Science teaches in a clear and demonstrable way how the mortal sense, the belief of life in matter and separate from God, must be yielded up, and the truth of being—man in God's likeness, spiritual and pure—held to, day and night, as the only real man. Those who refuse to come to Christ in the way of God's appointing are likely to wander, as many do, in "outer darkness" until, as in the case of blind Bartimæus, some one shall say, "Rise; he calleth thee." In some cases the purification must be by fire, as we read in the chapter of Zechariah already quoted; but what of that, if thus we reach the state presented in these words: "I [divine Love] . . . will try them as gold is tried: they shall call on my name, and I will hear them: I will say, It is my people: and they shall say, The Lord is my God."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

OTTAWA, CANADA.—Ground was broken on May 5 for the erection of a new church building in the capital city of the Dominion. The location on Metcalfe street, in the heart of the city, is admitted by all to be one of the best the capital affords. It is only a short distance from the Parliament buildings and is near the Victoria Memorial Museum. The lot has a frontage of 110 feet, a depth of 150 feet, and faces on three streets, namely, Metcalfe, Gilmour, and Lewis, the whole being surrounded by a number of beautiful maple trees. The price paid for the land was $27,500.

The building is to be of Italian classic design, the same treatment being carried throughout the entire structure. The main entrance will be from Metcalfe street. There will also be two entrances from Gilmour street which lead directly to the basement Sunday school hall. The auditorium will be 72 feet wide by 65 feet deep, and it will have a seating capacity for seven hundred and fifty persons. The building is to be completed within the present year. There is great happiness among the members in the prospect of being able to build a church which will more adequately represent Christian Science in the capital of the Dominion.

Correspondence.

LAKEWOOD, OHIO.—Members of Lakewood First Church of Christ, Scientist, are preparing to build a large church at Virginia avenue and Detroit avenue on ground already purchased. The church will have a frontage of 90 feet and a depth of 115 feet, and will stand on a lot 130 by 175 feet. The building will probably be of white enamel brick with terra-cotta trimming and a red tile roof. On each side will be wings with deck roofs. In the basement will be classrooms and a room for the Sunday school seating eight hundred. The church auditorium will be on the first floor and will have a seating capacity for about nine hundred. This church will be the fourth to be erected by the Christian Scientists in Cleveland and its suburbs. Work will start soon, and an effort will be made to have it ready for occupancy by fall.—*Cleveland Plain Dealer.*

THE LECTURES.

MONTGOMERY, ALA.

Judge Edward de Graffenreid, associate judge of the supreme court of Alabama, in introducing William R. Rathvon, who lectured on Christian Science, spoke in part as follows:—

The most valuable collection of books with which we have acquaintance is the Bible, for upon its doctrines rests much that is best in the thought, in the laws, and in the civilization of the age; and the most valuable part of the Bible is the New Testament, for through it all mankind is brought within the covenant made by the Almighty with Abraham. One of the contributors to the New Testament had the right to lay claim to more than ordinary literary distinction, since the book of Luke is the most beautiful book in the world. Its author was a physician and the amanuensis of St. Paul, and he was in all probability the author of the Acts of the Apostles. His works are filled with both divine and human philosophy.

The life which is consecrated to some noble and useful purpose is the best life. Abraham was only a simple shepherd, but his life was consecrated to the service of his God, and the light which in the dawn of the present era of the world's history Abraham kindled upon the hills of Chaldea, grows broader and brighter as the world increases in age. Moses was, according to Biblical teaching, cradled among the bulrushes which grew upon the banks of the Nile, but his life was consecrated, under divine direction, to the service of his people, and the laws of that ancient lawgiver find expression in the statutes of every civilized nation in the world. Jesus was born in a stable and grew to manhood in the home of a carpenter, and yet his consecrated name falls daily from every pious lip and furnishes hope and consolation to every pious soul. Stephen's life was a consecrated one, and while it appears to have made but a passing impression, his martyrdom sank deep into the heart of Saul of Tarsus, who was consenting unto that death, and probably led to his repentance and conversion, thus furnishing, in the person of the apostle Paul, the great Christian logician and theologian of the world.

Few of us know anything of Christian Science, but we all know that there is not, and cannot be, any doctrine that has for its only object the good of mankind which does not deserve a candid consideration. It is this spirit, a spirit of honest, fair-minded investigation, which should dominate us during the lecture of the afternoon.—*Correspondence.*

MARSHFIELD, WIS.

Frank H. Leonard, who lectured on Christian Science, was introduced by Attorney C. B. Edwards in an address in part as follows:—

The profoundest question confronting mankind has been, "What is truth?" Philosophers and theologians have sought the answer in the realm of metaphysics; archeologists have searched in the rocks and fossils of the prehistoric past; scientists have delved deep into the earth and examined every form of physical phenomena with the most accurate microscopes; astronomers have swept the heavens with the most powerful telescopes; men of every class and nation have wrestled from time immemorial with this eternal question; and yet the answer, at least for most of us, is as much in doubt today as when the question was first propounded. Christian Scientists, by the turning of the microscope of Spirit upon the Scriptures, claim to have discovered the answer to this momentous question, and to have found the truth that is to make us free. Whether this be so or not, certain it is that through the teachings and practise of Christian Science, multitudes of people have found what is to them a satisfactory answer. Equally certain is it that many people through Christian Science have found happiness instead of sorrow, health instead of sickness, an abiding faith in God in place of doubt and despair. I shall not attempt to tell you what Christian Science is. Indeed, I could not if I would. Its purpose, if I read it aright, is to bless and uplift mankind; to point a safe and sure way to eternal life; to teach men actually to live, as near as may be, the *life* that Jesus the Christ lived, and thereby, through God's power, banish from earth sin, sickness, and even death itself. Any society or organization which has for its purpose such a grand consummation, certainly is entitled to a fair, full, and free hearing, and the serious consideration of those not converts to its teachings.—*Correspondence.*

MARQUETTE, MICH.

In introducing Judge Clifford P. Smith, who lectured on Christian Science at the opera house, Attorney W. S. Hill spoke in part as follows:—

I want to say frankly that I was pleased when I was asked to introduce the speaker of the evening, because it has been my good fortune to know intimately and well quite a number of ardent and capable Christian Scientists who have tried faithfully to share with me their good cheer, their good tidings. It has been, I sincerely believe, my misfortune that I have not shared therein as fully as they hoped. It would not become me to eulogize one of my own profession merely because he is a member of it; but I can say with all modesty that a lawyer, from the very nature of his business, must study a question in all its bearings and from every angle; and the better the lawyer, the more points of view will he find to study and to choose from. Especially is this true of the lawyer who becomes a judge. That Judge Smith's constituents thrice elected him to the bench is proof that he studied and chose wisely as a lawyer and as a judge. That after nine years upon the bench such a man should choose to resign to take up work in behalf of Christian Science, commands our interest and compels our respect for his views and for his subject.—*Correspondence.*

COLORADO SPRINGS, COL.

The Rev. William P. McKenzie spoke to a large audience at the Princess theater on Christian Science. The lecturer was introduced by Judge John E. Little, who said in part:—

Those of us who have reached the age of maturity have learned that there is a law in force among men, known as the law of compensation, which is as inevitable as the law of gravitation. We have learned that the old saying, "Whatsoever a man soweth, that shall he also reap," is literally true; that good deeds, kind words, pleasant thoughts, and honest conduct mean happiness; while evil deeds, dishonest methods, and pessimistic views of life mean discontent and misery. We have learned that, as a rule, it is not best to strike back; that the ancient doctrine of "an eye for an eye, and a tooth for a tooth" was fundamentally wrong. We understand now that it is "more blessed to give than to receive," and that real success means service.

When we enter a dark room at night, it is useless to fight the darkness. A better way is to strike a light and thus overcome the darkness. This is not a new gospel; it was taught nineteen hundred years ago in Paul's injunction: "Be not overcome of evil, but overcome evil with good." Christian Science teaches that this can be done; that evil thoughts can be overcome by good thoughts and evil deeds by good deeds, and that the works which Jesus did while on earth, and even greater works, can be accomplished by men here and now. In other words, Christian Science takes Christ Jesus at his word.

I am not a Christian Scientist, but I have almost quit

Digitized by Google

using the word impossible. I have seen some wonderful results from this faith, and it is possible that the most extreme claims of Christian Science may yet be fully demonstrated to all the world. The method of teaching adopted by this church is highly commendable. It seeks not to destroy, but to upbuild. It attacks directly no other church or creed, but attempts to demonstrate righteousness to the world, and thereby draw men to it. I believe that right finally prevails, and from the wonderful growth of Christian Science during the last decade, one is forced to the conclusion that it is not founded on error, but embodies a Principle which appeals strongly to the hearts of men and which is revolutionizing the religious thought of the world.

Colorado Springs Gazette.

KEY WEST, FLA.

The remarks of Capt. Percy Willis, C.A.C., U.S.A., in introducing William R. Rathvon, who lectured on Christian Science, were in part as follows:—

It gives me pleasure to welcome you here tonight. I am glad that so many of the good people of Key West are interested in spiritual things. Christian Science is an idealistic religion; at the same time it is intensely practical. It is high above the earth in its conceptions and teachings. It believes, as the Bible teaches, that God is Spirit, and that man is made in His image and likeness, and therefore spiritual. This we understand to be immortal truth. Jesus said to those Jews that believed on him, "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." Free from what? Free from all that is untrue, free from belief in any evil power, free from sin, disease, and death. The Bible says, "Prove all things; hold fast that which is good;" and Christian Science has been fully tested and proven to be efficacious by the spiritual regeneration and physical healing of thousands of happy men and women who today bear joyful testimony to its blessed ministrations. The practical results and tangible proofs of this teaching have been the reason for its remarkable growth and its marvelous spread over all the earth. Jesus said, "By their fruits ye shall know them." Christian Science is quite willing to be thus judged.—*Correspondence.*

PEEKSKILL, N. Y.

An audience of about five hundred gathered in the Colonial theater to listen to a lecture on Christian Science by Virgil O. Strickler. Thomas Nelson, Jr., president of the village of Peekskill, made the introduction as follows:—

I am not a Christian Scientist. I have a number of friends, though, who are, and I want to say that since they have become Christian Scientists, they are much better men and women than they were before they embraced this belief. They are happy and hopeful where formerly they were disconsolate and without hope; their faces radiate goodness; they are optimists where formerly they were pessimists; they are secure in their belief of the future and in the faith that no harm can befall them. Now, any religion which can produce such changes—where formerly there was darkness and misery and now there is light and joy—we can emphatically declare is a good religion; and it certainly must appeal to all of us who do not take pleasure in melancholy.

I can remember listening in my boyhood days to some of the old-time sermons so much in vogue forty years ago, when the minister preached, not love, not hope, but fiery lakes of torture and eternal damnation, and attempted to win converts through fear of the consequences of wickedness rather than through love and the joy of doing good. Such doctrines as those old-fashioned teachings surely are repellent to men. God is Love. He is all mercy, and not one who delights in condemning frail mortals to everlasting torture. But the world is getting better, and people are looking at these questions with greater mental vision. All progress is the result of optimism, and I think I am safe in saying that Christian Scientists are optimists. So we are here today prepared to listen and to learn; to listen to the exposition of a belief that makes men and women happier, the world more beautiful, and life more useful.

Highland Democrat.

VISALIA, CAL.

Willis F. Gross, lecturing on Christian Science in Armory hall, was introduced by Atty. H. B. McClure, who said,—

The subject of Christian Science is now attracting the attention of the civilized world. Only a few years ago the discovery of this new-old religion was announced by Mrs. Eddy, but since that time it has received substantial support, and now has thousands of advocates who speak for it from experience. It makes little difference what you call a religion, what name you give it, so long as the principles which it teaches are for the uplifting and betterment of mankind. Your presence here would indicate that you are seeking after truth. Christian Scientists testify that their lives have assumed a nobler, holier, healthier, and purer outlook by reason of the study of Christian Science and an honest attempt to embody its teaching in their living; and I hope by reason of what may be said here this evening, that some fear or burden which now seems to bind and oppress will be lifted from each heart, and we shall go forth with a greater assurance of the ever-presence of the creator and His wonderful power.—*Correspondence.*

UNIVERSITY OF CHICAGO, CHICAGO, ILL.

Frank H. Leonard lectured in Mandel hall on Christian Science. The introductory remarks by Derwent S. Whittlesey were as follows:—

Since we are met here tonight under the auspices of the Christian Science Society of the University of Chicago, I should like to speak briefly of the purpose of the society. It is generally believed, and rightly, that a university atmosphere is the most open-minded to be found anywhere in the world. It is not so well understood, however, that the modern trend of this open-mindedness is to question all things, accepting as truth only that which has been fully proven. The comparative difficulty which teachers have experienced in presenting an adequate proof of the practical use of the Bible in daily life, has caused many a student to leave his university with the discouraging conviction that a tangled maze of opinions about the material world constitutes his only possible basis of life.

In such an atmosphere, then, the Christian Scientist finds a disturbing situation, confronting him even more threateningly than it does the average student, because he dares rashly to believe something other than the accepted teachings of the material sciences. No matter how secure his mental anchorage may be, the society's bimonthly meetings of exchange of experience help him to face the conditions by applying his faith in God to the every-day needs of an active college life. Here he gains courage to stand before the challenge of the modern critics of the Bible, and to stand calmly, with the assurance that he has found in Christian Science a scientific and at the same time a Christian rule of living. In order that strangers to the subject of Christian Science may learn something of its results, these meetings are open to all, and in addition, the society gives an annual public lecture.—*Correspondence.*

LECTURES TO BE DELIVERED.

TESTIMONIES OF HEALING.

The daughter of an old-school physician, born and reared under the medical law of inherited tendency to disease, I seemed to have small prospects in life except to eke out a miserable existence. For many years scarcely a day had passed that drugs were not taken for functional disorders, especially of the bowels and liver, and as one remedy would lose its effect another was prescribed. Upon the death of my father, I counseled with a friend, one of the leading physicians of our state, for I was greatly disheartened at the prospects of such a life, and asked him if there was any hope of my ever being free from the use of drugs. He replied that so long as I gave nature a little help, I would be all right, but that this seemed absolutely necessary. He also advised a change of climate as a means of temporary relief. Accordingly, I went to Colorado, and stayed at the home of a sister who is a Christian Scientist. While there, I continued the use of the medicines prescribed, and to my surprise the antagonism which I feared to meet on this account was never manifested while in that home. One day I could not refrain from asking a question which had long been troubling me. It was this: "I can see how Christian Science heals nervous or imaginary troubles, but how can it reach the bowels and the liver?" To this the rebuke came, "Do you for a moment doubt God's power?" Born in a Christian home, with the daily "family altar," I had been taught to trust God for everything, but had never looked to Him as the great Physician, able to heal without the use of drugs. I said no more, but although during the next four years the reply to my question was with me many times, I was yet afraid to give up the drugs.

Finally, in 1907, this sister and her husband came to our home, and upon their departure they left a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. My husband and I sat down to read it, and during that reading of the chapter on Prayer he was healed of a stomach difficulty. At the end of a week's study of this text-book I was entirely healed of bowel trouble, and gradually the liver complaint was healed also. It has now been four years and a half since this healing, and Christian Science has been tested in many ways during that time, always with the best results when properly applied. Drugs which once seemed so indispensable are now never thought of, since I have had the positive proof that it is God who "healeth all thy diseases."

This testimony is given as an expression of gratitude to God that Mrs. Eddy was found so pure and faithful as to be able to receive this revelation which is given to help lift humanity out of bondage into "the glorious liberty of the children of God;" also in the hope that it may go as a ray of light to some weary traveler who is journeying along the same doubtful course over which I have passed.

MRS. ETHEL A. ROBINSON, Dubuque, Iowa.

It is now about twenty-five years since I first heard of Christian Science, but I did not get hold of the Science as taught by Mrs. Eddy until within the last ten years, when I was finally started right. In all that time, however, I have seen most wonderful cures effected. When I first understood that God made only what is good, it was to me a wonderful revelation. It seemed as if the heavens had opened. The first thing I was healed of was a diseased ear, caused by a grain of wheat getting into it when I was a child. Then came the healing of a dislocated knee-joint when I was fifty or more; but I could not begin to tell in one testimony all I have seen and experienced. My husband was healed of an internal injury caused by a heavy fall. We were at New Castle, Col., at the time, at my daughter's, but he asked for Christian Science treatment at once, and we soon started for home. Though he looked very pale, he had no pain; but shortly after we reached home the pain came so severely that he was afraid he would not survive it. My other daughter thought that as he was not a Christian Scientist we should send for a doctor, so one was called from New Castle, on the telephone. Meantime, treatment in Christian Science was kept up, and as the doctor had three miles to come, by the time he reached us my husband was free from pain, and he took only one of the tablets left by the doctor. In a few weeks he was perfectly well. Since then he has been healed of poisoning and a very distressing malady, for his stomach and bowels were in an alarming condition. My sister, who is not a Scientist, was with us, and she said that if something was not done he would soon pass away; but my husband refused all offers of material help, and got well, and is much stronger than he used to be.

I could write pages, but will only tell of a few more. Our little grandchild was healed of the after effects of a terrible disease; his appearance was such that I could hardly bear to look at him. He could not be understood when attempting to speak, his eyes were crossed, and he was unable to walk, but a practitioner in Salt Lake took up the case and gave him absent treatment. He began to mend immediately, and in five weeks the treatment was discontinued. I saw this same boy healed of acute throat trouble when he was about three years old, though almost an entire family were swept away at the same time under medical treatment, and this time no help was called for outside the family. Another grandchild was healed of a bad form of croup a few years afterward.

No wonder that we are glad of the understanding of Christian Science! As I read one of the editorials in a recent issue of the *Journal*, I was brought to realize more than ever what a great work Mrs. Eddy has done. I am so thankful for the periodicals! I close with a song of thanksgiving for all I have learned of Truth and Love.

MRS. HENRIETTA E. BOTTORFF, Soldiers Home, Cal.

When I first became interested in Christian Science and attended the Wednesday evening testimonial meetings, I wondered what the people meant when they spoke of the many blessings which had come to them through Christian Science. I had not attended the meetings very long, however, before I found out what was meant, and now I too can testify to the many blessings which have come to me during my thirteen-years sojourn in Christian Science. The first blessing that I remember was the instantaneous healing from stomach trouble of my son, then seven years old, who was later healed of nasal catarrh. My second blessing was in being enabled to lay aside glasses, which I had worn for four years, and this after only one Christian Science treatment. One of the best oculists in Chicago had told me, when I consulted him, that my headache and eye trouble would be cured in three weeks; but this was not so. At the end of that time he informed me that I would have to wear glasses for the rest of my life, and his charges were one hundred dollars.

My blessings through Christian Science treatment, and the earnest, faithful study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, multiplied rapidly. I was cured of hemorrhoids in their severest form. I had had two operations performed for this trouble without any success whatever, as the trouble returned, and the charges of the last specialist were also one hundred dollars. Through the study of our text-book I learned that a surgeon's knife cannot remove the cause of a disease, but rather must this be effected by realizing the power of Truth over error. In Science and Health (p. 366) we read of that "infinite Love which alone confers healing power." I have now been free from hemorrhoids for fully twelve years. Eye, stomach, and nervous troubles, neuralgia, periodical attacks of sore throat, and other ills have vanished one after another. I suffered from boils, one leaving me with a discharge which

Digitized by Google

caused much pain and inconvenience, but through the patient help of a Christian Science practitioner this was fully and finally overcome. In my family of three, no material remedy has been used for the past thirteen years. My son, who is now twenty years of age, has been a regular attendant at the Sunday school as well as the church. He is not familiar with any disease whatsoever, and knows nothing of the symptoms of even the most prevalent ailments.

What I consider one of my greatest blessings is, that Christian Science has taught me to love the Bible. It has become my daily companion, for our text-book has so illumined its pages that I can only liken it to a gold mine. I now know that it is full of hidden treasures, but one must dig and search for the truth as one searches for gold. In Jeremiah we read, "And ye shall seek me, and find me, when ye shall search for me with all your heart."

Words fail me when I try to express my gratitude for what our revered Leader, Mrs. Eddy, has done for me and mine. I also wish to express gratitude for our scientific literature, which reaches us daily, weekly, and monthly, as well as for our lectures, which serve to correct erroneous thinking and teaching.

MRS. IDA E. ZIEGLER, Baltimore, Md.

It is with a heart overflowing with gratitude for what Christian Science has done for me and is doing for the world that I add my testimony to those of the many thousands everywhere who are expressing their thankfulness to God for the truth revealed to us through our Leader, Mrs. Eddy, and which is freeing us daily from sorrow, sin, and disease. I came to Christian Science, not so much for the physical healing, but because of a great sorrow and disappointment, when life seemed very dark and not worth living. I learned, however, through the study of the text-book, that our happiness does not depend on material things, for, as Jesus taught, to know God aright is life eternal, and I am beginning to understand in a small degree the omnipotence of God.

Christian Science has been my only physician for over three years, and it has healed me mentally, also of a serious form of throat trouble, besides many minor ailments, and in that time I have seen almost every disease met by this wonderful truth, which is growing dearer to me each day as I strive to put into practise what I have learned. My healing was slow, and I had a great deal of help, but now I am grateful for that, as it enabled me to strive harder to overcome evil with good. The Lesson-Sermons given in *The Christian Science Quarterly* are my daily guide, as they unfold the spiritual truths of the Bible.

It has been my privilege in the past year to visit some of the different churches from coast to coast, and it is indeed gratifying to see the wonderful progress and growth of this truth. I am more grateful to God than words can express for Christian Science, and to Mrs. Eddy for her writings, which are enabling me to work out my life problem.

MRS. ZOE SWARENS DAVIS, Kansas City, Mo.

Christian Science came to me, as it has come to many of us, when the need was greatest. Those things which I loved to do were becoming burdensome, because I was allowing discouragement to enter my consciousness. I had been teaching Sunday school classes for at least ten years without any visible proof that I was explaining the Scriptures in a way to bring practical results. In fact, I had to avoid many questions asked by the children, as they were not clear to me, and many passages seemed contradictory. At this time I was chosen Junior League superintendent, and the five services I usually attended on the Sabbath day seemed more than I could stand. Another task which fell to my lot was that of personal worker during a series of evangelistic services. It had always been my desire to do this work, but I realized that it needed more understanding of the Scriptures than I possessed. One day previous to these meetings, my sister-in-law took me with her to the office of a Christian Science practitioner, and after, as I supposed, a little friendly and earnest chat, she convinced me that man is spiritual and not material. As I left the office I remembered that the first thing God gave to man was "dominion" over all things, and I wondered why I did not have it. I began to "search the scriptures" to find out, and was rejoiced to know that I was not related to Adam, the dust man. Gradually the old beliefs I had stored away in my mentality were replaced by the truth which makes free. As I gained some understanding of God's law and put it into daily practise, I had dominion over the problems to be solved. It was like being resurrected by Christ, Truth, and having my grave-clothes slowly unwound, and Christian Science was the star of hope which has led me into the light.

The first text given me after coming to Christian Science was this: "With God all things are possible." I then realized the great opportunity that God had given me, and instead of the work being a burden, as it had been a short time before, it became a great joy, so immumerable were the demonstrations of God's presence and power during the following two years that I remained in my old church. I helped the children to realize that God is Love, ever-present Life, and this work gave me a joy which the world knoweth not, nor can it ever be taken away. I cannot say I was always willing to bear the cross of misunderstandings that seemed to arise, but it gave me fresh courage to remember that "with God all things are possible," and to recall the promise, "I will give you a mouth and wisdom, which all your adversaries shall not be able to gainsay nor resist." I found that I was more than conqueror, as I had conquered self, and I had conquered through the truth as Jesus taught it. As more understanding came to me, through the daily study of the Bible, and I learned how to be subject to the will of God, I found that I was healed of a physical ill of twenty years' duration, from which several physicians had given me no hope of ever being entirely free. I often made it hard for myself by imagining "vain things," but as we read in Science and Health, "divine Love always has met and always will meet every human need" (p. 494); and thus far I have proved this to be true.

I am now enjoying in some measure the fruits of my labors, the positive proof of the omnipresence of God in working out my own salvation. Christian Science has answered all my questions regarding God, man, heaven, and hell; it has made me more merciful, meek, just, kind; it has given me a desire, an unceasing prayer, for purity, to be counted worthy to reflect divine Love to those about me. I am learning how to "praise God, from whom all blessings flow." To our beloved Leader, Mrs. Eddy, I owe boundless gratitude for the key which has unlocked the great storehouse of good things prepared for the children of God.

MRS. GRACE A. SLOCUM, Chicago, Ill.

I send this testimony to express my gratitude for Christian Science, and with the hope that it may help some one who, like myself, is in a foreign land and in need of the great truth. But how shall I tell of all the blessings I have received? I first heard of Christian Science from an American lady who had received a letter from her mother-in-law, telling her that sickness need not be, and that God is Love and Life. Can any one imagine what this meant to one who had been sentenced by physicians to invalidism for life?

When my mother and I reached home, I immediately told my father what I had heard. I exclaimed, "Well, father, when God is Life, I cannot be sick, for God is never sick!" In the first few weeks I had only a copy of the *Sentinel* for help, and with the words, "God is All, matter is nothing," I began to work, knowing that although I knew but little of the truth, God was with me, and to Him nothing was impossible. At that time I had been ill for more than nine months with stomach and bowel trouble, and every two

Digitized by Google

or three months there appeared a throat difficulty, malaria, and some other ailments. At the end of the first week the stomach and bowel disorder left me, and after a while all the other ills disappeared one by one. To describe my thankfulness is impossible; but great as was the physical change, the moral one was even greater.

In October, 1910, while playing with children, I fell and struck my head on a sharp stone wall. The shock was severe, but still I could realize that God is Life and matter is nothing. When the little folks saw me lying motionless on the grass, they began to scream and to say I was dead. Hearing that, I arose, and walked into the house to cleanse the wounds. I had a deep cut on my forehead and one over my left eyelid. After five minutes I again joined the children, who were silent from fright, and as an organ-grinder was appearing, I began to dance with them, so their cheerfulness returned. In the night the wound over my eyelid closed, as did the one on my forehead the next day.

Every Sunday we held service, and in April, 1910, a few parents asked me if I would teach their children the simple truths of Christian Science, so I now have a Sunday school class. My great wish is to have class instruction, and to become a member of The Mother Church. I hope that Scientists who visit Java will remember my name, and that we may meet one another. I can add that in all these years (more than seven) I have never had a doctor.

May my gratitude to God, to Christ Jesus, and my thankfulness to our dear Leader, inspire me so that I shall become more and more worthy to be called a Christian Scientist.

TINE PRANGE, Batavia, Java.

With respect to the testimony of my daughter, I can say that all she has written is true, and more than that could be said. I, who live with her, know best the great change which has taken place, what she has been and what she is now. I am also glad to testify that when I have been in trouble and could not see my way clear, she has always helped me. Our thankfulness to God for all that Christian Science has done for us cannot be expressed.

MRS. A. PRANGE, Batavia, Java.

After five years' enjoyment of the blessings experienced through Christian Science, it becomes my duty to contribute this testimony of my appreciation of all that has been unfolded to me. I suppose that no one has been more antagonistic to Christian Science than was I, or has made greater efforts to remove it from their home, after the truth had once secured a foothold there, for I did all in my power to cast it from me. I was a fairly strong and healthy man, and the physical healing did not appeal to me; but as the months went by and my wife and children had done all in their power to point out this truth to me, the time finally came when I could no longer withhold the acknowledgment that there had been a great change in our home, and it seemed to me that I was the only one there who did not move in an atmosphere of love and happiness. My mental state was about as miserable as that of any mortal could be, and under these conditions I applied to a practitioner, requesting her to show me what my wife possessed that I did not. In just four days my healing came, and very soon afterward I was ready to stand in a Wednesday evening meeting and tell those dear people that thereafter their God should be my God, and their people, my people. I can truly say that the happiest period of my life has been from that time on.

I wish to write of a demonstration which I think is very remarkable. One of my teeth had been troubling me for about four months, and there appeared to be quite a large cavity; but although I had declared the truth for myself, the time came when it was impossible for me to use that side of my mouth, and I finally concluded to see the dentist about it. Shortly before keeping my appointment with him, however, I called up my wife and asked her for her help during the ordeal, at the same time declaring the truth to the best of my ability, both before and after arriving at his office. I did all that I could to help the dentist locate the affected tooth, but after a thorough examination he informed me that he thought I was mistaken. I again pointed out to him just where the trouble appeared to be, and he made another thorough examination. Finally he stepped back with a puzzled expression on his face and said that he could not understand why I had come to him, as he could find absolutely no tooth which required attention, but inasmuch as I had caused him so much trouble he would fill a small cavity which was just appearing on the other side of my mouth, and this would be the extent of the service which he could render me. It is needless to say that I was more than pleased with my experience, for when I got out of his office I found that the seeming cavity had disappeared. Although this took place in November, 1908, from that time until the present I have not experienced the slightest trouble from that tooth or from any of the others.

This is only one of the many blessings which have come to me through Christian Science, for which I am indeed grateful.—CHARLES H. LINDLEY, West Haven, Conn.

In grateful acknowledgment of the many blessings which have come to me through Christian Science I add this testimony, with the earnest hope that it may encourage others who are suffering as I was, to prove for themselves that God is an ever-present help. For some years previous to my healing through Christian Science I had been afflicted with rheumatism, a bowel trouble, and severe attacks of illness from colds. As all remedies prescribed by physicians proved unavailing, I was induced to try *Christian Science*, and wrote to a practitioner in a distant city, who took my case. Very soon after treatment began, the bowel disorder entirely disappeared. The rheumatism seemed unyielding for a time, but through the faithful application of the truth there soon came to me the joyous sense of freedom in using my arms, and the ability to move about my home in a normal way, which I had not done for many months. The severe attacks of cold in an alarming form, which had been one of my greatest troubles, have also disappeared.

This healing occurred some two years ago, and none of these diseases have ever returned. This was my first proof of the healing power of Truth as demonstrated through absent treatment, and it seemed most wonderful to me, as the one to whom I applied for help was some two thousand miles distant. It also proves that age is no barrier, as I am an octogenarian, and I never enjoyed better health than at the present time. The greatest of all the helps I have received from Christian Science is the casting out of fear.—SARAH P. WEED, Berkeley, Cal.

In Science and Health we read these words: "Spiritual Love will force you to accept what best promotes your growth" (p. 266). I might say that I did not seek Christian Science, but that I was forced into it by the failure of every other means to which I had looked for health. It was in the fall of 1907 that I decided to give Christian Science a trial, as a kind of last resort. I had been a semi-invalid for about thirteen years, during which time I underwent one operation and spent six months in hospitals. It seemed to me that I could not live without medicine, but I finally decided to "throw physic to the dogs," as the saying is.

I was very particular to state to the practitioner who consented to take my case, that if it was necessary for me to have faith it was useless for her to try to help me; but she said that I did not know what to have faith in, and she seemed very certain that God would heal me. My recovery seemed slow at times, but I knew I had found the truth.

Digitized by Google

and that sooner or later divine Love would set me free, and I can now say that I am completely healed, and have been in good health for over three years.

Christian Science means everything to me, for through it I have the realization of the ever-presence of God, which has made my life rich in happiness and contentment.

MRS. F. A. LEWIS, Fall River, Mass.

I am more grateful than mere words can express for what Christian Science has done and is doing for me. Since it first entered my life, I have found it a practical, every-day help. I was never considered strong, for a tendency to heart weakness, supposed to be hereditary, with frequent attacks of a stomach disorder, caused me much suffering and loss of strength. I was also subject to severe colds and throat trouble. I tried various remedies for these ills without receiving any benefit, but was constantly growing worse and more hopeless of ever gaining health. When I had about reached the limit of human endurance I turned to Christian Science and was healed of these ills, and numerous minor ailments are also disappearing. I am now stronger, healthier, and happier than I ever thought possible; but grateful as I am for the physical healing, I am more thankful for the better understanding of God that I have gained through the study of Christian Science.

I would also tell of another instance of the power of divine Truth which occurred in our home recently. My mother, nearly seventy-two years of age, was stricken with paralysis. She was quite helpless; indeed, unable to move at all, and very much distressed mentally, for she had always been very active, and this condition was hard to bear; but with help from a Christian Science practitioner she has been restored to her normal state and is well and active.

BERTHA YEAGER, Lancaster, Pa.

I am indeed glad at this time to be able to say something in regard to Christian Science healing. Truth has been my only physician for four years, and it has never failed when faithfully applied. Christian Science has healed me of the liquor habit, of the use of tobacco in different forms, of bad language, also of an unruly temper from which I had suffered for years. I did not come into Christian Science for physical healing, but the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy has led me to find the way from sense to Soul. There are seven in our family, and all have been healed by Christian Science, which has never failed. Two of our children were born under Christian Science treatment, and they are happy, healthy, and strong.

God has been our ever-present helper in overcoming all our troubles ever since we accepted this truth. The clouds have seemed dark at times, but when they have been cleared away the battle has been won, and all has been well again. I have learned in Christian Science that divine law is the only law, and that when applied from the understanding of divine Principle it is the law of all perfection. I am indeed thankful to God, and grateful to Mrs. Eddy for all that her teachings have done for me and mine. We need only build on the foundation of Christ, which is the truth. This truth is indeed "the bread of life" that "cometh down from heaven." My heart goes out in deep gratitude to God for the blessings which no man can take away.

OTTO A. JOHNSON, Chicago, Ill.

Art thou cast down? Learn well the meanings God hath placed in courage, patience, honesty, and zeal, and thou shalt well o'erleap the confines of discouragement and fear, and enter into larger joys. Thus, too, thou mayest know peace, forever above and beyond the treasons of time.

WILLIAM W. PORTER.

FROM OUR EXCHANGES.

[Rev. Samuel A. Eliot, D.D., in *The Christian Register*.]

The glory of mankind is surely in the sense of expectation. We are yonder-minded beings. Our prerogative is the consciousness of things that eye has not seen, nor ear heard, nor even the heart of man conceived. The interest of life lies more in what we want than in what we have; that has been the faith of every seer and the strength of every reformer. It has not been mere wilfulness, it has been the profoundest faith,—a faith that dared to think of human history not as a great flat plain on which men aimlessly wandered, always coming back to the dead camp-fires of preceding hosts, but rather as a shining mountain track up which men were to strive toward the possible heights of honor. Such ideals entering into the life of any nation or communion, stir the imaginative and the spiritual ardors of mankind and do more for human progress than all the knowledge, the science, the material gain that have ever been wrought out since the beginning of intelligence.

I know that these promptings of faith and hope are not ours to originate. That is the work of God in our hearts. It is ours to receive and to obey these promptings. The divine powers are ready for our acceptance, but they do not force themselves upon us. The Holy Spirit respects the reserve which is everywhere the law of spiritual intercourse. But like all living powers, faith is strengthened by its own acts, by the prayers which utter the hopes which God has quickened, and by the works which turn dream into reality. Our hearts' desires, our ideals, the faiths of the soul, are kept bright by the corresponding fulfilments of a life. He who takes it for his essential life to work out that which God works in him, will fill his soul and his world of opportunities with a divine dynamic. He who in patient endeavor seeks to overcome evil with good, to upbuild righteousness and truth, he who loves his friends and fellowships, his church, his country, for the sake of what is best and blessed in them, will never in any valley of the shadow of discouragement or failure lose sight of the fulfilment of the promises. He will ever press forward toward "the unwaning lights of the city of an eternal King."

[*The Living Church.*]

In patience there is always the element of mercy, however unconscious one may be of the fact. We may illustrate what we mean by the life of an artist, a painter, or a poet. Too often genius is not recognized by the generation in which genius lives; and crude justice would seem to recommend the leaving of the stupid to their stupidity, to cease labor that is apparently vain, and to drift with the tide. Instead, however, the vision and the purpose of genius beget patience; and slight and contempt, poverty and hardship, ridicule and scorn, all things are endured willingly in order that genius may leave its gift with men, ultimately. The present generation or the future generations become matters of indifference so long as the gift be delivered; for man needs the gift, and man will some day receive it if we can be patient. This is the higher justice which we call mercy.

So has God used us. Behind all things lie God's love and man's need. God's love, manifested through the sending of His Son, was not received; nor can we say—God be merciful unto us!—that His love is yet received. The love was manifested, nevertheless; and the man Christ Jesus suffered willingly, was patient and merciful.

[Rev. James W. Lee as reported in *The Constitution*, Macon, Ga.]

Beauty is not for any one who has not the sense of beauty; righteousness is not for any one who does not belong to a righteous order; there can be no manifestation of love except to a loving heart. This means that no Christ appearing in the world could be anything for it unless He were

Digitized by Google

already in it. The highest function of the historical Christ is to bring the potential Christ, which is in every man, which is every man's deeper self, to self-recognition. It is unto His own that Christ always comes. This is the great work of salvation. The majority of men are living in self-ignorance and therefore in ignorance of God. The Christ in you and the Christ in other men and the Christ in the heaven, are but different manifestations of one and the same universal, divine life. It is only when a man realizes this that he emerges from a state of selfishness, the state in which his own individual self is the center of everything, to that state of love whose center is everywhere. The discovery and surrender to the hidden Christ in himself is man's new birth. No man grows up into it. "Ye must be born again." The necessity for a new birth does not rest upon any inherent corruption in human nature. The new birth is the birth of a new consciousness. It is the emerging of the deeper self into consciousness, a new discovery of what our nature really is in its depth, and through that new discovery, finding for itself a new center of life.

[*The Christian Work and Evangelist.*]

Men are learning again to find God out-of-doors in our day, we think. Jesus prayed to Him on the mount of Olives, and communed with Him in the fields and by the sea. Today we are living out-of-doors more than ever, and the spirit that pervades the universe is becoming apprehended of our souls. We climb mountains and find God. We listen for Him in the quiet of the woods. We travel, and, if we have vision, see Him again in the old cities of Europe and the new and throbbing emporiums of our new world. Above all, as we journey, we find Him in all peoples. Even on the golf links, in the tennis court, in our tramping through the fields, and while sailing on the seas, if we have spiritual faculty, then the invigoration, the freedom, the blowing of cool winds, the salt spume flying in our faces, may be helpful refreshments from Him who is nature's soul. The songs of birds, the peace of evening, the glow of sunset skies,—we live with them more than we did, and find God there.

[*The Advance.*]

There were seven thousand in Israel all the knees of whom had not bowed unto Baal, and every mouth of whom had not kissed him. Where are the seven thousand? There are prophets who are struggling against hopeless odds, who might be saved from disheartening loneliness if some of the good people now in hiding would speak out; there are ministers ready to give up because they cannot find even seventy of the seven thousand. Let us not blame too severely the brave old prophet who thought that all God's plan depended on him; let us rather blame and exhort the men who should be standing by him to break their silence, to leave their timidity and selfishness and rally to assist the right. You may not know where all the seven thousand are, but if you can find one of them and bring him to the doing of his duty, you will do a good thing. Are you one of the seven thousand?

[*The Congregationalist and Christian World.*]

International conferences interpret the nations to each other. Provincialism is the mother of strife. We despise others because they seem to differ from us so greatly. When we come to know them, we find we are all alike in the abiding qualities of humanity. We differ only in our clothes, our skin, and our language. There is no nationality in souls, aspirations, or loves. To quote from a recent address to students by Mrs. Elmer Black: "We are citizens of the world today, not only of one city or country. All nations are our fatherland. Our neighbors are those who have like ambitions and ideals. All congenial souls belong to one great country. The things which unite us are greater than those which divide. Get down beneath the surface differences and we are one." This is the lesson international hospitality is fast teaching us.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works of Mrs. Eddy should be addressed to ALLISON V. STEVENS, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been published in pamphlet form, and is ready for distribution. Thirty-two pages and cover.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal*, printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: **For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage.** SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: **Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.**

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

A new plan has been proposed by Senator Miles Poindexter for the development of Alaska coal resources under government auspices. He introduced a bill by which all the machinery used in the construction of the Panama canal is to be transported to Alaska and the government to go into the coal-mining business. Half of the coal lands are to be left for leasing to private individuals under specified regulations. The bill also provides for government construction, ownership, and operation of railways and steamships, the location of depots on the Pacific coast for the sale of coal at cost to consumers, prohibits child labor, provides for an eight-hour day, a minimum wage, and insurance.

The Paint Creek Collieries Company, operating nine mines on Paint creek, West Virginia, has signed the agreement of the United Mine Workers of America. A strike is still in force on Cabin creek, which adjoins. By this action, for the first time since the strike occurred in the West Virginia coal fields over sixteen months ago, the coal operators extend formal recognition to the United Mine Workers of America.

The interstate commerce commission, at a meeting at Washington, D. C., with state railroad commissioners, determined upon a physical valuation committee which will cooperate with the interstate commerce commission in the gigantic task now before it. The states represented are: Kansas, Minnesota, California, Iowa, Oregon, South Carolina, Michigan, Wisconsin, Illinois, Nebraska, Ohio, Massachusetts, New York, and Oklahoma.

The reelection of Augustus O. Bacon to the United States Senate last week by the votes of Georgia electors, becomes of record as the first election held under the seventeenth amendment to the constitution, recently ratified by the states, which provides that the voters of the several states shall cast ballots in senatorial elections superseding the practise of choice being made by the members of state legislatures.

Charles Lathrop Pack, president of the Fifth National Conservation Congress, which will meet in Washington next November, has come out strongly in favor of the use by the city of San Francisco of the Hetch-Hetchy valley for the purposes of a municipal reservoir. Gifford Pinchot, president of the National Conservation Association, is also reported to favor the project in its present form.

The United States treasury handled in actual cash during the fiscal year ended June 30, the stupendous sum of $7,071,520,000, breaking all previous records, and stamping the federal treasury, officials declare, as the greatest banking institution in the world.

The differences between the officers and employees of the eastern railroads are to be settled by arbitration. Congress passed special legislation making this possible.

International.

Members of the Glasgow (Scotland) town council and representatives of the neighboring authorities interested in the purification of the Clyde, met at the Dalmarnock sewage works and formally started the electric motors, setting in motion the new plant for the first section of the percolating filters. The new filter is expected to treat four million gallons of precipitated effluent every twenty-four hours, and when completed the filters will deal with twenty-four million gallons every twenty-four hours. The cities on the Clyde above Glasgow are also busy with the problem of purification, Coatbridge alone having agreed to spend from fifty to sixty thousand pounds; and it is expected that Paisley, further down, will shortly fix on a purification scheme.

On the occasion of the jubilee celebrations commemorating his twenty-five years of reign, the Kaiser expressed his willingness to accept any sums which might be collected, for charities and other purposes in the interest of the people's welfare, while he declined all presents for himself. The money that has poured in from all sides in honor of his Majesty's jubilee is estimated at seventy billion marks. Not only the German municipalities and other corporations and many private persons have given liberally, but the Germans abroad have also proved very generous in showing their loyalty. The Germans in New York alone subscribed fifty thousand dollars.

The bill to abolish plural voting at elections in the British Isles passed its third reading in the House of Commons after a motion to reject it had been defeated, 293 to 222. This bill passed its first reading April 8, 303 to 107. It embodies the principle of "one man, one vote." It is but a part of a sweeping franchise reform, proposed by the government a year ago, by which suffrage would have been made universal. The bill was introduced, but was withdrawn last January, when the speaker of the House of Commons ruled that the clause granting the ballot to women could not go in as an amendment.

All of the twenty-four nations except Germany and Great Britain, represented by delegates at the opium conference just closed at The Hague, have agreed to deposit ratifications of the convention prohibiting the traffic of habit-forming drugs. State department advices say the German and British governments are sympathetic toward the anti-opium movement, and probably would ratify the convention if the signatures of Austria, Switzerland, and Peru, not represented at the conference, were assured.

Russia has suddenly presented to the Chinese government new demands requiring recognition of the full autonomy of Outer Mongolia, declaring China to be suzerain only, binding China to accept Russian intermediation, and recognizing all the rights conceded to Russia by the agreement and protocol signed at Urga, the capital of Mongolia, on Nov. 3, 1912. These four new demands are submitted by Russia in substitution for the recently proposed agreement, which has not yet been signed, and which Russia announces she has decided to annul. Both houses of the Chinese Parliament have been hastily summoned to consider the demands.

The Glasgow Institute of Architects, with the approval of kindred institutes in Edinburgh, Aberdeen, and Dundee, have written to Lord Beauchamp, first commissioner of works, regarding the supervision and preservation of ancient buildings in Scotland. As the government is about to form a board for the care of national and historical monuments, they ask that an independent board be formed for Scotland.

The Nicaraguan Legislature has been convoked to consider the treaty recently negotiated with the United States, whereby Nicaragua, in return for three million dollars, concedes to the United States a perpetual and exclusive right to build an inter-oceanic canal through that country.

The important subject of road-making brought to London official delegates from thirty-nine governments, as well as representatives from every civilized country in the world, to attend the great road congress at the Central Hall, Westminster.

Bulgaria, defeated in engagements with the forces of Greece and Servia in her attempt to take more than a just share of territory gained in the Turkish war, has thrown herself at the feet of the Powers.

Premier Asquith has promised the House of Commons that at its next session the government will present its scheme for the reform of the House of Lords.

The home rule bill was rejected in the House of Lords by three hundred and two votes against sixty-four. This action was anticipated.

The public debt of the Dominion of Canada was reduced twenty million dollars during the past fiscal year.

Industrial and Commercial.

A permanent remedy for strikes in the building trades in Chicago, which have frequently tied up important construction work, is seen in an agreement being drawn up by employers and workers. It will be a violation of this agreement for the union men to call a strike or the employers to declare a lockout without first conferring with a joint arbitration committee. The unions and employers will sign bonds, which will be forfeited if they do not live up to the letter of the contract. The lockout of twenty-eight thousand construction workers, which has been in force for a month, has delayed the completion of thirty million dollars' worth of improvements.

Secretary Daniels of the navy reported to Congress that a government armor-plate factory, costing eight million four hundred and sixty-six thousand dollars, would save one hundred and forty dollars a ton on armor, or more than one million dollars net a year. He explained that France, Italy, and Russia have sought relief from the high cost of armor plate by the operation of government-owned plants, while Japan has built two government factories. He found the same subject agitated in England, where many charges of monopolistic agreements and extortionate prices have been made.

A newspaper report says that Dr. Herbert E. Ives, a prominent scientist of Philadelphia, claims to have invented a substitute for daylight. He has been at work for a dozen years at the research laboratories of the city's gas plant, and finally has produced, he says, a light which has passed the test and is in every way equal to sunshine and the light of day. The invention has a field of usefulness in certain industries, such as textile manufacturing, dyeing, color printing, and similar arts, where heretofore only daylight could be used.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"LET YOUR LIGHT SO SHINE."

JUDGE JOHN D. WORKS.

WHEN Christian Science was in its infancy it was sometimes the subject of obloquy, ridicule, and most unjust misrepresentation and abuse. If Mrs. Eddy, its Founder, had not been a firm and fearless woman, sustained by unshaken faith and confidence in the truth of her religion, this movement which has done so much for humanity would probably have been overwhelmed by a well-nigh universal repudiation of it, especially by preachers and members of other churches. But our great Leader did not falter. She was never afraid to declare and stand by her convictions. She did not do it offensively or obtrusively, but lovingly, and with charity for the assailants of her most sacred beliefs.

As in all other cases, her example is worthy of the highest praise, but it is not an example that has always been followed. Many of those who came after her could not withstand the attacks made upon them and their new departure from the old beliefs and customs of the churches from which most of them had come out. It is not for us who have come into the fold later, when the stress of establishing a new church has passed, to criticize those who faced the earlier and more bitter onslaughts upon their faith. It was not a time for weaklings, and, fortunately, enough of the strong and faithful were found to hold up the emblem of the new-born faith in the Master and his teachings.

Now it is different. Christian Science is so firmly established, as a church, its adherents are so generally respected as sincere in their beliefs and worthy representatives of the Christian faith, that, as it would seem, none should be afraid to proclaim this faith at any time or under any circumstances. And yet to the writer the timidity, or apparent fear, of some to say openly and unhesitatingly that they are students of Christian Science, and to maintain its teachings, has been a matter of no little surprise. In the earlier time, when so many people, good people, looked upon one who had espoused the Christian Science faith as disgraced, such a failure on the part of the weak and timid might at least have been excused, but not now. The time has come when one loses none of the respect or confidence of his fellow men by saying, "I am a Christian Scientist." The writer feels that he has proved this, at least to his own entire satisfaction, by his actual experience in announcing his faith, and defending and supporting it under the most trying circumstances and at a time when he was being cautioned and advised not to do so because it would deprive him of the respect of his associates and lessen his power and influence when both were much needed. The sequel proved exactly the contrary. The stand taken was not condemned, but strongly approved and respected by those who were expected to scoff or ridicule.

Christian Scientists need not be ashamed or afraid to affirm themselves to be such, or to defend, on proper occasions, their religious faith. This should not, however, be done presumptuously; the beliefs of others should be respected. We should treat all religious opinions, conscientiously entertained, with loving charity, just as we think others should treat our beliefs and our religion. We cannot expect our own conscientious views to be respected by those who disbelieve in them if we are intolerantly and disrespectfully assailing their beliefs because we do not agree with them. Christian Science is a religion of love. It should, and must, be advanced through loving and charitable ministrations, and not by force.

Every Christian Scientist should let his light shine. To deny or conceal his faith cannot be justified. It is not to be flaunted in the faces of those who do not believe in it, and it should not be made the means of antagonizing the beliefs of others; but we should be ready, on all proper occasions, to say, "I am a Christian Scientist, and believe in its teachings," and if occasion calls for it, to say why we believe in it, and to explain what its teachings are and the works of good it has done and is doing. Thus we shall fulfil our Lord's command to his followers to preach the gospel and heal the sick. Too many of the sorrowful and suffering need and are hungering for the help of this beneficent religion, for us to hide our light under a bushel. To do so is to fail in our solemn duty to God and to suffering humanity. Said the Master, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

PURIFICATION.

LOUISE KNIGHT WHEATLEY.

ONE day a Christian Scientist who had recently passed through a somewhat trying experience was leaving the home of a practitioner just as another student of Christian Science was entering it. The newcomer and the practitioner stood for a moment on the veranda, enjoying the freshness of the spring morning, and the eyes of both half unconsciously followed the one who was leaving as he made his way down the shady street. "How that dear man has been persecuted!" murmured the newcomer. But the practitioner only smiled as she looked after the retreating figure. "Why not call it purified?" she asked. "To my sense, he is being pushed into the kingdom of heaven just as fast as he is able to go."

"Purified," not persecuted. As the one who was undergoing this purifying process proceeded on his way, his heart was full. He had gone to the practitioner that morning, trying to find surcease from a situation which was becoming well-nigh unbearable; and he had been given, not the sympathy which he had somehow expected, but a glimpse instead of the allness of God, lifting his thought into the realm of clearer vision, wherein he saw that "the accuser is not there" (Science and Health, p. 568) and man forever expresses the infinite perfection.

Oh, miracle of Love, he thought, which maketh even "the wrath of man" to praise Thee! How could I have been blind so long? Is the gold "persecuted" because the refining fire separates it from the dross? And what does it matter if the furnace does seem to be heated "seven times more than it was wont to be heated," as was that Babylonian furnace wherein were cast the three captives of long ago?

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

Since "seven" symbolically stands for "completeness," it must mean that the fire burns only until the experience has been sufficient to teach us the lesson which we had need to learn.

When this larger, better, truer view of some trying human situation becomes clear to us, we begin to look at persons and events in an entirely different light, and no longer continue to hang the millstone of a false sympathy about the neck of those whom we profess to love. It is a fact not without significance that when the friends and relatives of Lazarus stood about his tomb, weeping and lamenting, Jesus spoke to them before he spoke to Lazarus. "Take ye away the stone," he said. And when, at the Christ-command, Lazarus finally came forth, wrapped in his grave-clothes, Jesus once more addressed those who stood by. "Loose him," he said, "and let him go," thus implying that the friends of Lazarus had still something to do before the demonstration could be complete. Those of us who would be friends, in the highest sense of the word, will remember this, unless we are so blinded by "mere personal attachment" (Manual, Art. VIII., Sect. 1) that we cannot see a step beyond the present moment.

There is an incident in the experience of the three Babylonian captives before referred to which is well worth considering in this connection. Most of us have known the story from our childhood, having listened to it in wide-eyed wonder at our mother's knee; but it remained for Christian Science to show us that this narrative, like all those in the Bible, when spiritually interpreted, will furnish us a practical working basis for our present-day problems. We see that Nebuchadnezzar may be likened to those who are today controlled by mortal mind, which has not changed much since those primitive times, but still condemns to a fiery furnace those who refuse at its command to enthrone matter as deity. As we read on, however, we find that a strange thing happened. As Nebuchadnezzar watched the progress of what was intended to put an utter end to those who had defied his supremacy, he suddenly called out to his counselors, "Did not we cast three men bound into the midst of the fire?" Upon being assured that such was the case, "he answered and said, Lo, I see four men loose, walking in the midst of the fire, and they have no hurt; and the form of the fourth is like the Son of God."

"The form of the fourth." What was it? Whence came it? These three Hebrew captives had been in the king's company, more or less, for a considerable time, yet no one had ever until that *moment* seen this form. Why was it so suddenly in evidence? Might it not have been because the fiery trial of persecution had so purified the thought of the three men that they were able to rise to the true consciousness of man as he really is, spiritual, and not material, and thus forever beyond the reach of mortal mind's hatred? This discernment of the fact of being must have been so clear to them that after a while it became clear even to the dull perception of the heathen king, and he saw, all at once, their savior from the flames, even the true concept of man as he really is, "the Son of God."

Persecution or purification, which shall it be? We have our choice. Those who have done much mountain climbing know that it sometimes happens that a rock stands directly in the narrow pathway, apparently putting a stop to all further progress. Shall we make of this rock an obstacle or a stepping-stone? If we choose to do so, we may sit down helplessly in front of it, and exclaim, "This is too much. Just because I am trying to get to the top of the mountain somebody who wants to see me fail has put this miserable rock in my way." At this, however, some wiser companion only shakes his head. "There is nobody who wants to see you fail, for the only man is the man that God made, and the only Mind is the Mind that was also in Christ Jesus. This is just a stepping-stone, and from the top we will have a better view of what is beyond. Give me your hand, my brother, and let us go on."

But sometimes the hand is not given. The one stays where he is, the other goes on. But he who sits looking at the rock, with anger, resentment, self-pity, and self-justification still rankling in his bosom, misses the joy of the one who stands at last upon the mountain top, and as he looks through the rarefied atmosphere of spiritual ascendency upon the new heaven and the new earth spread out before him, he forgets his bleeding footsteps, and only cries out in his heart, "Father, I thank Thee for every rock *in* the way, since, in surmounting it, I gained a stepping-stone to this!"

Christian Science does not teach that God puts these obstacles in our path, for He, the infinite good, never has need to make use of evil to accomplish His wise purposes, nor do Truth and error ever form even a temporary partnership for the benefit of mortals. God had no part in the persecutions which attended the earthly career of Jesus of Nazareth; yet the very sum total of human hatred which ultimated in laying Jesus in the grave, was turned into an experience wherein he reached his highest realization of the ever-presence of Life. In triumphing over the trials of Gethsemane and Calvary he set the seal of demonstration on a teaching which his enemies would fain have buried forever in the tomb of Joseph of Arimathæa.

We read in the text-book, in the chapter on the Apocalypse, that when the dragon stood before the woman, ready to devour her child, the spiritual idea, "this only impelled the idea to rise to the zenith of demonstration" (Science and Health, p. 565). Why, then, should any of us murmur when we pass through an ordeal which compels us to rise to a higher and more glorified view of God as the only power and presence, and of man, not as an ill-used, unhappy mortal, but as the Son of God, forever at-one with the Father? Surely it is time to have done with the sickly sentimentality which fondly parades itself or its friend in the guise of a martyr. St. John tells us that at the beginning of those terrible hours which marked the final scenes in that most bitter and unjust persecution for righteousness' sake which the world has ever seen, Jesus "lifted up his eyes to heaven, and said, Father, the hour is come; glorify thy Son." To the clear, spiritualized thought of the Master it was a time of exaltation, not of martyrdom. The man who stands on the *mountain* top and thanks God, is not a martyr. He has only been forced onward and upward *by* the compelling hand of Love, to heights of which he *himself* had never dreamed.

Then when next we meet him, instead of thinking "How that dear man has been persecuted!" let us hold instead that truer concept of the situation which will "loose him" from his load of human sympathy, "and let him go." No word need be spoken between us; he will understand just from the silent clasp of our hand and the look in our eyes that we are rejoicing with him, because we know that when the fiery ordeal is over, he will come forth as gold.

LOVE AND LAW.

JOHN ASHCROFT.

LAW is defined, in part, as "a rule of action established by authority," and also as "established principle." The definition is not wholly adequate when applied to spiritual law, inasmuch as spiritual law is more than the expression of a law-giving, law-defining power; it is that power. The expression of the will of that which governs is inseparable from that which governs. This is illustrated by Mrs. Eddy in her statement that "God is not separate from the wisdom He bestows" (Science and Health, p. 6). Her definition of God as divine Principle affords a demonstrable basis from which to approach the study of spiritual law.

Spiritual law is the indestructible link between Principle and idea, between God and man in His image and likeness. It is the expression of divine Mind. That there can be more than one mind, and therefore more than one lawgiver, is an

Digitized by Google

impossible admission, when it is conceded that Mind is infinite. There can be nothing beyond infinity, or within it, unlike itself. Divine Mind, therefore, is the "established" Principle of all law. Mortal mind claims to parallel the activities of divine Mind, claims to exist, and to be a creator, governing its creation by its own law; but mortal mind and its manifestations being counterfeits, and there being no counterfeit without a true original, mortal mind and its claims of expression do but serve, by reversal, to indicate divine Mind and its actualities.

The ten commandments are law, and they are also the expression of law. They are the declaration of the will of God in terms comprehensible by mankind; "our schoolmaster to bring us unto Christ," as St. Paul said, to the perception and comprehension of Truth. In the good resulting from obedience to these commandments is manifested the perfection of the Principle of all that really is. The Mind that was in Christ Jesus was to him the only lawgiver, and it annihilated what those around him believed to be law, expressed in sin, disease, and death. He who "beheld in Science the perfect man" (Science and Health, p. 476), needed not the letter of the law to govern his relations with those about him; but recognizing humanity's need of a stated rule of conduct, he reiterated the Mosaic code, with the added admonition of supreme love for God and man.

The essence of law is Love. Love is not only law unto itself, but to all within its sway. "Love is the fulfilling of the law," declares the apostle. What law? "Thou shalt love,"—love God, who is Love, and man, who is the expression of Love. "Greater love hath no man than this," said Jesus, "that a man lay down his life for his friends;" that he lay down, abandon, his false sense of his own life, and his equally false sense of his friend's life, replacing it with the understanding of what Life really is, thereby fulfilling the law by ceasing to "bear false witness" against his neighbor. Love is the only constructive force in the universe.

Law and love are spiritual; they are best understood in terms of Mind. They speak through conduct; through the finer qualities in which Mind is best expressed,—through patience, wisdom, understanding. In the last analysis law and lawgiver are one, law and law-governed are one. To the degree that the individual is governed by spiritual law, by Love, does he become a law unto himself; needing not the promptings of the letter, but actuated by the spirit, expressing that conscious unity with his divine Principle which makes him truly a law-abiding citizen of the kingdom of God.

LOYALTY.

CLARA LOUISE BURNHAM.

IN pondering the phrase, "a loyal Scientist," recently, the writer had a deeper realization of its meaning than heretofore. To array one's self under the banner of Christian Science pure and undefiled, to refrain from wasting time in wandering into by-paths of human opinion, to study the Lesson-Sermon daily, and to read the text-book and other of our Leader's writings until the truths in them unfold and "blossom as the rose" to our understanding,—all these are the evident means of growth for the student; but obedience to Mrs. Eddy's mandate, "Stand porter at the door of thought" (Science and Health, p. 392), is also a necessity if a student would be loyal, and one which in the stress of life is less easy to remember. Loyalty to Christian Science absolutely requires that we be alert in classifying the thoughts which are forever occurring to our consciousness; coming out and being separate from some of them, and refusing to call them ours.

The glorious release from the old belief that evil is as truly our inheritance as good, should bring with it unlimited courage. Even if we have thoughtlessly extended hospitality to a false belief, it is never too late to turn the interloper out of the house of God's child. Even the arch-enemy discouragement can be ousted by a resolute return of thought to divine Principle, omnipotent Love. That brave line in the Bible, "Having done all, to stand," is a wonderful reminder that loyalty demands unswerving confidence in Truth, even before discords have ceased and harmony is realized. We may say glibly, "a loyal student;" but each heart knows where it stands in this daily business of standing porter. It is our Father's business, and the sooner and more sedulously we are about it, the fewer steps there will be to retrace, and the nearer we shall come to deserving that name which can be written in heaven.

"ACCORDING TO YOUR FAITH."

W. PETCH.

WE are always rewarded according to our desire. Jesus said, "According to your faith be it unto you," and the blind received sight, the perception of infinite and present possibilities. Divine Love is ever present, and is reigning forever within the real man; therefore true desire is of the heart, independent of outward things. Speaking for true vision, Jesus said, "Having eyes, see ye not?" He taught that the "kingdom of heaven," true happiness, is within man. If our desire is spiritual, the satisfaction thereof is sure.

Jesus had no other desire than to glorify God, and today Christian Science is the impersonal, spiritual desire of all nations, the Science that makes plain the allness of Spirit, and of Spirit's perfect and only ideal, man. Hence, every right desire has its place in Christian Science, while matter, or error, has no place there at all. The real man, born of Spirit, can have no will or desire apart from the glory of God; and this glory, the radiance of the divine Life, is that of universal joy and spiritual light. Christ Jesus said, "Father, the hour is come; glorify thy Son, that thy Son also may glorify thee."

If a so-called Christian Scientist were to treat his patient as one desirous of merely material things, he would undoubtedly be trying to meet error with error, while the Scientist who recognizes and fosters the spiritual hunger and thirst for God, which is the only real desire the patient can have, is thereby making practical and plain the Scriptural word: "Yea, I have loved thee with an everlasting love: therefore with loving-kindness have I drawn thee;" for the Scientist who knows that there is no other attraction than that of infinite Spirit, thus uplifts or weds the patient's desire to its conscious at-one-ment with all-satisfying Spirit. Jesus said: "I, if I be lifted up from the earth, will draw all men unto me." All men are drawn to God. Many are not seemingly conscious of this ceaseless attraction to something above the ideals of material sense, and others may misinterpret its meaning; but the Christian Scientist, to whom God is All and in all, cannot know erroneous thought or desire as reality, and the opposite knowing of Truth alone destroys the false sense of the patient. This is beautifully expressed in the calling of Samuel, who "did not yet know the Lord," but "Eli perceived that the Lord had called the child."

The Scientist who works from a true standpoint knows that there is no use in trying to meet error with error, for he perceives that nothing less than the realization of Truth and the understanding of divine Love can ever fully and permanently satisfy the heart hunger of the world. It is, indeed, through his own mental wrestling with false sense and self that he has been taught this grand lesson, been fitted for safe and honest practise, in the sweet ministry of Truth. Thenceforth he works as Jesus worked, who said, "Where your treasure is, there will your heart be also."

Jesus ever exposed the fallacy of believing that the restoration or accumulation of a material sense of things could confer permanent blessing. He gave us the parable of the

Digitized by Google

man who said, "Soul, thou hast much goods laid up for many years; take thine ease, eat, drink, and be merry." But Truth said to him, "Thou fool, this night thy soul [the false sense of substance] shall be required of thee: then whose shall those things be, which thou hast provided?" Who is benefited by such a false sense of life? Christ Jesus taught us how to gain the inexhaustible peace which comes from knowing God as the only Life.

Sometimes the calamities which take place in the world of sense bring the lesson of this parable very forcibly to our notice, as when, for instance, the objects around which one has centered his earthly all are taken from him in a night. God, Spirit, can never be the object of material sense. The reverse of the false sense of substantial gain is the promise of perpetual peace made by divine Love to those who worship or desire that Love in spirit and in truth. As we read in the book of Ruth, "The Lord recompense thy work, and a full reward be given thee of the Lord God of Israel, under whose wings thou art come to trust."

The beliefs of life and love as less than the reflection of the infinite, have no reality, no substance. The word of Truth ever is: "I have loved thee with an everlasting love." They who realize that here and now the perfection and indestructibility of the real and only man, that the manifestation of infinite Life, constitutes all that really is, are they who now "plant themselves in Christ, the true idea of God" (Science and Health, p. 54), and are henceforth safely grounded and rooted in Truth; their whole desire and joy is in Spirit and spiritual life, and therefore neither tempest nor shock can have power to harm them.

KNOWLEDGE VERSUS BELIEF.

GEORGE C. FRANKLIN.

ALL who give the matter thoughtful consideration will recognize that perfect intelligence signifies the absolute annihilation of fear. Ignorance begets fear. An individual who expressed perfect intelligence would know the exact course to pursue at all times, and would therefore have no doubt or questioning as to the right or wrong of any action. If this is true, then it is perfectly reasonable to assume that man's harmony is in exact proportion to his scientific knowledge. On page 366 of Science and Health Mrs. Eddy writes: "The Christian Scientist will be calm in the presence of both sin and disease, knowing, as he does, that Life is God and God is All." A moment's thought will show us that it is knowledge of the spiritual fact which enables one to be calm, and this calmness will be in exact proportion to his knowledge based, not upon an empiric *ipse dixit*, but upon demonstrable truth.

Most of us can remember instances where we have suffered intense anxiety, fear, either because of our not knowing the right course to pursue, or else because we were uncertain of the outcome of some action. This, it is easy to see, was the result of the sense of limitation, ignorance, which has always been a quality of the suppositional intelligence separate from God, the one perfect intelligence. A thoughtful consideration of these things will show us that, no matter how we have strayed into the vagaries and illusions of mortal belief, there is but one way to regain our harmony, and we should be grateful that through Christian Science we have gained a clearer knowledge of divine Truth, the intelligent application of which will deliver us from all the limitations of ignorance and superstition.

The calmness of the one who knows, compared with the anxiety of the many who merely believe, was illustrated to the writer several years ago in a court-room. The case was one in which a man had been arrested for stealing ore, "high-grading," as it is called, and it was thought by the officers of the law that the ringleader of a gang of criminals had been caught. So sure were they of this man's guilt, that the Mine Operators' Association had employed special counsel to assist the district attorney in the prosecution of the case. The accused stoutly maintained his innocence, and employed the best counsel he could afford, but very few people believed it possible for him to be acquitted, so clear seemed the evidence against him. A few days before court convened, his friends raised a large sum of money, and employed the best lawyer the place afforded, a man whose very presence in the court-room commanded the respect of all, because of his reputation for legal knowledge and the well-known fact that he would not defend a person whom he believed to be guilty.

Much to the surprise of the crowded court-room, the attorney took little interest in the empaneling of the jury, and even less in the cross-examination of the witnesses for the prosecution, and as the trial progressed, the friends of the prisoner felt no little chagrin at his seeming inactivity, and their hope was well-nigh gone. The one reassuring fact was the attitude of this attorney, who was the calmest person in the court-room. At last a witness was called, upon whose testimony all the case for the prosecution had been based, and, after several hours of direct examination, he started to leave the witness-stand without cross-examination, as the others had done before him, but instantly the attitude of the lawyer for the defense was changed. In a dozen questions he showed this witness to be a perjurer, and in a very few minutes the erstwhile witness was the defendant, and was eventually sentenced for the very crime he had attempted to saddle on some one else. Of course the prisoner stood acquitted.

This scene has often come up at times when material sense, the prosecuting witness in every case of sickness or poverty, has paraded its witnesses against the harmony and peace of man, and yet the practitioner who has "rendered himself strong, instead of weak, to cope with the case" (Science and Health, p. 423), knows that the witness which is arguing against the harmony of man is the same that says the sun moves, the earth is flat, and that two parallel lines extended far enough would touch. Because of his scientific knowledge that Jesus' statement, "He is a liar, and the father of it," is capable of demonstration, he is unmoved by all the witnesses who base their arguments upon sense testimony, and patiently bides his time to prove to all that every argument based upon material sense has no foundation, is not anything but a mere negation, a suppositional absence of intelligence. "The only law of sickness or death is a law of mortal belief" (The People's Idea of God, p. 12), therefore such a one is no more disturbed by the statement from the physician who bases his verdict of "incurable" upon the vacillating testimony of material sense, than was the lawyer in the case just related.

We know what God is, and that He is omnipotent and omnipresent. We know that the purpose of omnipotence is already expressed, and that no time could elapse between desire and execution where the all-power is the only activity. Thinkers are beginning to see that intelligence is coincident with divine Love, and that Love is the only Mind, and that the more of the scientific knowledge one can gain, the more real prosperity is his. At last we can consciously and with absolute certainty of success work to lay up "treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal," for spiritual knowledge is attainable, and spiritual knowledge means liberty, health, and prosperity.

If the darkening of the sun keep the fruits of the earth from growing, the earth is surely the worse, though it be blackened by no deposit of smoke. And when good things do not grow, the wild, and possibly noxious, will grow more freely. There may be no harm in the yellow tansy; there is much beauty in the red poppy; but they are not good for food.—GEORGE MACDONALD.

SELECTED ARTICLES.

[Frederick Dixon in *Richmond Herald*, Richmond, Surrey, England.]

A recent critic says that I will be surprised to hear that my previous letter, which you published, has done more to convince him that Christian Science has less in common with the Bible than anything he has yet read. He may be, in turn, surprised to hear that I am not in the least surprised. Indeed, judging from his method of presenting evidence, I should be extremely surprised if he regarded anything I said seriously. It is my habit to argue my case as closely as I can, and never to make charges on evidence I am not prepared to produce, or to accuse people of outrageous conduct on hearsay evidence. As, I regret to say, this is the critic's method, I am not the least surprised that my method does not appeal to him.

It is an axiom of criticism that before you criticize a person's deductions you must master his definitions. That is to say, that it is a puerile proceeding to denounce conclusions which have no bearing on definitions, as this simply perverts, instead of elucidating, what a writer or speaker has said. If the gentleman to whom our critic refers had read Mrs. Eddy's book, "Science and Health with Key to the Scriptures," before writing to the papers about it, he would have been saved from falling into the very class of criticism which all great writers and thinkers have necessarily utterly repudiated. Mrs. Eddy sometimes speaks of man as the spiritual image and likeness of God, and sometimes as the material human being, and he who has eyes to see can always distinguish "between God's man, made in His image, and the sinning race of Adam" (Science and Health, p. 345). It is the image and likeness of God which she says is without sin, and it so happens that she says precisely the reverse about the human being. Of course, if you completely reverse what a writer says, it is in your power to gain Pyrrhic victories on every occasion, but we all know what such victories end in; so perhaps before the gentleman rushes into print again to denounce Mrs. Eddy's conclusions, he will be good enough to make sure of her premises.

As for the clergyman who preached against Christian Science, clergymen are preaching against other religions every day, so that Christian Science is no exception. It is just because people are wasting their time preaching against Christian Science, while Christian Scientists, instead of wasting their time in denouncing their neighbors, are devoting it to demonstrating the truth in which they believe, that Christian Science is spreading more and more rapidly over the whole world. It is always much easier to denounce somebody else for not being a Christian than to be a Christian yourself. Then, without giving me time to reply, this clergyman takes up his discourse again in the next issue of the paper, and announces that what he contends for is "a visible fulfilment" of prophecy, and "not a spiritual imagination." I do not know whether he quite sees where he is himself, but his contention is the exact position of Christian Science, and that is why Christian Science demands that preaching shall be supported by healing. Jesus said, "Preach the gospel" and "Heal the sick,"—in plain English, support your preaching by a visible fulfilment. The gentleman supports his preaching simply by attacking his neighbor, which is exactly where I contend he is making his mistake. It was Jesus who said, "He that believeth on me, the works that I do shall he do also," and therefore it was Jesus who made a man's claim to be considered a believer proportionate to his ability to do the works he had done. He healed the sick and raised the dead. Christian Scientists are healing the sick today, and healing them beyond any question at all. That they have not acquired sufficient of the Mind that was in Christ Jesus to raise the dead, does not make Jesus' command less imperative, nor does it prove that Mrs. Eddy's contention was "spiritual imagination."

[H. Cornell Wilson in *Watertown* (N.Y.) *Times*.]

As the opinion expressed by our critic is a personal one and fails to represent the mature judgment of a very considerable population in other countries as well as here, I will ask your permission to state briefly wherein Christian Science differs from this gentleman's mistaken concept of it. Before doing this, however, I would like to cite brief extracts from opinions by other ministers, appreciative of Christian Science. One who has spent thirty-four years in the ministry, and has been well and favorably known in a prominent denomination, writes: "I have been kindly and divinely led into the borderland of a fuller sense of Life, Truth, and Love. To me Mrs. Eddy's message is the renaissance of Christianity, a return to the simplicity of Jesus' teaching and work, and through this rebirth I have gained an understanding of God which has illumined the teaching of Scripture and interpreted the vital truth of primitive Christianity." A pastor representing the same denomination as our critic, is reported as saying in a recent public statement: "There is so much good in the teachings of Christian Science that much might well be adopted by other religions. The works of Christian healing are as clearly a part of the commission of Christianity as is the preaching." These at any rate consider that Christian Science is Christian. There are also many others engaged in active religious work as carried on by other denominations, who either through experience or careful investigation have changed their prejudiced views of Christian Science, having discovered it to be what it is, namely, the scientific Christianity proclaimed in the life and practise of Jesus the Christ.

To misunderstand the purpose of Christian Science often brings about a misinterpretation of its results. For instance, it may not be generally known that the physical healing associated with Christian Science, and fully credited by our critic, is incidental to, a result of, the spiritual regeneration which is the prime object of all its effort. Christian Science is not a system of mental healing as the term is ordinarily applied; it is essentially and primarily a religion. On this point Mrs. Eddy says: "The mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world" (Science and Health, p. 150).

Our critic, having failed to grasp this and other important points necessary to an understanding of Christian Science, claims that "suggestion," or "auto-suggestion,"—hypnotism, in fact,—accounts for its works of healing. Thus the effort is made, but in vain, to place Christian Science on the plane occupied by many systems of mental healing (a number of which he has mentioned), where results depend upon the control of one human mind or will over another. This method of control, as our critic has pointed out, may be employed for an evil purpose as readily as for a good one. It constitutes, according to Jesus, a "kingdom divided against itself," which "shall not stand." The same charge was brought against the Master. The Pharisees declared that he cast out devils—referring specifically to his healing of the man who was both blind and dumb—by Beelzebub. To this charge he replied, "If I by Beelzebub cast out devils, by whom do your children cast them out? . . . But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you."

The difference between Christian Science practise and all forms of mesmerism—suggestion or hypnotism—is that one who employs mental suggestion generally believes thoroughly in the reality of disease while trying to change his patient's belief regarding it; whereas the Christian Science practitioner understands the unreality of disease and frees his patient from fear and false belief by knowing, as Mrs.

Digitized by Google

Eddy has said on page 335 of "Science and Health with Key to the Scriptures," that "reality is spiritual, harmonious, immutable, immortal, divine, eternal. Nothing unspiritual can be real, harmonious, or eternal. Sin, sickness, and mortality are the suppositional antipodes of Spirit, and must be contradictions of reality."

Healing *per se* is most certainly not the sole gage by which Christianity is measured, as the gentleman states. A reasonable study of the New Testament reveals, however, that Christianity as exemplified in the life of Christ Jesus and his accredited followers unquestionably includes healing the sick. Did he not say, speaking to those who should believe on him, "The works that I do shall he do also"? James holds that "faith without works is dead." Without doubt "the works" Jesus demanded were of the kind he himself was doing, as any Christian must admit. The message Jesus sent to John the Baptist, detailing his works of healing as a proof of his mission, should settle this question. There is no justification, so far as Christian Scientists can learn, for any one's presuming to separate the requirement to preach the gospel from the remainder of Jesus' command, which reads, "Heal the sick, cleanse the lepers, raise the dead, cast out devils."

Had our critic understood the important distinction Christian Science makes between man in the image and likeness of God and the counterfeit, the material or carnal sense of man, he would not have chosen from the Bible and Mrs. Eddy's writings the passages he did for purposes of comparison. Paul declares that the "natural [or carnally minded] man receiveth not the things of the Spirit of God: . . . neither can he know them, because they are spiritually discerned." The real man, Mrs. Eddy insists, is spiritual and sinless, and he is the image and likeness of God, of divine Mind. The supposititious counterfeit of this man is the material, human being, the image and likeness of the carnal mind. It is of the image and likeness of God that Mrs. Eddy is speaking in the passages referring to man quoted from her writings; it is of the carnal man that Jesus is speaking in the passages our critic quoted from the Bible. When Jesus said, "Ye are of your father the devil, and the lusts of your father ye will do," he was referring to that carnal sense, which Mrs. Eddy calls mortal man; and when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect," he was referring to the spiritual consciousness which Mrs. Eddy terms the real man. In resorting to the comparisons he has used, our critic could hardly have proved more conclusively his misunderstanding of the teachings of Christian Science.

The Bible quotations, "It is appointed unto men once to die," and "Then said Jesus unto them plainly, Lazarus is dead," used to disprove Mrs. Eddy's statement that "man is incapable of . . . death" (Science and Health, p. 475), refer to widely different subjects and conditions and are not analogous. Need it be said that Mrs. Eddy here refers to the perfect man? Indeed, this is the man the Master has reference to in his statement, "I give unto them eternal life; and they shall never perish." It is interesting that Jesus first mentioned Lazarus' condition to his disciples in these words: "Our friend Lazarus sleepeth; but I go, that I may awake him out of sleep." Because they did not comprehend him, "then said Jesus unto them plainly, Lazarus is dead." To the spiritually-minded or awakened consciousness Lazarus was not dead. Of Jairus' daughter he said, "She is not dead, but sleepeth;" but they, still doubting, only laughed him to scorn.

Gamaliel's wise advice may well be heeded today by those who disagree with Christian Science. To those bent on hindering Peter and the other apostles he said, "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

[Algernon Hervey-Westhurst in *Science Siftings*, London, England]

In a recent issue of your journal I have noticed a reference to Christian Science, which, the critic maintains, denies that there is any sin. The teaching of Christian Science is so clear and emphatic on this question that I will ask you, in fairness to your readers, to allow me to say a few words on the subject. It is true that Christian Science denies sin most emphatically, but certainly not in the manner implied by the critic. Far from denying sin, in the sense of ignoring it, Christian Science is reiterating the teaching of Christ Jesus, which was so wonderfully illustrated in that statement, "Neither do I condemn thee: go, and sin no more." In Science and Health, on page 497, Mrs. Eddy writes, "To acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal." Now, if sin or the inclination to sin were real, that is, if it constituted a part of the perfect creation of God, it would be useless to attempt to get rid of it, to forgive it or destroy it. It is, however, just because sin and evil are unreal, that is, not of God, that those in bondage to sin find relief through Christian Science today, just as men did two thousand years ago, by an honest appeal for help.

Christian Science, therefore, does not merely say that sin is unreal, but it shows the sinner how he may obtain his freedom from the bondage of it forever, with the result that he has no further inclination or desire to sin. The Founder of Christianity set up a standard which leaves no room for misunderstanding. The statement, "He that believeth on me, the works that I do shall he do also," is capable of but one interpretation, and Mrs. Eddy, in discovering and founding Christian Science, saw that mere theory was of little avail, but that if the teaching of Jesus the Christ was true, it was scientific and demonstrable, and it was for this reason that she always emphasized the fact that Christian Science is based upon the healing of sickness and the destruction of sin, and that it must be judged by its works, and in no other way.

[R. Stanhope Easterday in *Commercial-Review*, Portland, Ind.]

In one of your issues I note a very commendable editorial respecting the changed methods of religious activity and the nearer approximation of present-day Christian workers to the idea of divine compassion as set forth in the golden rule. Your inference is expressed in the words, "Both the pulpit and the pew are better than they were under the old regime, when bigotry reigned and the fagots of the *auto da fe* were too often the weapons of the ruling sect."

In marked contrast to the foregoing is the report, covering fully two thirds of the editorial page of the same issue, of a sermon in which the gospel standard of Christian preaching and teaching is departed from in dealing with systems of religious teaching that differ from his own particular interpretation of Holy Writ.

True religion is essentially and always constructive, and in order to prove his own rightness or righteousness the Christian need not vilify others or even prove their works and conceptions to be wrong. He has only to set forth to the world in the form of good "works" or "signs following" the rightness of his own deductions, leaving the efforts of others to stand or fall on their own merits. The world's Saviour declared unequivocally, "God sent not his Son into the world to condemn the world; but that the world through him might be saved." In another place Jesus urged: "The Son of man is not come to destroy men's lives, but to save them."

Truth destroys only error, and it does this as light destroys darkness, by displacing it, putting something in the place of nothing. It was indeed declared of our Lord, "The Son of God was manifested, that he might destroy the works of the devil," but our Saviour designated this same "devil" or "Satan" to be "a liar, and the father of it," affirming furthermore that it was his "Word," or divine Truth, alone

Digitized by Google

that eliminated this lie or untruth about God and man, regenerating and saving the sinner, but destroying the belief in sin. It is upon the basis of this Scriptural line of logic that Christian Science deduces the idea of the unreality of evil.

[Thomas F. Watson in *Petaluma* (Cal.) *Courier*.]

In a discourse on "The Church of the Future," given at a church in Petaluma, the reverend gentleman said the Scriptures teach "unity of Christians." He also exhorted his followers to hold out for this "unity," and beware of such imitations as "Eddyism," etc. Now, if the gentleman refers to Christian Science, why not call it by its right name? Of course there is no such thing as "Eddyism," even though Mrs. Eddy is the beloved Founder of the Christian Science church. Calvin founded the Presbyterian church,—some individual had to found it,—but Presbyterianism is not usually called "Calvinism," neither is the Methodist faith designated "Wesleyism."

As to Christian Science being an "imitation," as the critic stated, let it be said that all who call themselves Christians should imitate the Master, who said, "Follow me." He commanded his followers to preach the gospel and heal the sick, and this is just what Christian Scientists are doing. As to "unity of Christians," the only unity which Christ Jesus recognized was his unity with God. He said, "I and my Father are one," and this is the "unity" which Christian Scientists are striving to "imitate."

The "apathy toward the church" which the gentleman deplores, does not seem to be affecting the Christian Science churches in the least, for they are exceedingly well attended, many to overflowing, and the reason is that Christian Science is a practical religion, offering a present salvation; it comforts the sorrowing, heals the sick, and teaches mankind how to understand God, "whom to know aright is Life eternal" (Science and Health, Pref., p. vii). The "church of the future" will undoubtedly be the one which proves its faith by its works, for "faith without works is dead."

[W. C. Williams in *Baltimore* (Md.) *American*.]

"Truthseeker" asks in the *American* for the Christian Science view of the recent wind and flood horrors of the West. In the nineteenth chapter of I Kings the Scriptures state that "the Lord passed by, and a great and strong wind rent the mountains, and brake in pieces the rocks before the Lord; but the Lord was not in the wind: and after the wind an earthquake; but the Lord was not in the earthquake: and after the earthquake a fire; but the Lord was not in the fire: and after the fire a still small voice." Christian Science holds with the Bible that God is of too pure eyes to behold evil, and also with the statement that He declared His creation "very good." Mrs. Eddy in Science and Health, p. 119, states: "In one sense God is identical with nature, but this nature is spiritual and is not expressed in matter. . . . God is natural good, and is represented only by the idea of goodness; while evil should be regarded as unnatural, because it is opposed to the nature of Spirit, God."

When the fearful disciples awakened Jesus during the storm that nearly swamped the ship, his command, "Peace, be still," silenced the wind and quieted the waves. If the tempest was evoked by God, Jesus would not have rebuked it. He stated plainly that he came to fulfil the law, not to destroy it, and if the conflict of the elements was according to a law of God, he would have abided by the law. But as he knew that a loving Father did not invent disaster any more than He invented disease, he taught that man could, with God's help, overcome sin, disease, and all else that was antagonistic to God, to Love; he taught that the creator was no more in the tempest than in disease, and that He did not afflict His children with either. Christian Science teaches that the universe which God created is spiritual, and that harmony will not reign, in the individual or in the general human experience, until the conception of a power in materiality is overcome.

In Christian Science, error and evil have no power except that which has been brought about through fear and false belief, else God, good, is not omnipotent, all power. An understanding of God and a total reliance on Him would dispel fear and eliminate the results. As we have for centuries been industriously growing away from God, this consummation seems difficult of accomplishment; but if we turn again toward the realization of Truth, we shall eventually be able to assert our full, divinely given dominion.

[John W. Doorly in *Blackpool* (England) *Gazette News*.]

Your correspondent "C. S." would, I am sure, take another stand if he had quite a decided pain in any part of his body and was advised to "think nowt about it." This would be very poor consolation for any one who is suffering, and Christian Science never advises any one to "think nowt about it." It advises them to think rightly about it, to realize that pain can have no reality or power in the face of Truth, because it is not of Truth, or God, and therefore not true. The healing work of Christian Science is in no way related to this negative nonsense, but it is the positive activity of the law of God, destroying every form of evil, including sin, disease, and death, and establishing healthful conditions of mind and body.

Christian Scientists, unlike your correspondent, would not be afraid to take their own medicine, for that medicine is the truth of man's perfection in and unity with good, which always makes free.

[Written for the *Sentinel*.]

AT EVENING.

LUCY NICHOLSON.

THE master artist, with sure hand,
His long brush-strokes of rose and gray
Has swept across the evening sky;
A hush falls on the evening land
As daylight slips away
In perfect blend of tint and tone;
The little vagrant breezes sigh:
How soft the shadows are!
Above the tree-tops, bright and lone,
Out slips one star!

Nothing is here that jars, or breaks
The satisfying harmony.
Its rightful place, unquestioning,
Each tiny gleam, each light-line takes.
Each field and flower and tree
Helps to fulfil the master thought
That planned the miracle of spring;
So do the far hills, faintly blue,
All help the work so wisely wrought,
So fair and true!

Oh, outdoor world, the counterfeit,
In swift obedience, selfless love,
Of beauty, endless, ageless, new!
Of Being, perfect and complete,
All human dreams above!
Your glad and generous gifts we take
Of light, and color, and to you
Our wordless thanks are given,
Because your promise seems to make
Us sure of heaven! *

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"FILLED WITH THE HOLY GHOST."

In the fourth chapter of Acts we read that after Peter and John had been released by the high priest and his kindred, and they and "their own company" had prayed, "they were all filled with the Holy Ghost, and they spake the word of God with boldness." It is to be noted, however, that this speaking with boldness was not in any sense theoretical or academic, but it was accompanied by demonstration. In fact, the incarceration of these two apostles, from which they had just been released, was because they had not only preached the gospel, but had also healed a lame man at the gate of the temple. In a way, the healing of this man, a poor cripple who in the many years he had lain daily at the gate had become a familiar sight to the priests and to those who came there to worship, was a reproach to those who persecuted the apostles. Moreover, Peter had declared that it had been done "by the name of Jesus Christ of Nazareth," he whom they had so shamefully treated but a few weeks before, thinking that thereby they had put an end to the hold his teachings and works of healing had gained upon the people. It is not to be wondered at, then, that the council, "beholding the man which was healed standing with them, . . . could say nothing against it." It was easier to release Peter and John than to justify their own failure to heal.

The apostles were, however, forbidden to speak or teach in the name of Jesus, and it is interesting to note the attitude of this little company of the followers of the Master, after they had listened to all that Peter and John told them of what the chief priests and elders had said. Their prayer was: "And now, Lord, behold their threatenings: and grant unto thy servants that with all boldness they may speak thy word, by stretching forth thine hand to heal." Surely they could speak with all boldness the word of Him whose "hand is not shortened, that it cannot save;" and the prayer of every Christian Scientist today should be of similar import. Genuine Christianity is no different now from what it was in the first century, and the healing of the sick is today just as much a part of the work which the Master commanded his followers to do, as it was then. Can we, indeed, consistently call ourselves Christians without this work? "Ye shall know them by their fruits," said Jesus, and his "fruits" were the countless healings wrought among those who gathered about him to listen to his teachings.

When Christ Jesus was questioned as to his Messiahship, he made no claims in unsupported words, but rather called attention to the works which proved the divine source of his teachings and the truth of his assertions. When Christian Scientists are questioned as to the truth of Christian Science, they likewise should be able to point to the fruits of its practise, as well as the letter of its doctrine, and those who heed their Leader's counsel to "study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495), will then answer with the boldness born of conviction. Christian Science with the healing omitted would be no more convincing than is other preaching without proof, and it was because of this that our Leader provided for the giving of testimonies of healing through our periodicals and at the Wednesday evening meetings. Every one who makes known through these channels the saving power of Christian Science, is doing precisely what Jesus told John's messengers to do, namely, "Go . . . tell . . . what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached."

Christ Jesus judged not by appearances, nor by claims to spirituality, but by that which was accomplished in demonstration of his teachings. We must likewise remember that Christian Science is a religion of works, and that its watchword is that fundamental commandment of which Mrs. Eddy writes on page 340 of Science and Health, that "it inculcates the tri-unity of God, Spirit, Mind; it signifies that man shall have no other spirit or mind but God, eternal good, and that all men shall have one Mind. The divine Principle of the First Commandment bases the Science of being, by which man demonstrates health, holiness, and life eternal."

In the Church Manual, Section 5 of Article VIII. is a by-law which reads, "The prayers in Christian Science churches shall be offered for the congregations collectively and exclusively." If, as we bow in silent prayer and repeat the Lord's Prayer in the new light of the spiritual interpretation which our Leader has given us (Science and Health, p. 16), we desire earnestly that the "word of God" which is to be spoken may come with power upon all who shall hear it, should not such prayers bring the same reward as did that of Peter and John and "their own company"? and is it not safe to assume that in obeying this by-law Christian Scientists are seeking to be "filled with the Holy Ghost," even as were these ancient brethren?

ARCHIBALD MCLELLAN.

UNFOLDINGS.

In "Science and Health with Key to the Scriptures" Mrs. Eddy tells us that "throughout all generations both before and after the Christian era, the Christ, as the spiritual idea, —the reflection of God,—has come with some measure of power and grace to all prepared to receive Christ, Truth" (p. 333). To this she adds that those who "caught glorious glimpses" of the Christ were baptized "in the divine nature, the essence of Love." Of this we have abundant evidence as we search the Scriptures, evidence presented not alone in words but also in works, the highest manifestation of the divine nature being the life and ministry of Christ Jesus.

Following close upon this great example, we have Jesus' disciples and St. Paul, whose teachings were "in demonstration of the Spirit and of power." It must, however, be borne in mind that while the "glimpses" of Truth gained in those early days were of unspeakable value, the absolute truth of being was not understood save by Christ Jesus himself, and he declared that the world was not then ready to receive this truth in its fulness, as we read in the sixteenth chapter of John's gospel, where he said, "I have yet many things to say unto you, but ye cannot bear them now." To this he added, "Howbeit when he, the Spirit of truth, is come, he will guide you into all truth."

Reverently yet confidently Christian Scientists maintain that this Spirit of truth has come through Christian Science, and is the Holy Comforter promised by the great Teacher. By the spiritual enlightenment thus gained, the priceless declarations of Truth found in the Scriptures are lifted above the plane of material belief and related to their divine Principle, so that the word of God is again known as a living power, healing sickness and destroying sin. Mrs. Eddy tells us that many passages of Scripture, when interpreted materially, seem to conflict, "but," she adds, "once discern their spiritual meaning, and it separates the false sense from the true, and establishes the reality of what is spiritual" (Miscellaneous Writings, p. 73). This is illustrated in Paul's statement, "For to me to live is Christ, and to die is gain." From what follows it might seem that he desired death as a means of escape from trials and temptations, but as we read on we find a noble ambition to follow the Master even to the victory over death. (See Phil. iii. 11-14.) The dying to which he referred as "gain" is explained by his own words to the Corinthians, where he says, "I die daily;" and he relates this dying to rejoicing, as well he might, for the one who daily realizes that life is

Digitized by Google

neither in nor of matter is fast putting on immortality with its deathless joy.

Paul did not always make clear the separation demanded by divine Science, between the flesh and Spirit, matter and Mind, but he at least saw and admitted that the flesh or matter is not of God and does not please God. What is more, his writings when spiritually interpreted always sustain the Master's teachings and demonstrations, and are also in accord with the teachings of our text-book. The husk and chaff of mortal belief must, however, perish, as Paul said, that the grain of truth may spring up unimpeded.

Any tendency to cling to the material sense of Scripture on the part of a student of the Bible reminds us of the apostle's epithet, "Thou fool," which is explained by his statement that "some have not the knowledge of God," which he says is to their shame. Jesus himself said to those who were clinging to a material sense of the word, after he had given so many proofs of its spiritual power, "O fools, and slow of heart to believe all that the prophets have spoken." Well may we ask ourselves to what extent this applies to us, to what extent we are letting go of mortal belief, and letting God's idea unfold in us and through us, reflecting health, holiness, and happiness. We are told that the unfolding of spiritual sense brought to Jesus' followers "great joy." Is it doing the same for us today?

ANNIE M. KNOTT.

"LAID UNTO THE ROOT."

OF all the pests with which the farmer has to struggle nowadays, none are more sure to be on hand than the old-fashioned weeds. These perennial intruders may be either cut down or pulled up, and so far as immediate appearances are concerned the one course seems quite as effective as the other. A sharp hoe and vigorous work will do wonders in removing all the surface showing, but in most instances cutting off does not kill: the roots remain in all their lustiness, and a few days suffice to disclose the fact that in a new, many-branched, and much less manageable form, every weed has reappeared to witness to the unwisdom of undertaking to do a right thing the wrong way. When pulled or plowed up, so that every least hold upon the soil is severed, then and only then are they finally done for.

In all this, the farmer's experience is aptly illustrative of more serious situations, for the significance of the "remaining roots" appears in a wide range of human effort to get rid of undesirables,—the habits, impulses, and thoughts which would check and ultimately stunt the growth of divine implantings. When Jesus said, "Be ye therefore perfect," he was commending a genuine and not a pretentious product, a state which has involved the removal from consciousness and conduct of every unseemly thing, and the alert Christian Scientist enters upon this task with a new sense, not only of the need but of the nature of the doing.

John the Baptist reminded the self-satisfied Pharisees that their pride and patronage as the lineal descendants of Abraham, and their scrupulous devotion to surface cleansings and ceremonials, counted for less than nothing, and that the truth was as an axe "laid unto the root" of all their falsities. Jesus reenforced John's teaching both as to its necessity and as to the method of eliminating the evil, when he said, "Every plant, which my heavenly Father hath not planted, shall be rooted up," and our past records perchance have shown that ignorance of this right way he suggested, or indifference to it, has brought defeat even when both a good purpose and an honest effort to put it into effect were present. Christian Science teaches not only that the weeds of evil desire and doing, the thorns which spring up to choke the seed of the Word, must be removed, root and branch, but it shows how this may be accomplished. Mrs. Eddy writes, "Truth bestows no pardon upon error, but wipes it out in the most effectual manner;" "Christian Science destroys material belief . . . and the thoroughness of this work determines health" (Science and Health, pp. 11, 186).

While striving to remove the noxious growths that cumber consciousness and mar Christian living, men, good men, are constantly sparing if not cherishing the false beliefs which are their source and sustenance. They maintain an attitude of tolerance for cause, while warring with effects. This has always been the inconsistency and the weakness of Christian profession, and Peter's words to his fellow Jews in Solomon's porch are still explanatory, "Brethren, I wot that through ignorance ye did it." Much of the sincere conformity and devotion of all the Christian years has thus been a vain attempt to remove offenses while ignoring their occasion, and this largely because neither the nature of evil nor the Science of salvation has been understood. Christian Science, the world's metaphysician, has come to disclose the nature of evil as well as of good; to show that false belief is the root of every weed of sin, and that it is destroyed through "the light of the knowledge of the glory of God," infinite Truth and good.

When in the light of Science and the love of Truth we learn to make intelligent war upon the fallacies which have so monopolized the soil of human consciousness, the untruths which we like our fathers have long declared true, then their outgrowths will disappear and the garden within will be cleared of all that deceiveth or "maketh a lie."

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

LEWISTON, MAINE.—At a meeting this evening [June 12] of the members of First Church of Christ, Scientist, of Auburn, final action was taken on the purchase of the Friends church edifice on College street in Lewiston. This purchase involves the transfer of the Christian Science society from Auburn to Lewiston. It also marks the closing of regular services by the Friends, for the present at least. Years ago, when the adherents of the Christian Science faith were but a handful, meetings were held in the old hall at the head of Lisbon street. Later, when the New Odd Fellows building was erected in Auburn, the society, which had grown rapidly, moved into that lodge-hall for its Sunday morning services and for the Wednesday evening testimonial meetings. Services are still being held there.

With constant gains in membership and attendance, the Christian Scientists have felt the need of an edifice of their own. The Friends church property is extremely desirable because of its fine location in the best residential part of the city and on the main loop of the "Figure Eight" electric line. The lot is on College street, near Sabatis. The seating capacity of the auditorium is about two hundred, while the chapel will seat about one hundred. It is understood that the new owners hope to expend considerable money in making thorough renovations before the building will be ready for use by this society, but they expect to make these changes before fall, so as to dedicate the church in the early autumn.

Lewiston Evening Journal.

SOUTH BEND, IND.—Another large church is to be erected in South Bend in the near future. Arrangements have just been completed whereby the trustees of First Church of Christ, Scientist, at Main and Madison streets, are able to announce the purchase of the lot adjoining on the north. A new edifice covering both lots will be erected, to cost in the neighborhood of fifty thousand dollars, and it is expected that the construction work will be started in the fall. For some time the church trustees have felt the need of a larger building and have been making tentative arrangements, including rough plans, but the acquisition of the new strip, which measures 33 by 160 feet, is the first definite step. This land, in addition to what is now owned, will give a frontage of nearly seventy feet on Main street.

THE LECTURES.

PORTLAND, ORE.

About three thousand people heard the two lectures on Christian Science delivered by Judge Clifford P. Smith in the edifice of First Church of Christ, Scientist. In the afternoon the lecturer was introduced by Frank W. Waters, who said in part,—

It is a good thing to know that Christianity can be demonstrated. The general awakening which has come to this age through the efforts of Mrs. Eddy in her discovery and reestablishment of the primitive healing power of Truth, is bringing peace on earth and good will toward men, the sick are being healed, the sinners reformed, and the lame are being made to walk.

Through this discovery we are enabled to understand that God is good, and by trusting the Bible statements we can demonstrate Christianity. God's word is healing today, through Christian Science, not only physical ills, but, to quote from Science and Health: "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed" (p. 340).—*Portland Oregonian.*

In the evening Judge Smith was introduced by F. Elmo Robinson, first reader, who spoke in part as follows:—

A well-known American editor and author, himself not a Christian Scientist, said publicly some few years ago: "Mrs. Eddy made the greatest discovery of the last century, embodied in this sentence: 'All is infinite Mind and its infinite manifestation, for God is All-in-all' [Science and Health, p. 468]." Science and Health does not contain the personal opinions of Mrs. Eddy, as some critics affirm, but sets forth a discovery, the rediscovery of the Christ Science, or truth of being, which every one can demonstrate for himself. Hence to Christian Science itself there is and can be no opposition. Some people have from time to time opposed their own concept of Christian Science, and if it were what many of us once thought it to be, we would still be its opponents.

I retired from the orthodox ministry in this city only after I had fully recognized the failure of the old faith to supply a satisfying interpretation of life and personal means of escape from human discords. After three years of most careful investigation and demonstration, I became thoroughly convinced of the truth of Christian Science, and accompanying the great spiritual awakening which followed my investigation, came the physical healing I had sought in vain through *materia medica.—Portland Telegram.*

JACKSONVILLE, ALA.

William R. Rathvon, who lectured on Christian Science, was introduced by Mrs. Carrie Young of Knoxville, Tenn., who said:—

Friends, it is with genuine pleasure that I welcome you here tonight, in behalf of our earnest little band of workers known as the Christian Science Society of Jacksonville, to listen to the first lecture on this subject ever delivered in our city. The question has often been asked, by myself and doubtless by the majority of those present here tonight, What is Christian Science? Those who understand it well enough to be able to heal the sick, reform the sinner, and comfort the sorrowing by its means, will tell you that it is a revival of primitive Christianity, the words and works of Jesus the Christ understood and lived. What is the message of Christian Science? It brings a message of hope and joy to all the nations, for its message is, "On earth peace, good will toward men."

What is the demand of Christian Science? It requires its followers to obey the commandments, "Thou shalt have no other gods before me," "Love thy neighbor as thyself." What does Christian Science do for the world? I voice the profound conviction and sincere sentiments of a host of honest and intelligent people when I say that Christian Science edifies, purifies, and satisfies. Many, many years ago the question was asked, "Why should it be thought a thing incredible with you, that God should raise the dead?" May we not ask ourselves why it should be thought a thing incredible in this enlightened and progressive age that the commands of the master Metaphysician should be kept in their entirety? He said, "Go ye into all the world, and preach the gospel to every creature;" also, "Heal the sick." Christian Science teaches this. Christian Science understood does this.

I am convinced that anything that lightens the load which humanity has to carry, needs no praise from my lips, and deserves only sympathy and encouragement from yours. What does Christian Science ask of the world? The only thing that Christian Science asks of the world today is honest investigation. I feel certain that you will all have a more thorough knowledge of this most important subject by giving your unprejudiced and undivided attention to the lecture of the evening.—*Correspondence.*

IRONWOOD, MICH.

Frank H. Leonard delivered a lecture on Christian Science at Pierce's theater to a large and appreciative audience. He was introduced by Judge S. S. Cooper, who said in part,—

Various bodies of the Christian faith have arisen at different periods. In our own time has come Christian Science, which has spread with marvelous rapidity, and now has thousands of followers throughout the world. Surely a belief which in this enlightened period can make such rapid progress, can inspire such faith and confidence, and bring so much peace and comfort to its followers, found among the thinking people of every land, is worthy of our earnest study and our sincere respect. For the first time in the city of Ironwood, we are given an opportunity to hear a lecture explaining the tenets of this faith. Our presence here tonight, I take it, of itself indicates that we have come with unbiased minds and a desire to learn and appreciate what we can regarding Christian Science.—*Correspondence.*

SAN FRANCISCO, CAL.

Willis F. Gross delivered a lecture on Christian Science to an audience that completely filled Dreamland rink. The lecture was under the auspices of Fourth Church of Christ, Scientist, in San Francisco. Judge J. C. Campbell, in introducing the lecturer, said:—

The first telegram ever sent was from Washington to Boston, and it read, "What hath God wrought!" When I look upon the faces of this vast audience of honest, earnest seekers after the truth according to the light they have, and when we know that it is composed of those now made happy and strong, who are unfettered and stand forth in the broad light of day, and giving evidence of the faith they have in them by the good works which they do, when we know that many of these were afflicted with sin, sickness, and disease, we cannot contemplate these great things without the question arising in our minds as to what this God is. Although we understand but little of Truth, we are humble seekers after it, and we press forward to the end where all is love and light and life eternal.

When we contemplate the phenomena of Christian Science, we come to the conclusion that it is a great religious,

Digitized by Google

moral, and physical revelation working for the good of mankind; and when we further contemplate that this good is produced by the revelation of Truth contained in this wonderful book "Science and Health with Key to the Scriptures," wherein God has spoken through a wonderful woman, Mrs. Eddy, we may well repeat the words of that first telegram, "What hath God wrought!"

Richmond Banner.

MACON, GA.

Prof. Hermann S. Hering delivered a lecture on Christian Science entitled "Christian Science Healing, Spiritual and Scientific," at the City auditorium, before a large audience. He was introduced by Malcolm D. Jones, who said:—

We have assembled this afternoon to learn something of a great religious movement, unique in the history of the world as being the only one ever originated by a woman. Zoroaster, Confucius, Mahomet, Luther, Calvin, Knox, Swedenborg, Wesley, and scores of other men, advanced beyond the established creeds of their day and received the homage and belief of their followers; but it remained for conservative New England, the home of strong men, to produce the first woman in the world who started a new religious movement; and this she did with all the devotion and courage and wisdom displayed by her hardy sires when they cut their first roads through the wilderness of the Granite State.

Joan of Arc richly deserves the monument erected to her memory, on which, travelers tell us, the sun never rises or the stars never shine without revealing fresh flowers, placed there each day by loving hands. The maid of Domremy died for France, but this New England woman, born like the maid of Orleans in a country village, lived and worked for all humanity, so that future generations shall rise up and call her blessed. Her monument is not in marble or in brass; it is a book which in a single generation has reached a world-wide circulation; a book between whose leaves are pressed those immortal flowers which bloom only on the sun-kissed heights of purity, peace, and love for all mankind.

The little town of Bow, near Concord, N. H., proudly raises its hills to the blue sky and hedges itself about with pine and spruce and balsam and fir and cedar, trees which stand like sentinels about holy ground. Here Mrs. Eddy was born, and here the angels whispered to her a new interpretation of the Holy Scriptures, an interpretation which, think of it what we may, has brought to thousands of others health of body and that peace of mind "which passeth all understanding."

To Christian Scientists the speaker of the afternoon needs no introduction; and to those who are not believers it is only necessary to intimate that a religious movement which in less than fifty years has spread in this country from ocean to ocean, and, crossing the seas, abides at the hearthstones of those who speak strange tongues, which has made the lame and the halt to arise and walk, has brought smiles to tear-stained faces and sunlight into darkened hearts,—it is only necessary to say that such a force as this, whether we believe in it or not, is entitled to the profoundest consideration of the wisest minds.—*Macon Telegraph.*

LEEDS, ENGLAND.

Bicknell Young lectured on Christian Science in the Town hall. He was introduced by J. W. Doorly, who said:—

The subject of our lecture, Christian Science, is not really new, as it has always existed. It is the truth about God and His laws, that truth which appeared to Abraham and to Jacob; that truth which enabled Moses to be the wayshower for his day; that truth which appeared to the prophets, and which was fully demonstrated in the life of Christ Jesus.

In the year 1866, when Mrs. Eddy, the Founder of Christian Science, was on what seemed to be her death-bed, this truth appeared to her, and healed her. She recognized that this was not an accident, but that it was the same law which had enabled Christ Jesus to heal the sick and raise the dead nineteen hundred years before. For three years after this, Mrs. Eddy retired from the world and read little else but her Bible, and gradually the truth which we know as Christian Science was revealed to her. Today there is a great army of men and women scattered all over the world who have been blessed through the ministrations of Christian Science, and in every part of the globe there are thousands who can testify to its healing power, even in what are usually termed incurable diseases.

Christian Scientists absolutely refuse to believe that God, who is the same yesterday, today, and forever, could at any time have changed His course in order to bestow some special dispensation of power upon some particular person; they do not contend that they are doing anything extraordinary because they prefer to rely on infinite Truth to heal them without the use of so-called material remedies. Since Mrs. Eddy's discovery, this Science has been tested to the full, and has not been found wanting.—*Correspondence.*

PORT HURON, MICH.

In introducing Virgil O. Strickler, the lecturer on Christian Science, in Society hall, Dr. B. W. Hardy spoke as follows:—

Friends, you have been invited here this evening to listen to a talk on the subject of Christian Science, a subject which was very aptly and clearly defined by a prominent attorney of this city a few days ago when he said: "It is the greatest, by far the greatest, subject that can occupy the minds of the people of the world today." In considering this subject we, as a rule, come in contact with three conditions of thought: first, those averse to Christian Science, who criticize it because of their lack of knowledge; second, those who are earnestly seeking to know the truth in regard to it; and third, those who have sought and found it to be the truth. To this last class it is without exception the greatest subject which can occupy our thought today.—*Correspondence.*

BERLIN, WIS.

In introducing Frank H. Leonard, who lectured on Christian Science, Charles G. Starks, editor of the *Evening Journal,* spoke in part as follows:—

Those who regard Christian Science as simply another method of healing the sick, are mistaken. That is but a tithe of its mission. This healing naturally follows right thinking and right living; and while no Scientist has learned all about right thinking and right living, all see the benefits of it in proportion to the degree that they accept the truth. That they often fall short, they admit. In a world of doubt, among millions who act and think directly opposite to this teaching, it is not strange that Scientists sometimes fall back into the old way; not strange that while living in Rome they are prone to do as the Romans do. But like Peter, though temporarily failing when they essay to walk the waves, they keep their faces in the right direction; they look to Truth as resolutely as possible and cry out: "Lord, save us; we perish."

I want to impress upon you that a Christian Scientist is not a long-faced Christian. He will not talk his religion to you unless asked to. He will not urge you to prepare to meet your God, for he well knows we are all meeting God every instant. Science calls for a practical, common-sense, every-day Christian.—*Berlin Journal.*

LECTURES TO BE DELIVERED

Glenwood Springs, Col.—William R. Rathvon, Odd Fellows hall, 8 p.m., July 28.

Los Angeles, Cal. (First Church).—Francis J. Fluno, M.D., Third Church edifice, 8 p.m., July 25 and 26; Lomax hall, corner Vernon and Central avenues, 3 p.m., July 27.

TESTIMONIES OF HEALING.

Although my first knowledge of Christian Science came through a wonderful healing some years ago, I have never written of it for publication. At the time this truth was presented to me through a friend, my case had just been pronounced hopeless by a noted nerve specialist, and my family had been told that I could live only a little while longer. I had been ill for years, and at that time was almost entirely helpless from a complication of many troubles, some of them said to be nervous and functional and some organic in origin. Several operations were said to be necessary before I could possibly recover, but I was far too weak to undergo them. I was also suffering intense pain all the time, which had spread to every part of my body. I had been on crutches for six months, and had finally been obliged to abandon them for an invalid chair, in which I was wheeled about. The only relief I could get at night was when under the influence of quieting medicines. All possible methods of medicine and manipulation had been tried, with absolutely no benefit, as I was rapidly growing worse.

I was quite willing to try Christian Science treatment, though I had little or no faith in it. I was perfectly indifferent to everything, but I told the practitioner who was called that I did not see how I could endure the night without some opiate. "Would you be willing," she said, "to wait till midnight before you take a dose?" I said, "Certainly," and she replied that she was sure I would not need it by that time. I was truly never so surprised in my life as when I awoke about seven o'clock the next morning and realized that I had been peacefully unconscious in restful sleep ever since eight o'clock the evening before, the first full night's rest I had known for years! And words cannot express my joy when I also realized that the pain was partially gone. Faith immediately awoke, and my recovery was rapid. In three days I could walk about the house, and in a week I walked to and from the street-car a block away. In a few weeks I was completely restored to health, and to such exuberant strength as I had never before enjoyed. All my old chronic troubles disappeared at once.

Not the least wonderful of all this was the healing of my eyes at the same time. I had worn glasses for eight years, and for the last three years dark glasses also, even in the house. As I could not endure artificial light at all without severe headaches, it became necessary, of course, to forego all evening engagements for three years, and to leave the family and retire every day after the evening meal. So when on the second day the practitioner asked me to lay aside my glasses, I thought it would be impossible; but as she had been so tactful and helpful to me in other ways, I thought I would comply for a little while, merely to prove to her my need of them. Several oculists had told me that the trouble was a complication, with various phases of defective vision. The practitioner advised me to try to read without the glasses for only five minutes the first day, and to continue gradually to increase the time. I did so, and have never needed glasses again. By the end of the week I was reading all day long, with no sense of discomfort. I have often had occasion to test my eyes in the severest way, but have had no return of the old trouble.

Although I read and studied the Christian Science literature a great deal at that time, yet strange to say, even after such a wonderful healing, I did not at all comprehend the Principle on which it is based. I felt sure that it was due to some psychological power of the human mind not yet fully understood, and I studied the subject of healing for years from that standpoint,—years that now seem so wasted. It was only after another serious illness, when so-called mental science methods had proved their utter inefficiency, that I finally turned to Christian Science, and after I had again found most full and perfect freedom from all physical limitations, my eyes were finally opened to perceive the truth which alone can make us truly free.

Through her clear understanding and reflection of Truth, my last practitioner was enabled to answer my doubts and clear up the points I could not understand before, and I have learned to appreciate most deeply my privileges in the daily study of the Christian Science Lesson-Sermons and all the periodicals. This study is coming to take a constantly larger place in my life, and all other things are becoming of less importance as I learn to distinguish the real from the unreal.

I cannot begin to express my gratitude for the many blessings that Christian Science is bringing me. The understanding of Principle, of Love and Truth, solves every problem of life, whether physical, financial, or spiritual.

HARRIET N. TAYLOR, Ithaca, N. Y.

I first heard of Christian Science about three years ago, and I went to a Sunday evening service out of curiosity. I had not then the slightest idea that I should receive any benefit. For nearly seven years I had suffered from sleeplessness, but was not taking any medicine, as my doctor told me it would only do me harm. I was, however, taking intoxicating drinks up to four years ago, when I decided never to take stimulants again. After attending the Christian Science services and reading Science and Health for three months, I was healed. Shortly after that, a decayed tooth gave me much pain. I mentioned the case to a Christian Scientist and was advised to go on reading. I followed the advice about six weeks, but could get no relief, so I went to see a practitioner and was healed in one treatment. Later I came to the conclusion that I had no further use for my pipe, after having been a heavy smoker since boyhood. Then, in the summer of 1911, I hurt one of my knees, and the pain was very severe, so I sent for the same kind practitioner, who worked faithfully to allay my fears. In about three weeks I could walk a little, and shortly afterward I was healed.

My wife had suffered from so-called female disease for over twenty years. After trying several physicians and undergoing one operation, she was told that her case was chronic; that they could give her a drug when the pain was unbearable, but this was as much as they could do for her. After studying Science and Health for about twelve months she was healed without any treatment.

We are both trying to be truly thankful to our heavenly Father for all these blessings, and also grateful to Mrs. Eddy for showing us the way.

GEORGE HILL, Montreal, Quebec, Canada.

When I came to Christian Science, intellectual pride made my progress slow; but it has been steady. It was seeming lack which drove me to accept this truth. Though I had been well trained in my profession, there appeared to be no place for me in the industrial world, and I had lost all faith in myself, as well as in every one, and even in God. I realized that in this condition of thought I could not hold a position, even if I had one, and that my thought must be changed. It was not until then that I was willing to come to Christian Science, though a friend, whom I could not help admitting had been healed by the truth, had many times urged me to have treatment. With the kind help of a practitioner, I learned to know that God loves every one of His children, and that Spirit, not matter, is the unfailing and unlimited source of supply for every one, and a position was secured. Through the study of Science and Health the realization of the omnipotence of good and the omnipresence of Love wiped out of my consciousness an inborn fear and sense of hatred, which had brought me much ill.

While moving, last fall, my wrist was badly jammed. As one of the men released it, he said that it was the hardest

Digitized by Google

job he had done that day. My first thought was fear that I could not play the organ the next day, and there was great pain, but I was able to hold my hand up and clearly realize that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468); and the pain and fear vanished. Although my hand was somewhat swollen and lame the next day, I was able to play, and the wrist rapidly healed.

For these and many other demonstrations of the power of Truth which have come to us through Mrs. Eddy in Christian Science, I am truly grateful.

MABEL ESTHER COUILLARD, Los Angeles, Cal.

[Translated from the German.]

Three years ago I had a severe attack of bronchitis. I had medical treatment for a long time, but was not freed of the trouble, although I experienced relief; still, in the physicians' opinion my case was incurable. Then a very troublesome asthmatic cough set in which caused me much inconvenience whenever I contracted the slightest cold, so that I grew almost desperate, and in especially severe attacks often felt that the end was near.

Upon the urgent persuasion of my mother, who had been healed through Christian Science of what was diagnosed as hardening of the arteries, I applied to a practitioner. After a few treatments I felt better, but did not give any thought to the ministry of divine Love. This negligence on my part brought its own result, for I had a return of the trouble, and this time it was much more difficult to remove the error. After many treatments, however, and especially after the diligent reading of *Der Herold der Christian Science*, and more recently through the study of our text-book, "Science and Health with Key to the Scriptures," I have been completely healed. I am deeply grateful to God, and also thankful to our revered Leader for the blessings and benefits which I have experienced through Christian Science.

HEDWIG HARM, Wannsee, near Berlin, Germany.

It was in the summer of 1908 that I first learned something of Christian Science, and since then I have every reason to be grateful for the healing and regenerating benefits which the teachings of Mrs. Eddy have brought and are bringing to me. Before I knew anything of the subject, I seemed fated to be laid up with some complaint or other for a week or so at a time, and obliged frequently to take some kind of medicine; but since my first healing in Christian Science, early in 1909, I have needed no material remedy whatever, and my general health has so greatly improved that I have never been prevented for a single moment from pursuing my usual daily occupation. My first healing was of an acute attack of influenza, which was overcome in three or four hours. In the summer of 1910, in one night, I was healed of a painful internal complaint which used to appear periodically, and which usually kept me in bed for some days; while in the following winter severe poisoning was entirely overcome within four days. Even attacks such as these have been powerless to prevent my going about my work as usual, and I am convinced that not only is Christian Science a curative power, but it is as well a preventive of disease.

I wish also to express my gratitude for the spiritual help and enlightenment which Christian Science is bringing to me. For many years the Bible had been familiar to me, but I must admit that until I gained some knowledge of Christian Science, I understood very little of the Word of God. I can now say, from my own experience, that our text-book is very properly called a "Key to the Scriptures," since almost from the first the light it throws upon the Bible has enabled me to understand and appreciate that wonderful book in a way I had never believed to be possible.

To be gaining, through the conviction that sickness, anxiety, or any other discordant condition is no part of man's birthright, a sense of wonderful peace, security, and contentment, as well as to be learning something of the one God who is Love, are further reasons for giving heartfelt gratitude to Mrs. Eddy, whose teachings have made this knowledge possible and practical.

EDWARD CASTELLAIN, London, S. W., England.

I hope I may be permitted to join in the song of thanksgiving and praise for this wonderful truth, trusting that some one may glean at least a crumb of comfort from my experience.

When I ask myself what Christian Science has done for me, I find words are inadequate to express to others the benefit I have received from its teaching. When I first learned of it, a little over five years ago, I was very ill and very unhappy. All had been done for me that human love could do, but to no avail. Since childhood I had been held in bondage by a supposedly incurable disease of the kidneys, and to mortal sense the time had come for me to pass on. The physicians had pronounced the case hopeless, and had given me but a few weeks to live. I was greatly bloated, and scarcely able to walk, but with the help of a practitioner I began to improve in a short time, and soon the swelling disappeared. A dear friend then came to my bedside and told me of this truth that makes man free, and it was through her many kind words and deeds that I was led to investigate Christian Science. After telling me many impressive truths, she went away; but in a few days she sent me some copies of the *Sentinel*, and also a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and bade me read them. I did so, and at the end of three weeks I was able to walk about the house and attend to my duties.

From that time on my progress from a physical standpoint has been sure and steady. In a spiritual way it has been everything to me. I have learned to rejoice always, to count my blessings, and in doing so they have increased. Christian Science has changed my thought; it has taught me to love all mankind and trust God in all things. I am truly thankful to God for the knowledge which is gained through the study of this Science, and grateful to our beloved Leader for her wonderful writings. I now know that "the Lord is my shepherd" every day; yes, every hour.

MRS. BESSIE KELTY, Big Timber, Mont.

I wish to express my heartfelt thanks to God, and my gratitude to our dear Leader, Mrs. Eddy, for the help which was given me about two years ago when I was supposed to be a victim of lung disease. I had suffered for about four months with different ailments, the first being what was called appendicitis; then I was said to have an abscess on the liver, then an attack of fever, and next, acute lung trouble that ran into a quick decline, from which the doctors claimed I could not be cured.

After all hope of my recovery had been given up, a dear friend and neighbor, hearing of my condition, brought me over a few copies of the *Sentinel* and asked me to read the testimonials in them. I did so, and thought that what God could do for others He could do for me; therefore, when this friend called again I told her I was ready to try Christian Science. I began on Wednesday, and on Sunday I was able to sit up for several hours, when before this time I had not been out of bed at all for over a week. I also had a very bad stomach trouble, and had been able to take only liquid nourishment for some time; but I now began to eat anything I wanted without any ill effects whatever. From this time on I improved very rapidly, and in two weeks I was able to be up and go anywhere I wished. I kept on improving, and now I hardly look like the same woman, for I enjoy the best of health and am strong. Though I have three children to care for, I do all of my own work.

Digitized by Google

At the time I was healed I lived at South Whitley, Ind. Christian Science has not only helped us physically, but also financially, as my husband has a much better position than he had before. It has also helped us spiritually, as we have a much clearer understanding of God, good, than we ever had before.—MRS. J. H. GLASSLEY, Dallas, Texas.

It is with a deep sense of gratitude to God for Christian Science that I give this testimony. It is now eight years since I first began to learn something of this healing truth, my first relief being from the results of a severe cut on the hand; later on I was instantly healed of severe headaches through the realization of the truth taught in Science and Health; in fact, I have many times proved that God is Love, and "a very present help in trouble."

Words cannot express my gratitude to God, and my thankfulness to our dear Leader, who has so lovingly shown us the way.

AMY WAKELIN, Brill, Buckinghamshire, England.

In the sixteen years that I have been in Christian Science I have neglected to speak of my blessings through the *Sentinel*, but I now feel that I should tell of my manifold benefits and not hide my light under a bushel. In moving my family over a rough mountain road, a wheel dished on the lower side of the wagon and pitched us all over the side of the mountain. Our little girl of five had her arm severely injured at the elbow, and was otherwise badly bruised. A physician set the arm on the hillside while we were waiting for another conveyance, but it was after dark before I got a Christian Science practitioner by telephone, fifty miles away.

In the mean time we had driven several miles over a very rough road, and the child was suffering severely. She would sleep for a few minutes and awaken with a cry of fright and pain; but before I returned to the house from the telephone booth about a quarter of a mile away, where I had gone to explain the condition to the practitioner, the child was sound asleep and did not awaken until seven in the morning. She had no further pain or inconvenience from the arm or the bruises. The doctor came the next afternoon to put on the permanent splints, and to see if the arm had been properly set in the confusion and lack of convenience of the hillside the day before. He found that he could bend the arm to its fullest capacity and without any inconvenience to the child, and was very much delighted to announce that it was tied together. We of course realized that the tie had been made the night before.

In our home many ills have been overcome, including acute lung trouble, a serious heart affection, said to be organic, rupture, a dislocated shoulder, measles, whooping-cough, etc., also smallpox, with inflammatory rheumatism resulting from same, accidental poisoning, besides the usual burns and cuts of an active family of children,—all handled in Science. We have lived most of the time at a mine fifty miles from a city, and nearly all of the treatment has been given by ourselves or the work done by absent treatment, using the telephone for communication, and many of the healings have been instantaneous. It is surely superfluous to speak of our thankfulness, as our cup has been full and running over.—GEORGE R. STEUART, Alice, Col.

The above testimony as given by my husband is correct. The numerous healings would take pages if we told of each one even briefly, but I want to speak of one or two which I have experienced. At the time of our marriage I was given but three months to live at this altitude (10,506 feet), and possibly a little longer at a lower altitude. As I was then very much under the influence of *materia medica*, and was ignorant as to what Christian Science really is and very prejudiced against my sense of it, I did not think of asking for treatment; but my husband knew that God is man's life, and knew it so well that without any treatment in the usual sense of the term, simply by knowing the truth about me, I was healed, and in eight and a half years I have not had one attack of heart trouble. When my third child was born, the doctor, who was called because of state law, said he had rarely seen a patient go through childbirth with such strong heart action. I had been very delicate as a child, and each year seemed to bring added suffering until my healing through Christian Science. Since that time I have been an unusually well woman.

That Truth is the best surgeon has been proved to me. About three years ago I dislocated my shoulder. Our telephone line was out of order and I was alone with the babies, the eldest four and the youngest a year old. I knew that I must do my own work in order to be ready for the duties of the morning, and the lines on page 495 of "Science and Health with Key to the Scriptures" by Mrs. Eddy came to me at once: "When the illusion of sickness or sin seems to you, cling steadfastly to God and His idea. Allow nothing but His likeness to abide in your thought. Let neither fear nor doubt overshadow your clear sense and calm trust, that the recognition of life harmonious—as Life eternally is—can destroy any painful sense of, or belief in, that which Life is not. Let Christian Science, instead of corporeal sense, support your understanding of being, and this understanding will supplant error with Truth, replace mortality with immortality, and silence discord with harmony." I managed with one hand to do some necessary household duties and then went to bed, constantly declaring this truth. The pain seemed intense, and I declared the truth nearly all night.

In the morning I managed to dress the babies and get their breakfast, and then sat down to *know the truth*. A loud noise like that of a pistol caused my eldest child to ask me what it was. My shoulder had slipped into place, and there never was a bit of soreness of the ligaments or muscles thereafter. Under *materia medica* I once had a similar accident to my knee. I wore an elastic knee-cap for two years, and had trouble for ten years with the knee, which was healed after I came into Christian Science.

The physical relief has been very great, but my greatest benefit has been in the overcoming of fear, in some degree at least, and in knowing that no matter what phase of error presents itself, God is always here to help, and that I can use the knowledge gained to assist my fellow men.

ALICE BANNISTER STEUART, Alice, Col.

I wish to express my gratitude for Christian Science by telling what it has done for me and our family. It is now over four years since we came into Science, and it has helped me in many ways. My school work has become much easier, and I enjoy my studies. I have also experienced the healing power of Truth many times. My mother, when young, was very sickly, and never knew what it was to enjoy good health. Father brought her to Montana in the hope of some better result, but she was not helped in any way by the change. She was continually taking some kind of medicine, and the doctors at last gave her up to be an invalid the remainder of her life. A kind Christian Scientist then told us of the great power of Truth, and my mother is now a strong, healthy woman. I hope this testimony will help some others to find their way to Christian Science.

MISS RUBY NICHOLAS, Laurel, Mont.

When I first heard of Christian Science, I was in bondage to error, both physically and mentally; but by the help of a practitioner and the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, also by the light of Truth shining upon the Bible, evil gradually lost its seeming power. I now see the way in which to walk

Digitized by Google

in order to turn from the unreal. I know that I would never have gained the sense of freedom which I now enjoy had my belief in the reality of evil not been destroyed. This understanding was not accomplished at once, but by putting off "the old man with his deeds," and putting on "the new man" after the likeness of Christ Jesus. I am learning every day that no matter what position we hold in the world, we can glorify God. With the help of a Christian Science practitioner, I was delivered of a child with very little pain. The baby was also healed of an unnatural condition of his eyes in a few treatments, and later of what is called spinal meningitis. Besides these cases of healing, the understanding that God is ever-present Love and Life, that He ever gives to His children who listen to His voice, and that we may in darkest hours go to Him in prayer and He will guide, strengthen, and keep us through every trial, so that we need not fear evil,—this is my greatest gain. I feel very thankful to God, and grateful to our Leader, who was pure enough to hear His voice above the clamor of false sense.

MRS. MABEL SEIMEARS, Longton, Kan.

An editorial in the *Christian Science Sentinel* prompted me to state my experience in the proof that divine Mind is always conscious, is indeed the only real consciousness. For a year previous to the particular experience referred to, I had given much time and thought to the question of consciousness and unconsciousness as generally understood outside of Christian Science, and found that in Christian Science was the only possible or logical explanation of their contrariety. This study naturally impressed me with the desire to be always conscious of the real and unconscious of the unreal; to strive for that Mind to be in me which was in Christ Jesus,—the goal of all true students of Christian Science.

While in Panama I was stricken with a fever, but by the help of a local practitioner I was out in a few days, and took passage on a steamer for New York, traveling alone. *En route*, I was taken with a relapse, and immediately became unconscious to mortal sense, yet to myself I was conscious of knowing Science. On my arrival I was taken to a hospital, and Christian Science treatment was continued while I was there. I thank God that although I was unconscious of the error, I was conscious of divine Mind, and conversed freely with Scientists regarding the Christian Science treatment. I could also pray, and give satisfactory argument and declaration of the truth of being, and make intelligent denial of the erroneous manifestation. I was rewarded for my previous study of Christian Science and was conscious of the real, while unconscious of the unreal.

It may interest some one who is still uncertain of the scientific basis of Christian Science, to know that the records of that hospital, one of the most prominent in New York city, will show that after most persistent daily tests, by all of their scientific methods, no trace was found of any disease germs, and therefore they could not arrive at a diagnosis. Christian Scientists will understand that the truth had destroyed all sense of germs. What we learn by practical proof in Christian Science can never be lost, because it is a scientific fact.

CHARLES GRIFFITH YOUNG, Park Hill, Westchester Co., N. Y.

He who shall best explain the law of God, and best apply it to human things, is your legitimate ruler. Love him and follow him. But you have not, and cannot have, any Master save God Himself. To accept any other is to be unfaithful and rebellious to Him. The foundation of all morality, therefore, the regulation of all your acts and duties, and the measure of your responsibility, is to be found in the knowledge of your law of life, of the law of God.—MAZZINI.

FROM OUR EXCHANGES.

[Lathan A. Crandall in *The Standard.*]

The weakness of the church is in being satisfied with believing that God is. We do not seem to realize that we might as well have gods of wood and stone as a living God whose life does not pass over into our own. How slow we are to accept to the full the implications of Jesus' declaration, that except we eat his body and drink his blood we can have no life in us! How superficial is the common view of his interpretation of life when he asserts that it is to know the true God and Jesus Christ whom God has sent! The Master gave much more time to instruction concerning the relations which we must sustain to God than he gave to baptism and the Lord's Supper. By didactic teaching and revealing illustrations he sought to make it clear that God must dwell in us, and we in God, if we are to live the true life. The knowledge of God which conditions eternal life, and so the power of the church to accomplish its task, is much more than the "furniture of the mind;" it is the "nutriment of the soul." No description of the wood violet can give one real knowledge of its beauty and fragrance, and no catalogue of the divine attributes or theological estimate of the nature of God can make potent our work for the world's salvation. Only as we share in His life do our lives become efficient as regenerative forces.

[*The Christian Register.*]

In our time the new problem presents itself of social justice. The Spirit is at work, undoubtedly, just as of old. Though we may not be in entire sympathy with every form it takes, we must be glad that youth and fervor feel the stir of a new spiritual spring in the breast. We may look upon the awakening as the hopeful thing: the form it takes may probably effect something toward righting the old world, so out of joint, but not all that is expected. The manifestation of life is what God wants, the working of the Spirit of truth is the vital thing. Even though its results are disappointing, the manifestation of the sincere purpose is success. Life stagnates without such waking up at intervals. It becomes a green-mantled pool. The thews and sinews of the soul can stretch and grow supple only in such noble contention for right and justice. The church that has these elements in it, is and must be a growing church. The number of its members can by no means measure the extent of its influence.

[Rev. H. S. McClelland, B.A., in *The Christian Commonwealth.*]

Here, then, is the explanation of the amazing authority of the teaching of Jesus. His words are authoritative, because they ring true to our own consciousness of right. If they conflicted with what we most deeply are, if our obedience to him meant the doing of that which the moral conscience bids us not do, his authority over our spiritual nature would be gone. But he says, "Thou shalt worship the Lord thy God," "Thou shalt love thy neighbor as thyself," and our conscience beareth witness that upon these two laws all spiritual development depends. He proclaims a coming kingdom in which the things that ought to be shall be, and a voice within us responds, "This must be so." There is no other name under heaven whereby we may be saved, not because church or Bible tells me so, but simply because there is no other way of living whereby a man can rise, as Jesus did, to the sublimest heights of fellowship with God.

[*The Christian Work and Evangelist.*]

Greece taught the world that the quest of the ideal was the one quest worthy of human beings; that the human soul was greater than whole universes of dead matter; that those ideas which underlie all that is best and highest in our life and thinking are invariable and universal and give light to all

Digitized by Google

pure hearts; that the universe finds its ultimate meaning in free human spirits; that beauty is truth, and truth is always the most beautiful thing. This idealism that came to us from Greece lies underneath all lofty thinking, all great artistic achievement, and has infused itself into all civilization which loves the good, the true, the beautiful, more than it does things.

[*The Congregationalist and Christian World.*]

Our republic approaches a crisis. Our heritage, bought and builded in toil and sacrifice, is in danger. Our heritage of liberty and law, of commerce and industry, and our heritage of Christian democracy, are imperiled, not because millions of aliens have settled within our borders and continue to come in, an unceasing tide, but because the race prejudice of those whose fathers came on the earlier ships threaten to force these later comers to remain aliens forever. Neither this republic nor any nation can long endure if it is peopled by aliens. O men of vision, what is the duty of the hour? Read the answer in the Christian church, in our home missions, in the public schools, on the bleachers at the ball game, in marchers beneath our flag, and at the ballot-box. The answer is but a word; that word is brotherhood. We must assimilate; we must not segregate. This "melting pot" of the nations has refined and fused into our national life the gold of character and talent and noble tradition; but only as immigrants have ceased to be aliens. It is no longer safe to maintain special privilege or to close the doors of opportunity.

[*The British Congregationalist.*]

We should be very sorry to seem in the least degree to disparage the motives of those who make liberal use of advertisement. We know that in some, perhaps many, instances it arises from the consuming desire to get people within reach of the gospel; but the result has been that in using that kind of advertisement we have come to think less and less of that other kind by which the spread of the Christian church has in past days alone been secured. We mean the advertisement which the converted life of the individual gave to those who watched its daily story. In asking the people to come to hear one great prophet we have belittled the grand idea that all the Lord's people should be prophets. In asking the people to come to hear our music, we have forgotten that the song of the church is from those who are in white robes, and that a company of men and women who are the friends of the sinful and sorrowful provides the finest of all attractions.

[From an editorial in *Minneapolis* (Minn.) *Tribune.*]

The cure for disagreement, in every church, is work. Let the clergy show the laity the way to go to work. When the church is so busy that she has no time to be bitter over refinements of doctrine, she will find that questions of creed and name have settled themselves. When she has become content with the present exaltation of the priestly office and undertakes the fulfilment of her prophetic office, she will find that most of her present difficulties of means and men have likewise solved themselves. In the name of the men who have been faithful to the church, the call is, Go to work! In the name of the men in whom the spirit is working for a new allegiance to the church, the test is, Go to work! In the name of a great nation awakening to a realization of its spiritual need, the command is, Go to work!

[Ozora S. Davis, D.D., in *The Advance.*]

And so, when the material world has done its worst to the soul of man, the voice of the Spirit sounds above the swell of the storm and affirms that the individual triumphs in the dark night of the universe. He who listens may hear it, and hearing may take courage for the conflict that must come before the soul can win its heavenly best.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of this *Sentinel*.

The volume "Poems by Mary Baker Eddy" is gilt bound; 79 pages.

Orders for the books named above and the other books of Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Christian Science Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been published in pamphlet form and is ready for distribution. Thirty-two pages and cover.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-two pages and cover.

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal*, printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

FROM THE CLERK OF THE MOTHER CHURCH

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ .05	$ .06	$ .07
Twenty-five copies . .	1.00	1.15	1.30
Fifty copies . . .	1.80	2.05	2.40
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913; XIIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, *cloth*, $3.00; *half calf* or *half* morocco, $5.50. On earlier volumes write for prices.

Equivalents of United States money:

Make all remittances payable to The Christian Science Publishing Society.

Entered at Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The federal lighthouse bureau and the forest service are cooperating in forest work. This cooperation is confined to the lighthouse districts on the shores of the great lakes in the lumber states of Michigan and Wisconsin. The lighthouse reservations here include a total of nearly five thousand five hundred acres, and range in size from thirty acres at Grand Island, Mich., to one thousand and forty acres at Grand Marais. On some cut-over tracts white pine and Norway pine will be planted; on others the timber already growing will be preserved through use. On two of the reservations the opportunities are excellent for growing cedar and pine for spar buoys and piling, to be used in the work of the lighthouse bureau itself.

San Diego, Cal., is to inaugurate a municipal back-to-the-land movement. Two thousand acres of city land, now idle, will be utilized as a start, and eventually eight thousand acres will be put under cultivation. The plan is to subdivide the pueblo lands into two-and-a-half and five-acre tracts, which will be cleared and put in shape for cultivation, then leased for a period of ten or more years, at a nominal rental, for small farm purposes. For the first year or so it is planned to fix the rental at not more than 5 per cent of the appraised value of the land, probably not to exceed five dollars an acre.

Six million acres of withdrawn public lands were restored to entry during the months of May and June upon approval by the secretary of the interior of the recommendations of the United States geological survey. This action was the result of examination and classification of the lands by the survey, those restored either having been found not to be valuable for power sites, reservoirs, coal, phosphate, or potash deposits, or having been definitely valued as coal lands, and rendered available for purchase under the coal-land law.

Colonel Goethals, chief engineer in charge of the construction of the Panama canal, has given notice that steam shovel work in the Culebra cut section will hereafter be conducted on the assumption that Gamboa dike will be dynamited on Oct. 10. The destruction of the dike will allow Gatun lake to flood the cut, thereby practically connecting the Atlantic and the Pacific.

Formal taking over by the government of the Albemarle and Chesapeake canal, connecting Albemarle sound with Chesapeake bay, is expected to take place at once. This will establish not only the first link in the proposed Atlantic inland waterway chain, but a free waterway between Maryland, Virginia, and North Carolina waters.

Seven forestry and timber-land organizations were represented at the three days' conference at Sunapee, N. H., under the auspices of the Society for Protection of New Hampshire Forests, with the cooperation of the state forestry commission and the American Forestry Association.

Banking by mail is the latest innovation entered into by the government in connection with the postal savings system. Hereafter both deposits and withdrawals may be made by mail.

International.

Andrew Carnegie has entrusted the Carnegie Dunfermline Trust with the administration of the income from ten million dollars of 5 per cent steel bonds, heretofore administered by the Carnegie Corporation of New York. Hitherto, the income of five hundred thousand dollars has been devoted to public libraries and church organs in the United Kingdom, but the Dunfermline Trust is to be given full power to devote the fund "to the most beneficent uses for the good of the masses of Great Britain and Ireland."

Lord Kitchener's scheme for the reform of the constitution in Egypt has just been promulgated. There will be a single chamber, part of the members to be elected on the basis of manhood suffrage, and part by nomination. The new legislature will have the right to initiate legislation provided it does not interfere with the constitution. Members will sit for six years, one third retiring every two years. The entire assembly will consist of members as well as ministers. Sixty-six of these will be elected and seventeen nominated.

The monument of George Washington, presented by the American colony to the city of Buenos Aires, was unveiled July 4, amid the plaudits of thousands and the rendering by the bands of the American and Argentine national anthems. The ceremonies were attended by the President of the republic, the vice-president, the ministers of foreign affairs, of the interior, of marine, public works, and justice, the presidents of the Senate and the Chamber of Deputies, and the president of the supreme court.

After a lapse of ninety-eight years King George, on July 22, revived the ceremony of installation of Knights of the Bath in Westminster abbey. The ceremony was the result of the king's desire that the King Henry VII. chapel be reinaugurated as a chapel of the Order of the Bath. The scene was the most brilliant witnessed in the abbey since the coronation. The Order of the Bath was founded in 1399, fifty years after the institution of the Order of the Garter.

Servia and Greece have agreed to the proposal that peace negotiations with Bulgaria should take place in Bucharest, and Greece insists that the armistice and the agreement for peace negotiations be signed simultaneously. Roumania has refused Turkey's request that she be allowed to participate in the peace conference, and the powers have consented to the conference plans.

Work on the southern section of the Canton-Hankow railway, under the present management and ownership, seems to be progressing favorably, in view of the upset condition of Chinese railway finances.

Industrial and Commercial.

The secretary of agriculture has just issued a permit to the Pacific Light and Power Corporation of Los Angeles, Cal., to construct and operate a series of power plants in the Sierra national forest. The company plans to build four power-houses, two reservoirs, and twenty-five miles of cement-lined tunnels. The permit provides for construction extending over a period of twelve years. The ultimate development proposed is about one hundred and fifty thousand horse-power. The greater part of this power will be transmitted two hundred and forty miles into Los Angeles and vicinity, and will probably be used in large part on further extensions of interurban railway systems. It is also expected that considerable quantities of this power will be utilized in pumping water for irrigation in the upper San Joaquin valley. The power will be transmitted over a double steel tower line strung with stranded aluminum cables and at a pressure of one hundred and fifty thousand volts, the highest yet attempted in commercial transmission. This development of the Pacific Light and Power Corporation is one of several under way or projected upon national forest lands in California. Among these are the projects of the Great Western Power Company on the north fork of the Feather river, where a reservoir of forty-three square miles is to be constructed and power plants with a capacity of about three hundred and fifty thousand horse-power are to be built. The Southern California Edison Company is planning for the development of four plants on the Kern river. The Pacific Gas and Electric Company is constructing on the South Yuba one of the highest masonry dams in the world. The greatest water-power development in the history of the state is now under way, and most of the plants proposed or being constructed will occupy national forest lands under permit from the secretary of agriculture.

Over one half of the standing timber is wasted in the course of logging, milling, and manufacturing, according to a writer in *The Independent*. The waste could be materially lessened. If thin band gang-saws were used instead of thick bands, the loss of volume due to sawdust would be reduced. The market requirements and usages should be modified so as to use odd lengths and short lengths for various purposes. More careful methods in edging and trimming would eliminate much waste. The utilization of by-products, such as chemical products, sawdust, and wood pulp from the wood now wasted, would conserve the life of our forests for the use of future generations.

The proposed reduction of express rates throughout the country has been approved by the interstate commerce commission. In a decision which will shortly be made public, the commission will announce its rejection of the pleas made by the express companies that the proposed rates were discriminatory and confiscatory. The public will benefit by reductions averaging from 25 to 50 per cent on packages of five pounds or under, and from 10 to 30 per cent on heavier parcels.

Twenty copper mines in Michigan were closed last week, owing to a strike called by the Western Federation of Miners. Only from a fifth to a quarter of the miners belong to the union, but it has been found impossible to work the properties with these men out. The men's demands are: recognition of the Western Federation of Miners; an eight-hour day; abolition of the one-man drill; and better working conditions.

The two-cent fare rate on all railroads in Minnesota, affected by the recent decision of the United States Supreme Court, went into effect on July 21. The lower merchandise and commodity freight schedules were filed on the same date.

A toy company of Sheboygan, Wis., is using only the waste wood from other mills. It has worked out a system of using all small waste pieces, so that practically nothing but the sawdust is lost.

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MENTAL CROSSROADS.

GEORGE H. MOORE.

THERE are very few subjects occupying human thought on which mankind as a whole agree. The varying philosophies of life and substance, the divergent influences controlling conduct, the multiplied theories of science, art, and government which throw mankind into a kaleidoscopic jumble of schools and creeds,—these are all tentative and irreconcilable, because in fact the very problem which such theories postulate and then attempt to solve, is itself a fickle mirage of ever-changing color and form. Mrs. Eddy's statement that "mortal existence is an enigma. Every day is a mystery" (Science and Health, p. 70), expresses this fact, as does also her conclusion that the only solution of the riddle of mortal existence is to be reached through a radical change of base for human thought. Her further teaching, that thoughts are things, that "temporal things are the thoughts of mortals," "eternal things (verities) are God's thoughts" (Science and Health, p. 337), constitutes a veritable pathfinder in the wilderness to those who will follow her rigorous logic to its natural outcome.

It is evident that the only real creation is that which expresses divine Mind, and that the temporal counterfeits which seem briefly to express the thoughts of men, must be as unstable and indeterminate as the mentalities which conceive them. There is no such thing as one material universe which looks alike, behaves alike, or offers like inducements to us all. The natural scientist or the philosopher, attempting to explain this apparent world of men and things, first assumes certain statements as fundamental or axiomatic truth. On these as a basis, or with these as a working hypothesis, he proceeds to erect his mental structure or theory of the universe. In like manner, every man, whether he ever thinks about it or not, either inherits, formulates for himself, or imbibes from the schools, certain more or less definite theories or habits of thought in regard to himself and his surroundings, which give aim, quality, and tone to all his conscious life and make or unmake his career.

We call this molding influence character; but even so, character itself is best gaged by dominant desire, which in turn is born of one's working hypothesis as to what in life is worth while, what is enduring and true. A man who builds a career on the supposition that mere wealth is the greatest benefactor of the race and therefore the greatest good for the individual, may end his career as a financier who thinks only in terms of the dollar, whose only heaven is a dream of affluence, whose greatest fear is poverty. The artist lives in a universe whose best good is expressed in terms of beauty, whose conception of evil finds vent in ugliness, barrenness, or discord. The scholar lives in a world whose polar extremes are culture and ignorance. The criminal, the morally weak or degenerate, inhabit a world where every man's hand is raised against his brother, and a seemingly brutal law restrains every natural impulse and desire. And so the dream of mortal existence goes on, initiating its paltry suppositions as to the meanings and values of life, erecting thereon its ephemeral mental structures, built only to be demolished by a later and possibly better-grounded conception of reality. Well might the master Christian say to those who vainly pursued false ideals, to the exclusion of the good and the true, "Ye fools and blind"!

It is not necessary to analyze long years of devotion to varying ideals, to detect the basic law involved. Every hour's work, every ambition, every adventure with new opportunity or new hope, every novel outlook, is vitalized by some working hypothesis which either accelerates or retards our progress and success. Lincoln voiced this law in a letter to a friend: "The way for a young man to succeed is to improve himself every way he can, never suspecting that anybody wishes to hinder him. . . . You cannot fail in any laudable object, unless you allow your mind to be improperly directed." The seeming power of a wrong thought, persisted in, is appalling. The tangled complexities of material existence traceable to the one false assumption that there is life apart from God, gives insistent warning of this fact. There is nothing in mortal thought so cumulative as a lie. One wrong assumption, firmly lodged in consciousness, may, often does, seem to poison and defeat a lifetime of effort, until destroyed by Truth. Instances of this are all about us, staining and distorting what otherwise would be fair and hopeful.

Starting as mere thoughtlessness or silly fear, as temperamental diffidence or some petty conceit, we may be led by degrees into abnormal habits and mental by-paths which lead so far from mental rectitude that our wanderings must later be retraced in tears or obliterated through suffering. Mere diffidence, unchecked and feeding on itself, may grow into a sense of loneliness, thence by apparently natural steps to a conviction that one is not appreciated or is disliked,—a thought that it is no use to try to please one's friends or to win against such assumed opposition, a settled belief that the world is against one, and that he is therefore bound to fail,—to futile effort foreseeing its own defeat, to actual failure, and to bitter mental revolt and violence. It is needless to multiply illustrations, for their name is legion. A little self-examination, a little watchfulness, a little of the earnest, uplifted desire, expressed in the psalmist's words, "Search me, O God, and know my heart: try me, and know my thoughts: and see if there be any wicked way in me," will bring the truth home to us all, thus destroying these false beliefs.

The same influence, until checked by divine Mind, affects us in the humdrum detail of existence. Indeed, such by-paths all begin in the petty routine of our work and thought. We start every task, be it trivial or great, with a mental forecast either invigorating or poisoning our effort,—that we shall succeed, or that we are bound in all probability to fail; that the task itself is worth doing for what it may bring us or teach us, or that it is a fruitless necessity forced on us by unkind nature or ill fortune. We may assert with equal confidence, "I do not believe I can do this thing," or, "There is no reason why I should not do this, for I know that intelligence guides me," and we by so much decrease or add to our efficiency. There is no handicap so heavy as that with which men burden themselves, in habits of self-depreciation, hes-

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

itancy, evasion, or cowardice. There is no assurance so heartening as the knowledge that in our legitimate undertakings we possess divine capabilities far beyond our past demonstration and growth, and that just over the borderline set by our fears and mental delinquencies lies the promised land of spiritual fruition and attainment.

This attitude toward life, rightly conceived, is the very antipode of the wilfulness, expressed in dogged determination, brutal insistence, and self-assertion, which at times seems to bring to men the success they desire. Spiritually directed, a wholesome mentality bases all its thinking on God as Principle, and on fundamental, axiomatic truth; always postulates good rather than evil, success rather than failure, cooperation rather than competition, helpfulness rather than the rough mental push and pull characteristic of unrestrained carnal mind. By such means, diligently pursued, the awakened mentality, seeking its own deliverance, initiates and establishes the absolute change of base necessary to right thinking. This process is not only allying one's self with "the deific power" (Unity of Good, p. 17), it is actually being born anew into the universe of God's creating, all about us, peopled with His ideas and radiant with the glory of His presence and power.

WAY OF PEACE.

REV. ANDREW J. GRAHAM.

CONSCIOUSLY or unconsciously all men are seeking satisfaction, rest, harmony, peace; and this entitles them to our compassion. Peace on earth involves health of body, vigor of mind, and cheerfulness of spirit. There is but one way to attain this end. "Thou hast made me for Thyself, O God, and my soul can never find rest until it rests in Thee," cried St. Augustine, and it has been the cry of all men, everywhere and alway. "The whole creation groaneth," said St. Paul. To know God, to be acquainted with Him, through Christ, Truth, is to forsake the path of pain for the way of peace. As Job in the midst of his groaning prayed, "Oh that I knew where I might find him! that I might come even to his seat!" so do men pray today. Steadily and increasingly are members passing out from many Christian churches, and this exodus is not a desertion but a quest. Mrs. Eddy says, "Contentment with the past and the cold conventionality of materialism are crumbling away" (Science and Health, Pref., p. vii).

The writer of this article knows full well, from many years' experience, how the middle-age theology and ecclesiasticism still hold in partial bondage multitudes of patient, loving people who are looking and longing for the consolation of Israel, release from perplexing thought, a present heaven. In response, Truth is knocking at the door of this age. Christian Science, through its text-book, its services and lectures, encircles the earth with the living voice of Truth. It knocks at the door, and offers to the weary and suffering all the wealth of the infinite storehouse of omnipotence.

Is mankind heedful of this message? The shepherds, the first to learn of the advent of "the Prince of Peace," were wakeful; so must men be now. The shepherds were obedient to the heavenly vision,—to follow the light is always necessary,—and to them it was said: "This shall be a sign unto you; Ye shall find the babe wrapped in swaddling clothes, lying in a manger." Spiritually interpreted, the appearing of the babe stands for the dawn of the divine idea in human consciousness, while the swaddling clothes represent the material environment which must be laid aside as the idea is unfolded to us, and the manger typifies that humility without which God is unknowable.

Let us briefly refer to these points. The Discoverer and Founder of Christian Science had much whereof she might boast, yet selfish pride was lost in the deepening sense of the blessedness of humility. After years of prayer and work she attained to a mental state which was marvelous in its spirituality, and saw her world-wide work in great prosperity; nevertheless she thus wrote of herself, as the author of "Science and Health with Key to the Scriptures": "Though rejoicing in some progress, she still finds herself a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Pref., p. ix). Not to be puffed up with a sense of one's importance, not to glory in one's position, attainments, or possessions, but to seek that *Mind* "which was also in Christ Jesus," is the way that *leads to* the Christ-idea, the beginning, the dawn of harmony.

Said the Master, "Verily I say unto you, Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." How constantly and lovingly is a little babe watched and nourished! So should the student of divine Science cherish that consciousness of God born in him, nor should he be impatient or discouraged if he finds that the swaddling clothes of old beliefs and customs still keep him from absolute freedom. Entrance into the realm of peace is a journey rather than an instantaneous experience. Beginners in Christian Science have with them the spiritual idea, though to their sense it may seem to be struggling for fuller expression, and if they but know that omnipotence will "gently lead those that are with young," they will not worry much about the swaddling clothes. These, in time, will take themselves away, and become known for what they really are, namely, nothing.

Christian Science enters upon no noisy crusade to make converts. It has no sympathy with the policy of encompassing land and sea to proselyte. It simply seeks to bless, with health of mind and body, all those who are weary of profitless struggle. Long attachment to and reverence for material observances keep many a Christian from that continuous peace which comes from the understanding of God. So long as religious thought and *worship center in* and around the material, whether it be the material body of Jesus or material sacraments, so long must men fail to attain *that* peace which can only be known as one rises to the meaning of Jesus' words: "God is a Spirit: and they that worship him must worship him in spirit and in truth."

Day by day the gates of Christian Science are being more widely opened, and an ever-increasing throng of joyful people are passing up to the city which John saw and *into the* abode of peace. Would any ask, Why journey we *to the* city? Our Leader shall reply: "The sharp experiences *of* belief in the supposititious life of matter, as well as *our* disappointments and ceaseless woes, turn us like tired children to the arms of divine Love" (Science and Health, p. 322).

"LEARN OF ME."

CHRISTINE H. BEALS.

IT is generally admitted that understanding gives power. We know this to be true in the most common and ordinary sense. We cannot do the thing we do not know how to do, however small or unimportant the thing may be. We must have an idea before we can put it into execution; we must understand before we can accomplish.

We realize that the wise man of ancient time gave good advice when he said, "With all thy getting get understanding." There are in the world today no lack of sources held out to struggling humanity, through which or by means of which men are promised understanding. There is a tendency among educators to advance the theory that all possible learning on all possible subjects constitutes understanding, but this attitude toward learning should be carefully considered. From an ethical and moral standpoint we have two things to consider,—good and evil; that which is desirable, and that which is not desirable; that which promotes the welfare and happiness of men, and that which retards these conditions. All progress depends on the promulgation and

Digitized by Google

perpetuation of that which is good; evil has no place in progress, nor in the advancement of the individual or of the race. It follows, then, that education should constitute a knowledge and understanding of that which is good and true and enduring.

The master thinker of all ages said, "Learn of me." Then the question naturally arises, What did he have to teach? What sort of knowledge did he propose to give out to the world? We cannot conceive of Jesus the Christ teaching evil to any man; no impure thing ever went out from his consciousness. "For I am meek and lowly in heart;" this is the reason that Jesus gave why men should learn of him. He wished humanity to know, not self-seeking, worldly wisdom, and ambition, but the fine, true things of life; clean, honest knowledge; a right perception of all things. He said of those who should obtain this correct knowledge, "Ye shall find rest unto your souls;" and he clearly taught that this knowledge which he desired to impart to humanity would be to them an avenue through which they might obtain all the good and desirable things of life. On page 26 of Science and Health we read, "Divine Truth, Life, and Love gave Jesus authority over sin, sickness, and death;" and Jesus says to humanity, "Come unto me, . . . and learn of me." Let us think of the call of the Master, and see if there is anything beside it that is so worth our time, thought, and energy.

THAT "STILL SMALL VOICE."

STELLA DUTTON.

AMONG the many revelations which Christian Science is bringing to light is the truth that direct communication with God, instead of being a miraculous occurrence experienced by a select few and during a limited period of time, always has been and always will be the privilege of each and all of God's children. The Bible is full of instances where God talked with men, where He led them by His voice and communed with them as consciously as man now communes with man. The inspired Word, found in the Bible, is recognized by humanity as the truth communicated by God to man, and He speaks now, to those who are ready to hear, in the same way that He communed with the holy prophets thousands of years ago; for He would not create children and provide no means of communication with them. Because of the man-made law that the auditory nerve is necessary for the conveyance of thought from one mind to another, and because men have become so accustomed to the belief that vocal sound is voice, they have come to the conclusion that God's voice is silent.

It is only thought which is really heard, and it is the understanding or mentality which hears it. The belief of a material medium of hearing has no more power of transmitting thought than an inanimate piece of wood; and as man rises above the belief that there is intelligence in matter, he will recognize the truth that "the medium of hearing is wholly spiritual" (Science and Health, p. 214). Every thought which strengthens our faith in good and lessens our fear of evil, which wrestles with and overcomes hatred, resentment, envy, or any other belief that "worketh abomination," and imparts comfort or inspires with love, which lifts us from the depths of sorrow and turns us gently away from material things to spiritual, is that "still small voice" which says to mortal mind, "Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me."

The thought which a person is admitting into his consciousness is the voice he is listening to. Now, humanity has listened so long to the voice of error, is so constantly admitting thoughts of discord, sin, sickness, and death, that it does not realize that Truth's idea is always knocking for admittance, is always yearning to be heard, just as when it was voiced through Christ Jesus, who said, "Why do ye not understand my speech? even because ye cannot hear my word." No one would think of going into a noisy factory and expect to hear above the roar of the machinery the singing of the birds outside; neither can one hope to hear the sweet utterances of Spirit while his consciousness is confused with the noise of human discord. We read in Science and Health that "Spirit, God, is heard when the senses are silent" (p. 89), and through the study of Christian Science we are learning how to guard the avenues of thought, as well as recognizing the necessity for so doing, against every error, every image of disease, every sinful desire, and every other discordant noise that seems to drown for a time the voices of God's ministering angels, the "impartation of the divine Mind to man" (Science and Health, p. 68). We know that only as we do this can we hope to hear God speak. Again, we are learning how to listen for the "still small voice" of Truth, how to close the ear to every note of discord, how to shut out from consciousness everything that is unlike good, and we are hoping, watching, and working for the ultimate silencing of all error, while, to quote Longfellow,—

> Down the dark future, through long generations,
> The echoing sounds grow fainter and then cease;
> And like a bell, with solemn, sweet vibrations,
> I hear once more the voice of Christ say, "Peace."

As yet, we seem to be between the darkness of materiality and the dawn of Spirit, and as the soft, indistinct twitterings of the birds tell us of the coming of morning, even so does our awakening understanding catch the low utterance of the "still small voice" of Truth. This voice is constantly growing more distinct, and the time is coming when men will again hear and understand the pure language of Spirit; when they will hear the voice of Truth as distinctly as we now hear human voices, and will commune with Mind as consciously as "when the morning stars sang together, and all the sons of God shouted for joy."

BASIS OF PRAYER.

REV. WILLIAM E. ENNIS.

AFTER long years of prayer,—prayer sometimes little short of agony, but which resulted in almost or quite nothing,—the writer has grown to recognize the fact that the failure of his prayer to win the result of answer lay in his failure to understand man's relation to God. His thought or belief about man did not agree with what man is. He prayed upon the spontaneous assumption that man is a mind or being apart by himself, and his prayer was an effort to get this off or apart being filled by divine power and wisdom and peace. Could he have succeeded, after beginning with such an assumption of man, he would of course have made God not the Supreme Being and the one and only Mind, but there would have been many minds, even as idolatrous mortal thought believes.

After many weary, disappointing years of prayer, the truth has sufficiently dawned upon his thought, through the teachings of Christian Science, to show him the error of this supposition. To ask God to come to a man, to enter and fill a consciousness separate from Him and unlike Him, is a pathetic act, and one divinely impossible of fulfilment. It is as if the familiar echo, being personified, should get lonely, and should ask the little boy to come and play with it. It is so weary and comfortless all by itself; in pain and sorrow it implores some one to come to it. But who can go to the echo, who can comfort and uplift it with his blessing and presence? No one can, of course, for there is no person, mind, or being called "echo;" and no more can God go to that mortal sense man who seems to be off and apart from God, for there is no such man. God can go only to what lives, and moves, and has its being in Him, because there is no real being, existence, or man outside of Himself,—outside of Deity.

Digitized by Google

And when this false mortal sense man ceases the belief that it is a man or a being, and when God is recognized as the only being, infinitely reflecting Himself through man, then we do indeed cease to pray the impossible prayer. Lighted by a beam of truth, we rise from this false self of belief; rise, and see and realize the one infinite being, and ourselves as forever perfectly and indestructibly living in God,—yea, verily living by Him—the "express image of his person." Mrs. Eddy describes the spiritual man as "that which has not a single quality underived from Deity; that which possesses no life, intelligence, nor creative power of his own, but reflects spiritually all that belongs to his Maker" (Science and Health, p. 475).

This is the passing from woeful polytheism and pluralism to the monotheism of Christ Jesus, to Truth; this is the passing from the world-evil to the heaven-good, to immortal Life and Love; this is the passing to that happy, holy state wherein "whatsoever ye shall ask the Father in my name, he will give it you." We have found that this "in my name" is the conscious realization of God as All; and man, the true self, as God's own reflection. What more can we ask? We have already reached the unutterable! Only one word can be uttered—"Abba, Father!" and by that word we live.

"WORD OF RECONCILIATION."

EVA S. WILLIAMS.

THOSE who before they became adherents of Christian Science were deeply immersed in what Mrs. Eddy speaks of as "erudite theology" (Science and Health, p. 24), find great enlightenment in the new aspect presented by once familiar passages from Scripture. One such passage is found in the fifth chapter of Paul's second epistle to the Corinthians, where we are told that God hath "given to us the ministry of reconciliation;" or, "committed unto us the word of reconciliation."

Exactly what does this mean? Perhaps one of the first things to come home to the thinker along new lines is this: that since all may be "kings and priests unto God," the need of an official priesthood is swept away in the broader perception of the fact that the duties of priesthood devolve equally upon all men. Now one of the demands upon those for whom "old things are passed away" is that he should endeavor to reconcile all men to God through Christ. In what way does he set about doing this? In one way only, namely, by so purging his own consciousness of false beliefs concerning man and his relation to God, that all those who come within the range of his thought are helped by it. To put it simply, we learn that every critical and condemnatory belief which we entertain concerning our fellow men is a disadvantage to our own progress into harmony, as it also is to theirs in so far as they are ignorant of their God-given ability to defend themselves from the mistaken thoughts (illusions) of others.

What is it, as days and weeks go by, that raises the individual Christian Scientist to the position of practitioner or Sunday school teacher, that of reader or president of a church? Is it not that in all his relations with self, and with all with whom he comes in contact, he strives to exercise the ministry of reconciliation, *i.e.*, to unsee all that is unlike God, and to maintain the spiritual facts of God-likeness? It is the part of an adult worker to do this daily and hourly, but we readily see how the mind of a little child instinctively expresses the truth its elders must study deeply to hold and to impart.

The writer was once told a story of a little girl, an older member of whose family had become a Christian Scientist. This little girl's whole nature had been transformed for good by contact with this new and higher thought. One day a remark was made in her presence concerning a boy who was being given employment in the house, that he was "a most unattractive if not actually repulsive youth." Instantly the child said: "Oh, do you think so? I love him!" It is well known that in this way it is more usual than not for little children to judge what the Master termed "righteous judgment;" and honest seekers for the truth as revealed in Christian Science will find that there is neither need nor excuse for them to fail in exercising the same discrimination. Do we not all know from human experience that the judgment we fear is seldom that of those who are advanced in the subject concerned, but of those who are on much the same plane as we are?

Said a musician recently, "I think you will find that teachers of music are much less critical of playing than others," and thus it has continued to some extent in the study and practise of Christian Science. Quite rightly the free discussion of error in any of its forms should be avoided among Scientists; but is there not a further ground for the endeavor, among the inexperienced or backward, to conceal difficulties from one another, namely, the fear of unhelpful criticism? The cause of this attitude should be eliminated. He who has step by step gained ascendency over the belief of personality in evil, is trusted to give help because he or she is known no longer to identify it with the individual. The less advanced student fails thus to discriminate, and possibly gives out a thought which adds to the already self-condemnatory sense of a suffering or sinning brother.

But there is even now a revival of the spirit which animated the early Christians, of whom it was said, "See how they love one another;" and it needs only that this perception of true brotherhood be enlarged through the determination on the part of every beginner in Christian Science to hold only such thoughts and to speak only such words as shall uplift his fellow pilgrim. To put it on the most negative plane, we cannot possibly help another by the mental declaration, "So and so is not getting on a bit;" but why make such a pronouncement? Who are we that we should attempt to decide the time and manner in which another's difficulty shall be seen to have yielded to the work of Truth? Every statement of truth, however impersonal it may be, the right thought never leaving room for the wrong, is, however, actually reconciling the whole world to God, through the true understanding of the infinite goodness and power of divine Love.

[Written for the *Sentinel.*]

MY CHOICE.

LUCY HAYS EASTMAN.

My God, no human touch I crave,
But oh, may I Thy presence feel,
Closer than claspèd hands,
In selfless love that stretches wing
O'er fear-bound hearts, and works to heal!

And I no spoken word would ask,
But pray to hear the inner voice,
So small, so still, so strong,
That speaks the things of God, and woos
My heart and will from earthly choice.

Father, no outward sign I seek,
But may each thought be borne to me
Direct from Truth itself,
And, planted deep within my heart,
Bear fruits of love and charity.

And one thing more: O Mother Love,
For all Thy blessings sent so free,
This debt may I repay
By yielding up false mortal self,
In joyously exalting Thee.

SELECTED ARTICLES.

[Frederick Dixon in *Barbados Standard*, Barbados, British West Indies.]

One of the greatest of European statesmen, speaking of the Bourbons after the Restoration of 1815, declared that they had learned nothing, and they had forgotten nothing. The same may be said with emphasis of the sectarian critic. He recollects that for centuries it has been the portion of every orthodox church to persecute the heretic and the dissenter. He has not learned, and he is apparently incapable of learning, that the heretic and the dissenter have thriven on persecution, and that so far as their influence may have declined, it has always been when, like Jeshurun, they have in prosperity waxed fat and kicked at the heretic or dissenter of their day.

A contributor who calls himself "A Christian but not a Christian Scientist," is no exception to the rule. He poses as a Jupiter Tonans from behind the mask of anonymity. He begins by saying that Christian Science "is calculated to mislead the unlearned." It can only be said that if scholarship is a man's ballast against false religious teaching, the bulk of humanity must be in a parlous condition, a prey to the scholars of the churches. The critic appears to have overlooked the fact that the bulk of the New Testament was written by a publican, three fishermen, and a tent-maker, to say nothing of the fact that it was one of the complaints of the Epicurean Celsus that the pioneers of the culture of imperial Rome were weavers and cobblers. In modern times the story has been just the same. The history of dissent in England has been the revolt again of the cobblers and weavers against the scholars. "The Pilgrim's Progress," a book which has influenced religious thought more, perhaps, than any other except the Bible, was written, not by a bishop, but by a tinker.

The critic next explains that Christian Science teaches that Jesus' healing power was derived from God and not from himself as God, equal to the Father. He might be asked to explain, if this is so, why Jesus said, "I can of mine own self do nothing." Writing of this, a famous bishop and scholar says, "The very idea of sonship involves (in some sense) that of dependence." The comment is not important, though it is interesting. The difference of opinion is, however, one which the critic must settle with the bishop, and not with a Christian Scientist. He then goes on to explain that Christian Science teaches that "believers in God can by prayer procure the working of miracles equal to those wrought by Jesus." The statement is not very exactly put, but if Christian Scientists do, they have the authority of Jesus for it. It was he, and no other than he, who said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

Finally, the critic indulges himself in the sarcasm that when Christian Scientists can perform a string of works of physical healing,—some of which, be it said, they have already done,—they may talk about their wonderful healing. This particular sentence is surely a triumph of bad taste and worse logic. The taste can take care of itself, but the logic is worth examining. The critic has apparently forgotten that a few lines above he explained that Christian Science healing was effected by prayer to God; therefore he needs not be so painfully irritated because God has answered prayer. The "wonderful cures" are, on his own showing, the work not of any person, but of God. Again, is no one ever to talk of anything he cannot do perfectly? Barbados, indeed the world, is likely to become a silent place under such a dispensation. Nobody, for instance, but a senior wrangler, must open his mouth on the subject of mathematics, and it is an open question whether even he should. Nor is this all. If no one is to speak of healing unless he can heal like Jesus, then no one ought to preach who cannot preach like Jesus. There is nothing for it, apparently, but for all the churches to close their doors. Yet Jesus said, "Preach the gospel" and "Heal the sick." That is what Christian Scientists are trying to do. It seems a little hard that they should be stopped doing the little they can, because they cannot do all. It is perhaps as well that the anonymous critic is not in a position to put his logic into practise in Barbados.

[H. Cornell Wilson in *Medina* (N. Y.) *Journal*.]

A sermon by the Rev. C. Poeckler, published in a recent issue, refers to Christian Science in a way to indicate that its teaching is not understood by him. Without doubting the entire sincerity of the gentleman, I may state that there is every evidence in the sermon that he knows nothing about Christian Science, and consequently subjects it to misrepresentation.

An understanding of Christian Science is to be had by studying the Christian Science text-book, "Science and Health with Key to the Scriptures," by Mrs. Eddy, which is available to every one. This done, one will never venture the assertion made by this critic, that "the Christian Scientists say the very opposite of what Jesus says." Fortified by a knowledge of the Bible, especially by a spiritual understanding of the words of Jesus, of his disciples, and of Paul, one soon discovers that the teaching of Christian Science accords in every particular with the Scriptures, in precept as well as in practise. The proof of this fact lies in the increased interest in, regard for, and understanding of the Bible, which invariably follows the introduction of Christian Science. This is the testimony of thousands upon thousands everywhere and in all walks of life.

[John W. Harwood in *Manchester* (England) *City News*.]

It is but natural that as a doctor and churchman your correspondent "Medicus" should disagree with the teaching of Christian Science on the subject of healing sickness and of overcoming sin; but we find this in "Science and Health with Key to the Scriptures" (pp. 163, 164): "Dr. Mason Good, a learned professor in London, said: 'The effects of medicine on the human system are in the highest degree uncertain, except, indeed, that it has already destroyed more lives than war, pestilence, and famine, all combined.' . . . Sir John Forbes, M.D., F.R.S., Fellow of the Royal College of Physicians, London, said, 'No systematic or theoretical classification of diseases or of therapeutic agents, ever yet promulgated, is true, or anything like the truth, and none can be adopted as a safe guidance in practise.'" These statements by members of the medical faculty do not inspire any great confidence in their methods. Most of the adherents of Christian Science had already tried all that *materia medica* could offer before looking elsewhere for healing, and it is because they have found healing, and others see this healing taking place, that the Christian Science movement is making such rapid progress. The only way that any one can hold up this movement is to show a better system.

"How profoundly mysterious it is to be told that disease is an illusion, for it is mental, not a condition of matter," says our critic. How much more mysterious it would be to believe that disease is absolutely true and real, for we should be compelled to admit that God, who created all that was created, "and, behold, it was very good," created disease and suffering; and if this were admitted, who would dare, even if they could, oppose God's plan and will by healing the sick? Jesus said he came not "to destroy the law, or the prophets: . . . but to fulfil," and in fulfilling God's law, sin and disease vanished into their native nothingness. Our critic objects to the classification of sin with disease, and yet as a churchman he must be cognizant of the same classification by Jesus when he said to the man sick of the palsy, "Thy sins be forgiven thee," and to the people who murmured against this, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk," showing in

Digitized by Google

this case that the destruction of sin resulted in physical healing. Jesus defined Satan, devil, or evil, as a liar, and the father of lies: "there is no truth in him;" so when Christian Science relegates evil and disease into nothing more than an illusion or falsity, it is but following his method, and the remedy he used is the one Christian Scientists use. Christian Science repudiates suggestion and declares that there is but one Mind, who is infinite intelligence and Truth. As we obey the injunction of Paul, "Let this mind be in you, which was also in Christ Jesus" (know the truth as Jesus did), we are able to destroy intimations of sin and disease.

To object to the teaching of Christian Science simply because it is not in accordance with preconceived views, will not influence others. Christian Scientists do not ignore any part of Christ's work. The test as to the true Christian, a believer in and follower of Christ Jesus, was given by him in these words: "He that believeth on me, the works that I do shall he do also," and, "These signs shall follow them that believe; In my name shall they cast out devils; . . . they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." If *materia medica* and scholastic theology cannot stand this test, they will go down before the true teachings of Jesus Christ, as reiterated by Christian Science with "signs following."

[Thomas F. Watson in *Grass Valley* (Cal.) *Union.*]

The *Morning Union* recently contained a sermon, delivered at the Congregational church, purporting to be an exposition of Christian Science, in which the minister alludes to the "Christian Science Bible." Now it is well known by nearly every one today that the Christian Scientists use the same Bible that is used by other churches, namely, the King James version. They also use the Lord's Prayer in every service. There are many commentaries on the Bible, but the Christian Scientists have chosen "Science and Health with Key to the Scriptures" by Mrs. Eddy, because it enables them to understand how God's word, when rightly understood, heals the sick and sinning as readily today as it did in the time of Jesus and the apostles. "He sent his word, and healed them," is as true today as when it was first uttered, and Christian Scientists are proving it, not by "the power of suggestion," as this minister declares, for Christian Science teaching is diametrically opposed to mental suggestion.

The critic evidently has a misapprehension in regard to the Christian Science teaching concerning sin. Science and Health states as follows: "The belief in sin is punished so long as the belief lasts" (p. 497). Again we read: "For victory over a single sin, we give thanks and magnify the Lord of Hosts. What shall we say of the mighty conquest over all sin? A louder song, sweeter than has ever before reached high heaven, now rises clearer and nearer to the great heart of Christ; for the accuser is not there, and Love sends forth her primal and everlasting strain" (p. 568). It is well known that Science and Health is in all the public libraries, and can be easily obtained or borrowed; therefore each may read and prove for himself that Mrs. Eddy's teachings do not in any way conflict with the Bible. It is also a well-known fact that many have been led to investigate Christian Science after hearing or reading a manifestly unjust criticism of it by one whose ignorance of the subject had caused him to misrepresent the truth; and so the "wrath of man" is made to praise God.

The critic's statement that Christian Science is on the wane and that the churches are decreasing in number, is not borne out by actual statistics, for there are more Christian Science churches now than ever before. However, they do not boast of their numbers, knowing that "one on God's side is a majority." The *Christian Science Sentinel* of June 14 stated "that the growth in membership of The Mother Church during the past year has exceeded that of any previous year of the history of the denomination." Christian Scientists, as a whole, are so busy preaching the gospel and healing the sick, in the way the Master taught, that they have no time to criticize their neighbor's religion.

[Ezra W. Palmer in *Denver* (Col.) *Republican*]

In a recent review, in the *Republican*, of Edouard LeRoy's book, "The New Philosophy of Henri Bergson," mention was made that there is a similarity between the ideas of Bergson and those of Mrs. Eddy. Perhaps a brief comment will show that the Bergson philosophy, as set forth in LeRoy's book, is wholly unlike Christian Science. Bergson's philosophy does not postulate God as the basis of all reality, as does Christian Science, for Bergson bases his reasoning on an introspective study of the human mind, and from this inner view attempts to evolve a solution of life and the relation of mind to matter. His book throughout confuses mind and matter, and attempts in a vague way to make them both a part of reality. Nowhere in his book does LeRoy show that the Bergson philosophy even attempts to draw a line of demarcation between matter and spirit, and his philosophy is merely an attempt at the impossible—to bridge over the gulf between matter and spirit and to make God the creator of both.

This has been the crux of the contest between the idealists and the materialists in all ages, and will doubtless continue to be until men see more clearly the meaning of the omnipotence, omniscience, and omnipresence of Spirit, which necessarily precludes matter, a material universe, and a material creation. The dual character of Bergson's philosophy is aptly illustrated by his definition of God as "a free and creating God, producing life and matter at once" (p. 225), a statement utterly contrary to the teachings of Christian Science, which hold that God is Spirit, and that, therefore, God is not the creator of His unlikeness, matter. The whole teaching of Jesus and his wonderful works rests on the supremacy of Spirit, God, and the annulment of the claims that life and intelligence inhere in matter. Defining her views of matter, Mrs. Eddy writes, "My conscientious position, in the denial of matter, rests on the fact that matter usurps the authority of God, Spirit; and the nature and character of matter, the antipode of Spirit, include all that denies and defies Spirit, in quantity or quality" (Unity of Good, p. 31).

This confusion of mind and matter is observable all through the LeRoy volume, and utterly differentiates it from Christian Science, which rests on a purely monotheistic basis. On page 109 the writer vaguely defines mind and matter as "not two things opposed to each other, but rather as two universe directions of movement," whatever that may mean. On page 229 he attempts to coalesce matter with life, and this again is foreign to Christian Science, which teaches that God alone creates man, but not matter. Christian Science teaches the unreality of evil, because evil is contrary to the nature of God, whom St. John defines as Love. Yet, LeRoy's book defines both evil and good as real, and says that "memory makes a persistent reality of evil, as of good" (p. 123), thus setting up a dual universe and making God responsible for all the diseases and disasters which afflict mankind. Christian Science repudiates the doctrine of the reality of evil and holds with Habakkuk, that God is "of purer eyes than to behold evil."

In its attempt to define life, the volume again teaches a doctrine foreign to Christian Science. It attempts to show the evolution of life as torpor in vegetables, instinct in animals, and intelligence in man (p. 112). This materialistic origin of man is not upheld by Paul, who declared that "the Spirit itself beareth witness with our spirit, that we are the children of God." How can we be the children of God, and at the same time evolve from lower forms of

Digitized by Google

physical organisms? The feat is manifestly impossible, as Christian Science clearly teaches. No satisfactory theory of nature can be evolved which attempts from a material basis to explain man and the universe. Any system which makes this attempt usually raises a cloud of obscure and vague surmises, without aiding humanity one iota to escape the ills of the flesh and to gain the peace and supremacy of spiritual life which Jesus demonstrated.

Nor does the Bergson denial of material things bear any similarity to Christian Science. Bergson attempts to see an inward meaning to forms of matter, and holds that through this meaning we shall grasp absolute knowledge. Christian Science is based on no such analysis of material things; it seeks no absolute knowledge of matter. It points to God as the source of inspiration, of all knowledge, all wisdom, all science, and it repeats the words of Jesus, "Ye shall know the truth, and the truth shall make you free." Christian Scientists have learned that the truth which frees is not found in elusive forms of matter, but in the demonstrable knowledge of God, which heals the sick and destroys the power of sin.

[Algernon Hervey Bathurst in *Church Family Newspaper*, London, England.]

I have read with some interest the report of the Christian Evidence conference which appears in a recent issue, and may I be allowed to say a word on one point mentioned by Canon Masterman? He referred to Christian Science as "doing away with the idea of a personal God," and, much as I regret being compelled to contradict the speaker, I am bound to do so, since no system of philosophy or religion has ever insisted with greater vehemence upon the personality of God in the correct or spiritual meaning of the word than does Christian Science. On page 116 of "Science and Health with Key to the Scriptures," Mrs. Eddy writes: "As the words *person* and *personal* are commonly and ignorantly employed, they often lead, when applied to Deity, to confused and erroneous conceptions of divinity and its distinction from humanity. If," she continues, "the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*,—in the sense of infinite personality, but not in the lower sense."

Undoubtedly the most important feature of Christian Science is its teaching as to the true nature of God and man, and it would be difficult to find a clearer and more scientific or demonstrable explanation of this important point than is found in the Christian Science text-book. Christian Science teaches and proves, as did the Founder of Christianity and his disciples two thousand years ago, that God, omnipresent and omnipotent good, is ever present and ever available to those willing to recognize Him. "The Son," Jesus declared, "can do nothing of himself, but what he seeth the Father do;" and St. John made that magnificent declaration, "Now are we the sons of God." It is therefore surely possible for each individual to recognize God, or to have a personal God, only to the extent that he understands that Spirit, or Love, to quote but two of the synonyms of the Deity mentioned in the Bible, is not finite, is not personal in the sense of a human personality, but is infinite, and that man, being the son of God, must necessarily express these qualities. This, of course, brings us back to the great question of creation, for it is obvious that the material or mortal man is scarcely godlike.

If, however, we admit, as all Christians affirm, that God, Spirit, is the only creator, the First Cause, then His creation, or the effect of this cause, must be like or manifest the qualities of this cause or creator. Whatever does not express godlike qualities is, therefore, not part of this creation. Now it is the privilege and duty of Christians to prove not only in theory, but in practise, that God is all-powerful and ever-present, and the fact that infinite good is in reality omnipotent and omnipresent, makes it possible for the practical and scientific nature of this teaching to be demonstrated, with the result that the belief in evil, or that which is not godlike, lessens, until eventually it will be recognized to be unreal, or, as Jesus declared, "not in the truth, because there is no truth in him [devil or evil]."

I would add that Christian Science cannot be practised without at least some understanding of the true nature of God, or without some recognition of the true nature of the "infinite personality" of God mentioned by Mrs. Eddy in the passage above referred to.

[Editorial in *Boston* (Mass.) *Herald*.]

The children of the Puritans grew up oppressed by fear of an impending future punishment which should afflict their souls. The children of the present day are shadowed by the fear of the impending ills which may afflict their bodies, and are oppressed by the anxiety which on all sides surrounds their physical existence. Instead of frightening them with visions of a personal devil, we frighten them with tales of deadly germs ready to pounce upon them, and myriads of microbes lying in wait for them. In our desire to give them healthy little bodies we are forgetting that we must also aid them to develop courageous little souls.

It has been truly said, "No man is brave who believes physical suffering to be the greatest evil." This belief modern educational methods seem likely to inculcate. Proper instruction in hygiene is most desirable, but we need to remember that the schoolroom and the nursery should furnish light and air for the expanding soul as well as the expanding body. By focusing attention too persistently upon the dreadful ills that "flesh is heir to," we may convert the classroom into a chamber of horrors and set the children shuddering; but we shall never by this means supply them with the strong moral equipment with which to fight their future battles, or the bright inspiration to awaken in them the love of purity, integrity, and honor. A healthy body is very incomplete unless it is inhabited by a glad, healthy spirit, and in the house of much "plain speaking" we need also habitual "high thinking," lest we forget, and teach the children to forget, that life's equipment calls for something higher than hygiene.

[From an editorial in *Baltimore* (Md.) *American*.]

Men are very largely what they are because of what they think. This was recognized by the apostle, and his words are true, whether applied to the intellectual or the spiritual life. If character is molded by thought, the thought must be lofty if the character is to be lofty. So we have this advice from the apostle: "Whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

We doubt whether there can be such a thing as an absolute "mental vacuum," that is, a wholly tenantless mind. But it may be comparatively empty, so empty as to be widely open to evil. It must be filled, and with things that are true, lovely, and of good report, otherwise it will become the slave of other influences. It is not enough to "cease to do evil;" men must "learn to do well." Virtue consists, not in the absence of evil, but in the presence of good. That is the teaching both of Christianity and of the non-Christian philosophers.

Every fact is the expression of a thought. Even as no true representation of a man can be given by the mere body deprived of its vital spark, so no true representation of a fact can be given by one who overlooks the thought which was its life and soul. Not all men agree to and accept these ideas when thus expressed; but in practise they are accepted by all.—MAZZINI.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

DIVINE SERVICE.

THE need for daily and hourly doing of deeds of Christianity, rather than simply putting on a religious habit for set occasions, is emphasized by Mrs. Eddy on page 40 of Science and Health, where she writes, "Our heavenly Father, divine Love, demands that all men should follow the example of our Master and his apostles and not merely worship his personality. It is sad that the phrase *divine service* has come so generally to mean public worship instead of daily deeds." This is in line with the announcement that the Master made of his mission: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord." In other words, consecration to the service of God meant service to mankind, the ministry of Love.

Christian Science teaches that one must prove, "through living as well as healing and teaching, that Christ's way is the only one by which mortals are radically saved from sin and sickness" (Science and Health, p. 458). The life of a Christian Scientist, therefore, is one which does not permit him to lay aside the moral code with his Sunday clothes, in favor of a business code which is more or less inconsistent with the golden rule. To a Christian Scientist, divine service means the doing of the will of the Father in all things and at all times, the reflection of divine Love, the manifestation of Truth, in all that is said and done. It means the practical application of the golden rule, the testing of every thought and act in relation to one's brother by the touchstone, Is it what I would have him think of me? Is this what I would like him to do to me? Surely the millennium would not be long delayed if every professed follower of Christ were to practise this rule. Yet it is only by such consistent and persistent exemplification of this rule of living that we may dare to hope to attain to the demonstration of that greater command, "Be ye therefore perfect, even as your Father which is in heaven is perfect."

We sometimes forget that our Master reminded his followers, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me," and waste our time in longing for the opportunity to do some great service for the cause, instead of cheerfully and willingly doing the lesser duty that lies close at hand. Yet if in our daily living we are exemplifying the teachings of Christian Science, proving the faith that is in us by our words and deeds, we are doing our part in God's great plan for the redemption of mankind. Our example, our influence, may carry greater weight with our neighbors and friends than we realize, and there is no community so small or so isolated that there is not an opportunity for a loving word, a kindly act,—a cup of cold water in the name of the Master, a seed of the truth sown that may harvest an hundredfold.

We cannot all serve within the temple, but those who hew the wood and draw the water are also needed, and the faithful performance of their duties is just as necessary to the success of the whole as of those charged with greater responsibilities. Let us put the spirit of divine service into our daily task, gladdening and beautifying what might otherwise seem routine drudgery with the thought that in its faithful performance we are witnessing to the truth, and glorifying every least action with the consciousness that so far as in us lies it will meet the test of the rule of Love.

ARCHIBALD MCLELLAN.

GROWTH AN AWAKENING.

THAT the normal Christian life means steady growth would appeal to most people as logical if not axiomatic; and if they were asked the meaning of growth, practically all would approve the saying that "the Christian man should grow as grows the tree."

In the emphasis this prevailing sense of the nature of spiritual advance places upon the value of strength, beauty, and continuous increase, it is legitimate and commendable; but in so far as it is in subjection to the laws and limitations of material evolution, it is likely to become a disabling fallacy. In all her writings Mrs. Eddy is most considerate of human conditions and the practical probabilities of human nature. At the same time she recognized and demonstrated the possibility of that immediate spiritual awakening which fulfils the higher and more inspiring concept of growth presented in Christian Science.

In the thought of the many all growth is gradual, and the long-time element has thus come to be regarded as necessary to every spiritual gain. The inevitable outcome of such belief is registered in that snail-pace advance in knowledge and efficiency which characterizes the average Christian experience. Though quite unconscious of any distinct gain in spiritual perception of capacity, even during years of church attendance and religious conformity, the "Christian evolutionist" who speaks of geological fauna as "our ancestors" is not troubled. He notes the vast time consumption of material history, that the oak makes but an inappreciable increase year by year, and he unconsciously becomes adjusted to the thought that at the best the rule of the spiritual is to be a future rather than a present realization!

To all this the teaching of Christian Science presents a corrective contrast. While recognizing the claims of human ignorance, irresponsiveness, and incapacity, and while counseling that they be considerately dealt with, as *in her* statement that we are to abandon the material "so fast as practical" (Science and Health, p. 254), Mrs. Eddy constantly refers to spiritual growth as an awakening, and this leads the student of Christian Science to regard it from the metaphysical rather than the evolutionary point of view. Familiarity with and the practical acceptance of the material sense of growth, sufficiently accounts for present-day incredulity respecting those instant moral transformations which even our fathers thought to be natural, and which they therefore experienced in so-called conversion. They were convinced that somehow the sense of things could be literally hell to heaven in a moment, and they entered into the joy of an improved belief in which Science always rejoices.

In its teaching of the unreality of evil, all that is revealed to us by material sense, including mortal experiences and limitations, Christian Science presents a philosophical explanation of spiritual growth of which these worthies had not dreamed, and which is capable of conscious individual demonstration, hour by hour. It declares that "if sickness and sin are illusions, the awakening from this mortal dream or illusion, will bring us into health, holiness, and immortality;" and "when that awakening comes, existence will be on a new standpoint" (Science and Health, pp. 230, 556).

As human sense escapes from its enslavement to matter it begins to move more freely, and the hindrances of space and time are largely removed. Thus the flight of thought by the wireless wave gives a new understanding of the Scripture phrase used to express the instantaneousness of Truth's achievements, "in the twinkling of an eye, at the last trump." When Truth is apprehended and declared, the time element disappears; God speaks, and "it is done." Ignorance and immaturity are "as a sleep," and to grow in Christlikeness is to awaken therefrom. The destruction of error by Truth is always immediate, from the divine point of view, and this explains the instantaneous healings of Christian Science. To the responsive, Truth is ever saying, "This day is salvation come to this house."

SCIENTIFIC FORGETTING.

To the student of Christian Science the Scriptures take on a new meaning and make strong demands for unhesitating obedience to statements of truth which were formerly passed over as having no vital relation to the working out of our present-day problems. One such statement is that found in Paul's epistle to the Philippians, where he tells of his effort to follow Christ Jesus up to the victory over death. He reminds his readers that he does not claim to have reached this high attainment, but that he is pressing on toward the goal, and he does not fail to make clear the "one thing" which he evidently considered of supreme importance in his brave effort to realize the meaning and grandeur of life as revealed by the Master. He says, "Forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus;" and he counsels all who are striving after perfection to adopt this rule.

It is surely worth while to inquire diligently of ourselves to what extent we are doing this, and so helping others as well as ourselves. There are few who pause to think that disobedience to this rule entails needless suffering, hinders our growth out of the mortal sense of things and darkens the outlook. Our revered Leader says, "To the physical senses, the strict demands of Christian Science seem peremptory; but mortals are hastening to learn that Life is God, good, and that evil has in reality neither place nor power in the human or the divine economy" (Science and Health, p. 327). We ought to see, and see clearly, that this rule, stated by St. Paul, is one of the strict demands of Science, and a most important one. Christ Jesus said, "Sufficient unto the day is the evil thereof," and we are told that we should not let the sun go down upon our wrath. In other words, we should wrestle bravely and scientifically with every phase of evil which assails us, but never carry a belief of its reality into another day, much less carry this burden into another year.

The belief that evil has power to harm us, or that it ever had such power, is a disturbing element in human consciousness, and in its worst form may even lead to disease of mind and body, until obedience to Truth's demand brings deliverance, as it surely will. In Longfellow's beautiful "Psalm of Life" we are bidden to "let the dead past bury its dead;" and this is surely sage counsel, for the experiences of each day should leave only the memory of brave encounter with the assaults of evil, and that greatest of all victories, the consciousness that our armor is unpierced because we have never let go of the great truth that God is supreme. Jesus won the victory over death by proving the powerlessness of hate to dim his sense of Love's ever-presence, and that is why we can say with boundless gratitude that we love him; but our words would be a mere mockery if we failed to forgive and to love those about us in the full measure of our present understanding.

These words of our Leader, spoken at a great gathering in Chicago, in 1888, may well inspire us to forget the dead past and press on. She says: "I will love, if another hates. I will gain a balance on the side of good, my true being. This alone gives me the forces of God wherewith to overcome all error" (Miscellaneous Writings, p. 104). We cannot too often remind ourselves (and sometimes others) that if the recalling of evil darkens our horizon, the forgetting of its every manifestation,—as sin, disease, or death,—and the holding of our mental gaze constantly toward the light, will unfailingly bring health, happiness, holiness, which means God with us every hour. We must forget the things that should be left behind, but never forget to be thankful for the plenteous and good gifts of Love revealed in the light of Truth.

ANNIE M. KNOTT.

NOTICE.

It will interest and please the field to know that The Christian Science Publishing Society has acquired from The Concord Publishing Company all right, title, and interest to the publishing and selling of "The Life of Mary Baker Eddy" by Sibyl Wilbur, and that this book is now published exclusively by The Christian Science Publishing Society.

AMONG THE CHURCHES.

CURRENT NOTES.

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m. (during July and August the Sunday evening service is omitted); Sunday school, 10:45 a.m; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

FRANKFURT A. M., GERMANY.—The department of our church work for the distribution of literature was organized in the spring of 1910, with a distribution committee and two assistants. At present there are four workers in this branch, one a man, but all are Germans; and through the activity and tactfulness of these workers, fresh channels for the outflow of Christian Science literature are rapidly being opened up. A local Cosmopolitan Club has accepted subscriptions for the *Monitor* and the *Sentinel* for its reading-room, also a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. There, as well as in all the libraries, and in nearly all public places, the Christian Scientists are kindly and courteously received. Press attacks on Christian Science have greatly decreased in this state since 1910, though the chief dailies still exclude from their columns anything in favor of the movement. I am glad to report a much friendlier attitude toward Christian Science on the part of the clergy of the state church. Several prominent west German churchmen have alluded publicly to Christian Science as a religion that heals the sick. Another interesting item is that Christian Science has penetrated to the district lunatic asylum, and through the medium of *Der Herold der Christian Science* has already effected one liberation.

Christian Science literature was distributed in 1910 in fourteen places, and in 1912 in twenty-five places, as follows: eight hotels, three pensions, two offices, two libraries, one traffic agency, two dentists, one polyglot club, two cafés. Science and Health was placed in two libraries and in one polyglot club; the *Sentinel* and *Der Herold der Christian Science* in two libraries, and the "Life of Mary Baker Eddy" in three libraries. In the course of the last year much more interest has been manifested in the *Monitor*. In the great reading-halls of the libraries, where from four hundred to four hundred and fifty persons are going in and out daily, it is read so much that the sheets are sometimes worn out; and in one of the libraries the people often ask for it before it arrives. Science and Health, *Der Herold der Christian Science*, and the *Sentinel* have been eagerly read in two libraries the past year, and copies of *Der Herold* have often been taken home. Mrs. Eddy's "Life" has also had a good circulation.—*Correspondence.*

THE LECTURES.

WASHINGTON, D. C.

Virgil O. Strickler delivered an address on Christian Science at the Columbia theater before an audience which crowded the building to its utmost capacity. Many men in public life were present. Mr. Strickler was introduced by Representative Frank M. Nye of Minnesota, who said:—

Truth never changes, but man's apprehension of truth enlarges and expands in accordance with the open mind and sincere purpose. As vines turn to the sun and flowers open to the day, so should men ever struggle toward truth. Men are coming to the apprehension of the great truth that to know God and to know Him aright is eternal life. For the great Teacher who had been encouraged by the response of those who walked and toiled with him said, If you continue in my work, that is, if you rest your life upon this great lesson I have sought to implant, you shall "know the truth, and the truth shall make you free." And we are coming to understand that this is the source of power which tends to make a man "every whit whole." The prophets and pioneers of truth have always failed, I think, to receive the sanction of the authorities of the earth at the time of their great message. They have been the outcasts largely of their day, spurned and looked upon with disdain, though they were exponents of truth. True to their mission, they preached the gospel by the wayside; the poor have heard it gladly, and the great suffering masses of humanity have been benefited by its wholesome and vital power.

In modern times we have had one of these messengers, a woman whose life and teachings have resulted in the establishment of a school of thought, to learn more of which we are met here. Of her great contribution to the religious thought of our times I need not speak. It calls for no encomium, for she lives in the hearts of thousands who have been the beneficiaries of her unselfish and Christian teaching, whose lives and experience speak with eloquence not born of ordinary speech. I am not myself a member of the Christian Science church, but for several years have studied somewhat diligently its great teaching, and I am sure that I have derived great benefit from it, and feel that it is a message which is doing great good in this mortal world in which we live. The barriers of prejudice are slowly yielding, and silently, almost as the night melts into the day, the splendid influence of the teachings of this great woman is felt at the very heart of human society.

Correspondence.

MERIDEN, CONN.

Frank H. Leonard delivered a lecture on Christian Science at the local church, corner of Liberty and Norwood streets, and a large audience availed itself of the opportunity to hear about this new-old teaching. The speaker was introduced by Albert Hartwig, first reader, who said:—

The revelations of God have been increasing from generation to generation. God was revealed more fully to Moses than to Abraham, more fully to David than to Moses, more fully to Isaiah than to David, and the faces of all are turned toward a future ever brightening as the centuries advance. In this enlightened twentieth century the God of Abraham, of Isaac, and of Jacob, has been revealed as the ever-living, ever-present reality, nearer and more accessible than anything we can see or hear. We therefore know that wherever we are, God is; however alone we may seem, in the silence of the night or in the seclusion of the desert, yet divine help is near.

Clearer and far more overwhelming than any arguments drawn from innate ideas or historical evidences is one which meets you face to face every day of your life. Everywhere we see traces of an unseen hand healing sickness and destroying sin. These are the effects of a more practical Christianity, of a higher and more spiritual conception of God and man. As nineteen hundred years ago, even so today, the convincing argument is that of the blind man who replied to his questioners, "One thing I know, that, whereas I was blind, now I see."—*Meriden Record.*

CINCINNATI, OHIO.

The introductory remarks of Miss Emma A. Estes, in presenting the Rev. William P. McKenzie at his lecture on Christian Science, in Music hall, under the auspices of Second Church, were in part as follows:—

Christian Science comes bearing a message of [illegible] to poor, suffering, sin-sick humanity on earth to-day, a future-world salvation, but a present one, right here, now. It comes, as our Saviour said, "to bind up the broken-hearted, to proclaim liberty to the captives, and the opening of the prison to them that are bound; . . . to comfort all that mourn." It is truly the Comforter that Jesus the Christ said he would pray the Father to send, and that it should abide with us forever. Christian Science has come to abide, to stay with us, to save us individually from the ills of the flesh, the sins, false doctrines, and superstitions of the world, and the works of evil. Is not this "a consummation devoutly to be wished"?

The Scripture says that God "sent his word, and healed them." God's word, spiritually understood, does heal. It knocks gently at the door of every heart for admission, promising to bring all into the land of freedom, where the fetters of carnality cease and the fetters of materiality fall, and the liberty of the children of God is found to be a demonstrable fact; freedom from sin, sickness, and discord a present possibility through the understanding of God, who forgiveth all our iniquities, and who healeth all our diseases. It is the voice of Jesus again echoing down the ages still saying in loving tones, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Christian Science offers a practical solution of all the problems of human existence.—*Correspondence.*

PULLMAN, WASH.

A very attentive audience listened to a lecture on Christian Science delivered by Judge Clifford P. Smith. Dr. F. A. Golder, of the Washington State College faculty, in introducing the lecturer, spoke in part as follows:—

Christian Science is receiving more and more favorable consideration from the general public. There is hardly a town of any size which has not a Christian Science organization. The practise of the teachings of Christian Science has brought blessings to a great many. We can afford to test Christian Science by its results.—*Correspondence.*

PRESCOTT, ARIZ.

Willis F. Gross, lecturing on Christian Science in the Elks theater, was introduced by F. L. Haworth, Esq., who said in part,—

Probably the majority of the people now before me are not Christian Scientists. Many, like myself, are mere seekers after Truth, desiring to hear a scientific statement of this belief which has become the religion of so many of our friends. Meetings such as this one tonight are to my mind examples of the progress of our age.

History tells us of a time when men of one faith would not gather together for the purpose of listening to the statement of a faith different from their own. People adopted a religion through chance, and retained it with all the tenacity which is bred of ignorance and superstition. Men would not listen to ideas that were not repetitions of their accepted theology. Even in this day I have heard suppos-

Digitized by Google

edly intelligent people advise others against listening to this or that man on the ground that their religious beliefs might be changed by so doing. Religion—unfortunately, I think—has been considered by many to be something which must be accepted blindly, and which it is a crime to question in any way. As against this opinion some one has aptly said that "nothing should be too sacred to be honestly questioned, and nothing too holy to be honestly investigated." I believe this is a great truth, and I am an admirer of Christian Scientists because they apply this theory, not alone to the religion of other sects, but also to their own.

Many of us, as I have stated, are probably ignorant of the teachings of Christian Science, but I assume that most of us believe in that Scripture which says, "By their fruits ye shall know them." If we adopt this, we place ourselves in the position of endorsing Christian Science to a certain extent, because we cannot go far without meeting with tangible evidence of the good that Christian Science has accomplished in at least some instances. We see examples where there have apparently been almost marvelous cures of physical ailments and weaknesses by the ministrations of Christian Science; but what to me is more important is the fact that Christian Science is the cause of developing many people into stronger-minded, more hopeful, and more efficient men and women. We must give credit to the Christian Science church for giving us some of the best citizens we have in this community. In my humble judgment no higher recommendation can be given any church than that its teachings develop bright, happy men and women, who make the world a little better around them and fulfil their duty as citizens. The measure of the goodness and greatness of any person or institution is involved in the answer to the questions, "What have you done to make the world better?" "What is the extent of the service you are giving to the world?" Christian Scientists have met this test; they have shown their good work, and they are entitled to a chance to present their ideas and to have those ideas receive earnest and careful consideration at our hands.

Correspondence.

SEATTLE, WASH.

William D. McCrackan, M.A., delivered two lectures on Christian Science, at both of which he was introduced by Oliver C. McGilvra, whose remarks at the Moore theater were in part,—

That the people of Seattle are interested in the subject of Christian Science is conclusively shown by the circumstance that although this lecture was advertised to begin at half-past two o'clock, the doors were closed by order of the authorities at two o'clock, and there are now standing outside enough people to fill another hall. Some idea of the momentum acquired by this great movement toward the kingdom of God may be obtained by recalling that less than thirty-five years ago its following consisted of a little band of twenty-six individuals in the city of Boston, whereas today students of Christian Science may be found in every portion of the civilized globe. The reason for such remarkable growth is that the thinking people of this enlightened generation are realizing that Jesus not only said "Preach the gospel" but that he said "Heal the sick." They are realizing that after he had healed the leper, restored the withered hand, given sight to the blind, and multiplied the loaves and fishes, he said, "He that believeth on me, the works that I do shall he do also." They are realizing that the privilege of being well and healing others is not confined to a chosen few, but is extended to every man that believeth on him.

At the Arcade hall the introductory words were in part as follows:—

The circumstance that this is the first lecture given by First and Fourth churches jointly, adds substantially to the pleasure it gives me to introduce the lecturer. Biblical history is replete with examples of the wisdom of unanimity of action in the cause of Truth. It was not until the multitude had come together on the day of Pentecost and were of one mind that they received the message of the Spirit with its blessing. It was not until Joshua and his followers had compassed the city of Jericho seven times and had joined in a mighty shout that the walls fell. If we only apply, in our daily lives, what we learn here tonight, I am sure we will find this a better world to live in, and will have gained a glimpse of "on earth peace, good will toward men."

Correspondence.

DENVER, COL.

Before large audiences which filled to overflowing the auditorium of First Church of Christ, Scientist, Clarence C. Eaton lectured twice on Christian Science. He was introduced at the first lecture by W. Stuart Booth, the first reader, who said in part,—

Of all the promises which have brought hope and cheer to tired humanity, the sweetest is that of Christ Jesus, "Come unto me, all ye that labor and are heavy laden, and I will give you rest," and it is repeated to this age by Christian Science, the marvelous growth of which is largely due to the fulfilment of this promise in the lives of many thousands the world around through the application of its teachings.

Miss Clara L. Sweet, the second reader of the church, introduced the lecturer at his second appearance, saying in part,—

A story is told of the great sculptor, painter, and architect, Michelangelo, that one day as he worked upon a huge, rough block of marble, a bystander, marveling as he saw forms of strength and beauty appear under the magic chisel, said to him, "How do you create such wondrous forms from the marble?" Michelangelo answered, "I do not create the forms; they are there. I but chip away the stone covering them." In all ages the mighty truths about God and man have lived in our midst, veiled, hidden, glimpsed only occasionally when some individual's great self-sacrifice, or supreme devotion to a high ideal, has made the revelation possible. In ancient history and in Old Testament records there are proofs that men have believed in and have sometimes clearly seen the eternal, primal truth. But it remained for one master sculptor, the man Christ Jesus, to reveal the perfect, whole vision of Truth. The truth, Jesus said, did not originate with him, but had been "from the foundation of the world," and this he brought to light for the healing and saving of mankind. He left for us the perfect, healing religion, cut clear from the shrouding creeds and opinions of his day; a religion so defined as to have stood, it would seem, untouched through all ages, but which, alas, during the darkness and dogmas of intervening centuries, has been so obscured, so hidden as to have lost for mankind its most precious gift, the healing of sickness and sin.

It remained for one in this age, a master sculptor, a woman, clear enough of vision and true enough of touch, again to strike away the blinding beliefs, the stony misconceptions of the human mind, and reveal to a waiting world the eternal truth, the all-power and presence of God, primitive Christianity, the healing message of Christian Science. Tonight we know you will hear some things which will clear away misunderstandings and unbelief which have hidden from men the healing truth.—*Denver Republican.*

LECTURES TO BE DELIVERED.

Cotuit, Mass.—Bliss Knapp, Freedom hall, 8 p.m., Aug. 12.
East Jordan, Mich.—Hon. Clarence A. Buskirk, Temple theater, 8:15 p.m., Aug. 14.

TESTIMONIES OF HEALING.

It is some years since I first heard of Christian Science, and I have often felt how much I should like to tell others of all the joy and peace it has brought into my life. In the old thought, after losing a beloved mother, a dear husband, and a baby daughter, I yearned for spiritual guidance and comfort, and like many another seeking for the comfort that heals the broken-hearted, I wandered about, trying many different forms of religion, but without gaining the help I so much needed. At times my sense of loneliness was very intense; I felt like a bark without a rudder, tossing about upon an angry sea, with no land in sight. The small capital I had was laid out to make a home for myself and my only remaining child, where I was to try to maintain us both; but not having been brought up to earn anything, I found it a great struggle, and the greater the struggle the more desirous I became for spiritual comfort.

I often attended church four times on Sunday,—early celebration, matins, afternoon service, at a little church some two and a half miles from my home, then even-song,—as well as every service possible during the week. All this, however, did not give me what I longed for, till one day a young lady visited my house and spoke of Christian Science, which she said was being established in London. She told me what good it was doing for its followers and those interested, but she did not speak of it altogether in tones of approval; and though I longed to hear more, I did not like to question her, as I have always disapproved of any religion being ridiculed.

My longing was, however, shortly to be gratified. I had been suffering rather seriously for some time with an internal trouble, and it was considered necessary for me to consult a doctor in London (one who had known me during my husband's lifetime), who pronounced my case rather worse than I expected, saying that an operation was imperative. While in London I called on a friend, who, upon hearing of the sad state of my health, for I was much upset at the doctor's decision, told me how greatly interested he was in Christian Science, as well as how much better he was since he had heard of it, and begged me there and then not to undergo any operation without first consulting a practitioner, which I readily promised to do.

I spent the following winter in London, and became much interested in Christian Science, as I always found peace when visiting the church at Bryanston street. Christian Science appealed to me more than any other form of religion, and, needless to say, I studied dear Mrs. Eddy's book, "Science and Health with Key to the Scriptures." After reading it, I can only remember one very severe attack of internal pain, for I used Science as well as I then understood it, and recovered quite quickly. I really have no recollection as to when and how I was healed, for I never had any operation or any special treatment from a practitioner; but my friend helped me during the time I was reading the book, which he kindly loaned me.

Since that time I have become a diligent student of Mrs. Eddy's writings and have had class instruction. I am a member of The Mother Church, and also of a branch church. Many trials, sorrows, struggles, and disappointments have come to me which in the old thought I am sure I never could have survived, but through the wonderful teaching of Christian Science, and the understanding I now have of a God who is Love, our Father-Mother, with the realization that my true spiritual self can never for one moment be separated from omnipresent good, has entirely obliterated the loneliness of former days, for I never feel lonely now, though for many years I have lived alone, and my sense of peace and happiness passes all understanding.

One of the greatest blessings which have come to me through Christian Science, is the overcoming of fear, which was one of my sore trials. Many physical ailments have also vanished, such as rheumatism, chapped hands, and a sensation like chilblains on my ears during the frosty weather, while many little flaws in my character have entirely disappeared. I trust I shall be able to prove my deep and sincere gratitude for all these blessings by living a life of love and reflecting it. I am truly grateful to God for many things, among them for inspiring our beloved Leader to bring to light this wonderfully comforting truth which heals the broken-hearted by its teachings. I enjoy all our periodicals, including the *Monitor*. I am thankful that I am able sometimes to help others, and grateful for all that has enabled me to help myself, as well as for the truth that has lifted me up and helped me to realize the allness of God when distress seemed paramount.

MRS. MARY C. DRUMMOND HENDERSON, London, England.

At the present time there come to my mind two pictures of myself, one as I was before I took up the study of Christian Science, and the other after my coming into the true understanding of God and man. The first picture is that of a nervous, discontented, selfish, fearful, unloving, and miserable piece of humanity; the second is in entire contrast, for it expresses health, joy, happiness, meekness, contentment, and, best of all, love. Where formerly I cared but little for any one outside of my own family, meeting in return the same indifference from others, I have grown to love mankind in a way impossible to me before. I have learned how blessed it is to give, and I can now keep the commandment, "Thou shalt love thy neighbor as thyself," for through the study of Truth I have been enabled to know man as the child of God, and not the offspring of sinful mortal thought. I can love this perfect and true concept of man where I could not love the other false concept. I have also learned to seek the beautiful and the good in all things, instead of looking only for evil, and to seek useful work and activity where previously inactivity and indolence had been my constant companions. The result has been better health, better morals, spiritual understanding, and an earnest desire to live and do for some one else besides myself.

My family recently had a very trying experience, that of the passing on of my sister from the accidental discharge of a pistol. But God was truly with us at this time, and our need of comfort was completely met. My grief was entirely healed by realizing that a leaden bullet has really no power to destroy man's life, the Life that is God, and that "man's individual being can no more die nor disappear in unconsciousness than can Soul, for both are immortal" (Science and Health, p. 427).

The desire to be healed of nervous trouble is what first brought me into Christian Science. I had been treated by a specialist for this particular disease, and I tried the "rest cure," being under the doctor's care quite a while, but never experiencing the slightest relief until I began to take treatment in Science. My healing was slow, but gradually I felt myself improving, until today I can say that I enjoy better health than I ever did before. Sleeplessness, weak eyes, and a bowel disorder have disappeared under treatment, and what used to be an ungovernable temper is daily becoming more submissive to the law of Love. I can now see that this slow healing gave me an opportunity to become better acquainted with God, and I am truly grateful for the truth, the knowledge that all health, happiness, and peace belong to me as a child of God, which knowledge came to me during my getting-well process, for it taught me how to continue in well-being and health.

With a heart full of thankfulness to God, the giver of all good, and of gratitude to Mrs. Eddy, through whose unceasing labor and devoted love for her fellow men this good has come, and for all of our wholesome and helpful litera-

Digitized by Google

ture, I close this testimony of God's goodness to me with the sincere desire to let my light so shine before men that they may see my good works, and glorify our Father which is in heaven.

I will add that I am a young Jewish girl who became interested in Christian Science, and this interest, I am glad to say, still continues, because of what it has done and is doing for me. I send this testimony with the hope that it may prove helpful to those of the Jewish race who are investigating Christian Science.

MISS BERTHA FRIEDMAN, Kansas City, Mo.

[Translated from the German.]

A feeling of gratitude prompts me to tell of the many blessings and joyful experiences which have been mine through Christian Science. One day in June, 1911, while on my way to work, I was suddenly seized with a severe griping pain, accompanied by ague, and I broke down on the street. It took me quite a while to get up, whereupon I dragged myself home, work under these circumstances being out of the question. A physician, who was summoned immediately, prescribed medicine, which, however, proved utterly ineffective. These attacks were of almost daily occurrence, and the headaches which were added became so violent as to be almost unbearable. A second physician was then consulted, who stated that my trouble was due to nervous weakness, and he in turn prescribed for me, and I followed directions strictly, though without experiencing improvement. My attention was then called to Christian Science, and notwithstanding the stormy weather then prevailing, my wife and myself went to see the lady who had told us of it, in order to hear more about it. We left her with a sense of new hope, and the next day applied to a practitioner.

The effect of Christan Science began to manifest itself after the first treatment, and my condition improved noticeably, so that I was able to take up my work again; but owing to a lack of understanding of its teachings, I experienced a relapse after a few weeks, which assumed such a severe character that in my distress I called in the physician. He again prescribed medicine, which I took, believing that it would relieve me, although my knowledge of Christian Science should have made me realize that God is our only physician and Mind our only medicine. The consequent effects were dreadful, for not only did the pain and the weakness become most alarming, but the ear cavity and the throat were burned, so to speak, by the drug, and an old trouble reappeared of which I had not been conscious for a long time.

I must state here that one year previous to this time I had had medical treatment at the hospital, in which my throat had been injured, so that I experienced severe pain in those parts for quite a while afterward. This injury was very evident now, so I was sent to the hospital, where an X-ray examination was made, and where the examining professor said that the conditions were very serious. I requested the Christian Science practitioner who had assisted me previously, to take up treatment once more, which was done at once. Although the healing went on slowly this time, it gradually became clearer to me that disease cannot come from God, infinite good, and the more I relied upon the power of ever-present Love, the more error disappeared. Today I may say with a grateful heart that my healing is complete, and that I am able to the fullest extent to attend to my work.

The knowledge of God has often been a shield and buckler to my wife since we have been acquainted with the teachings of Christian Science, and we are deeply grateful that through these glorious teachings we have found the way to Truth. We feel that we may well bear constantly in mind the beautiful words of the psalmist, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases."

FRITZ SCHRADER, Hannover-Döhren, Germany.

When Christian Science first came to my notice I was in a training school for nurses. While there, I was taken with a very severe attack of rheumatism, and I also suffered from flatfoot, for which the physicians said I would always have to wear braces. I attempted to work for a few days, but the pain was so intense that this was almost impossible. A friend of mine who is a Christian Science practitioner then offered to treat me, for which I was very grateful. In a short time I was in perfect condition again, and able to continue my work. I have never touched medicine since, although before that I had been in the habit of taking all kinds.

After I graduated from the training school, I was nursing a fever case. I had been with the patient two months when I contracted the disease in its worst form, and had been ailing for about three weeks before I called a Christian Science practitioner. I was partly confined to my bed for just two weeks, being delirious most of the time. I had several very severe hemorrhages, besides internal and external abscesses. My head was badly swollen, and I was unable to retain anything on my stomach for days. I also lost my sense of sight and hearing; but in the third week I was again able to be out and was perfectly healed. About three years previous to this time I had an attack of the same fever while in the hospital, though it was much less severe; but I was in bed almost two months, and unable to return to my training for three months. The medical treatment was severe, and I suffered greatly.

I had another very remarkable experience in Christian Science. I was suddenly stricken with intense pain in my right limb, and finally was unable to walk or lie down. I sat in an upright position for some days, when the pressure was relieved and I was able to lie flat. The pain was said to have been caused from a heart condition, an abscess having formed because of imperfect circulation. One foot and limb were twice the natural size and badly discolored, also cold all the time. I was, however, perfectly healed, and have never walked so much in my life as I have since. To me this was a very wonderful demonstration, since during my former experience in *materia medica* as a professional nurse, cases of this kind have necessarily been subjected to very severe treatments, often many unsuccessful operations.

MRS. MARCELLA POORE, San Francisco, Cal.

I send the following testimony to the *Sentinel* with gratitude for the happiness and help Christian Science has given me for nearly six years. Many proofs of healing and many blessings have I received through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I am glad to be one of the many thousands to express love and gratitude to her who has shown the world how to meet and overcome all evil by the understanding of God and our relation to Him, as taught by Christ Jesus. That she has correctly interpreted his teaching and method, I have proven many times by demonstrations of healing.

One example of how much quicker and more efficacious the spiritual healing is than the old material method, was impressed on me when my son was twice afflicted with a dreaded disease of the eyes. The first attack caused him severe suffering, sharp pains darting continually through the eyes for three days and nights. He was under the care of a medical doctor, who ordered bandages, changed every half hour, and some fluid dropped into the eyes every five minutes. It was several weeks before he entirely recovered, and even then the eyes seemed weak. Just a year later the same symptoms reappeared. Meantime Christian Science had healed me of many diseases, neuralgia, curvature of the spine, rheumatism, and dropsy being among them. With my then limited understanding of the truth, I succeeded in helping my boy, so that the suffering was slight and only troubled him one day. He slept well the first night, and the healing

Digitized by Google

was complete, for he has never had any trouble with his eyes since, and this was over five years ago.

I am truly grateful to God for my health and support, and to the Christ for his wondrous teaching, made so much clearer by Mrs. Eddy's writings. As she says on page 353 of Science and Health, "All must admit that Christ is 'the way, the truth, and the life,' and that omnipotent Truth certainly does destroy error."

VIOLET B. SANBORN, New York, N. Y.

I am so thankful for what Christian Science has done for me that I only wish all who pass through this most trying ordeal could have the help which I experienced. I passed through parturition almost painlessly, the last hour being entirely without pain. We were living nearly a hundred miles from the practitioner, which occasioned some delay in sending the message; but after it was received there was no more suffering. I had only two treatments at this time. I had heard and known a little of Christian Science before this experience; but now my husband and I intend to study and learn more of this practical religion which lifts us from fear of the many ills that so constantly seem to attend us in every walk of life. My prayer is that I may so avail myself of the understanding of Truth's infinite power as taught by Mrs. Eddy that I shall be able to help others as I have been helped.—MRS. LUCY MITCHELL, Denver, Col.

I send this testimony with a heart filled with thankfulness to our heavenly Father for the new knowledge I have gained of Him through Christian Science, and for the good that has come to me and mine. After wandering in the wilderness of material sense for twenty years, seemingly afflicted by every disease that one could endure, unable for several years even to feed or dress myself or walk one step, and having given up all hopes of ever being well in this world, believing it God's will and feeling resigned, I suddenly awoke to the realization of the truth that makes us free. I learned that God is a loving Father, never sending aught but good to His children, never afflicting us for our good, as we have been taught to believe,—and can any wonder that I say, "Bless the Lord, O my soul"?

For many years I had been strongly opposed to Christian Science, but I was gently led into the truth. The scales fell from my blinded eyes, and healing came, both physical and mental. I now realize that all the good I fail to receive results from lack of understanding, and just as fast as I rid myself of all thoughts that are not Christlike, walk in the Master's footsteps, love God supremely, and my neighbor as myself, in a word, as I am governed by the Mind that was in Christ Jesus, health, strength, peace, and joy enter into my life. Truly has our Leader told us that our enemies lie within ourselves, in our thought, and like weeds they must be plucked out. Jesus said, "By their fruits ye shall know them," and my earnest desire is so to live that my life will speak for the Master. I would also say to those whose healing seems to come slowly, Do not be discouraged, for only as the ground is prepared, can the seed spring up. When problems have seemed difficult, I have always found the trouble was with me, not with God; His work is already done. The Bible tells us to work out our own salvation, which means constant, steady effort on our part, also the yielding up of material beliefs for the spiritual and true.

It is a little over two years since the knowledge of this grand truth came to me, and although health and strength have come gradually, it was because I was not in an attitude to receive help faster. I feel, however, that I have learned more of God and how to reflect Him than I would had it all been made manifest at once. I am demonstrating that complete health and strength are ours in Truth. I found, after being in bondage to the belief of sickness for twenty years, that fear was one of my worst enemies; but by knowing the truth, knowing that "perfect love casteth out fear," and by having a little help from a Christian Scientist, this belief has been overcome to a great extent, for which I praise God. I can now walk to and from our meetings and reading-room three times a week, although it is quite a distance from my home. I do nearly all my work and am like a new person. I confront problems daily, meet seeming difficulties, both physical and mental, but have the joy of knowing how to work out of them, for which knowledge we cannot be grateful enough. I know that God gives us dominion, and that we do not have to bow down to fear. I know that we must not sit down with folded hands, expecting God and our practitioners to do the work for us; each day brings its tasks, and we must watch and pray constantly and have charity one for another.

MRS. E. J. BARTON, Kent, O.

I write this testimony with a heart full of gratitude to God, hoping that it will benefit some one who is suffering as I was. I was brought to Christian Science through the healing of my daughter, who lives in Lincoln, Neb. Her healing was a great demonstration of God's power. I was suffering from rheumatism in my feet and had cramps in my limbs at night, so bad that I could not rest. I also had stomach trouble of long standing, could only eat certain kinds of food, and had severe headaches, which sometimes lasted three days before I could get relief. *Materia medica* had been my idol from childhood, and I knew nothing better until I was visiting my daughter. It was through her invitation that I called on the practitioner who had healed her, and I was brought into the light. I took treatment and was healed of the pain in my feet instantaneously, and since then have been healed of numerous ailments. I bought a copy of Science and Health, and with the Bible and the *Christian Science Quarterly*, which I study daily, the uplift has been wonderful.

It is over two years since I became interested in Christian Science, and I have found this truth to be the "pearl of great price." Through its teachings I have been able to help myself and have had many beautiful demonstrations for others. I am thankful for this, for it led me to study Science and Health more closely, and I have thus gained a better understanding of the Bible and of God as perfect Principle. I have learned to look to divine Love for every human need, and I have a sweet sense of peace through the realization that I inherit only health, goodness, joy and freedom. For this wonderful teaching, and the peace and harmony which have come into my life through the study of the Lesson-Sermons, I am indeed very thankful to God, also grateful to Mrs. Eddy. I am away from any Science church or Scientists, alone with God, but He surely blesses me in the work, and the seed of Truth sown here in the hearts of friends and neighbors is springing up, and it will not be long that I shall be alone, for others are seeking and finding the Christ-way.

MRS. MARY L. SCOBEE, Perry, Mo.

[Translated from the German.]

My heart is filled with gratitude for the blessings received through Christian Science. About three years ago I suffered with several chronic ailments, such as stomach, bowel, and kidney troubles, also an abdominal complaint. I tried six of the best physicians at that time, none of whom were able to help me, in fact some of them gave me no hope of recovery; but while in my greatest need I heard of Christian Science and applied to a practitioner for treatment, which was taken up in a most loving way. My condition improved from that day on, though the healing was somewhat slow, treatment being continued for about six months, after which time I began to work for myself to the best of my ability.

In eleven months' time I was completely healed of all my

Digitized by Google

troubles, and a year later gave birth to a fine, healthy baby. It is an unusually strong child and has never been sick. When the baby was about four months old, however, I seemingly lapsed into a very dangerous condition, some of the old troubles reappearing in an aggravated form; moreover, I was disturbed mentally, and discord seemed to hold sway. My friends were greatly alarmed at my appearance, but I again asked the practitioner for help, and through her faithful work the symptoms gradually disappeared. When fear and discouragement arose, the loving help I received inspired me with new hope, and I relied upon divine Truth, which always is the victor.

I am now a perfectly well woman, sound in mind and body, praising God and giving thanks for the many blessings received, and holding deep appreciation for the work done by the Founder of Christian Science, through whom this great truth has again been revealed to the world.

LOUISE ZIEGLER, Point Reyes, Cal.

This glorious truth known as Christian Science found me about three years ago in a hopeless condition, discouraged, and tired of life. Several times I had to give up work on account of bad health, especially nervousness, and at times a very despondent mental condition gave me much trouble. I suffered frequently with severe sick headaches, which kept me from my teaching for two or three days at a time; but since kind friends have brought me the good news of Christian Science, and have patiently told and retold me about the allness of God, good, His tender love and care, all the clouds of darkness and doubt have passed away. My life is brighter, and there is now harmony, where formerly there was a sense of chaos and struggle.

With the help of a practitioner I have been healed of bad colds, a supposedly dangerous fever, and many other ailments, in the most wonderful way. I now feel stronger, healthier, and happier than I ever did before. I am very grateful for all these healings, but feel still more thankful that Christian Science is teaching me to overcome all fear of evil. It helps me to be loving and patient to all mankind, and it has also freed me of bad temper and other sins. Words are inadequate to express the joy and gratitude I feel for this wonderful truth, which has given me a God who is ready now and always to help and strengthen His children, and I am striving earnestly to live the truth as Mrs. Eddy, our revered Leader, teaches us in the Christian Science textbook.

OLGA MÜLLER (MRS. PERLEY SANBORN), Ashland, N. H.

Words cannot express my gratitude to God for Christian Science. When I came to it, I felt that I was under a heavy shadow; there seemed to be only sorrow, darkness, despair, in store for me; but after studying it for some time, I found that there is a God who wipes away all tears. Mrs. Eddy says, "The heavenly intent of earth's shadows is to chasten the affection, to rebuke human consciousness and turn it gladly from a material, false sense of life and happiness, to spiritual joy and true estimate of being" (Retrospection and Introspection, p. 21). I have found this to be true as I have journeyed onward. Many beautiful demonstrations have been made by applying this great truth, which daily brings new inspiration to thought, and every hour we rejoice in understanding better the Master's untiring work for mankind, and in knowing our all-wise Father-Mother God who governs all.

I find myself progressing according to the faith that is in me as I draw nearer to God. I am grateful for all the good that has come to me, and words cannot tell my thankful appreciation of our Leader, Mrs. Eddy, for this truth that has done and is doing so much for all mankind.

MRS. CARRIE ARNESEN, Seattle, Wash.

FROM OUR EXCHANGES.

[Lathan A. Crandall in *The Standard.*]

The awakening of the church to the privilege and duty of social ministry is one of the most significant features of our modern life. The wonder is that the followers of him who "went about doing good" should have failed for a single hour to give themselves to the relief of human distress. Strangely enough, Christians have sometimes made such a din denouncing one another that the cry of the needy and the suffering has been unheard. Eyes that have failed to see the Christ in the little ones of earth, have sought for him in vain in the heavens above them. Now "social service" has become the watchword of the hour, and in the forefront of the battle for human betterment stand the representatives of the Christian church. This is not only as it should be, and as it must be if we share in the spirit of him who told the story of the man who went down from Jerusalem to Jericho, and spoke the scorching words recorded in the twenty-fifth chapter of the gospel of Matthew, but it greatly increases the power of the church's appeal. It serves to bring religion out of the clouds; it makes it clear to all that Christianity is not a theory about life, but life itself, and that helpfulness is the automatic expression of the truly Christian temper. Because of this new attitude toward the ills of society, religion is becoming naturalized among legitimate human interests, and those who were wont to look at it askance, as having no real value for the present order, are learning that it is the most practical and powerful of all the forces making for the well-being of man.

[*The Outlook.*]

People go to hell, not because they are sent there by a divine decree, but because they belong there. They go, as certainly as the harvest follows the sowing, by a law written in their natures. They can no more escape hell if they invite it, than they can escape the succession of the seasons. There is nothing arbitrary or abnormal about it: God does not send men to places of torment; they go of their own volition. He does not impose it upon them by the use of arbitrary power; they elect to go, and they leave hope behind simply because they have thrown hope away. It makes very little difference what the theological conception of hell is; it remains and always will remain an appalling fact in the experience of humanity. It does not lie beyond the visible boundaries of the world; it does not wait to open its doors until death comes; the world is full of people who are already in hell whether they know it or not. And they are there because they have chosen to go. The pages of the newspapers furnish indisputable evidence that hell is a reality in this life, whatever it may be in the next stage of life, and that lost souls are going about in darkness in the every-day world.

So long as the human spirit gives itself to evil, there is no place for it but hell. To such a one heaven would be just as much a place of torment as hell; while to a good man, hell in any world would be a mere name. It has no more personal relation to him than the police courts have to the man who never breaks the law. Hell is a torment which comes to us because we invite it, as most things come to us; not suddenly or tragically, but gradually and slowly, as the ripening of our own thoughts and deeds.

[*The British Congregationalist.*]

Preaching, though it is claimed that it is better and more intellectual than formerly, frequently lacks force and inspiration, from the point of view of the men and women who listen to it. The human side of humanity's needs is so often overlooked. The average man and woman, we are convinced, go to church not to listen to mere eloquence, to hair-splitting upon purely theological differences of opinion,

Digitized by Google

or to mere emotionalism; they go in the hope of being comforted, advised, sustained, and encouraged for the battle of life in which most of them are engaged six days out of seven. And a strenuous and heart-breaking fight it is for some of them. "Comfort ye my people" is a motto that might well face many a preacher as a gentle reminder of what he might very well attempt to do as he enters his pulpit on a Sunday morning, or, better still, find a place on the study wall. We think, too, that it is a mistake to believe that members of our congregations object to plain talk. If it is vital, such talk must do good, and few whose opinion is worth consideration will be inclined to resent it.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth.*]

As to the second coming, although the primitive church was mistaken in asserting that it was imminent, there was a sense in which it was right even at the time, and it is probable that in the long run it will prove to be literally right, too. Saving for his bodily presence, Jesus did return in every crisis that from that time forward befell either the church or the world. He did overthrow the existing world-order and established an entirely new one upon its ruins. He did come in power and glory, enthroned in the hearts of men, Lord of all the ages, the recipient of a homage such as has never been accorded to any other being that has ever trod this earth. The marvelous spiritual force generated at Calvary has been gathering momentum ever since, and every victory it has won in this world has been a fresh advent of Christ into the consciousness of the human race.

[*The Universalist Leader.*]

There are disagreeable facts in this world, and there are different people who have different ways of meeting them. Some fight them, some ignore them, and yet here is the point,—why should we not use them? At least they may serve as a most effective disposition gymnasium, in which we are to train through keen observation and strenuous effort the muscles of our dispositions until we command them instead of being bossed by them! We are bound to come face to face with disagreeable people sometimes, and most frequently when we look into the mirror! But what are we to do with them? Shall we run away, or fight, or enlist on the right side the forces which are finding false expression, and make them serve for good? Disagreeableness is misplaced energy which should not be wasted!

[*The Christian Register.*]

In religion we are often inclined to think that the last word has been said. The forms are stereotyped. There is no new phase of the spiritual life to offer, no new commandments to enforce, no duties and obligations that have not been emphasized for the past nineteen hundred years. But a live church is always presenting surprises, making an advance in the night, as it were, that carries it on beyond the old boundary posts, set up and consecrated by the fathers of the faith. Religion, like other interests of vital importance, takes color, form, and pressure from every commanding impulse of the age. Dealing with the deepest problems of human nature, it is, in some sense, swerved by everything that affects the trend of thought, emotion, and moral progress.

[*The Advance.*]

Let us be sure that our progress is upward. God has a plan for the universe, and in that plan will not be thwarted. It is for us to meet the purpose of God, where it touches our lives, and make that purpose vital within us; else the purpose of God will be wrought without us, and within the sphere of our lives the grace of God will spend itself in vain. We cannot rely on the divine purpose to perform within us and through us what we do not assist. It is for us to work out our own salvation with fear and trembling, while God works in us "to will and to do of his good pleasure."

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works of Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the Sentinel, *Journal,* and *Herald,* whether articles, poems, or testimonials, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been published in pamphlet form and is ready for distribution. Thirty-two pages and cover.

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (August, 1912 to 1913), *The Christian Science Journal,* printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

Digitized by Google

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp. round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each, twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 30 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 93 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy	$ .05	$ .06	$ .07
Twenty-five copies	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.40
One hundred copies	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913: XIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $5.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

In a civil antitrust suit filed at Portland, Ore., by Attorney-General McReynolds, the federal government seeks dissolution of the alleged telephone monopoly on the Pacific coast maintained by the American Telephone and Telegraph Company—the Bell interests. The attorney-general asks the federal court to compel the Bell companies to relinquish control of the Independent Telephone Company of Seattle, the Home Telephone Company of Puget Sound, the Northwestern Long Distance Telephone Company, the Interstate Consolidated Telephone Company, and the Independent Long Distance Telephone Company. If necessary to accomplish the dissolution, the court is asked to appoint a receiver for the properties.

In the suit the attorney-general specifically requests the court to require the alleged telephone trust to dispose of the stocks, bonds, and physical properties of the independents "to persons not connected with the Bell Companies as stockholders or otherwise." He asks for the restoration, as far as practicable, of competitive conditions existing before the consolidation, and that Bell companies, their officers and agents, be enjoined from acquiring interest in or control of the companies relinquished.

The losses by fires on the national forests for the calendar year 1912 were the lowest of recent years. Less than one acre to every thousand acres of timbered lands was burned over, and the total damage is estimated at seventy-five thousand two hundred and ninety dollars, or less than one dollar to every two thousand acres of area. About 38 per cent were due to carelessness. The total number of fires was 2,472, as compared with 3,369 in 1911, and they burned over, in the aggregate, two hundred and thirty thousand acres as against seven hundred and eighty thousand in 1911. Of the 2,472 fires, more than 75 per cent were put out before ten acres were burned over, and nearly 50 per cent before one quarter of an acre was covered. Only twelve fires caused a damage of more than one thousand dollars each.

Despite senatorial criticism of the proposed reduction in parcel-post rates and the increase in the size of packages, Postmaster-General Burleson announces that he will issue the final orders at once, putting the changes in effect Aug. 15. The announcement came after the wisdom of making the changes had been subjected to a searching review before the Senate post-office committee in the presence of the postmaster-general. Chairman Clark of the interstate commerce commission, explaining why the commission had sanctioned the proposed changes, said he believed the postmaster-general had ample power under the law to make the changes. "I am convinced that the post-office department ought to, can, and will extend the parcel-post until it will carry all packages up to one hundred pounds," he added.

The government is beginning to make the national forests pay for the money which has been expended in conserving them. During the fiscal year just closed, the receipts from the forests amounted to almost two million five hundred thousand dollars, the business having surpassed that of any previous year. The appropriation for forest service work during the year was about five million five hundred thousand dollars. In addition to the receipts mentioned, however, contracts totaling four million dollars were entered into for the sale of timber, to be cut either at once or in later years. Where large bodies of timber are involved, these sale contracts permit the cutting to extend over a number of years. Thirty-five per cent of the year's gross receipts, or more than eight hundred thousand dollars, according to law, goes to the benefit of the states in which the forests are situated, for schools and roads.

Physical valuation of the railroads of the United States by the interstate commerce commission will take from five to seven years by a specially organized corps of men, and will cost the government from ten to fifteen million dollars or more, according to plans of the commission presented to the House committee on appropriations. The commission has asked for an immediate appropriation of one million five hundred thousand dollars for the organization of the corps of engineers necessary to undertake the work.

Cooperative methods pursued by the successful European farmer must be the means of improving the great farm areas of New England, in the opinion of a member of the American commission of agricultural organization and rural credits, which has just returned from a tour of observation in Europe.

The first payment of two hundred and fifty thousand dollars to Panama for the annual rental of the Canal Zone has just been made. The payments are in addition to ten million dollars paid in cash to Panama nine years ago.

International.

Opening of the Panama electric tramways last week was the occasion of a holiday. The first ride over the ten miles of railway was taken by President Porras of the republic of Panama, the archbishop, the president of the supreme court, the mayor of the city of Panama, various councilmen, the chief of the constabulary, and other national and city officials. The road crosses the international border three times and serves the suburbs of Ancon, Balboa, La Boca, and Sabanas. The tramways start near the national palace in the lower part of the city, and run past the Panama railroad station to Ancon in the Canal Zone. There is another line running north to Sabanas, the high-class residential section of the city. The third section or branch of the railroad runs to Balboa, the Pacific terminus of the Panama canal. The road is equipped with the newest electric cars.

The position in the Balkans last week reached a point which made negotiations possible, owing to the final success of the Greek army, which, in repulsing the last attack of the Bulgarians, drove King Ferdinand's forces over the Macedonian frontier into the Djuma pass, so finally disposing of the Bulgarian hold on Macedonia. The governments of Athens and Belgrade have agreed to a temporary truce. The delegates have met in Bucharest. An approximate indication of the total economic loss which has befallen the five peoples, including an estimated expenditure on mobilization and armaments during the last nine months of $60,000,000 by Roumania, and of perhaps $100,000,000 apiece by Austro-Hungary and Russia, would make a grand total of $1,329,000,000.

The Indian railway board has just issued its annual administration report for the year, and it covers every detail of railway progress. In the year under review a total of one hundred and sixty-eight miles of railway were opened to traffic. It has long been the policy of the railway board to maintain an average of a round thousand miles of new line each year, but owing to various causes this has not been found possible in recent years. The actual length of line open at the end of 1912 was thirty-three thousand four hundred and eighty-four miles, showing that ten thousand miles of new line had been built since 1900.

Total profits of all the publicly owned utilities in Edmonton, Alberta, were sixty thousand dollars last year. The street railway had a large deficit on account of extraordinary charges for extensions and improvements, but the light and power departments earned more than sufficient to cover the losses. The water department was operated at a profit.

Seven of the southern Chinese provinces with a population of one hundred and fifty million, have come to an agreement for action against provisional President Yuan Shi Kai and the Peking government, and besides these the troops under General Lung in the province of Kwang Si sympathize with the movement.

The committee of the Argentine Chamber of Deputies investigating the question of cattle meats, has decided to present a bill for the prevention of trusts, another for the taking a census of the cattle in Argentina, and another ordering an official inquiry into the interior meat trade.

The House of Lords has rejected the bill to abolish plural voting at elections in the British Isles. The vote was 166 to 42. On July 3 this bill passed its third reading in the House of Commons after a motion to reject it had been defeated, 293 to 222.

Industrial and Commercial.

Government experts have given a demonstration of scientific conservation of natural resources that has resulted in a saving of one hundred and fifty million cubic feet of natural gas daily in Oklahoma. This gas is estimated as worth thirty-seven thousand five hundred dollars, or thirteen million dollars a year. It was estimated at the time the experts entered the Oklahoma field, that every day two hundred and fifty million cubic feet of natural gas, worth sixty-two thousand five hundred dollars was being wasted. Operators and drillers were skeptical of the assertion of the two experts that they could prevent waste by a certain system of drilling. But the experts were right, and the operators are now making preparations to stop the waste. The gas already saved is equal in heat value, in a year's time, to one million eight hundred and seventy-five thousand tons of the best coal.

The break in the ranks of the silk ribbon strikers in Paterson, N. J., is construed by the mill owners as meaning the end of the five months' trouble with their factory hands. It is estimated that two million dollars in wages has been lost, while the manufacturers are about one million dollars out of profits. The strike began Feb. 25, when seventeen thousand five hundred hands were called out.

The new Chinese republic has established a department of agriculture and forestry. For a long time China had been pointed out as the most backward nation in forest work.

A single mill in Maine uses two thousand cords of paper birch each year in the manufacture of toothpicks.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

ACTIVITIES OF PRAYER.

HON. CLARENCE A. BUSKIRK.

PRAYER may sometimes be scoffed at as superstitious folly, but it is loved by sorrow and affliction, and revered by ripened wisdom. It is the effort of the spiritual element in human consciousness to attain a closer acquaintance with the divine source of all true being. What is humanly unworthy may at times enter into the motive, inception, and methods of prayer, but it is always supremely divine in what it accomplishes; for what is true in prayer is sure of its affirmative answer, while all that is untrue is sure of no response. Many human aspirations are like the moth that supposes it is soaring to a star but falls scorched beside a lamp. The right answer to the right prayer is a proven sure result of the infinite and eternal activities of divine Principle in the relations of man to the universe in which he is placed. It is dynamic and kinetic; to the kingdom of God within us it is like the sunlight to the beauty and fragrance of the unfolding blossom.

"Therefore I say unto you, What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." This inspiring promise of Jesus is neither disproved nor limited because many supposed prayers receive no answer. A prayer is answered or not answered, according to the view-point of Truth, not according to the view-point of him who prays. We desire and ask aright from our view-point only as it harmonizes with the view-point of divine Principle.

It ought to be clear to every one that the prayer to which Jesus refers, as sure of an affirmative answer, is the ideal prayer, with no admixture of error. If we can know what constitutes such ideal or absolutely true and perfect prayer, and can attain its pure and impeccable height when we pray, then the foregoing promise of Jesus is entirely trustworthy. The true God must be prayed to. It is indeed well for us that the kind of supreme being in whom many believe, and to whom they pray, has no existence. It would, for example, be much the safer for us to keep as far away as possible from that conjectured deity who is sometimes declared to be the author of laws of sickness and other aspects of human error. To pray for deliverance from such discords while believing that they are dispensations of divine Providence, is not only a vain but a dangerous thing to do; for it serves to bring our most potential consciousness into communion with a baseless untruth,—a belief which may be humanly causative of sickness, etc.

Further, the right prayer in respect to motives must be proffered. Whoever desires to understand the requirements of the prayer which is sure to be answered, needs repeatedly to read and ponder the chapter entitled Prayer in "Science and Health with Key to the Scriptures" by Mrs. Eddy. This one chapter alone, of her priceless volume, has already uplifted religious philosophy and the thought of Christendom to far higher plateaus, where the gladdening sunlight of Truth is forever shining.

"With God all things are possible." I have heard it argued that this is not true, because God could not make five from the addition of two and one, nor could He make a line with but one end. It ought to be plain enough, however, when reflected upon, that such argument is shallow sophistry; for Truth neither creates nor affirms untruths or negations. If one and two should make five, or if a line should have but one end, then they would be eternal facts, and no longer negations or denials of fact. By patient and unanswerable reasoning, Mrs. Eddy has shown that prayers, when answered, are answered in obedience, not in disobedience, to the infinite, omnipresent, eternal spiritual laws which rule us.

That which is true in human prayer has already achieved abundantly enough to prove forever that prayer has unlimited potentialities; that it achieves according to the measure of its truth and deserving. There is no evidence to warrant the assumption that what can be accomplished by prayer is a realm which may be mapped with boundary-lines. No such lines have ever been ascertained; they cannot be, because of the very nature of prayer. It is a theory or conjecture, not something proven, that prayer cannot interfere with the operations of material law. In many instances Jesus proved the reverse; and our highest reason proves the reverse likewise, unless one begs the question by assuming that spiritual law is impotent in dealing with so-called matter. Is such an assumption justified by any proven facts? No. Is it justified by reasoning? No.

Speaking for himself, the writer fails to find any good reason for even doubting, let alone denying, that divine Principle supremely governs everywhere and always and amid all conditions and circumstances. He fails to find any fact or reason for supposing that falsehood, or evil, is either more powerful than the law of Truth, or is immune from Truth's dominion, instead of disappearing when it comes into impact therewith, just as, for illustration, the negation of silence surrenders to sound or darkness to light. Moreover, he fails to find any other means or process so effectual and dependable for the purpose of availing ourselves of "the kingdom of God" within us, which Jesus both taught and demonstrated. The hour is already striking for the fast-growing conviction that true prayer is one of the most potent forces and one of the most beneficent activities known to human experience.

The fact that no one is yet able to walk upon the waves, as Jesus did, gives no proof that such a thing cannot be done in obedience to divine law. The denial is only a theory. It has never been proven that matter is above spiritual law. What alone is to be granted is this: that we must sufficiently understand and apply the spiritual dominion which belongs to the real man as the reflection of God, who is all-power. We are limited by our beliefs in our limitations. It may be granted that according to our beliefs such limitations seem well-nigh insuperable; but that does not make them inherently so. A brief time ago wireless telegraphy seemed to be an impossible feat; yet many things which were once regarded as wholly irrational dreams are now demonstrated and accepted facts. Can we really name anything more difficult for one person to accomplish by means of spiritual law than the deliverance of another person from the dominion

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

of sin or physical sickness? "The prayer of faith shall save the sick." If that is assuredly being accomplished, then the beneficent activities of prayer in the domain of matter is become a mere question of "arriving." The divine door is an open door. Our steps may falter, our feet may seem to us to be too feeble; but it remains for us an open door forever. Well says the poet:—

We pray amiss and words are naught;
But when we rightly pray,
Men cannot measure with their thought
The wonders of God's way.

First count the myriad stars on high,
Proud man, before you dare,
With all your vaunted tools to try
To map the realm of prayer.

"THY WILL BE DONE."

MAY BELCHER.

IT is a great step in our passage from sense to Soul when for the first time we realize, however dimly, the true meaning of those words which most of us have repeated so frequently from our earliest childhood, "Thy will be done." Before we begin to learn in Christian Science "what is that good, and acceptable, and perfect, will of God," we used to try to say, "Thy will be done," in times of great sorrow and anxiety, believing that an all-loving Father had sent us this heavy burden for some wise but inscrutable purpose of His own, a burden which we must accept unquestioningly, although our reason tells us that even an imperfect human father would not willingly so afflict his children.

Through the clearer understanding of God as Love, "with whom is no variableness, neither shadow of turning," which we are gaining day by day in our study of Christian Science, we begin to see what God's will is. We know it means perfect love, peace, joy, harmony, wisdom, strength, and power, the kingdom of heaven manifested here and now. Having gained some understanding of what constitutes the divine will, our next step is to make this knowledge practical in our lives, so that we too may reflect God's will, and directly when we are faced with the antagonism of that carnal or human will which St. Paul tells us is "enmity against God."

Although we say "Thy will be done," we are often so unwilling to give up our own opinions and desires that we delude ourselves into thinking we are being governed by God's will when it is quite the reverse, and it is not until some bitter experience comes to us that we are ready to be quite honest with ourselves and to acknowledge with humility all our selfishness, pride, and self-will. In striving to work out our life-problem according to the rule given us in Christian Science, we need to watch that we do not outline in any direction of thought. We are certainly not demonstrating the Principle of Christian Science if we first make up our minds that a certain course of action is right, and then work to bring about a given result in accordance with our own wishes. To do this is clearly not leaving all to God, and very far from saying in all sincerity, "Thy will be done." It is bringing our work down from the metaphysical to the material plane; it is believing in the power of the finite mind to judge righteous judgment.

In all problems which may present themselves, whether personal, social, political, or national, we cannot outline anything. Our work is to strive to realize more and more each day that God, divine Mind, is the only power, the only thinker; that His law is the only law, and that if we are content to leave all things in His hands, we shall be shown the right path, and have strength given us to walk firmly and unfalteringly in that path.

We know that in order really to demonstrate God's will, all material belief and desire must be given up, that everything which is contrary to God's law must be uprooted from our lives. We must learn to say, "Let not the flesh, but the Spirit, be represented in me" (Science and Health, p. 33). This means much, even the crucifixion of our human sense of self; but if we honestly strive to put this great truth into practise, we shall begin to understand the meaning of those words of our Master, "Your sorrow shall be turned into joy . . . and your joy no man taketh from you." Every time there are difficult problems to be faced, if we can only give up our own will we will have a sense of security and peace which indeed "passeth all understanding." All worry, anxiety, fear, all sense of personal responsibility, will be lifted from our shoulders, and we shall be like little children holding firmly to a loving hand, knowing that all protection and good are ours.

On page 1 of Science and Health Mrs. Eddy says "Desire is prayer," and often when the struggle with the human will seems well-nigh overpowering, that thought will come to the storm-tossed human consciousness with healing in its wings, for we know that if we honestly desire to do God's will, not all the so-called laws of mortal mind can hinder us. Then, as the mists clear away, we realize, perhaps as we have never done before, the omnipotence and omnipresence of good, and the consequent powerlessness and nothingness of evil. This knowledge brings to us the joy, strength, and peace which the world can neither give nor take away.

"ALL THINGS COMMON."

JOHN MONTGOMERY TURNER.

WE read in the fourth chapter of the Acts of the Apostles that "the multitude of them that believed were of one heart and of one soul: neither said any of them that ought of the things which he possessed was his own; but they had all things common." When a beneficiary of the healing power of divine Love as revealed in Christian Science experiences a right sense of gratitude for the blessings which have come to him, his first and greatest wish is to impart to others the knowledge of the truth which has set him free. In his home, in his business, on the street, everywhere and all the time, at his work and at his play, the need of mankind for healing, either of sickness, sin, or poverty, is presented, and as a well-loved hymn expresses it,—

The heart with love to God inspired,
With love to man will glow.

Such a one is anxious that his brother shall participate in his new-found treasure, and share with him the joy and happiness he himself is experiencing.

It is not always expedient to speak the word of Truth, much as we may desire to do so. Very often the "still small voice" for which the Christian Scientist learns to listen, bids us refrain, for a time at least, and to know that God will give us "a mouth and wisdom" to speak the "word in season." Still, for all that it may be necessary to curb the impulse to speak, we may nevertheless share our bounty with our brother. Every manifestation of inharmony in the way of sin, disease, lack, any condition which appears to deny the presence of divine Love, may be denied and the truth declared. As a good thought is never lost, we know that every effort along the line of right knowing will bear fruit in some degree; that is, in the measure of our understanding of Truth.

There is constantly presented to all the opportunity to share our blessings, and our beloved Leader has shown us how, from our well-filled storehouses of spiritual food, we may give to the needy brother. Not a cripple, a drunkard, or a beggar, a lame dog, or an overburdened horse, but may be helped through the silent realization that whatever afflicts, binds, or tortures is unreal, because not sent from, made, permitted, or tolerated by God, divine Love. We can likewise deny the impatience, anger, or selfishness with which our associate in business seems to be afflicted, and know that in place of strife, envy, or hatred, only peace,

Digitized by Google

calmness, and patience exist. To the brother seemingly in bondage to the belief of limitation, the thought of an infinite supply of plenty and prosperity may be applied, and with the assurance that it will in some degree serve to lift him into a knowledge of man's reflection of the divine affluence. It is the plain duty of every Christian Scientist to send out a corrective, scientific thought to offset the apparent existence of any inharmonious condition.

In the book of Proverbs we read: "Divers weights, and divers measures, both of them are alike abomination to the Lord." Does not this mean more than ordinary honest dealing from a material standpoint? Does it not mean that each and every child of God is entitled to be seen as such, and that any concept we entertain of a fellow being which falls short of the perfect idea of God is not measuring him with an honest measure, but with some one of the "divers measures" of human opinion? By always employing the "just measure," each and every one of us may practise Christian Science, and so help to free humanity from its shackles, whether we be engaged exclusively in healing the sick, or whether our work takes us into the business world and a more material environment. On page 518 of "Science and Health with Key to the Scriptures" our revered Leader tells us that "the rich in spirit help the poor in one grand brotherhood, all having the same Principle, or Father; and blessed is that man who seeth his brother's need and supplieth it, seeking his own in another's good."

BEST GIFTS.

M. FLORENCE EUSTIS.

"If instead of a gem, or even a flower, one could cast a beautiful thought into the heart of a friend, that would be giving as the angels must give." These words of George Macdonald were once quoted at a Wednesday evening meeting, and the speaker told of the comfort they had brought her. It was the Christmas season, and owing to a sense of lack, she was unable to give the usual material gifts; but this word had helped her to realize how much more beautiful were the thoughts that she was daily casting into the minds of friends than any material gift could possibly be. I approved of all she said, for it sounded sincere; but at that time my own thought was one of thankfulness that I could give the material gifts.

Several years passed, and the quotation was seemingly forgotten. I was boarding among strangers, in a strange city, and had the financial problem to work out. The head of the house was taken ill. All were fond of her, and took this opportunity to express their affection by sending flowers,—all but myself. I had no money to invest in flowers. My pride was hurt; then, too, I feared the good woman might think I had no appreciation of her past kindness. She grew worse, and the house conversation began to express fear of death. The atmosphere became most oppressive, and I woke up to the truth of being. I had no thought of treating her, but I did desire to keep my own peace of mind, and each morning while dressing I declared for peace, with quiet assurance of life. When at breakfast, the more that others talked of the night of suffering and probable death, the stronger I declared mentally for peace, for life.

This continued for a week; then on a Saturday morning the daughter asked me to go to her mother, who wished to speak to me. My first impulse was to make an excuse, for I was still burdened with the remembrance that I had sent no flowers, and I was ashamed to see her. However, I put this feeling aside and went to her. As I stepped into the room, I saw flowers on every side and exclaimed about their beauty. "Yes," said the invalid, "every one has sent me flowers except you, but you have given me so much more, I want to thank you." I looked at her in amazement and answered, "Why, I haven't given anything." Before I could explain my financial problems she began to tell of her nights of suffering, then added, "But for the past week I have had such beautiful mornings that I have been able to endure the nights. In the early morning hours, when the pain is so hard to bear, my daughter tells me to be patient, for in a short time you will come in to breakfast; and each morning, a few moments after you have taken your seat, a great sense of peace has come to me, and then sleep for hours. Oh, yes, the flowers are beautiful, but your gift is more, much more! Is this your Science?"

As I left the room, Macdonald's long-forgotten words again came to me, and I felt a sense of deep gratitude to our dear Leader for having taught us in Christian Science how to give "angel-gifts."

ILLUSIONS.

REV. WILLIAM G. SCHOPPE.

Mrs. Eddy says that "mortal mind sees what it believes" (Science and Health, p. 86). Hegel declares that "true progress consists in the removal of illusions." A sense of fear means perversion. It has been the custom of mortal mind to hold distorted images of being. This mind has filled the world with false concepts of Deity and demanded their worship. It has formed in thought erroneous pictures, and then objectified the general mentality, so that even thinkers of each succeeding age have shared the error. The common illusion has seemed reality until Truth has stripped off its disguise. In this respect no age has seemed to learn much from the experience of former ages. Each one thinks that the past cherished falsehood, while the present is filled with light. Each one blindly hugs its own pet illusion and persecutes the revelator who disturbs its dream with the awakening truth.

When Christian Science challenged the mortal contradiction of the ages by boldly declaring that all which seems opposed to the action of infinite Mind is not true, but mortal illusion, it was scorned by the dominant forces whose thinking had been coerced by established systems. The more free and spiritual method, even the vision of God as absolute causation and His manifestation in the spiritual idea, casting out the false sense which claims that evil has real being in the realm of infinite good, is hinted in history and established by sound reason. The thread of illusion that runs through human experience is readily admitted. For thousands of years men believed that the sun circled the earth each twenty-four hours. It seemed so till the science of astronomy corrected it, and persecution was the lot of denial. Galileo, under the rack, was compelled to recant "the abominable heresy that the earth moves." Sport was made of Columbus for believing there was land on the other side of the globe, and people asked, "How could men walk with their heads hanging down?" Emerson says, "We live in illusion."

Confusion, doubt, and the mists of limitation which darken human experience, so border on the normal action that the mortal man touched with doubt is compelled to ask, Am I awake? Is there a sure line of demarcation between the real and the apparent? Are things what they seem? What is the influence that presses on mentality? Is it mesmeric, or real? The rationalism of history has been engaged in a sharp conflict to separate truth from illusion. Often the craft of men has been involved. Entrenched interests have held to the illusion, while the flaming sword of truth has led the deliverance. In the childhood of the human race, childish thought was objectified in wondrous forms. The gods and demigods, which were creations of mortal thought, appeared in forms of men. Their actions were as questionable as the minds that formed them, but until a more rational awakening came there was no one heretical enough to deny their reality. Strong and good men shared the common delusion.

In the "dark ages" the thought of evil became a nightmare. Devils were legion; they walked and talked and

Digitized by Google

devised ill. Men saw them face to face and were never free. Luther's diary abounds with weird tales of his experience with the arch-enemy; he hears him in the corridor at night, and holds conversation with him. The illusion was well-nigh universal. The ghost lore of our fathers would fill libraries. A common fear of the unknown was portrayed. We say we have outgrown these hideous fables, but they once seemed as real as men. The thought of ages was objectified. Has this mortal law ceased to operate? Is there no common error of thought extending into our time that makes illusion seem real?

The reign of devils and specters passed before an advancing thought of the divine character. Faith fixed itself in the eternal goodness. It was insisted that divine Love never made a world thus filled with horror; then hell and Satan began to vanish from human belief and the world was brighter. Truth demands an extension of this logic until all evil is excluded. Can sin, sickness, and death be harmonized with all-creative Love and power? Spirit is absolute; Spirit alone endures, and the enduring is real. To this basic truth of being "every knee shall bow." Matter, as such, is not real; it is but the externalization of mortal sense. If one looks through blue glass, all objects seem blue; through material sense they appear material; but as thought becomes spiritualized, Spirit is seen to be the author and life of all, unfolding and sustaining creation from Himself in His image; then objects appear as they are, spiritual and complete.

The scientific perception of reality is marked by Mrs. Eddy's statement that "divine Science, rising above physical theories, excludes matter, resolves *things* into *thoughts*, and replaces the objects of material sense with spiritual ideas" (Science and Health, p. 123). Within the infinite good, evil has no place. A general material thought objectifies a corrupted creation, but the higher outlook, the spiritual penetration, unfolds to man's knowledge the truth of being, God and His creation, spiritual and perfect.

For the sure basis of reality, we are not left to conjecture, —the ever-coming Christ is revelation; Spirit penetrates the mist of matter. The Master appealed to proof,—"The works . . . that I do, bear witness of me." "The works that I do shall he do also." The need continues; the rule is ours, even the supremacy of Spirit. The healing work is in every hamlet. All who will may see and know. Mrs. Eddy again says, "Demonstration is Immanuel, or *God with us.*" Under spiritual progress, "what to material sense seems substance, becomes nothingness, as the sense-dream vanishes and reality appears" (Science and Health, pp. 34, 312).

BEING AWAKENED.

MIRIAM B. CLARK.

WHILE returning from a recent outing, a lesson was brought home to the writer in an especially vivid manner. As we neared a bridge at which the track made a turn, our car stopped, and naturally we looked for the reason. On the rail fence adjoining the bridge a drunken man was lounging, so close to the track that, had our car moved on, it would have struck him, and serious results would undoubtedly have followed. He was, however, so satisfied to remain in his dangerous position that he refused to move at the request of motorman and conductor; and when one of them disturbed the self-deceived slumberer, taking him by the shoulders and leading him away from danger, the response was a rebellious fretfulness and complaint.

Then the thought came, How true this is of lazy, intoxicated mortals, who love stupid ease, who complain because of the constant demands to come up higher and dwell in the safe place, "in the secret place of the most High"! They would prefer to be let alone, though in a position dangerous to spiritual growth; and if a friend proves himself to be really a friend, and, seeing their need, dares to disturb their false peace, or even causes them to suffer momentarily, they are not grateful for the arousal. Do we murmur over problems and experiences which force our progress heavenward, causing us to see by degrees that the gods of this world cannot satisfy us, that only the peace which Christ, Truth, gives can still the human restlessness and satisfy our desires and longings? The answer comes, "My peace I give unto you: not as the world giveth, give I unto you."

Jesus was familiar with the rebellious attitude of lazy mortal mind, as evidenced by the response given him when healing the demoniac coming out of the tombs: "What have I to do with thee, Jesus, thou Son of the most high God? I adjure thee by God, that thou torment me not." The man who thus spoke was tormented to such a degree, and was so blinded, because gratitude had not yet been awakened, that for the moment he failed to appreciate Truth's work in stirring the evil for destruction. Jesus' command to error, "Come out of the man, thou unclean spirit," was for the blessing and healing of the man, who soon found himself "sitting, and clothed, and in his right mind," even as have so many in this age through the blessed ministry of Christian Science.

CHURCH WORK.

ADA J. MILLER.

IN her definition of church, Mrs. Eddy says, "The structure of Truth and Love; whatever rests upon and proceeds from divine Principle" (Science and Health, p. 583). This definition should decide for every Christian Scientist the lines of his activity. Aside from what is considered regular church work, whatever movement is based upon Principle is really part of the church structure. The individual cooperation of Scientists is needed in all that makes toward freedom of thought, toward purer city, state, and national government, toward the establishing of justice and peace, and toward the equalizing of the sexes. Because Scientists are working with a demonstrable Principle, their cooperation is of double value: they know that self-seeking in the individual or in the nation is inimical to growth; they know that good cannot come from evil, and that only as all government rests upon divine Principle is it upon a sure foundation.

The fact that Mrs. Eddy established *The Christian Science Monitor* as a daily newspaper for the home is proof of her earnest desire to have Christian Scientists carefully informed in regard to the world's activities. Because one phase of the power of Truth is emphasized by Scientists, many assume that the healing of the sick is the entire work of Christian Science. But this is far from true. Every phase of human discord is disease, and Truth is the remedy. Christian Scientists are building their church as they work to demonstrate that Truth heals not only the physically sick, but also those conditions, whether of the city, state, or nation, which are not expressions of the activity of Mind. Gladly then do they join hands with all who are working to liberate and thus elevate the race, when this work "rests upon and proceeds from divine Principle."

[Written for the *Sentinel.*]

WORK.

GERTRUDE SMITH.

OH, work for the love of work, my friend,
If joy your heart would know,
For work, true work, is a thing divine,—
God's love in its overflow!
Like to a bird in flight and song,
Like to a child in laugh and play,
This to your life is work, my friend,—
God's blessing on each perfect day!

SELECTED ARTICLES.

[Frederick Dixon in *Brixton Free Press*, Brixton, England.]

The reference of the Rev. A. J. Waldron to Christian Science, in a recent issue, is at once courteous and kindly. May I be permitted to say, however, that though I am sure he would be happy to debate on the subject of Christian Science, no Christian Scientist would dream of accepting such a challenge. Christian Scientists have learned long ago that nothing whatever is to be gained by such methods, unless it be the generation of a certain amount of heat in a public audience, which is rather to be deprecated than anything else. Christian Science, for this among other reasons, has based its claim to public attention on its ability to demonstrate the Principle it advocates. It is partially for this reason that it places so much stress on healing; and by healing, let me point out, I do not mean the mere removal of physical ills, but that mental change which is referred to in the Bible as the gaining of the Mind of Christ. When the writer of the epistle of James declared that "faith without works is dead," he referred, in the opinion of Christian Scientists, to this very fact. A mere declaration of faith in dogma has meant the division of Christendom into opposing camps, which for centuries have torn not only each other's opinions, but each other's bodies, in pieces. Had these camps settled their differences, not on the scaffold, at the stake, or on the field of battle, but instead by obeying the divine command to prove their faith by their works, it would soon have been made apparent which of them was walking most nearly in the footsteps of Jesus the Christ.

In saying that those who believed in him would be able to do the works he did, the Founder of Christianity surely made it sufficiently plain that the test of what a man knew of God was to be his ability to demonstrate the knowledge he professed. To pretend that the Christian Science position is weakened by Christian Scientists' inability to perform all the works which were performed by Jesus, is just about as sensible as it would be to say that nobody had any right to call himself a mathematician who had not solved every conceivable mathematical problem. Just in the proportion in which a man lives up to the standard of Christianity upheld by Jesus of Nazareth, will he prove able to imitate the mighty works of the Founder of Christianity. This has been put briefly and lucidly by Mrs. Eddy, on page 40 of her "Miscellaneous Writings": "The reason that the same results follow not in every case, is that the student does not in every case possess sufficiently the Christ-spirit and its power to cast out the disease. The Founder of Christian Science teaches her students that they must possess the spirit of Truth and Love, must gain the power over sin in themselves, or they cannot be instantaneous healers."

The gentleman says, and says quite truly, that to a large extent a man's face is an index to his character, that is, to what he thinks; and he implies that this is true also of his body. Christian Science insists that a man's body reflects his thought, whether he is aware of it or not, and that this is exactly what Jesus meant when he said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" The ordinary definition of sin is always hopelessly unscientific; that is to say, it always indicates a breach of a moral code, which differs not only in various countries, but with the varying ethical standards of those countries. According to Christian Science, sin is belief in anything unlike God; that is to say, a man may be guilty of an obvious sin of commission, though such a sin would not be accepted as obvious in every country. In addition to this, however, he may be guilty of sins of omission of which the world is actually unconscious. Nevertheless, these sins of omission or commission reflect his consciousness, with the result that his body, which is only the subjective condition of his thought, passes through various physical changes, which we call healthy and unhealthy, but which in more archaic English were called holy or unholy, since the term holy is only another form of the word whole. The man made "every whit whole," was, in simple English, the man every whit holy. Surely, once more, this is simply what Jesus meant when he said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?"

[B. O. Flower, in *Concord* (N. H.) *Monitor*.]

My attention has been called to a remarkable letter recently sent by the New Hampshire Medical Society to each member of the Legislature of New Hampshire and given wide publicity in the press. The character of this communication, no less than the avowed intent to secure restrictions that would rob a large number of highly intelligent citizens of the legal right to employ the practitioners of their choice, the practitioners who in past experiences have cured them after the doctors had failed, leads me to ask for some space in your valued publication for the following consideration of the facts involved.

The position taken by the New Hampshire Medical Society in the letter referred to above, while it might mislead the shallow and unthinking, will not appeal to any thoroughly intelligent and unprejudiced person, for the following reasons:

The material and the metaphysical systems of cure are mutually exclusive, yet each system claims hundreds of thousands of highly intelligent citizens who believe they owe their health and life to their favorite system. The metaphysical system, though as old as Christianity, has only recently gained a strong hold in western civilization; yet there are today tens and hundreds of thousands of highly intelligent people, embracing men who as governors of great commonwealths, as United States senators, as publicists of national repute, leading business men, editors, authors, artists, and, indeed, persons prominent in almost every walk of life and thoroughly representative of our best citizenship, who believe they have been cured by the metaphysical system after the material treatment had signally failed.

Now we are not arguing for the metaphysical system or condemning *materia medica*, but the point we make is, that under freedom these tens and hundreds of thousands of people have found health at the hands of the metaphysical practitioners, after failing to find it at the hands of the practitioners of the material systems, and we hold that these people and others have the same right to seek health here as those who believe in drugs have to go to the material physician. Yet, as has been observed, the two systems of cures are mutually exclusive. So it would be manifestly absurd to compel the allopathic doctor successfully to pass rigid examinations in the metaphysical system of cure before being permitted to dispense drugs. And in like manner it is manifestly absurd to insist upon the metaphysical physician, who does not touch the human body or administer any drugs, being compelled to pass the examinations required of drug-dispensing doctors. So, also, it would be manifestly absurd to compel osteopaths, and those who do not administer drugs, to be examined in *materia medica* or to force the homeopathic physicians to be examined in the old-school *materia medica*, in which they do not believe and which they do not practise.

The legislation sought by the New Hampshire Medical Society, on the pretext of raising the medical standard, and which would serve to force tens of thousands of persons to employ doctors belonging to the class seeking this legislation, in spite of the fact that their own experience has shown them that better results can be obtained from other practitioners, is similar in general purpose to a bill which the Massachusetts Medical Society sought, though without success, to have enacted in 1898. And at that time Prof. William James, M.D., one of the leading medical educators of the country, appeared before the health committee of the Massachusetts Legislature to protest against the bill. In

Digitized by Google

the course of his remarkably able address, Professor James said:—

"I hold a medical degree from Harvard University. I belonged for many years to the most scientific of our medical societies. I have taught anatomy and physiology, and now teach mental pathology, in Harvard College. The presumption is that I am also interested in science. I am, indeed: and it is, in fact, because I see in this bill (along with some good intentions) a movement in favor of ignorance, that I am here to oppose it. It will inevitably trammel the growth of medical experience and knowledge. Were medicine at present a finished science, with all practitioners in agreement about methods of treatment, such a bill as this, to make it penal to treat a patient without having passed an examination, would be unobjectionable. But it would also be unnecessary then. No one would attempt to cure people without the instruction required. But the present condition of medical knowledge is widely different from such a state. Both as to principle and as to practise our knowledge is deplorably imperfect. The whole face of medicine changes unexpectedly from one generation to another, in consequence of widening experience: and as we look back, with a mixture of amusement and horror, at the practise of our grandfathers, we cannot be sure how large a portion of our present practise will awaken similar feelings in our posterity."

Professor James pointed out the fact, important to every high-minded legislator, that the state "is not a medical body, has no right to a medical opinion, and should not dare to take sides in medical controversies. This safe neutral position the friends of the proposed legislation summon the commonwealth immediately to give up. One would suppose that any sane person interested in the growth of medical truth would rejoice if other persons were found willing to push out their experiences in the mental healing direction, and provide a mass of material out of which the conditions and limits of such therapeutic methods at last become clear. One would suppose that our orthodox medical brethren might so rejoice, but instead of rejoicing, they adopt the fiercely partizan attitude of a powerful trades union demanding legislation against the competition of the 'scabs.' They summon the state to disregard absolutely all the peculiar conditions under which the mental healing operations flourish today, and say to the mind-curers, 'Pass our state examinations, or go to our state's prison.'

"Abstractly it sounds magnificent to say that our state protects its citizens against the ignorance of practitioners. In the living concreteness of the matter, however, not only is such a claim an utter farce, but in this particular business of mental-healing there can be no doubt that if the proposed law were really enforced, it would stamp out and arrest the acquisition of one large branch of medical experience. What the real interests of medicine require, is that mental therapeutics should not be stamped out, but studied, and its law ascertained. Do you feel called on, do you dare, to thrust the coarse machinery of criminal law into these vital mysteries, into these personal relations of doctor and patient, into these infinitely subtle operations of nature, and enact that a whole department of medical investigation (for such it is), together with the special conditions of freedom under which it flourishes, must cease to be?

"I venture to say that you dare not, gentlemen. You dare not convert the laws of this commonwealth into obstacles to the acquisition of truth. You dare not do it, gentlemen; and yet that is exactly what you are asked to do if you pass this bill. Pray do not fail, Mr. Chairman, to catch my point. You are not to ask yourself whether these mind-curers do really achieve the successes that are claimed. It is enough for you legislators to ascertain that a large number of our citizens, persons as intelligent and well-educated as yourself or I, persons whose number seems daily to increase, are convinced that they do achieve them, are persuaded that a valuable new department of medical experience is opening up by them. Here is a purely medical question, regarding which our General Court, not being a well-spring and source of medical virtue, not having any private test of therapeutic truth, must remain strictly neutral, under penalty of making the confusion worse."

Professor James' views coincide with those expressed by such distinguished and authoritative men in the world of scientific advancement as Prof. William Jay Youmans, Herbert Spencer, and Thomas H. Huxley. Indeed, the history of civilization teaches few lessons more clearly than that in all fields of experimental research, freedom, and not restriction, is the condition essential alike to scientific advancement and human happiness and development.

[Paul Stark Seeley in *The Oregon Scout*, Union, Ore.]

Christian Scientists are in perfect agreement with the statement that God made man in His own image. Indeed, it is a fundamental teaching of their religion, and this important premise is followed consistently to its logical conclusion. If in truth man is made in God's image, he must be like God, that is, of God's nature. From the beloved Master we learn that "God is Spirit." Man, then, made in God's image and likeness, must be spiritual. It is at this point that Christian Science parts company with those who accept the conclusion that man is material, unlike God, though at first agreeing that man was made in God's likeness. If there is but one God, and He is Spirit, His creation can only be spiritual, for Spirit, intelligence, can never reverse its own nature and bring forth its opposite, matter, non-intelligence, although this is the illogical conclusion preferred by the orthodoxy of today.

But if Christian Science is true and man's being is spiritual, like that of his creator, the question naturally arises, Whence came the material universe and material man? Christian Science answers the question by reverting to the generally accepted statement in Genesis that God created all that was made, and that it was very good. God being the only creative power, man and the universe, His creation, must be like Him, spiritual and good. Then matter, the opposite of Spirit, can have no relationship to God or His creation. Its apparent existence is resolved by the force of irresistible logic into nothingness, which "seems to be something, but in truth is nothing but false belief, belief in a life apart from God and resident in matter. Speaking to those who clung with blind obstinacy to their material beliefs, refusing to turn from matter to hear his spiritual message, Jesus exposed for all time the unreality of material being when he said, "Why do ye not understand my speech? even because ye cannot hear my word. Ye are of your father the devil [evil], and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it."

That a material sense of existence is false and to be overcome by learning of man's spiritual being, was proven many times by the lowly Nazarene, who furnished ample evidence of this truth by healing the sick, raising the dead, feeding the five thousand, and walking on the waves, so breaking the most strongly entrenched laws of material belief, at the same time making it clear that he came not "to destroy, but to fulfil;" that is, to fulfil the law of Spirit, God. And such is the work of Christian Science in the present era. It is turning the thought of men from a material to a spiritual base, and is liberating them from the false belief in a power unlike God and from the bondage of sin, disease, and evil in every form.

However logical in its reasoning from cause to effect Christian Science may be, its chief claim to the thoughtful

Digitized by Google

attention of mankind is its works; even as the Master said, "By their fruits ye shall know them." Of the many thousands of Christian Scientists at the present day, the great majority came to Christian Science for physical healing, after all other systems had failed. There is indeed no disease named by the medical profession that Christian Science has not healed, including smallpox and diphtheria mentioned in your recent article. Broken bones, too, have many times been healed by its treatment. But a few years ago the writer had under his immediate observation a compound fracture of the forearm which was perfectly healed by Christian Science treatment after a surgeon had declared that the arm could never be used as before. Statements that Christian Science does not heal, or heals only imaginary diseases, are made, I must say with candor but with all kindness, from the narrow confines of self-satisfied opinion formed without any knowledge of the facts. Hundreds of thousands of intelligent men and women throughout the entire world are testifying to the healing power of Christian Science. Their testimony means more than long arguments or doctrinal controversies, for they are saying with the satisfied sense of the blind man whom Jesus healed, "Whereas I was blind, now I see." Gradually but certainly the barriers of prejudice and false opinion are falling before the indisputable fact that Christian Science is making its adherents happier, healthier, and purer men and women, and through its teachings is giving to the world a brighter and more godlike view of life and the destiny of man, even that found in the correct understanding of God, man, and spiritual law.

The fact that Christian Science is not at this time restoring severed limbs is no good reason for its critics to assail it, any more than they would condemn the child learning his first lesson in arithmetic for not solving a problem in algebra. The victories already won over the tribulations of material belief, through a meager understanding of Christian Science, portend a future rich with promise, and make plain the way for compliance with the Master's command, "Be ye therefore perfect, even as your Father which is in heaven is perfect." The command is plain and certain. Christian Scientists rejoice that they have found the path leading to its fulfilment. Unjust attack and false criticism cannot turn them from their course, for they know that they have found the "pearl of great price," even "the stone which the builders rejected," and that it has even now "become the head of the corner."

[Editorial in *Pueblo* (Col.) *Indicator.*]

The American Medical Association got a rebuke when too previous officials of that organization made light of the Christian Scientists because of their mental treatment of sufferers from the Omaha tornado and Dayton flood. Something more substantial is needed "when death rides in the wind and on the waves," said the medics. The Christian Scientists, ever on the alert to defend their cause, came back with the published statement that their church contributed almost one hundred thousand dollars in funds for the relief of the storm victims, whereat the medics must observe a discreet silence and let the public judge of a cult that gives so freely when "death rides in the wind and on the waves."

[John Ashcroft in *The St. Louis* (Mo.) *Republic.*]

Permit me to refer briefly to the sermon by Archbishop Glennon, quoted in a recent issue, wherein appears a reference to Mrs. Eddy and her work which is liable to leave a possibly unintended but nevertheless unfortunate impression in the thought of your readers. It is to be regretted that the distinguished prelate was not more specific with regard to the "strange things" which he deems that Mrs. Eddy found in the Bible. It is generally conceded that the Scriptures are susceptible of both literal and spiritual interpretation. Christian Science, however, does not "make the individual mind the court of last resort" in measuring the value of any interpretation of Holy Writ. Rather does it abide by the standard established by the Founder of Christianity, "By their fruits ye shall know them." That Mrs. Eddy, through compliance with the Master's injunction "Search the scriptures," should have contributed to the broadening of mankind's spiritual outlook, should be a matter of felicitation rather than of implied criticism.

The first tenet of the Christian Science church is the explicit statement that "as adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497), and a careful study of Mrs. Eddy's writings will reveal only a consistent adherence to the Scriptural declarations of the omnipotence, omnipresence, and omniscience of God, Spirit, and of the availability of divine help for every human need.

[Thomas F. Watson in *Mountain View* (Cal.) *Register-Leader.*]

The critic in the *Mountain View* "Signs of the Times," who classes Christian Science with the "mystic religions of India," shows an entire misapprehension of the subject, for Christian Science is not in any sense allied to the teachings of occultism or hypnotism, but is diametrically opposed to those teachings; nor is there anything mysterious about Christian Science. The first tenet as given in "Science and Health with Key to the Scriptures" by Mrs. Eddy, is as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (p. 497). As to the "hundreds of thousands of men and women of culture and education" who have been healed of diseases which the critic claims were "only in their imagination," the gentleman seems to forget that the large majority of these cases had been carefully diagnosed by the leading physicians of this country; many were in our sanitariums and hospitals, where they had been given up to die, and only came to Christian Science as the last resort; therefore there could have been no mistake as to the genuineness of their healing, which is explained by the psalmist, who says, "He sent his word, and healed them, and delivered them from their destructions."

The day has passed when one can lightly cavil at Christian Science healing, for these cases are too numerous and too well authenticated to be passed by with doubt by any who really want to know the truth of the matter. When the critic refers to the thousands of "educated and cultured" people who are adherents of Christian Science, he should pause and consider the obvious fact that if Christian Science were the conglomeration of superstition and error which the gentleman has mistakenly represented it to be, these intelligent people could not possibly be long deceived by it. Christian Science is a demonstrable religion; it is the religion of the Bible; it is the truth which Jesus taught and practised.

[Written for the *Sentinel.*]

SYMPATHY.

GERTRUDE GOODING MC CLOUD.

When sorrow comes to one I love,
I would not dare
To send mere words of sympathy;
I needs must care
Enough to send a message of good cheer,
To tell the loved one that all good is here.

I would destroy as best I could
The sense of grief,
By showing that all else than good
Is false belief.
If in this way a ray of light I bring
To one I love, with joy my heart shall sing.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

PRACTICAL GRATITUDE.

In our daily experience we largely get into the habit of dividing into various grades the sins which tempt mankind. Some are looked upon as being much worse than others, some are regarded as sins of commission and some as sins of omission, and to these latter much leniency is usually shown, for they are supposed to be minor in importance and least serious in their results. Probably the lack of gratitude for benefits received would generally be regarded as a sin of omission, but Christian Scientists are fast learning that this sin is far-reaching in its effects and one to be studiously avoided if they are to progress toward that state which Jesus called the kingdom of God, the childlike recognition of a loving Father who gives only good gifts to His children. In this connection it is well to remember, as Mrs. Eddy points out, that "action expresses more gratitude than speech;" that if we are really grateful, "we shall avail ourselves of the blessings we have, and thus be fitted to receive more" (Science and Health, p. 3).

In the old way of thinking, many had looked upon our Master's words, "Whosoever shall deny me before men, him will I also deny before my Father which is in heaven," as a threat of vengeance or reprisal, as expressing a personal determination to punish a personal wrong-doer, or one who had given personal offense. In a very few words on page 372 of Science and Health, Mrs. Eddy entirely changes this concept of Jesus' words, and makes clear their true meaning, namely, an exposition of the inevitable result of failure to understand and obey the word of God. After quoting these words of the Master, she says, "In Christian Science, a denial of Truth is fatal, while a just acknowledgment of Truth and of what it has done for us is an effectual help. If pride, superstition, or any error prevents the honest recognition of benefits received, this will be a hindrance to the recovery of the sick and the success of the student." To be lacking in gratitude is to bring upon ourselves a proportionate narrowing of our blessings, a present-day application of the teaching, "Whosoever hath, to him shall be given, and he shall have abundance; but whosoever hath not, from him shall be taken away even that he hath."

Throughout Science and Health, and her other writings as well, Mrs. Eddy makes plain the impersonal nature of the Master's teachings, together with the necessity for grateful recognition of what Christian Scientists are receiving whenever they truly turn to God for deliverance from all that is unlike Him. Scarcely any one who has had much experience in Christian Science but has noticed the struggles of those who fail to appreciate what Truth is doing for them, or the rapid progress of those whose expectations may have been small, but their gratitude boundless. And by gratitude we do not mean that which is felt only toward some person, but rather that deep appreciation of God's goodness which makes of "each loving life a psalm of gratitude."

We need to remember the infinite source of all goodness; that "every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning." Relying, then, upon this inexhaustible fount, the prayer of gratitude that springs from an overflowing heart will find its answer in an opportunity to extend a helping hand, to speak the "word in season" that may turn the wayward feet into the straight and narrow way. Such was the prayer of our Leader, and none can measure that "daily good" (Poems, p. 13) which in ever-widening circles is destined to embrace all mankind.

ARCHIBALD MCLELLAN.

SYMBOLS.

In Science and Health we read that "spiritual teaching must always be by symbols" (p. 575), and in addition to this statement there are many others in our text-book which explain very fully what symbolic teaching means. Symbol is defined in the dictionaries as "a visible sign or representation of an idea; anything which suggests an idea or quality, etc." From this it will be seen that symbols are meaningless apart from Mind, and while it is generally believed that they must appeal to the senses, that they are material, a truer sense reveals the fact that they are the language by which divine Mind communicates with its own ideas. This is beautifully expressed by the psalmist who says: "The heavens declare the glory of God; . . . Day unto day uttereth speech, and night unto night showeth knowledge. There is no speech nor language, where their voice is not heard." There can be no question that if we read aright the divine message, we shall be lifted far above the material sense and find that spiritual law is ever operative, "making wise the simple."

Two young students of Christian Science were once talking about jewels, and the one said that she only cared for them as representing the love of friends who had given them. The other said they meant much more than this to her, as symbols of divine ideas. Thought then drifted naturally to St. John's symbolic description of the holy city, the foundations of its wall "garnished with all manner of precious stones," the splendor of the city being expressed in these telling words, "having the glory of God," and the added statement, "There shall in no wise enter into it anything that defileth, . . . or maketh a lie." This reveals the fact that when the symbol is seen in its relation to the spiritual idea, separate from sin and sinners, we have that which rebukes lust and pride, all materiality, in the pure language of Spirit.

It needs no prolonged argument to show the utter folly of material sense in its attempted use of nature's beautiful symbols. Mrs. Eddy speaks of a rose as "the smile of God" (Science and Health, p. 175), yet the impure take these fair flowers for sensuous adornment, and it is well known that the costliest jewels have been sought and worn by some of the most degraded and wicked mortals, their possession gained through crimes which have darkened history; and all this because the sons and daughters of men are blind to spiritual realities and contend for matter and its delusions with their very lives, quite forgetful of the rebuke given by Christ Jesus to the Pharisees, when he said, "If ye were blind, ye should have no sin: but now ye say, We see; therefore your sin remaineth."

To understand the meaning of a symbol we must look away from matter to Mind, to Spirit, ever remembering that purity is "the symbol of Life and Love" (Science and Health, p. 561). The psalmist tells us that God is both "sun and shield," and the stars, radiating their reflected light, typify the righteous who shine forever in the spiritual firmament. Thus seen, the divine ideas greet us on every hand, telling us that "the law of the Lord is perfect," and that it brings perfection to all, both within and without. It begins by healing all discord, as did the Master, who pointed to the symbols presented in flower and fruit, in sower and seed, in the shepherd and sheep, the fisherman and fish, all his lessons lifting thought to understand the real object of his ministry, namely, "the healing of the nations." Error would arrest our attention with symbols of evil, or by misinterpreting the types of spiritual ideas presented in nature and making them seem material: but Truth rebukes all falsity by revealing the real with its unvarying demand for perfection, which means health, harmony, and immortality. Once perceived, the divine idea lifts thought into the closest communion with Principle, in whose presence no shadow of material darkness can linger. Sense vanishes before the light of Spirit, and Soul is reflected in its own pure and perfect ideas.

LOVE POINTS THE WAY.

THOUGHTFUL people are becoming deeply impressed with the conviction that the social order embraces many facts and conditions which are altogether wrong, and that the spirit of Christian brotherhood, alone, can right them.

Christ Jesus sent forth his disciples with the single, all-inclusive, all-corrective mandate, "Thou shalt love." This was to fit and munition them for every possible situation and experience. They went out to meet the ignorance and torpidity of the common people, the caste pride and self-satisfaction of the Pharisees, the contempt and cruelty of the Roman legions. They were called to resist every assertion and accretion of selfishness and sensuality, to defeat every manifestation and power of evil; in a word, to overcome sickness and sin, death and hell, and their sole means both of attack and defense was to be love! Their enemies mustered millions, and they were impelled by all the instincts and inertia of material sense. They were backed by common consent and political authority, and they had every weapon of the world wherewith to work their will; yet twelve commoners were to conquer all through love, and because this love was "of God," they did.

How wonderful it seems, how unlike mortal planning and preparation for conquest, and how entirely in keeping with it is Mrs. Eddy's counsel to her students, as expressed in her well-known line, "Wait, and love more for every hate" (Poems, p. 4). This reliance upon Love alone, which Christ Jesus inculcated and which is reaffirmed in Christian Science, is very much more than the institution and maintenance of amiable relations with those about us. Love understood and made manifest is to be not only a legacy of joy and peace, but an instrument of efficiency, the means for the solution of all problems, the achievement of all that is good.

However sweet and serviceable the ministry of personal affection, the love that fulfils the law and redeems mankind is adequately defined only in the source whence it proceeds, and in the end which it subserves, and for which it is again being proved available. Naught but the reflection of divine Love can meet the demands of the conquest of sin. This was glimpsed by Mrs. Browning when she said,—

> Shame! to stand in His creation
> And doubt Truth's sufficiency!

and it was fully apprehended by Mrs. Eddy and made clear to others when she wrote, "Love fulfils the law of Christian Science, and nothing short of this divine Principle, . . . can . . . open the seven seals of error with Truth, or uncover the myriad illusions of sin, sickness, and death" (Science and Health, p. 572). Love is the heart of Deity, of infinitely beneficent intelligence; and since all true dominion must be mental, the rule of right can be gained only through Love.

In the last analysis economic strifes all speak for selfishness, its injustice and lust. This is the darkness of carnality, and it can be dispelled by the light of Love alone. To love our neighbor as ourselves means consideration for his rights, forethoughtfulness for his welfare, and absolute justice in all our dealings with him. This is the way we love ourselves, and want to be loved; and to love our fellow men in the same way would manifestly remove the occasion of every economic and communal difficulty. As society is ordered today, this spirit must be expressed not only in personal relations but in legislation, in the machinery of government, and here, too, the love of Christ, constraining us, must relate itself to improved civics, to a sane and safe suffrage, to ever increasing righteousness in the communal life.

The just and effective government of men cannot be separated from the government of God, of good, for there is one law, the law of divine Love, and men are just only as they are ruled by it. St. John's teaching that we "love one another," really includes the whole gospel.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

ST. LOUIS, MO.—The first Christian Science church organization was incorporated in 1894 with a membership of fifty, and services were held in the old Beethoven Conservatory of Music at Twenty-third and Locust streets, while steps were being taken to build a church. Early in 1895 a lot was purchased at Leffingwell avenue and Pine street and the building was started in June. The efforts of the little band soon made the church inadequate to accommodate the members, and in 1902 they moved to the Odeon. In 1903 the congregation erected a costly edifice at Kingshighway and Westminster place and had it completed in time to welcome the large attendance due to the World's Fair the following year. The structure was built at a cost of one hundred and fifty-five thousand dollars, and without a gallery there are seats for twelve hundred and fifty persons. Several churches of Christ, Scientist, have sprung from this church, and it still has the third largest membership in the state.—*St. Louis Star.*

PROVIDENCE, R. I.—The new edifice of First Church of Christ, Scientist, which was opened on Sunday morning [June 29] for public worship, has been completed so far as the exterior work is concerned, and the interior is practically finished. The structure, which was begun five years ago, was built at a cost of two hundred thousand dollars. It is 87 feet square and will accommodate about eleven hundred persons, for the auditorium is 84 by 52 feet. The church was incorporated in 1895, and at first the meetings were held in private homes. Later a chapel was built on Bowen street, at which place the members of the church have worshiped until the present time. This chapel, which was built to accommodate three hundred persons, long ago became too small.—*The Evening Bulletin.*

NORTH VANCOUVER, BRITISH COLUMBIA.—Christian Science is evidently making rapid progress in this city. Since services were first started here, about fifteen months ago, the attendance has more than doubled, and the North Vancouver Christian Science Society, which was organized only last July, has now outgrown its present quarters at 1428 Chesterfield avenue, where services have been held hitherto, and has rented a house at 146 3d street east. At this address they will also maintain a free reading-room for the use of the public, which will be open every week day from two to four in the afternoons, and on Tuesday and Friday evenings from eight to ten.—*North Shore Press.*

AMESBURY, MASS.—One viewing the grounds of First Church of Christ, Scientist, at the junction of Main and Carpenter streets, these days, would hardly believe that such a change could be made in any locality such as has been accomplished, and that in so short a time. Many citizens, upon learning that the society had bought the lot, felt that some one was beside himself. Viewing the situation today, the same party would call it wise judgment, for the place is a credit to the church and the town.

Newburyport Daily News.

ROCHDALE, ENGLAND.—The corner-stone of the new church which is in course of erection in Castlemere street for First Church of Christ, Scientist, was laid on Tuesday [June 17].—*Rochdale Observer.*

SAVANNAH, GA.—The new building of First Church of Christ, Scientist, at Whitaker and Thirty-first streets, was opened Sunday, May 18, for the first time.

The Savannah Press.

THE LECTURES.

NOTTINGHAM, ENGLAND.

'An audience which crowded the large hall of the Mechanics' Institution assembled to hear a lecture on Christian Science by Bicknell Young. The lecture was arranged under the auspices of the Nottingham Christian Science Society, and the chair was taken by Col. Sir Lancelot Rolleston, K.C.B., D.S.O., who in introducing the lecturer said:—

If it were not, as I understand it is, your custom to entrust this office to some one who is not of your own community, it would seem strange that I, a member and supporter of the Church of England, should have the honor to preside on this great occasion. As regards my duty to my own church, it is without the slightest hesitation that I undertake this task, for personally I hold that members of that church do well to look with sympathy and a friendly eye upon a Christian, a Protestant community which, without worldly motives or sordid aims, is striving with honest heart to seek the truth and worship God. That these are the simple aims of the Christian Science church I firmly believe. I have had, as you may know, some opportunity of judgment in this matter. I have seen that to the sick you bring relief and often health, to the faint-hearted you bring courage, to the miserable comfort and hope; and at a time when not as formerly at street corners only, but even in high places, we hear preached a doctrine of hate, you press forward uncontaminated and undisturbed in your mission of charity and peace and love.

In the jealousies and disputes which rage between the various sections into which our countrymen are so unhappily divided you take no part; disputes by participation in which the power for good of many Christian denominations is well-nigh strangled, participation from which even my own church in certain very conspicuous, but happily very exceptional cases, has of late not been entirely free. By such deplorable degradation the Christian Science church has never allowed itself to be defiled. It lives on a higher plane, it breathes a purer air; and for these reasons it is, and because we know of you nothing but what is good, that we honor you and wish you well. We wish you well because, too, we see that, perhaps most of all Christian churches, you are acting simply, unswervingly, and with a single mind in the spirit of the great message which nineteen hundred years ago, heralded by a star, came straight from heaven: "Glory to God in the highest, and on earth peace, good will toward men."—*The Trader.*

MEADVILLE, PA.

The introductory remarks of Dr. F. C. Doane in presenting the Rev. William P. McKenzie, who lectured in the Unitarian church under the auspices of Second Church of Christ, Scientist, were as follows:—

One of the great discoveries of the nineteenth century was the lordship of mind over matter, and that man is master of his destiny; that it is for man to command and for the world of things to obey. In a thousand ways this newly awakened sense of the dignity and power of humanity has come to rule over the minds of men today. In the past, men have for the most part supposed that the world and God somehow were working at cross-purposes. The world was held to be the cause of all manner of pain, disease, suffering, disaster. God, meanwhile, was supposed to be struggling against the world, seeking to heal men of their diseases, to bear their burdens, and to avert disasters from them.

But now we know that God is immanent in the world of His creation, and that pain and disease and death are essentially unnatural and even unreal. Men learn to believe in God by practising His presence. To one who thus practises the presence of God, all life becomes a perpetual [illegible] of joy and health. Where God is there can be no [illegible] where God is there can be no sorrow; where God is [illegible] can be no disease, no death; where God is there can be [illegible] fear, no anger, no malice, no hatred, no one of those [illegible] sions which lower the sense of man and separate him [illegible] the consciousness of God. This is, I say, the great [illegible] of the nineteenth century,—the sense of the presence [illegible] on earth.

We are to listen tonight to a speaker from The [illegible] Church in Boston, who is to tell us just this,—that [illegible] here, is here in this world; and who is going to bid us [illegible] of good cheer, to cry out no more in pain, to weep no more in sorrow, to tremble no more in death. I do not know in detail what he is going to say, but I assure you in advance of this, that he brings you a message of joy and strength.—*Correspondence.*

LOS ANGELES, CAL.

The remarks of Ira F. Thompson in introducing W. F. Gross, who lectured on Christian Science in Simpson Auditorium, were in part as follows:—

No doubt all of you have considered the intense practicality of this age, when business of all kinds is no longer run in an easy, slipshod fashion, but rather upon the most accurate information obtainable; when farming has passed from the bonds of chance and been reduced to a science; and when our institutions of learning are featuring arts and sciences, the idea of which would have been scoffed at a few years ago. The fact that this is being done, however, is not nearly so important as the mental growth which it exemplifies, for it shows not merely a desire for material aggrandizement, which we learn availeth nothing, but a desire for exact understanding. Christian Science is not new, any more than the falling of the apple which opened Newton's eyes to the law of gravity was a new occurrence, or the bubbling of the teakettle which suggested to Watt the power of steam; but in the interval between the time of the Master and the early Christians until Christian Science was discovered by Mrs. Eddy, the world did not reduce to practicality the Scriptures, because they were accepted on faith, without any expectation of present understanding. We all vaguely admitted that God was omnipotent, omnipresent, and immediately forgot to think what this really meant. We all conceived of heaven, but utterly forgot the Master's statement that the "kingdom of God is within you." Christian Science comes, as we hear read at every Sunday service, "explaining the Bible texts in their spiritual import and application to all ages, past, present, and future" *(The Christian Science Quarterly)*, explaining that if God is omnipotent, there is no other power than God, good, and that the kingdom of heaven, harmony, is within one's own consciousness.—*Correspondence.*

PAYETTE, IDAHO.

A large and attentive audience listened to a lecture on Christian Science by Judge Clifford P. Smith at the Empress theater. He was introduced by the Rev. Benjamin Smith of the Christian church of this city, who said in part,—

I want to congratulate this audience upon the privilege which is yours tonight. While I do not know the line of thought the speaker intends to pursue, yet I take it for granted that he is here to present the truth concerning Christian Science. Personally, I appreciate the opportunity to be authentically informed on a movement which has become such a prominent factor in the religious life of our country. The rapid growth of the Christian Science church and the class of people to whom it has appealed would indicate that it is worthy, at least, of a conscientious investigation; and

Digitized by Google

since the speaker comes from The Mother Church, I therefore congratulate you upon the opportunity which is afforded you.

I want also to congratulate the speaker upon having an audience such as is here assembled. It indicates at least three things: First, that we as a people have advanced far beyond the age of superstition; for if we were under the dominion of superstition we would not have come here, we would have been afraid of the speaker. Second, it indicates that we have outgrown, or are rapidly outgrowing, the age of prejudice, for if we were controlled by the spirit of prejudice, we who are not identified with this people would have condemned the speaker as well as the church without a hearing. Third, this audience indicates that we are living in an intellectual age, and fortunate it is for us all; for a superstitious people deny the truth, and therefore live in ignorance. While those who are prejudiced have gotten hold of a few truths and have shut them in, and at the same time have shut out all other truth, the intellectual people are seeking ever for "the truth, the whole truth, and nothing but the truth." I therefore congratulate the speaker upon having an audience who will not deny without a reason, nor condemn without a hearing, but who are seekers, investigators, and lovers of truth.—*Correspondence.*

VALPARAISO, IND.

A large and representative audience greeted the Hon. Clarence A. Buskirk at Memorial opera house when he appeared to deliver his lecture on Christian Science. The speaker was introduced by Prof. Eugene Skinkle, superintendent of the city schools, who spoke as follows:—

Within forty years the people of America have come to realize that there has arisen in their midst a religious movement which has stirred the world as no other since the days of the crusades. The votaries of Christian Science, preaching with all the zeal of a Peter the Hermit, have carried their doctrines to the farthest isles of the sea, and everywhere those doctrines have been well received. They have been gladly received, for men have looked upon them, not as a ladder from earth to heaven, not as a crutch for any creed, but rather as a return to the teachings of him who, while on earth, sought to alleviate human suffering and right human wrong.

I look upon this movement from the view-point of a member of another church, and if Christian Science can make the path of any mortal here below more straight and fair, if it can replace in any heart despair with hope, grief with joy, if it can wipe from sorrow's cheek a single tear, I say, God bless it. There is need enough of it and room enough for it in this old world of ours.—*The Daily Vidette.*

UNIVERSITY OF CALIFORNIA.

An interesting lecture on Christian Science by Clarence C. Eaton was given under the auspices of the Christian Science Society of the University of California at the high school auditorium. The speaker was introduced by Miss Edith Mossman, a member of the society, who spoke as follows:—

Christ Jesus lived among men and proved the power of Spirit over matter. In his great love for humanity he taught and demonstrated how we may become free from the bondage of sin, sickness, sorrow, and death. For three hundred years, those who believed in him were able to follow his example to a great extent, but after that the fulness of his mission was lost sight of. Christians as a rule turning to God only for release from sin.

In this generation a woman saw clearly the fuller spiritual significance of the gospels, and was thereby healed from the effects of an accident pronounced fatal. The all-loving Father then used her to point the way to others. Now all who will, may receive from the study of the Bible more and more spiritual understanding. In proportion to our growth in spiritual understanding and to our conscientious application of it to all the affairs of human experience, we find that there is an absolute, unchanging Principle which brings a solution to every problem.

There were those who sought to destroy Jesus and his work. This was because they were unable to appreciate the tidings of "on earth peace, good will toward men." Today there are those who are misinformed as to the teachings of Christian Science, and so they oppose not what it is, but what they think it is.—*Berkeley Gazette.*

WALLA WALLA, WASH.

In introducing William R. Rathvon, who lectured on Christian Science, Mayor A. J. Gillis said:—

I presume that this audience to a very considerable extent is made up of people who, like myself, are not affiliated with the Christian Science church and who have only a superficial knowledge of its scope and purpose. As a distinctive religion Christian Science is a new thing, and on its presentation to us we have a right to ask what its teachings are and what is their effect. My understanding of the mission of Christ is, that it was twofold, a mission of healing and a mission of teaching, and it is also my understanding that Christian Science is a following of the teaching and example of Christ. If it makes us less critical of the shortcomings of our fellow men and more appreciative of their virtues; if it makes life more sane and thought more serious; if, as some one has said, "to the hearts of rich and poor alike, for wounds that will not heal and griefs that tempt the spirit to rebel, it brings an assuaging balm;" if, more than all, it teaches us to follow more closely him who nineteen hundred years ago was nailed for our advantage on the bitter cross, then it must assuredly have a message for us.—*Correspondence.*

WILKES-BARRE, PA.

William D. McCrackan, M.A., who lectured on Christian Science at Irem temple, was introduced by ex-Judge Benjamin R. Jones as follows:—

I am not a Christian Scientist, and do not pretend to understand what Christian Science means, what it teaches, or what it accomplishes; but I have a number of very dear friends who are Christian Scientists, and who profess to know what this new doctrine is, what it teaches, and what it does, and they live and practise it with all the zeal and ardor of the most devout church worker. I believe these friends to be honest and sincere, and I honor and respect them for the courage of their convictions. I am informed that there are scattered throughout the world fifteen hundred Christian Science churches, bringing joy, comfort, health, and happiness to the members thereof, and founded in the belief that a healthy body, a clear mind, and a pure spirit are the heritage of every man and woman. Is it any wonder that this Science is growing? It is becoming a potent factor in the religious world, and is therefore worthy of thought and consideration; and if it is going to make the world better, we all want it. I have the honor this afternoon of presenting to this audience one who has given this subject deep thought and earnest study, and can discuss it in an intelligent and instructive manner.—*Correspondence.*

LECTURES TO BE DELIVERED.

Charlevoix, Mich.—Bicknell Young, Charlevoix theater, 3:30 p.m., Aug. 17.
Mill Valley, Cal.—William R. Rathvon, Out Door Art Club house, 8 p.m., Aug. 18.
Omaha, Neb.—Clarence W. Chadwick, Church edifice, 8 p.m., Aug. 14 and 15.
Paris, France (First Church).—William D. McCrackan, M.A., Washington Palace, 14 rue Magellan, 9 p.m., Sept. 30.

TESTIMONIES OF HEALING.

I would like to tell others why I am so sure of the truth of the teachings of Christian Science and why I am so grateful to Mrs. Eddy for sharing her glorious discovery with all mankind. Three years ago I, a middle-aged business man in London, was stricken down by a disease of the spine which manifested itself in various ways, one of them being a partial paralysis of the legs, accompanied by emaciation of the body and limbs. I was told by a specialist, in consultation with my regular doctor, that this disease was incurable, that it would grow worse, and that I would have to spend the remainder of my life on my bed.

This verdict was a great blow to me, and as a result I became worse. I could no longer endure the daily journey from my house in the suburbs to my office in London, so in June, 1909, I sold the business and took to my bed. After about a month I was able to get up, but I spent the bulk of every day on a couch, being able to walk alone a very short distance in the vicinity of my home, and to take longer journeys only with assistance. I was in this condition for about a year, and my bodily and mental suffering throughout that time may be imagined, for besides being unable to walk any distance, I was dependent on my business for my living and had a growing up family to support.

When Christian Science came to me, I did not believe in it at all, but after a time I consented to be treated by a practitioner simply because I thought it would please my wife, who was then becoming interested in Science. After a few weeks I found, to my astonishment, that I had been healed of a slight ailment which I had had all my life, and which years ago had been treated without success by doctors in England and America, and to which I was so accustomed that I thought little of it. Then I knew without a shadow of doubt that Christian Science was the truth, and I turned to God with my whole heart, and from that time I made steady and sure progress toward recovery. Now I am healed! I can walk any distance that may be necessary, while the emaciation and all the other symptoms of the disease have disappeared; and not only am I healed, but I am back again in business.

When the practitioner told me that I ought to get to work again, I told him that this was not possible, as I had entered into a covenant with the purchaser of my business that I would not pursue that occupation in London or within twenty miles of it; but the practitioner said that if Truth meant me to return to work, a way would be opened whereby all obstacles would be harmoniously overcome, and that as a preliminary step I had better consult the purchaser of my business to ascertain what views he had on the subject. I did so, and afterward received a letter from him by which he not only fully released me from the agreement, but warmly congratulated me on my wonderful recovery. Very soon after this, quite unexpectedly I was offered a partnership in a good business of a similar nature to my former one, and I am established there at work now, and have been for some time. I am in better health and stronger than ever before in my life, and a very much happier man in every way, and I feel more competent to attend to my work, now that I know what it means to lean upon "the sustaining infinite" (Science and Health, Pref., p. vii), instead of relying on my own personality, as I used to think was necessary.

Thus far I have spoken only of my physical healing, in the hope that this may reach some who are troubled as I was, and that they may know that their case is not hopeless, as they have been led to believe. To such I can say that Christian Science shows the way of escape, and a very practical way too; but I must also speak of the wonderful moral transformation which has come to me, step by step, with the physical healing. A feeling of deep gratitude to God is with me always, and I am trying to give it constant expression by living the life which Christian Science teaches us we ought to live. Thus I have very good reason to be so sure of the truth of Christan Science, and very good reason to feel grateful to Mrs. Eddy for sharing with all the world her unwavering confidence in the ever-present of divine, omnipotent Love.—F. L. WHEELER, London, England.

[Translated from the German.]

Some time ago my three children, between the ages of six years and nine months, were taken with measles, attended by a high fever and a severe cough. We asked a Christian Science practitioner to treat them, whereupon the healing progressed rapidly. It was winter time and intensely cold, with much snow on the ground, but the children asked me to let them go out. This was just about a week after their attack, but knowing that God is omnipresent, I allowed them to go, and they experienced no ill effects whatever. My youngest girl was taken later with whooping-cough. She had just been vaccinated, and besides was cutting teeth, which caused her a good deal of suffering, and she seemed quite poorly within a few days. I again asked a Christian Science practitioner for treatment, and in two weeks the child recovered and now gives us much joy.

I thank God from the depths of my heart for His gracious protection, and I am also grateful to our Leader, Mrs. Eddy, for having shown us the way to Truth, to the right understanding of God.

FRAU LOUISE ROSENBERG, Hannover-Linden, Germany.

This is to testify to what Christian Science means to me and mine. Nine years ago we heard about it through a relative, who with her child had been healed after many years of suffering, and both are well today. My husband was very ill; he had taken all kinds of medicine with no benefit whatever, and was getting worse all the time. Every one who saw him said that he was not long for this world. As I had always thought that God could and would heal him if we only knew how to ask aright. He concluded to try Christian Science, so we got a practitioner, with the result that he was out and at work in less than a week. Seeing this, I was so much interested that I began to look into the teaching. I had always read the Bible with a sense of duty, but without understanding. Christian Science has, however, made it a new book to me. For this I am truly grateful, and so thankful that I am able to speak the truth to others when I have opportunity. I do know that all shall "know the truth," and the truth shall make them free, as the Master said it would. I thank God with all my heart for sending Mrs. Eddy to show us the true way our Master taught.—MRS. MARY W. NEILL, Portland, Ore.

After being in Christian Science over two years I wish to express my gratitude for the many blessings received from its teaching. I was healed of nervousness and sleeplessness in the first few treatments. Then the chapter on Prayer in "Science and Health with Key to the Scriptures" brought a great uplift, and gave me a better understanding of the following chapters. Subsequently a sense of fear and loneliness was overcome, for my husband, who is a traveling salesman, was away much of the time. Last, but not least, was the demonstration I had of the power of divine Love at the birth of my child, for the time of travail was brief and there was very little pain, showing that with God all things are possible. Christian Science has been a great help to me in my home, giving me strength for each day's duty. For all the good I have and expect to have, I thank Christian Science and our Leader, Mrs. Eddy, through whom the truth has been given to all mankind.

MRS. EMMA C. SLOAN, Peoria, Ill.

It is with a heart filled with gratitude that I give my testimony to the healing power of Truth. I took up the study of Christian Science in search of a cure for the drink habit, after I had tried in vain for five years to overcome the same with so-called liquor cures, each of which left me in a worse condition than I was before. Through Christian Science I was healed in one treatment. Not only was I freed from this habit, but also from the use of tobacco, to which I had been a slave for years. Again, I have laid away glasses which I had worn for eighteen years. For some years I had been troubled with rheumatism, often losing from one to two months in a year through being unable to work; but I have had no sign of this trouble since my healing. Further, I have been healed of a rupture, have been protected in times of accident; in fact, I can now say that I look to God in every need, and never in vain.

All that I am today, and all that I ever expect to be, I owe to Christian Science. While I am deeply grateful for the physical benefits received, they sink into insignificance compared with the moral uplift which I have experienced. Christian Science has given me a God who is Love, an understanding of Principle from which to work out every problem in life, be it mental, physical, or financial. I am grateful to God, and also grateful to our beloved Leader, who was good enough, and strong enough in her conviction that man made in God's image and likeness has absolute dominion over all the earth, to give us this healing Truth.

We have abundant proof in our family of God's mercy. My wife and I have been sustained by this life-giving and regenerating truth for almost four years. Not long ago a beautiful baby girl came to us, an experience which formerly had been deemed an impossibility; and the mother was up the next morning. We are all enjoying the best of health, and we thank God daily for the many blessings He bestows on mankind. The physical demonstrations, however, sink into insignificance when compared to the spiritual quickening. Words fail to express my gratitude. I am thankful to be a worker in the church; and to the many Scientists who gave and are still giving me a helping hand, I wish to express my gratitude.

FRANK LATCH, Los Angeles, Cal.

Through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed of an abdominal trouble from which I had suffered several years, and the only alternative offered me was an operation. At this time I was also able to lay aside glasses which I had worn fourteen years for defective vision. Human language is inadequate to express the joy and peace that have come to me through the study of Christian Science. I am indeed grateful for many blessings received, and am each day striving to "lay aside every weight, and the sin which doth so easily beset us," and to run "with patience the race that is set before us." The Bible has been unfolded to me in its beauty and holiness, and in my home, where love seemed always to abound, I have been privileged to see each member experience a far greater degree of harmony through this wonderful truth.

I would like to express my sincere gratitude to God that I have been so gently and lovingly led at all times, and instructed to look ever to the divine Principle of all good for guidance. I am also grateful to the contributors to our Christian Science literature; many healings have been realized through the study of some beautiful thought expressed therein. My heart glows with love to God for the knowledge that each day I may glean a better understanding of Him in whom "we live, and move, and have our being," and to our beloved Leader, who has made it possible for us to know that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

MRS. LYDIA MACKENZIE HOVEY, Detroit, Mich.

It is with a heart full of gratitude to our dear Leader, Mrs. Eddy, that I send this testimony of the healing power of divine Love, as revealed to us in our text-book, "Science and Health with Key to the Scriptures." Christian Science is surely the Science of sciences, for it is the great philosophy of Life, and reveals the power of God over the beliefs of mortal mind. When my son was born, a little over two years ago, I had Science help both before and at the time of the birth, and every step of the way was a demonstration over the many laws of suffering which mortal mind lays down for this experience. The babe is a dear little boy, and any ailment which appears is overcome in Science. I have seen practically every ill "that flesh is heir to" healed by Christian Science, and I am indeed grateful for even the small knowledge I have of it.

While thinking of God's loving-kindness to me, my heart overflows with gratitude to all those who have helped me to know God aright, and I am especially thankful to dear Mrs. Eddy for her meekness and love and purity, by means of which she was able to bring this Science of Life to mankind. One day, while carrying my little son, aged sixteen months, through the apartment, his hand was caught in a door, and for a moment it seemed as if the baby's fingers must surely have been cut off. My fear was very great, but I had enough presence of mind to run into another room with him, and after closing the door behind us, I walked up and down the room, declaring the only statement of Truth I could think of at the moment, namely, "God is All" (Science and Health, p. 532). The little fellow was screaming loudly, but as soon as the fear was quieted he became more normal, and as I voiced more of the truth he finally became altogether harmonious, and was soon busily playing on the floor with his toys, with not even so much as a mark on his hand. I am indeed grateful for this proof of Truth's availability in times of discord.

Another healing which I myself experienced was the overcoming of an attack of acute stomach trouble. One night I was awakened out of a sound sleep by very severe pains. I repeated the "scientific statement of being" (Science and Health, p. 468), but was not set free at once; so, getting up, I took Science and Health and read persistently for an hour or more, and the trouble was completely overcome. I am indeed thankful for all that I am able to prove in this demonstrable Science, and I am trying to live more of the truth each day. I also want to express my thankfulness for the great privilege of class instruction within the past year, as well as for all the loving-kindness and help of the Science friends I have met. I pray that I may daily be more awake to the voice of God, and that my consciousness may be so filled with Love that nothing else can enter.

IRMA KATE SHIVERS, New York, N. Y.

About seventeen years ago I began the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. From the first the book seemed beautiful to me, almost too good to be true. At that time I had no thought of physical healing, indeed I must say I tried to find some fault with the teaching because I could not make it fit in with my old church doctrine; but by careful study of the text-book, together with the Bible and the *Quarterly*, and by putting into practise the little gained each day, I was able to prove for myself that Christian Science is the rule of scientific healing, both for sin and for sickness.

Through this teaching I have been able to overcome many discordant physical conditions in myself, as well as in others, but about three years ago I had a severe struggle. I got what in the Northwest is called a hay-needle, or wild barley, in my knee. At first I paid little attention to it; but in less than two days the knee became so painful and swollen that I could not walk. I asked my wife for help, and she did all she could, according to her understanding;

Digitized by Google

but fear crept in and I grew worse. A Christian Science practitioner was called by telephone, but replied that she was very busy and could not come. She said, however, that she would do what she could for me. Later in the day she called up and recommended a practitioner in another city, and we agreed to the change. Let me say here that the hay-needle came out after one or two treatments by the first practitioner, but complications set in, and the entire leg became greatly swollen and inflamed. To outward appearances I was growing worse every day, and I became so helpless that they had to lift me on a sheet from one side of the bed to the other.

Some of our friends advised an operation, saying that I could not recover unless the leg had an opening. I was too weak to make much resistance, but I knew I did not want that, and my wife could not be persuaded to leave Christian Science and trust to material means. Thanks be to God, we did cling to Truth and the operation was performed without surgeon or knife. In the epistle to the Hebrews we read that "the word of God is quick, and powerful, and sharper than any two-edged sword." Then my friends said, if I ever walked again I would be a cripple; but thanks be to God, and to the faithful practitioner who so encouraged and helped us with words of cheer in the letters sent us, I was able to walk in about nine weeks, and a week or two later did not even use a cane. I had in all eleven weeks of absent treatment, and was able to go to work, which was farming at that time, two weeks after the treatment was discontinued. Soon after my recovery, my wife and I took class instruction from our faithful helper.

I rejoice to say that I am not a cripple, and that the injured leg is just as strong as the other one. Is it any wonder we love Mrs. Eddy, and try to be faithful students of Christian Science? It was through her that we have been given this new-old religion of Love, which means teaching and healing through the Christ-method. Words can never express our thankfulness to God, but we hope to prove our gratitude by our works.

LEWIS S. TOWNSEND, Ellendale, N. Dak.

I feel it a privilege to send my testimony, hoping it may benefit others as I have been benefited by reading the numerous testimonies of healing. Before knowing of Christian Science I had been more or less delicate from childhood. I suffered from severe stomach trouble, which developed, according to the doctors, a complication of diseases. Many times they found it necessary to remove me to and from hospitals on a stretcher and by ambulance. Seven doctors said I was a hopeless case, and on one occasion three doctors, standing by my bed, said I would not live until morning. I continued in this way until the physician who last attended me refused to give me any more medicine, and ordered a change of climate, which I resisted, since on many previous occasions I had come back as bad as I went. It was at this point that Christian Science was brought to my notice. I was loaned a copy of Science and Health, and on reading just a few lines on page 14 of the chapter on Prayer, I was instantaneously healed, and began to eat my food in a natural way, which I had been unable to do, for at times I even had to be fed with a tube. I have had no further trouble in this way since my healing in Christian Science, which is now nearly eight years.

I have also been healed of a trouble which appeared every winter, a severe cold on chest and lungs, oftentimes being at the point of death. The first winter after my other healing, this same illness appeared in its usual way; but with the little understanding I had of Christian Science, I was able to overcome it in three days, attending to my business as usual, and I did not have any blisters, etc., which the doctors had found necessary to apply on previous occasions. The following winter I awoke early one morning with the usual symptoms of this disease, but was able to overcome them in less than one hour, through the understanding of Christian Science, and I have not had another attack during the past five winters. I have also been healed of continual fainting spells.

The healing in my case has been very wonderful indeed, but for the spiritual uplift, for daily peace and joy in the consciousness of God as ever-present Life, Truth, and Love, and man as God's image and likeness, I am even more thankful. To be free from all that is unlike God, *to know* that sin, sickness, and death are not sent by our Father,—the understanding of this, even in small degree, brings a peace that passes all human understanding.

I should like to refer to the experience of one of my brothers, who was healed by Christian Science of lung trouble in its last stage, after he had been given up by a lung specialist and physician, the latter saying that he might pass on at any moment. I knew that Christian Science had healed me and could heal him, and I obtained permission from him to write to a practitioner some distance away. He had absent treatment and was healed in a short time, much to the amazement of doctors, clergymen, and friends, all of whom said that he owed his healing to God.

For all these, and numerous other benefits which have come to me since I have gained some knowledge of Christian Science, which is indeed the truth that makes us free, I feel most sincerely thankful to God, and grateful to Mrs. Eddy for being a channel pure enough for this truth to reach a world in darkness. I shall consider it a privilege to answer any questions forwarded to me in reference to this testimony.

MISS JANE REVELL, Melita, Essex Road, Saltash, Cornwall, England.

It is with the deepest gratitude that I give my testimony of Truth's healing power. Fourteen years ago I had my first Christian Science treatment, and Truth has been my only guide ever since. Up to that time I knew nothing of Christian Science. I was, and had been for many years, a sufferer from stomach, bowel, and nervous trouble, and had been told by several of our best physicians that they had done all they could do for me. I was gradually getting weaker as the attacks were more severe, and on returning from the doctor's office one day, I met a friend who was a Christian Scientist, but she had never spoken of it to me. She asked me how I was, and in reply I told her that I was no better, that I knew I would not be here long, and had told my family so. She asked me why I did not try Christian Science, as the doctor did not cure me. I said that I would be only too glad to have treatment. I did so, and in that same hour I was healed. Such peace of mind, love, and harmony I had never experienced before.

Christian Science has made me free. There have been some most beautiful demonstrations in our home, one in childbirth, which proved the greatness of the blessing which comes to all who trust our heavenly Father. I am indeed grateful to our dear Leader, Mrs. Eddy, for giving us in Science and Health the "Key to the Scriptures," which makes it possible for all to know this great truth.

JOSEPHINE MUNSELL, Oklahoma City, Okla.

It is with much gratitude that I give my testimony of healing. I first heard of Christian Science about five years ago, when I was suffering from goiter, in which condition I had been for twenty years; but although I had tried many remedies, I received no permanent benefit. I was very desirous to prove for myself whether Christian Science were the truth, so I procured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, also a *Quarterly*, and began the daily study of the Lesson-Sermon. I then had treatment, with the result that in two months I was completely healed. I have continued to study Christian Science, and as a business woman it has been an invaluable help to

Digitized by Google

me. Although working long hours and being constantly busied, I am in excellent health.

The physical healing is, however, only the lesser blessing, compared with the content and harmony which have come to my consciousness. I cannot half express my thankfulness to God for this revelation, and to Mrs. Eddy for her courage and self-denial in bringing to us this glorious truth.

CLARA SUGDEN, Keighley, Yorkshire, England.

Having received much help and encouragement from reading in the *Journal* and *Sentinel* the testimonies to be found in their pages, I am inclined to relate one of the many experiences which have resulted from my study and application of the truth taught in Christian Science. About a year ago it became necessary for me to have some dental work done, inasmuch as a large cavity was found in a back molar. Previous to my study of Christian Science, the fear of this work had caused such distress that it seemed wise to have the aid of a practitioner at this time, which aid was given. After a careful examination by the dentist he said, "I fear that the nerve is exposed," to which I responded calmly, "Very well, doctor, continue your work." This was repeated several times, and when the drill was in operation there was no pain, only a slight tenderness whenever it touched the live nerve.

More recently, when further dental work was needed, no practitioner was called upon. My own understanding of an absolute reliance on God, divine Truth, enabled me to undergo without pain work which heretofore had caused much suffering. It was not a question of enduring pain, as some might think when hearing about it, for there was no pain. Words are inadequate to express my thankfulness to God, and my gratitude to our revered Leader, Mrs. Eddy, for all the blessings received through the study of the Bible as interpreted by "Science and Health with Key to the Scriptures."

I have had one unusual demonstration. While leaning over a porch railing, looking down toward the lower door, the top rail gave way and I was precipitated, the head denting the dry ground. Though the head and neck were not even lame, there was evidence that the spine had received a double curvature, causing the body to be much bent, and one rib was broken. All of this was, however, made whole through the application of the teachings of Christian Science. Is it any wonder that I feel grateful?

MRS. LOLA MAUD RISDON, Chicago, Ill.

The query, "Where are the nine?" might well be addressed to me if I failed to testify to the benefits I have received through Christian Science. In January, 1905, I applied to a practitioner for treatment. I was then, in belief, very ill, and suffering greatly from nervous exhaustion, also from stomach trouble, catarrh, and various other ills. Sleeplessness was overcome in one treatment, and after ten days I was able to discard glasses, which I had worn for seven years, and which I have not felt the need of since. One by one the other ailments vanished, until at the end of three weeks I was perfectly well; but I did not realize this at the time, so I continued the treatment for another week.

The practitioner loaned me a copy of "Science and Health with Key to the Scriptures," which I studied faithfully, but I had little or no understanding of this blessed truth at that time, and depended upon the efforts of the practitioner. Previously I had had the best of care, my father being a druggist and my brother a successful practising physician, and I had taken a large amount of medicine; but nothing seemed to relieve me, so it can be imagined how happy I was when I found I could be well without taking medicine.

I am very grateful to Mrs. Eddy, who has shown us the way to God, divine Truth, and my daily prayer is that I may become more worthy to be called a Christian Scientist.

MAY BILSTAD RICHARDSON, West Berkeley, Cal.

FROM OUR EXCHANGES.

[*The Outlook.*]

There is a great deal of flippant talk about the abolition of hell. It seems to be the impression of many people that the possibility of suffering, symbolized by a material place of torment, has been eliminated from human life. As a matter of fact, hell, in the sense of inevitable and unmistakable punishment, is today far more a reality than it has ever been before. Whatever may be the sufferings through which men must go in the future in order to be purged of impurity, there is no question about the sufferings which they undergo in this present life. The answer of the man who was asked if he believed in hell, "I do not believe in it; I know, because I am in it," is a terse statement of what may be called the modern view of punishment for sin. It is not a punishment which is relegated to the future; it begins the moment the sin is committed. It is not a punishment which is local and exterior; it is a punishment which is wrought out in a man's nature. It is a thousandfold more terrible than the conception of hell as a place of external torment; for the hell of today gets its more tragic aspect from the fact that the men who are in it are often unconscious that they are in a place of torment.

It is unspeakably pathetic to see a human being go down the hill of life physically from higher to lower levels, becoming less and less pure and more and more a slave; but the most terrible tragedy lies in the fact that the victim is often unconscious of the increasing degradation. It is the deadening of moral sensibilities, the blinding of the moral sight, the decay of the moral faculties, the dulness of vision, that constitute the real moral tragedy of living men and women voluntarily submitting without struggle to temptation; gradually, and often unconsciously, losing the power of seeing the difference between health and disease. They cut themselves off from the spiritual world, and are made skeptical by their blindness of vision. They cannot see the mountains or the stars which to people who have not injured their power of sight are always visible.

[Editorial in *Los Angeles* (Cal.) *Express.*]

When the disciples of John met Jesus of Nazareth, witnessed his divinely natural works for suffering humanity in the healing of mind and body, and came within the spell of the sweet simplicity and unparalleled power of his spiritual genius, they imploringly urged him to clear up in their minds a yearning hope clouded by doubt. They said unto him, "Art thou he that should come? or look we for another?" His answer was as simple as it was profound: "Go . . . tell John what things ye have seen . . . how that the blind see, the lame walk, . . . to the poor the gospel [message of peace to body, mind, and heart] is preached." Nineteen hundred years ago the proof of the genuine in the spiritual realm was the transformation wrought in character, the relief brought into human experience, and the transformation accomplished in all the practical relations and experiences of men and women. The same is true today.

What is crumbling away in religion is but the husk. All that is vital is imperishable and is able to survive the shafts of malice and the logic of honest criticism. It is imperishable because it is immortal in itself, as a part of God's essential message to men. Never in the world's history was so much that is vitally sound and wholesome, spiritually militant and irresistible, assembled beneath the banners of the cross. The readjustments which are taking place are in the line of progress, and are born of a demand for personal heart experience rather than a formal allegiance to creed or dogma.

The religion of Jesus, in its purity, simplicity, and wholeness, is today, as in the world's yesterdays, the hope of the

Digitized by Google

world. To the individual it is peace of body, mind, and heart; to the social body it is the conquest of love and justice over selfishness, bitterness, and hate; to the state it brings the message of that organized righteousness which is more powerful than armies and navies in developing a people. The armies of the cross bring a message of peace, and their victory is being wrought daily in the heart of mankind.

[*The Universalist Leader.*]

The moral of the story as we read it between the lines of the Bible is that there is everywhere in the making of the book and in the making of the men and women who live in the book that same moral and spiritual discipline which we find going on in our own lives. The old notion that the prophets and saints of the Bible received their great faith without one great struggle, is a crude and artificial conception of the ways of God with men. The faith and hope and love of that ancient story grew in the soil of human experience. They were born in human travail. They were baptized in human tears. They were matured in the devotion and consecration of men and women who were faithful unto death. There is nothing which they won that we may not have for the same price which they paid. Read with such thoughts the Bible becomes the text-book of a daily devotion more inclusive and more inspiring than in the old days, when it was supposed to be a revelation of abstract and infallible theology.

[*The Continent.*]

All persons long for art, and the very highest art is open to all persons. If to live unselfishly is the ultimate beauty, then there is a chance for everybody to be a great artist. What would you not give and do, by way of expense, by way of sacrifice, and by way of labor, in order to learn the skill of putting on canvas in one exquisite painting the soul of all your longing for beauty? Are you not then willing to spend as much in labor, sacrifice, and outlay, especially in the patience of endless practise, to achieve the secret of living an exquisite life? Just to put yourself heart and soul into some service done wholly for others and not at all for yourself, in your own home, in your town, in some foreign land, wherever God calls you, is the way whereby any day you may "start a school of art." The course is long, the tuition not small, but the achievement is sure; and it is worth its cost. Don't you want to be an artist in the beautiful life?

[*The Watchman.*]

The present age is one in which it seems peculiarly difficult to hold children to the faith of their parents, because of the changes of thought that go on and the credit that is given to progress. New thought and not tradition has the field today. The youthful mind is also progressive, and is disposed to seek the newer things rather than the older. Many voices are heard today calling here or there and showing new light. The difficulty of retaining children in the old path of faith is not surprising in such a state of thought. Nevertheless there are things that are ancient yet always new and essential. Amid things that pass away are things that abide. There are great essentials of Christian faith.

[Rev. G. Stanley Russell, M.A., in *The Christian Commonwealth.*]

We who are here this evening are privileged to live in one of the greatest ages of all the world's great story; an age when the prophetic function is no less urgent and scarcely less difficult than in those far-off days first preceding the Hebrew exile; an age when, amid the sordid materialism and vice which characterize much of humanity's pleasures and business, the note of the ideal and the spiritual needs to be continually sounded.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been *translated* into the German language and printed as a *special edition* with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal,* printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been published in pamphlet form, and is ready for distribution. Thirty-two pages and cover.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

These pamphlets are for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 103 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

ITEMS OF INTEREST.

National.

With nearly two million five hundred thousand dollars yet to spend and one million dollars' worth of contracts in force, the United States engineering office in Kansas City, Mo., has planned the greatest amount of work for the coming year that has ever been done on the Missouri river, to make a six-foot channel from Kansas City to St. Louis. By the time the work is well under way several thousand men will be at work. Already a large number of the shallow spots in the river have been deepened, and the steamboats are carrying full cargoes and many sightseers from one city to the other. More boats are being added to the fleet, and the revival of river traffic is bringing new life to many of the older river towns, while the farmers in the bottoms are profiting. Their wheat and corn, which frequently had to be hauled long distances to the railroads, is now piled up on the bank, loaded on the boats, and shipped to St. Louis. Besides the haul to the railroad, they get their grain carried to market for one fifth less than the railroads charge. From St. Louis to Kansas City the freight offered is frequently in excess of the capacity of the steamers, and it is necessary to divert the cheaper and heavier shipments to the railroads.

The state railroad commission of California ordered reductions last week in the express rates of Wells-Fargo & Co., amounting to a cut of seven hundred and fifty thousand dollars from present annual revenues. Every rate of the company in the state is abolished by the order, which becomes effective Oct. 1, and over three million new rates, devised by the commission on a ten-mile zone basis, are to become effective at that time. The express company is to operate six months on the commission's rates, which are, on the average, 15 per cent below those heretofore exacted, and then submit a statement of its earnings, if it feels the rates not justified. At present, the commission finds, the company makes a net yearly profit of $841,097 on a property valuation estimated at $613,233, or 136 per cent on its investment. The decision follows two and a half years of investigation, during which over two million three hundred thousand way-bills were scrutinized.

At the opening meeting of the three days' convention of the National Forward-to-the-Land League in Boston last week, Wilfrid Wheeler, secretary of the state board of agriculture, asserted that there are more than five million acres of waste land in Massachusetts which could be used profitably for agricultural purposes. Mrs. Haviland H. Lund, organizer of the league, in her address said: "The purpose of the league is to safeguard the movement to the land in all its phases, and it includes this comprehensive program: organization, conservation, legislation, rural credits, cooperative purchasing and marketing, rural sanitation, housing associations, recreation and social life, garden cities, vocational farm schools, agricultural high schools, and colonization."

To give settlers and other local users a larger voice in national forest administration, Secretary of Agriculture Houston has just promulgated a new regulation which goes into effect at once, providing a means by which the forest service may systematically cooperate with duly organized associations of such users. Any association whose members include a majority of the local residents making use of the national forests, may get together and select a committee to meet with the local forest officers. This committee will be recognized in an advisory capacity in settling questions which may arise between the forest service and the public in the use of the forests.

Reductions in express rates, which will cost the companies fully twenty-six million dollars a year, approximately 16 per cent of their gross revenue, were ordered by the interstate commerce commission last week, to become effective on or before Oct. 15, 1913. The most important change prescribed by the order is by way of modification of the present graduated scale of parcel rates.

Governor Haines of Maine and his council have voted to expend one hundred thousand dollars to be joined with the sum of fifty thousand dollars from the national government for the improvement of the road from Portland to Bath by way of Brunswick, the money to be spent on roads used by rural free delivery carriers.

The Hamburg-American liner Imperator, the largest ship afloat, arrived in New York on a recent trip with more than forty-five hundred people on board, counting crew and passengers.

International.

Box hill, the pleasant down which, owing to its imposing height, dominates the country around Dorking, is about to be purchased for the nation by a gentleman whose name has not as yet been disclosed. The first public announcement of this acquisition was made at the meeting of the National Trust in the rooms of the Royal Society at Burlington house. When the purchase is concluded, Box hill will be put into the hands of some public body in trust for the nation. On the whole, the National Trust have collected over fifty thousand pounds in donations and annual subscriptions, and have acquired as pleasant open spaces no less than fifty-nine properties which were in danger of being built over or otherwise destroyed.

The destruction of part of the Roman road crossing Durdham Downs, near Bristol, to the Roman dock at Sea Mills, and the filling up and turning over of some prehistoric lead workings on the same downs, were referred to at the annual congress of archeological societies held at Burlington house, London, recently. It was resolved that a letter of protest be addressed to the Royal Agricultural Society in connection with the matter, as the damage had been done in preparing for the society's show at Bristol.

Three hundred million dollars, in addition to the six hundred and twenty-five million dollars already expended, was the estimate given by the chief secretary for Ireland of the sum necessary to complete the operation of land purchase in Ireland in accordance with the provisions of the Land Purchase acts of 1903 and 1909, which make it compulsory for a landlord to permit his tenant to purchase the land he cultivates.

A return dealing with the post-office savings banks in London shows that during the year 1912 the amount deposited was £50,708,852 8s. 10d. To this has to be added the amount brought forward on Jan. 1, 1912, namely, £176,518,508 19s. 1d., and the interest £4,253,087 3s. 2d., making a total of £231,480,443 11s. 1d.

The Canadian government has supplied twenty-five million tree seedlings to farmers, principally in the Alberta and Regina plains region.

Industrial and Commercial.

According to figures just compiled by the bureau of foreign and domestic commerce, department of commerce, forty million dollars' worth of automobiles and parts thereof were sent out of continental United States in the fiscal year 1913, against one million dollars' worth in 1903. The number of machines exported to foreign countries in 1913 was twenty-five thousand against seven thousand in 1910, and a little less than three thousand in 1907. The imports of automobiles in the fiscal year 1913 were less than two million dollars in value, against over four million dollars in 1907, and the average price of those imported in 1913 about twenty-three hundred dollars each, against thirty-four hundred dollars in 1907.

It is estimated that boiler scale in locomotives represents a waste in coal consumption of fifteen million tons annually; that unscientific methods of producing coke represent a waste of forty million tons; that the smoke in Cleveland represents a waste of six million dollars annually, and in Chicago fifty million dollars, and that in mining the five hundred million tons of coal annually, "probably one third of the bituminous coal and one half of the anthracite are left in the mine"—practically a waste.

Mayor Gaynor of New York city vetoed a resolution recently adopted by the board of aldermen providing for an issue of thirty-two thousand dollars of special revenue bonds for the establishment of a municipal ice plant. "There are many other things," he comments, "we have to do before we may reasonably think of manufacturing ice, assuming we have the legal right to go into such an enterprise."

The trade of the United States in the past fiscal year was greater than in any previous year. Figures just completed show that the total was four billion two hundred and seventy-five million dollars, greater by four hundred and twenty-one million dollars than last year's record of exports and imports. The balance in favor of the country this year was six hundred and fifty-three million dollars.

Austria not only sells timber but timber products from its forest lands, and disposes of about one million five hundred thousand railway ties a year. There is no provision in the United States by which the national forests can dispose of manufactured lumber, though the policy of selling standing timber is well established.

An agricultural colony in Palestine has just applied to the United States forest service for help in planting trees to bind the drifting sands of the Mediterranean. The colony is near Jaffa and there is being developed in connection with it a seaside resort, with hotel, villas, bath-houses, and gardens.

The final step in the organization of a six million-dollar merger of stamping and enameling interests, with headquarters in Canton, Ohio, has been effected by raising the capital stock of the Canton Stamping & Enameling Company from five hundred thousand to one million dollars.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

A NECESSARY EXCHANGE.

CLARENCE W. CHADWICK.

BENIGHTED mortals are prone to lose sight of the fact that there is no human equivalent for divine Truth. There is nothing in the material sense universe which one who is spiritually enlightened could accept in exchange for God's bounty and goodness. All the accumulated wealth of the world could not purchase one atom of spiritual substance. Obedience to God's law wins all and surrenders nothing.

The very first step in the pathway of obedience is to learn the spiritual import of self-sacrifice as indicated in the words of the Master: "Whosoever will come after me, let him deny himself, and take up his cross, and follow me." Christian Science loosens the fetters of finite belief concerning this subject of self-sacrifice, leaving no doubt in the thought of the student as to its real import. Self-sacrifice to the student of Christian Science is nothing less than the willing exchange of the human consciousness for the divine. Sooner or later, here or somewhere, every mortal must surrender everything that constitutes a mortal mentality, and accept in its stead the Mind or consciousness of the Christ. As the apostle expressed it, we must bring "into captivity every thought to the obedience of Christ," for as high as heaven above the earth are God's thoughts above the thoughts of mortals.

The erroneous belief that man is mortal and material is the only mortal there is. Shall we, then, accept this belief instead of the spiritual understanding that man is immortal, the perfect image-likeness of his creator? No; but when enough of good is discerned by individual consciousness to cause the denial of this belief, understanding takes its place; the mortal is put off or out of consciousness, and the immortal is put on or admitted into consciousness; the day-dream is dissipated, and reality is recognized. This constitutes the necessary exchange of human concepts for the divine idea. It is necessarily a work of mental regeneration, and it must continue till the human consciousness has surrendered to the divine. The so-called mortal has much to get rid of, but nothing to impart, nothing to "give in exchange for his soul." Could he be sufficiently humbled to see the nothingness of all that is called mortal or material, his mental journey from the relative to the absolute would be rapid, but line upon line and precept upon precept seems necessary to compel progress. Consciously and unconsciously he clings to earth, to the belief that there is some good apart from God, and this clinging tends to becloud his apprehension and appreciation of spiritual things. Every disappointment, every trial and tribulation, is a salutary agent to quicken and to dissipate the unenlightened mentality of mortals. Each mental advance more and more reveals the vanity of things material and the substantiality of things spiritual and eternal.

The average person approaches the subject of religion more or less imbued with the thought that he has many things to "give in exchange for his soul," and he does not find the pearl of great price until he can acknowledge that mortal existence is a state of false consciousness to be supplanted by the divine. Truly saith the apostle, "If a man think himself to be something, when he is nothing, he deceiveth himself." The vanity and falsity of the belief that man is both mortal and immortal will cease to antagonize us the moment we grasp the idea of man's unity with Spirit, God, and learn to love this idea. The moment God is admitted to be All-in-all, the only logical and scientific conclusion concerning man is that he must be godlike or spiritual, else he could not be related to God. To surrender or exchange the human concept for the divine, then, is the next natural and orderly step to be taken in the process of salvation. This necessary exchange of the human thought for the divine constitutes the daily activity of the student of Christian Science. It is the work enjoined upon every would-be follower of the Christ. It is the essence of practical Christianity. It is the application of true metaphysics to the daily needs of humanity. It is the needful union of religious theory and practise in the overcoming of all that bears the stigma of mortal or material thought. It is the only obedience to the command to leave all for Christ.

The mortal who turns away from God has nothing left. He becomes an idolater, a worshiper of that self which the Master cautioned him to deny, to exchange for the Christ-idea, if he would follow in his footsteps. When contemplating this idolatrous self-worship our Leader wrote: "What is the god of a mortal, but a mortal magnified?" (Science and Health, p. 140.) Wrong thinking, however classified, constitutes some form of idolatry. It is the conscious or unconscious admission of a selfhood that is not related to God. The admission of sick or sinful thought would reb God of His purity and perfection, and would slay the man of His creating. Why, then, any reluctance to exchange such thinking for spiritual or right thinking? Why any opposition to the master Metaphysician, who bade men overcome all evil thinking and to have "one good" only, one all-good God?

The great Teacher said, "Bind them [the tares, all matter thoughts] in bundles to burn them: but gather the wheat [all spiritual thoughts] into my barn." Why any disinclination to appeal to one's God-given mental power or intelligence to exchange a thought of sickness or disease for God's ever-present thought or idea of health, instead of appealing to that which neither thinks nor lives, to effect the necessary change? Why any hesitancy to submit to mental correction when it alone can restore normal moral and physical or bodily conditions? Because of ignorance and unwillingness to deny or sacrifice self and to acknowledge the immortality of man, to exchange human opinion for the revealed word of God, to renounce all belief in evil, and to acknowledge in all humility and love that God is good and God is All.

The signs of the times strongly indicate that the world is rapidly awakening to the fact that "metaphysics resolves things into thoughts, and exchanges the objects of sense for the ideas of Soul" (Science and Health, p. 269), and countless thousands of the beneficiaries of Christian Science are sending forth a pæan of heartfelt praise for the peace and joy which attend this necessary exchange of the human for the divine. Well may they exclaim with the apostle, "Thanks be unto God for his unspeakable gift."

DEMONSTRATION.

KATE TREVER RONEY.

BEING exact, Christian Science can tolerate no carelessness, either in the statement of its Principle or in the use of terms. Demonstration is a term which is used very frequently, and often carelessly, by Christian Scientists, and in studying just what it means in Christian Science, the writer is often reminded of experiences connected with her early work as a teacher of mathematics. Before entering upon her duties she heard many references to two exceedingly bright boys who had worked nearly through the arithmetic the preceding year. No one spoke of their mathematical understanding, however, or knew of their ability to apply it, other than that they had worked all of the problems. It was not surprising, therefore, when the first recitation revealed the fact that although answers had been secured throughout the text-book, upon testing the boys as to their mathematical understanding of the fundamentals involved in the problems, the simplest rules could not be applied. Their erratic work had secured the desired results, for figures had been made to fit, though not one answer had been obtained scientifically.

It was not until this method was discarded for a time and blackboard work undertaken, not until they learned to work from a basic law, that they had any concept of what demonstration means in mathematics, and so appreciated its significance. They also learned that the securing of answers is not the object, but a necessary result of the correct application of mathematical laws. One meaning of the term "to demonstrate" is, "to prove with certainty." It implies, then, something already existing but not yet realized by the student, who must proceed to work as though knowing its existence; he must have no other basis for thought in order to demonstrate the truth of any statement.

What are Christian Scientists called upon to "prove with certainty" in order to make a demonstration? In the "scientific statement of being" (Science and Health, p. 468) we find this wonderful sentence: "All is infinite Mind and its infinite manifestation, for God is All-in-all." This statement we accept as true, and we are called upon to prove it. The Scripture statement that God is Love is also accepted, and as a result we must allow that everything not having its origin in God, divine Love, is illusion, possessing no power, law, substance, or reality, and so all human discord—sin, disease, and death—is merely an experience of human belief, the result of conclusions from a false premise, the basis of thought being a lie about God and man. Christian Science has come to teach us that God and His infinite manifestation are all; and further, that God is good, too pure to know evil. This being true, all is the expression of good, and the human concept, with its sin, sickness, and death, is not the truth of being at all, but the outcome of a false belief about man's origin and nature; hence salvation is realized in knowing the truth. Jesus said, "Seek ye first the kingdom of God, and his righteousness." God is Mind, then His kingdom, heaven, is a mental kingdom, and the gaining of this kingdom is the condition under which Jesus said the truth would make us free.

To remain on the same plane of consciousness and merely secure the satisfaction of material desires cannot be called a demonstration in Christian Science, any more than the gaining of answers without understanding is a demonstration in mathematics. We may gain a sense of health, happiness, material supply, and even church buildings in material sense, but unless these things have come as the result of knowing the truth, of definite mental action, not even a Christian Scientist can be said to have made a demonstration. It is the Scientist's business to demonstrate the truth of being and leave the results with divine Principle, knowing that a loving God has only good to impart to His children. The true Christian Scientist does not work for material things, but for spiritual understanding, the kingdom of heaven, "and all these things shall be added." It is the kingdom of heaven that is our substance, not the "things" of material consciousness. Therefore the gaining of this kingdom constitutes our demonstration.

Referring again to the above illustration, when the boys were required to lay aside their books for a time, they seemed quite confused at first, for not having the required answers to their problems, they saw nothing to work for. This is often the case with Christian Scientists. *Unless* there seems to be some desired change in our *material* experience, we may lose sight of the fact that there *is definite* work to be done, and so drift along satisfied; yet every moment this false sense of being which denies God and claims another origin, is holding us to matter, whether our human experiences are pleasant or otherwise. There is, therefore, always work to be done, always the one great problem to be worked on, to demonstrate the allness of God, in keeping with Mrs. Eddy's statement, "Good demands of man every hour, in which to work out the problem of being" (Science and Health, p. 261).

The writer can never forget the joy which the boys felt when first able to apply mathematical law to their problems, and when they recognized its value to them and something of what mathematical knowledge is; nor can she forget her first application of the truth of being to her human need, and the consequent proof with certainty of God's allness. One claim which a false sense of being seemed to have formed into a law for her, was a feeling of inability to go up or down hill or to climb stairs. Treatment had been given for that and other ills a few days, when it appeared necessary to go on an errand, to be accomplished in a short time considering the distance to be gone. The first thought of this false sense was that she could not go. It was easy to deny this mentally and start, but the severer test came later, when different cars moved out just before she reached them, thus necessitating the walking of many blocks, some of them being very steep grades. When at last a car was boarded, it was discovered at the end of the journey that the street on which the car ran was many flights of steps below the street required. This was the final test. Material sense said that she must stay right there and take the next car back, but a better thought came: "God is your strength, so you can do it; prove it. 'Now is the day of salvation.' Now is the time to prove that 'all is infinite Mind.'" Assenting to this true sense instead of the false, and making a start, there burst into consciousness a flood of light with these words: "The eternal God is thy refuge, and underneath are the everlasting arms." The stairs were climbed with scarcely any sense of a physical body, and the healing of that particular ill could not help but result, for the fear of it, and belief in its necessity, like the obstruction between the beholder and the sun, was recognized as groundless and so destroyed.

This experience has also served as an illustration of the tender leading of divine Love in our journey from sense to Soul, and proves the truth of the Scripture, "God is faithful, who will not suffer you to be tempted above that ye are able." If the final test had come first, it might have seemed too great. The joy experienced as a result of this demonstration was not so much on account of the healing of that particular wrong sense of being, as the change in consciousness which assured her that "God is our refuge and strength," not far off, but where Jesus said heaven is, at hand. This change in consciousness was the demonstration, rather than the healing; that was only the inevitable result.

The work of demonstrating the truth of being is much more glorious than the mere gaining of harmony to material sense, for one cannot destroy in his own consciousness the least false sense of being without helping to lift the world to a higher plane of consciousness. The Scientist can work bravely on, then, even though to material sense the result does not seem to be a demonstration, for the real result is that which "eye hath not seen, nor ear heard."

OBEDIENCE.

A. B. FICHTER.

SHOULD the word obedience convey to us the sense of dependence, of being arbitrarily interfered with, compulsion, enslavement, or should it mean freedom, guidance, privilege, opportunity? The sun dispensing its light to the solar system, the song-bird pouring forth his liquid notes, the tender plant upspringing from the earth and bringing forth flower and fruit,—these are obedient to the law of their being; the sublimity, harmony, and order of the universe manifest the results of obedience to law. When in the prism the requirements of the law of refraction are obeyed, the sun's ray inevitably flashes the seven colors of the rainbow, and a perfect rose proves that the law of its being has been minutely obeyed. Why, then, should mankind revolt when the cultivation of the spirit of obedience is urged, seemingly unwilling to give up what they mistakenly regard as their rights of self-government?

It may be that in the relations of man to man, obedience has sometimes meant submission to another human will, subjection to selfishness, usurped power, and cruelty; but this is scarcely the right sense of obedience, since it always implies choice of action. Man, the image and likeness of God, the only one so designated of all the creations recorded in the first chapter of Genesis, must differ from all the rest. The image and likeness of the eternal "I AM" must be the reflection of intelligence, and his obedience must be conscious obedience, conscious expression, conscious utilization of law.

Any apparent disobedience of mortals is a self-delusion of material sense, and we learn in Christian Science that it is corrected by the substitution of the spiritual sense, "a conscious, constant capacity to understand God" (Science and Health, p. 209). It becomes plain that as this sense of the privilege of constantly reflecting the divine nature dawns on human thought, the mortal sense of being must yield to the revelation of the real purpose of man, to bring out on earth, as in heaven, the perfect will of God. "Thou shalt have no other gods before me" is a requirement of man's true nature; then all his grand possibilities shine forth. We are warned not to eat "of the tree of the knowledge of good and evil," because to eat of it means not a pleasant and useful experience, but death, cessation of right consciousness, to know good and evil being contrary to the law of man's being.

When healing has come to us in Christian Science, we vow in perfect sincerity that henceforth we will prove our gratitude by our obedience. Do we realize that this obedience is only an added blessing to us, which will bring us advantages of growth and a gain in understanding? It could not possibly bring any addition to the infinite Principle, or enhance the high position of the Discoverer of Christian Science; it could not make us more worthy of salvation, since by grace we are saved, nor could our disobedience arrest the advance of truth. It is perfectly plain that the law derives no benefit from obedience to it, since it exists forever, independent of obedience or disobedience, application or disuse; but when the law is ignored, how can it become operative to us? It can operate only when it is applied, and then it benefits not itself, but him who applies it, furnishing him proof of its efficacy and usefulness, which will result in a fuller confidence in the law.

Just as Jesus said that "the sabbath was made for man, and not man for the sabbath," so the command "Fear not," is not a sentimental comfort, but a reminder that the reflection of infinite Love is fearless and courageous. We should love our enemies, not for their sakes simply, but because the belief in the reality of hate obscures to the human sense the conscious reflection of Love, and also because the reflection of Truth must necessarily heal. So also we must love our neighbor, because man's true activity cannot be interrupted, and we must magnify the Lord, not because God depends on human praise, but because the growth of spiritual understanding enlarges and enriches our concept of divine Principle.

Similarly, when Christian Scientists join The Mother Church, accept the tenets, acknowledge the Manual as their guide, subscribe to the periodicals, and gratefully use the privilege of class instruction, they do it because, unless they abide in the vine, which is typical of constant touch with all the functions of The Mother Church, they cannot bring forth fruit; and let every one who is feeling the impulse of gratitude, the desire for more faithful obedience, that he may become more effective and advance more rapidly, consider if there be not some possibility of bringing out at least a human semblance of entire obedience to all the counsels of our Leader.

When after the establishment of the *Journal*, the *Sentinel*, and *Der Herold der Christian Science*, those carriers of spiritual food and inspiration, Mrs. Eddy also inaugurated the *Monitor* "to injure no man, but to bless all mankind," with the request that all Christian Scientists support it with their personal interest, their affection, their daily use of it, and their enthusiasm for what it stands for, it could not have been for the glory of a great achievement; but seeing the world's need of a purer, more humane, more upright journalism, she provided a paper which gives place to no appeal to sensual instincts, but which has the largest room for those statements of positive good that become as leaven to public thought.

Responsiveness to these admonitions of Mrs. Eddy is much more than a voluntary expression of gratitude; it makes active in our lives the inspiration, nurture, culture, and atmosphere of true Christian Science. One cannot get a perfect rose if he does not fulfil the requirements of its law, and how can the true Christian Scientist be manifested without the fulfilment of all the obligations imposed by the ideal life outlined in the Manual? To obey these requirements is to become a worker, a healer, a peacemaker, a light-bringer to men; it is to show the value of intelligent obedience to every righteous requirement.

No matter how much more picturesque or effective a great spontaneous act may be, the constant, uninterrupted doing of little duties, the surrender of self-indulgence, the overcoming of self-assertion, this inconspicuous service and unobserved contribution of love may speak of far more perseverance, earnestness, and purpose than the unique single effort. The blood of the martyrs was the cement of the early church; that age may have required and been benefited by the more evident heroism of these witnesses for the truth. But since Truth and Love are ever requisite to the building of the church, a continuous life of obedience to Principle, in witness of the glorious truth of Christian Science, must be a cement of corresponding efficiency in the erection of that nobler concept of God and man which Christian Science has brought. Far from being an obligation or a tax, our obedience is a privilege, and the blessings which flow from it must be such as to increase our gratitude, to fill the heart with wonder, love, and praise, and we see how we may so grow that we may become "the temple of the living God," an avenue for the continuous manifestation of divine Principle.

In little steps out of self, out of narrowness, out of timid conservatism, out of sensitive seclusion, out of financial limitation, out of local conditions, out of sectional prejudices, out of social exclusiveness, out of national pride or racial instincts, we gain at last an inspiring realization of the meaning of human brotherhood, gain a gladdening sense of cooperation, of being part of that great fraternal movement for universal salvation which is embodied in the Christian Science church organization and its ever widening activities. Thus, and thus only, can we contribute to the expression of the "infinite idea forever developing itself, broadening and rising higher and higher from a boundless basis" (Science and Health, p. 258).

"IN A DESERT PLACE."

J. NONISH.

AMONG the letters to our Leader in the *Sentinel* of March 26, 1910, was one which referred to a seeming lack of men in the church work, and how it was met; but recently an incident came under my notice which I think would make the writer of that letter give thanks. I myself, in coming back from that small meeting, felt like one breathing the pure air from a mountain height.

In the old army days there were times when it was necessary to put true men on the skirmish line, and it may be that there are more men on the skirmish line in Christian Science than we are aware of. They are surely needed here in this small settlement, where the population in all probability numbers five to seven thousand. The first question asked, as we came together on that evening was, "Is there a practitioner here?" and the answer was in the negative, yet there could not be a more promising field for a worker, a large majority of the people being young men away from home. As there was no reader present at the gathering, it was a case of two or three being gathered together in Christ's name, and we surely realized the promise, "I will be in the midst of them." There were four men, strangers, the world would call them, one asking for help to remove a doubt, another saying he had read a few pages of Science and Health, and that he was looking for more light. Another said he never attempted any undertaking, either financial or otherwise, without seeking guidance or help of divine Mind, while one said he loved Science and Health because its teachings were practical, entering into every problem of life and solving each and all of them.

Three miners or prospectors and one financial man, but they had forgotten their quest for material gain and joined hands in trying to help one another onward and upward, to that better way which our beloved Leader has shown us, and I think it would have brought a smile to many faces, could those back at headquarters have heard the rough old miners praising her work for us.

GLORIFYING GOD.

FRANCES M. GORRELL.

As we read several accounts of Jesus' healing work, we note that many of them close with the words, "and they glorified God." Then, in the incidents connected with these so-called miracles, we find that Jesus charged the people over and over again to tell no man what had been done for them; but Mark tells us that the more Jesus charged them that they should tell no man, "so much the more a great deal they published it; . . . saying, He hath done all things well." In one instance we read of a man who was so filled with love and gratitude to the Master for the healing which had come to him, that he wanted to go with Jesus wherever he went, but his entreaty was met by the words, "Return to thine own house, and show how great things God hath done unto thee."

One sometimes yields to the temptation to talk Christian Science when it would be wiser to follow Jesus' command to return to his own house, his own consciousness, and by removing therefrom all envy, jealousy, fear, and other material beliefs, show what great things Christian Science has done for him. On the other hand, Mrs. Eddy tells us in the "Manual of The Mother Church": "Testimony in regard to the healing of the sick is highly important. More than a mere rehearsal of blessings, it scales the pinnacle of praise and illustrates the demonstration of Christ" (p. 47). Veritably we need to be as "wise as serpents," and not otherwise will we be saved from the experience of having our pearls of truth trodden under foot. In order to glorify God one must love Him supremely, be ever conscious of His power and goodness, and make large room for the thought of His allness. When we make a business of glorifying God, there will be no time for self-justification, self-righteousness, or self-pity.

"And they glorified God." Not all received the healing; for many were unable even to see or hear Jesus; but Luke, in his account of the healing of the blind man, says, "All the people, when they saw it, gave praise unto God." *And this* is our privilege in Christian Science. It may be *that we* have not yet realized the healing for which we have been watching and praying, but there is always the opportunity to praise God for the freedom and joy which the healing of another has brought. In that wonderful fifteenth chapter of St. John, Jesus gave a definite rule for glorifying God in these words: "Herein is my Father glorified, that ye bear much fruit." Good fruit is produced only by much thought, constant care, and many times it is necessary to prune closely. The result of all this is not seen at once, but we know that when the work has been faithfully and intelligently done the fruit will appear sometime.

Ofttimes in our work it may seem that after all the thought and care and pruning, God is not glorified, good is not evidenced, because we have not gathered any fruit; but when we look beyond this seeming, we know, as Mrs. Eddy has said, that "Truth does the work, and you must both understand and abide by the divine Principle of your demonstration" (Science and Health, p. 456).

AN EXPERIENCE.

HANSON W. WHEELER.

SEVERAL years ago I had an experience which proved the power of Truth's "still small voice" to overcome error. I was very deeply impressed with a sentence in our Leader's letter to the board of lectureship, which appeared in the *Sentinel* of March 15, 1900. It was this: "When error strives to be heard above truth, let the 'still small voice' produce God's phenomena." That statement had taken a strong hold upon me, and I was very soon called upon to put its requirement into practise.

I had occasion to visit the office of a large concern in one of our principal cities, to obtain some information which it was perfectly proper that I should have, and while one of the clerks was giving it to me the head of the office came up and, without any provocation, stopped the proceedings, and in a very disagreeable and uncalled-for manner refused to let me have the desired information. Knowing that it was perfectly legitimate that I should have what I had asked for, my first thought was to resent the treatment accorded me, but instantly our Leader's words came to me, and I decided to "let the 'still small voice' produce God's phenomena." Without saying a word, I thought, Divine Love is omnipresent, and is here. Immediately the man turned around, smiled, and apologized for his manner, then invited me into his private office, saying that he not only would comply with my request, but thought he had some additional information which would be helpful.

There was another man with me at the time, and when we left the office he asked me what I had done to bring about the change, saying he had known the man for a number of years, that he had the reputation of being very disagreeable, and that it was unusual for him to smile. To me, however, the man's change of manner was easily accounted for, since experience has taught us that the truth of Christian Science is able to calm the turbulent waves, and to bring every condition of human thought into obedience to the divine law.

This incident shows how we should strive to let all our thoughts be ruled by divine Love, that its harmonious manifestation may bless all with whom we come in contact in our daily experience.

SELECTED ARTICLES.

[Frederick Dixon in *Kent Messenger and Ashford Examiner*, Ashford, England.]

In a recent issue a writer refers to the sermon lately preached by the Vicar of Tenterden on Christian Science. Will you kindly permit me to emphasize one part of his argument while explaining another, and then to make a demand, in the most public way possible, on the vicar himself? First, I should like to emphasize that part of his letter in which he points out that if the vicar's argument is sound, he is engaged in blowing himself out of the water simultaneously with Christian Scientists. Second, may I explain that the vicar's prejudices constitute miserably frail premises for the consideration of Christian Science. Christian Science certainly teaches that an understanding of spiritual law, and an attempt to live in complete obedience to it, will be found to embody a knowledge of the truth which Jesus the Christ said would free the world. It does not, however, ask humanity to accept this as a dogma to be proved after death. It asks it to accept it as a working hypothesis to be demonstrated, as Jesus demonstrated it himself, and demanded that it should be demonstrated by his followers, when he said, "He that believeth on me, the works that I do shall he do also." This surely makes a man's claim to Christianity dependent on and in proportion to his fulfilment of Jesus' own requirement.

Christian Scientists accept this demand unequivocally for themselves, and everybody has got to do the same who is not going to run away from the obvious meaning of the Bible. It is utter nonsense to say that they blame their neighbors for their failures, and only proves that critics like the Vicar of Tenterden have not read the book they are attacking. Here is what Mrs. Eddy does say, on page 149 of the Christian Science text-book, "Science and Health with Key to the Scriptures": "If you fail to succeed in any case, it is because you have not demonstrated the life of Christ, Truth, more in your own life,—because you have not obeyed the rule and proved the Principle of divine Science." The propaganda of Christian Science amounts to this, that Christian Scientists say: Here is a teaching which we have individually accepted in theory, and found to be demonstrable in practise, therefore we naturally believe in it. If you are in trouble, moral, mental, or physical, and have failed to find help, you might, as we did, examine and test it, to see if, as we did, you may not find help in it. This is not, however, enough for the Vicar of Tenterden; he must be the arbiter of truth for the parish, and whatever he decides against must be cast out. I hope the bishops of his church are prepared for the crusade in which he has assumed the rôle of Peter the Hermit.

And now may I publicly demand from him, and I have a right publicly to demand this as he has publicly committed himself to the statements, where in Mrs. Eddy's writings he finds the quotations printed in his *Parish Magazine*, in inverted commas, in these words: "But Mrs. Eddy rejects the church; 'My church is the only church, the other church is an unclean thing.'" The readers of his magazine have taken the last part of this sentence as a quotation from Mrs. Eddy, and that is what the construction of the sentence implies. Worse than this, writing of the sacrament, he says, "Christ says, 'Do this in remembrance of me;' Mrs. Eddy says, 'Do not do this in remembrance of him.'" Will the vicar say where in Mrs. Eddy's writings he finds the two quotations put into her mouth, and placed deliberately as quotations within quotation marks?

[Paul Stark Seeley in *The Monmouth* (Ore.) *Herald*.]

The writer in your columns who asks the question, "If Christian Science should heal a man of all his diseases and yet he should lose his soul, what would he be profited?" apparently believes that he would be profited not at all; and if such a result were possible through Christian Science, his conclusion would be justified. But it is not, for in Christian Science, healing and salvation go hand in hand.

Christian Science teaches that man can be permanently healed of his diseases only as there is eliminated from his consciousness, through a correct understanding of God, the belief in a power apart from God, which can cause him to be sick, subject him to sin, and finally cause him to languish and die. Physical healing is but the small beginning in Christian Science, the first step toward the understanding of God as Love, and of His creation eternally free from the claims of discord and distress. Mrs. Eddy has made clear this fact on page 150 of Science and Health, where she says, "Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

Christian Science follows with scientific exactness the teachings of Christ Jesus, who taught that sin and disease were of one common origin, namely, of the devil (evil), and were to be put off by one and the same process, namely, the true understanding of God and man's relationship to Him. Evidence of this is given in his declaration to the impotent man, whom he healed and to whom he said, "Behold, thou art made whole: sin no more, lest a worse thing come unto thee,"—a command to free his mind from the false beliefs in evil, sin, and disease by which he had been made captive. And again, Jesus said to the Pharisees, speaking of the palsied man whom he healed, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Rise up and walk?" a passage little understood by the orthodoxy of today, but nevertheless carrying the clarion message that disease and sin are cast out in the same way. And so in the working out of their salvation Christian Scientists strive to overcome disease even as they overcome sin, by knowing that both are evil, not of God, not supported by Him, and that they can be eliminated and annihilated by recognizing the omnipresence of God's goodness and God's love, forever sustaining His creation in harmony, health, and perfection.

The word "soul," so often misused in scholastic theology to represent a mystical conception of that part of man which survives death, is used primarily in Christian Science as synonymous with God, in whose image and likeness man is made. Thus Soul is seen to be indestructible, and evil sense all that can be destroyed, as stated in "Science and Health with Key to the Scriptures" (p. 311): "It is a sense of sin, and not a sinful soul, which is lost. Evil is destroyed by the sense of good." Through this process of eliminating evil and becoming acquainted with good as the nature of man's being, is man healed of disease and saved from sin.

[Harry I. Hunt in *The Bergen News*, Hackensack, N. J.]

Our critic objects to the Christian Science statement: "Heaven is not a locality, but a divine state of Mind in which all the manifestations of Mind are harmonious and immortal, because sin is not there and man is found having no righteousness of his own, but in possession of 'the mind of the Lord,' as the Scripture says" (Science and Health, p. 291). In Jesus' closing address to his disciples, as reported by St. John, occurs the quotation referred to by the critic: "I go to prepare a place for you." Farther along in the same address, Jesus says: "These things have I spoken unto you in proverbs [American Standard version: dark sayings]: but the time cometh when I shall no more speak unto you in proverbs, but I shall show you plainly of the Father." Thus Jesus himself makes it plain that the only reference in the four gospels to a "place" which he was to prepare for his followers, was a figure of speech which would be explained to them as they progressed in the understanding of his teachings.

Digitized by Google

Elsewhere Jesus declares that heaven is not a place. In Luke we find this: "When he was demanded of the Pharisees, when the kingdom of God should come, he answered them and said, The kingdom of God cometh not with observation: neither shall they say, Lo here! or, Lo there! for, behold, the kingdom of God is within you." This is a clear, definite statement that the kingdom or rule of God within the individual consciousness makes heaven a present possibility, and not a place or locality into which the good man is to be ushered at some future period.

In discussing the fall of man, our critic fails to make the distinction made by Christian Science between man made in God's image and likeness, and man formed out of the dust of the ground, the Adam-man. Christian Science accepts the Biblical statement, wherein man is described as made in the image of God and after His likeness, belonging to that creation pronounced "very good" by the creator. The Adam-man, described in the second chapter of Genesis, is the man referred to in Romans, "By one man sin entered into the world, and death by sin." Here we have the origin of sin and its consequence, death, boldly credited to Adam by St. Paul; to the man "of the earth, earthy," the counterfeit of the real or spiritual man. Sin is thus seen to be not an expression of intelligence or a law of infinite wisdom, but the manifestation of the mortal man of dust, out of whose heart (consciousness) "proceed evil thoughts, murders, adulteries, . . . thefts, . . . blasphemies." If we are to be benefited by the Scriptures, we must have an intelligent understanding of them. Thus, the recognition of the good in us as marking the man made in God's image and likeness, leads to the understanding that all that is unlike God is unlike the man made in His image. This recognition that the good in us is the real, gives us far greater power to resist evil and part company with it than our old beliefs about the fall of man.

In closing, permit me to add that Christian Science does not reject "redemption by the blood of Christ," our critic to the contrary notwithstanding. It interprets salvation as "Life, Truth, and Love understood and demonstrated as supreme over all; sin, sickness, and death destroyed," and also says: "The spiritual essence of blood is sacrifice. The efficacy of Jesus' spiritual offering is infinitely greater than can be expressed by our sense of human blood. . . . His true flesh and blood were his Life; and they truly eat his flesh and drink his blood, who partake of that divine Life" (Science and Health, pp. 593, 25). Christian Science rests its teachings upon the Bible. Its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, explains the spiritual import of the word, and the correctness of its interpretation of the Scriptures rests upon demonstration. In striving to live in accord with all of the teachings of the Master, including the healing of the sick, Christian Scientists deserve the approbation rather than the censure of their fellows.

[Algernon Hervey Bathurst in *Kendal Mercury and Times*, Kendal, England.]

I have read with considerable interest the report of the address on Christian Science delivered by a clergyman and published in your paper. I recognize and greatly appreciate the honest criticism of the preacher, and it is because I feel that some explanation will be welcomed, not only by him, but by many others, that I venture to refer to some of his statements. I would not care to say how many commentaries on the Bible have been published from time to time, and if it is not considered presumptuous of students of what might be called denominational theology to publish commentaries, it is surely not presumptuous of Mrs. Eddy, the Discoverer and Founder of Christian Science, to publish what has frequently been well described as the Christian Scientists' commentary on the Bible, namely, "Science and Health with Key to the Scriptures." The various commentaries published have all endeavored to explain the meaning of the Scriptures, and in Science and Health Mrs. Eddy has not only explained, but proved, the teaching of Christ Jesus and his disciples to be as scientific and practical today as when the truth of his statements was demonstrated by the healing of the sick, the destruction of sin, the feeding of the multitude, and the raising of the dead some two thousand years ago.

Now the critic has evidently been confronted with the difficulty with which so many are faced who have not yet studied the subject of Christian Science sufficiently to enable them to prove the truth of its teaching. I refer to the great difference, pointed out by Mrs. Eddy from cover to cover in Science and Health, between man made in the image and likeness of God, that is the real man, and man who according to human experience is subject to both good and evil, sin or sickness, or both. The success of the Christian Scientist depends upon his spiritual discernment of the true nature of God, and therefore of man. In other words, Christian Science teaches that the signs which Jesus declared so emphatically must follow a correct understanding of his teachings, will only be possible to the extent that the student recognizes his sonship with God, or understands that, as St. John puts it, "now are we the sons of God;" therefore that the real man is as incapable of sin or sickness, discord or error, as is God Himself. May I be allowed to make my meaning perhaps still clearer by saying that Christian Science declares that God is the "great First Cause" or creator: Spirit; infinite good, and that His creation, as stated in the Bible, must inevitably be likewise spiritual and perfect. Always adhering to the fact that there could not be more than one infinite cause or creator, it follows logically that there can be in reality no effect except from the one perfect creator; hence any seeming evil effect must be a misconception of truth, or that which has no truth in it, and therefore is unreal. As, however, a mistake can only be corrected to the extent that the truth about it is recognized, as is so evident from the teaching of Jesus, the belief in sin, sickness, and all discord can be destroyed only to the extent that the true nature of God and man is understood; and thanks to the discovery made by Mrs. Eddy, Christian Scientists are, to some extent at any rate, able today to free themselves and others from the bondage of physical troubles, as well as from sin.

With regard to the method by which evil and discord are overcome in Christian Science, it is important to understand the difference between the word "mind" used by Mrs. Eddy to represent the material or carnal mind referred to by the apostle, and Mind as a synonym of God. When the difference in the use of these two words is understood, it will be recognized that what is termed the control of matter by mind, or the use of will-power, has nothing in common with Christian Science. It is quite true that harmonious conditions largely "depend on general health," but health or wholeness is synonymous with holiness, and is really attained only through a correct understanding and practise of the teachings of the Founder of Christianity. As to the question of "denying the existence" of physical troubles, Christian Science no more does this than did Christ Jesus. He, however, came, as he said, not "to destroy, but to fulfil" the law of God, and by his works to prove that neither leprosy nor blindness, sin nor poverty, were according to the law of God, and he healed these troubles because of his understanding of that law. So today those who understand, even in a slight degree, that same law of God, have a right, and indeed it is their duty, to expect the same results which were so frequently accomplished during the first few hundred years of the Christian era, and to do the works Jesus did in fulfilment of his declaration that those who understood his teachings should do the works he did. Again, just as his "healings were usually connected with spiritual blessings," so the healing of the sick through Christian Science treatment today must inevitably result in an improved moral condition or spiritual regeneration. These results cannot, however, be accomplished by the exercise of

Digitized by Google

what is termed will-power, or by the control of one mind by another, for it is the belief in a mind capable of believing in, and therefore accomplishing, both good and evil, that has to be destroyed.

The unity of good, the oneness and allness of God, and therefore His omnipotence and omnipresence, is the key-note of Christian Science practise. It is because the belief in the power or reality of both good and evil, because the belief that health and sickness are continually at warfare, is false, that the healing of the sick through the understanding of the teachings of Christian Science is being so successfully accomplished all over the world today. It would, however, be impossible to say that in the practise of Christian Science there is danger of cultivating "selfishness," for Christian Science cannot be practised unless the Scientist is striving to live in accordance with the Sermon on the Mount, and beyond all to obey the golden rule, to do unto others as he would have them do unto him. Indeed, no system or religion has ever advocated more strenuously or has ever proved with more powerful logic that the practise of true Christianity must inevitably result in the general recognition of the universal brotherhood of man than does Christian Science. Referring to this point, Mrs. Eddy, after having stated that the first commandment demonstrates Christian Science, writes on page 340 of Science and Health: "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

[John M. Dean in *Memphis* (Tenn.) *Press.*]

Starting from the premise that God is, and that He is Spirit, Mrs. Eddy was faced with the inevitable conclusion that God, Spirit, being everywhere, matter can exist nowhere except in a supposititious mortal consciousness, and that matter, with its attendant train of evils, is the result of ages and ages of wrong thinking about God and man and the universe. Thus Christian Science regards evil, sin, sickness, and death as false beliefs, as unreal because not God-made, as nonentities because destructible; in short, as lies counterfeiting the truth. This teaching certainly gives no power to evil, for to give power to that which has no real existence would be a manifest absurdity, and the only recognition given to it is the same kind of recognition that any wise man would give to a lie of whatever sort. An innocent man accused of stealing a horse would not be giving power or reality to the charge by denying its truth and declaring its falsity. Rather would he be adopting the only logical way to disprove the false claim by evidence to the contrary. If God is omnipotent, the only power, nothing is more certain than that there can be no other power, and that nothing exists beside His perfect creation, which He pronounced "very good." So it must be plain that Christian Science stands for the only monistic idea which is logical and tenable, and it plants itself squarely on the platform of that ancient lawgiver who boldly said, "Hear, O Israel: The Lord our God is one Lord."

The "great First Cause" could not have created His opposite, for like must create like, and men cannot "gather grapes of thorns, or figs of thistles," nor will an acorn produce a pine tree. On page 119 of Science and Health Mrs. Eddy says, "God is natural good," and "natural good" could not, if it would, and would not, if it could, produce an element of evil to wage eternal war against its own creation. In order to be understood in accordance with prevailing standards, Mrs. Eddy was compelled to use ordinary English in stating her deep metaphysical conclusions, and so she speaks of Mind and matter, good and evil, Truth and error, but always as giving sole power to Mind, and good, and Truth, with the inevitable recognition of matter, evil, sin, disease, and death as ghastly illusions without a single element of being, despite their self-assertiveness. In this way, and only in this way, is it possible to destroy their assumed power.

The so-called human mind knows nothing of reality, and only in the degree in which this "carnal mind" is supplanted by the divine Mind can mankind gradually gain increasing glimpses of the real and spiritual creation. Thus we know that the human mind can never "know the absolute," which is attainable only by those who have learned to let that Mind be in them "which was also in Christ Jesus." The one Mind is God, and surely in this Mind there can be no thought of dualism or divided power.

[John L. Rendall in *Ottumwa* (Iowa) *Daily Courier.*]

I have read with interest in a recent issue of the *Courier* a synopsis of the sermon by the Rev. E. J. Bulgin, "Wilt thou be made whole?" (John v. 6) and I am impressed with the fact that in this question Jesus proved by demonstration that physical healing is available for each and every one who is willing to turn to God for help. In the fourteenth verse of the same chapter we read: "Behold, thou art made whole: sin no more, lest a worse thing come unto thee." The plain inference is that Jesus recognized sin and sickness to be of the same origin and procurement, the sum total of sickness being the result of the sum total of sin, and that both are healed by the "word of God."

This teaching is fundamental to Christianity and is given special emphasis in Christian Science. Mrs. Eddy states in Science and Health (p. 271): "Jesus instructed his disciples whereby to heal the sick through Mind instead of matter. He knew that the philosophy, Science, and proof of Christianity were in Truth, casting out all inharmony."

In the course of his sermon the reverend gentleman stated, "If Mrs. Eddy had been there that day, she would have said, 'You're not sick; just believe you are whole and you can walk in a few weeks.'" This gratuitous statement is pure guesswork, and voices one of the stock misconceptions of the Christian Science teachings. Mrs. Eddy states (Science and Health, p. 460): "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being."

Christian Scientists are approximating this "right apprehension" possessed by Jesus, and their healing works are in proportion to their understanding and demonstration of "the truth of being." "Wilt thou be made whole?" means to be whole physically, mentally, morally, spiritually. Christian Science is bringing about this complete "wholeness" in Jesus' way, by healing the sick and sinning in accordance with his reiterated commands to "preach the gospel" and to "heal the sick."

[R. Stanhope Easterday in *Elkhart* (Ind.) *Truth.*]

The Rev. R. J. Wade, in a sermon reported in a recent issue, mars his otherwise kindly reference to Christian Science by evincing a startling and very misleading misconception of the true purport of Christian Science teaching. He implies, in the first place, that the operation of Christian Science in the healing of the sick is purely on the basis of the influence of so-called human mind over matter. Christian Science is based upon Paul's admonition, "Let this mind be in you, which was also in Christ Jesus." The same truth is couched in Jesus' words, "The Son can do nothing of himself, but what he seeth the Father do." Such divine psychology includes no sense of the exercise of will-power or of the unwholesome domination of one so-called mind over another, but is characterized by that wholesome, intelligent knowledge of God, and of man's true relationship to Him as the image and likeness of the infinite, which at once precludes the possibility of evil and conduces to that absolute dominion over all conditions which is the divine right of all God's children.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

WHY DISCRIMINATE?

THE different light in which coroners view the many deaths under medical treatment which come to their attention, and an occasional death under Christian Science treatment, is aptly shown in a statement to the *New York Sun* by the Christian Science committee on publication for that state, from which we quote as follows:—

Just recently the New York city papers gave prominent notice to the statement that the coroner of Yonkers was looking for some grounds upon which to procure an indictment against the parents of a sixteen-year-old boy who died of tuberculosis while under Christian Science treatment. The coroner had held office throughout the preceding year, during which one hundred and twenty persons had died of the same disease in Yonkers, all quite unnoticed by this official. It also appears that two other children of these parents had died from tuberculosis under medical treatment, and the coroner took no notice.

If it were a fact that Christian Science had not healed a single case of tuberculosis, or of any so-called serious disease, there might be some reason for the discrimination thus made by a public official; but such is not the case, and the person who today still persists in the belief that Christian Science is not a reliable healing agency, is simply writing himself down as one who is not abreast with the times. In illustration of this, let us go back ten years, when a similar case was on trial in the Los Angeles (Cal.) court. Among the several witnesses examined under oath were prominent professional and business men, who testified to having been healed through Christian Science treatment, after medical treatment had failed to cure them, of stomach, kidney, and heart trouble, nervous prostration, insomnia, spinal trouble, etc., also three cases of lung trouble. From two of these testimonies we give the following brief extracts:—

Q—Tell us what success you have had, what your bodily conditions were, and what experience you had had in trying to obtain relief, and the results of Christian Science treatment.

A—For five years I had lung trouble, and during that time I had the best medical advice that I could get here, and I seemed to make no improvement. I made occasional trips away from here in the hopes of getting better, but it was only temporary relief, and when I returned I seemed to grow weaker; I was so much so that I was feeling unable to give my whole time to my business. After five years of constant treatment I finally decided to give up my business for a year and go away. On my way East I stopped at Chicago and became interested in Science. I heard of it there, and after a two-weeks treatment I was entirely relieved of my troubles. That has been six years ago, and I have never had occasion to use medicine, and have been perfectly well during that six years.

Q—You feel that you are in perfect health?

A—I know that I am in perfect health. I know it absolutely.

Q—You say that they told you at some stage that you had consumption?

A—The microscopic examination was to the effect that I had tubercular infection with a combination of mucous, and showed cavities in my lungs of long duration, and it was rather a hopeless case, according to the doctors.

In this instance it is perhaps needless to say that the parents were acquitted, and in ten years the world has seen the marvelous advances made by Christian Science in the acceptance and practise of its teachings all over the civilized world and by every class of people. One has only to look over any issue of this paper or of *The Christian Science Journal*, to find a number of pages devoted to the testimony of those who have been healed, and it is to be remembered that this has been going on week after week and month after month during the last decade or two. But even this is not all, for each week, in the Wednesday evening meeting held in Christian Science churches throughout the world, estimating conservatively at least ten thousand persons testify that Christian Science has healed them from sin and sickness.

The question, then, as to whether Christian Science heals the sick, is no longer open, and surely no one need remain in ignorance on this subject if he honestly desires to be informed. Does not Mrs. Eddy indicate the reason why some do not wish to know the truth about the healing done through Christian Science when she asks, on page 344 of Science and Health, "Why should one refuse to investigate this method of treating disease? . . . Is it because allopathy and homeopathy are more fashionable and less spiritual?" Certainly Christian Scientists have reason to be and are grateful for the new and better way opened up to them through the untiring labors of the Discoverer and Founder of Christian Science, and if as parents they prefer this treatment for their children, their right so to do should not be questioned in this enlightened age.

ARCHIBALD MCLELLAN.

THE WAYSHOWER.

NOTHING is more clearly taught by Christ Jesus than that a knowledge of God embraces and sums up one's promise and possession of eternal life: that the true consciousness is a God-consciousness; and this fact gives the greatest possible weight to the question whether our acquaintance with Him whom the Master taught us to think of as "the Father" is steadily increasing. Christ Jesus defined his sense of life when he said, "I and my Father are one," and his mission was to awaken in all men this realization of what constitutes man's being. He entered into the "holy of holies," and in his declarations, "I am the way," "No man knoweth . . . the Father, save the Son, and he to whomsoever the Son will reveal him," he disclosed the true nature of his high priesthood, the practical purpose and end of the incarnation.

As thus apprehended in Christian Science, this teaching comes as a great comfort to the hearts of those to whom God has seemed to be far removed and intangible, whose thought of God is indefinite and unsatisfying, if *it is not* incongruous and discreditable. The wisdom and power and purity, the beauty and goodness and compassion, of the "Son of God," make instant appeal to all. We can reverence and admire, understand and love him, feel sure that we know and would trust him; and to think that we are indeed knowing and loving God in the measure of the outgoing of our hearts toward this our brother, is to be blessed by an angel visitant, the coming of a new and gladdening sense that we have begun to live forever. We have taken the Wayshower's hand, and he is leading us into the divine presence.

St. Paul writes that in Christ Jesus "dwelleth all the fulness of the Godhead, bodily," and this is entirely in keeping with the Master's declaration of his at-one-ment with God. Scholastic theology has grounded its creedal sense, "very God of very God," on these and kindred passages; but Christian Science finds the nature and explanation of this unity, not in the impossible coalescence of two personalities in one personality, but in the identification of the spiritual idea, the Christ, with the activity of divine Principle.

We remember how kind and loving Jesus was to the little children, how scrupulously just and compassionate he was toward the wronged and the suffering, and it would be simply impossible to think of him as bringing pain to the innocent, as instituting any law and order which would result in profitless suffering or unmerited punishment, such as the child's inheritance of disease or the indescribable cruelties of a Messina earthquake. And yet we have been taught that God is just and merciful, and at the same time that He is directly responsible for the material law and order which entails these tragedies! While unthinkingly accepting these contradictory and erroneous statements about God, most men have always felt that inner protest which Mrs. Eddy voiced in her declaration that "the lawgiver, whose lightning palsies or prostrates in death the child at prayer, is not the divine ideal of omnipotent Love" (Science and Health, p. 119).

Digitized by Google

Christian Science might well be defined as the perception of and loyalty to the divine nature and law as it is "now made manifest by the appearing of our Saviour Jesus Christ." To disregard the confused man-made doctrines about God, and acquaint ourselves with Him through His self-revelation in Christ Jesus, is to find the abiding peace and joy of a consistent and comforting concept of the author of our being. We are no longer troubled with the necessity of trying to reconcile the irreconcilable. We are sure that we are not being deceived by our highest sense of justice and affection, and we can understand the meaning of Jesus' words, "Whatsoever ye shall bind on earth shall be bound in heaven: and whatsoever ye shall loose on earth shall be loosed in heaven."

The cry of Job, "Oh that I knew where I might find him!" is echoing today in a great many honest hearts. It is the cry of those who have not yet seen "the human and divine coincidence, shown in the man Jesus, as divinity embracing humanity in Life and its demonstration,—reducing to human perception and understanding the Life which is God" (Science and Health, p. 561). Christian Science honors Christ Jesus as the Wayshower to God in the most practical and spiritually stimulating sense. In the mirror of his life and words the nature and will of God is revealed, and men may there gain that acquaintance with the Father which speaks for life, aye, life eternal.

JOHN B. WILLIS.

SCIENTIFIC RULES.

THROUGHOUT Mrs. Eddy's writings we find references to Jesus' Sermon on the Mount which show that she regarded it as basic scientific Christianity, and in the light of Christian Science we discover in this marvelous sermon rules which are of vital importance in the working out of our problems, whether these deal with the healing of sickness or the demonstration of harmony on any other plane of human experience. It should be very clear that we can never advance in any true sense if we rest upon the mere belief that we are safe because we are possibly members of a church, the Christian Science or some other, that we accept unquestioningly the teachings of the Bible, and, if we are Christian Scientists, of Science and Health as well. To be faithful and consistent we must study the rules for Christian living and apply them without reserve in all our human problems.

On page 271 of Science and Health Mrs. Eddy says: "When the Science of Christianity appears, it will lead you into all truth. The Sermon on the Mount is the essence of this Science, and the eternal life, not the death of Jesus, is its outcome." From these statements by our revered Leader we should see the necessity for laying hold upon eternal life as we read and ponder the words of the Master, found in the fifth, sixth, and seventh chapters of Matthew's gospel, especially what are known as the beatitudes, which lift thought above a mortal and material sense of existence up to the spiritual and perfect. As we read, "Blessed are they which are persecuted for righteousness' sake: for their's is the kingdom of heaven," we are apt to shrink from applying these words to ourselves, preferring to relate them to the martyrs of olden time, but we are urged forward by the note of personal appeal,—"Blessed are ye"!

It is not necessary to recount here the various phases of persecution indicated; the important thing is the command, "Rejoice, and be exceeding glad," which should at once be recognized as a rule of scientific demonstration that we dare not dismiss as if it were a mere platitude. The Master adds to this command and related promise, "Ye are the salt of the earth: . . . Ye are the light of the world," and it is clear that his professed followers will be tested at all points to see whether the salt retains its saltness, and whether the light shines out with added brightness when the test of persecution is being applied. If a sense of persecution dominates one's thought, if it is talked about and dwelt upon, this shows that the scientific rule is being ignored, that darkness is putting out the light,—an impossible thing in Science. We are not to hide the light of Truth and Love under the bushel of belief in the reality and power of evil to harm us. If we do, we will be the first to suffer from the obscuration of this reflected light. The hour of trial is the best time to apply cheerfully, yes, rejoicingly, the rule of Science which requires us to obey every "least" commandment of divine law, knowing that all must be fulfilled; then to let our light so shine that all shall see the light, not the persecution, and see, too, the good works which are its accompaniment,—the healing of disease and the overcoming of sin for ourselves and others.

The mental attitude of a Christian Scientist can be readily decided upon. If he gives prominence to persecution in any instance, this shows that he is not realizing the blessedness which is the essential fact, and that he is thus failing to apply the rule which requires us to "hold fast that which is good" while we are proving the powerlessness of evil with all its asserted but baseless claims. If the pressure seems to be hard upon a brother, we must not hold him down with the belief that he is making a reality of evil, persecution, for instance, neither must we load him with sympathetic mesmerism while he is apparently struggling in the waves. Rather should we point him to the Christ-idea that walks over the waves and bids every storm be still, never forgetting that at all times our light is to shine and we are to "rejoice, and be exceeding glad."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

PEORIA, ILL.—Through the distribution committee, *Sentinels* and *Monitors* are supplied to the police stations, and *Monitors* to the juvenile court, the workhouse, poor farms, hotel lobbies, reading and rest rooms, charitable institutions, barber shops, fire engine houses, car barns, and many other places where people are likely to congregate. The waiting-rooms in the interurban and railroad stations are kept constantly supplied, as are the wings in most of the theaters. These papers are put at regular intervals in wall boxes, marked "Take One." As many as twenty-one hundred *Monitors* have been taken from the stations in a month. There were distributed between Oct. 23, 1912, and May 23, 1913, a period of seven months, 19,272 *Monitors*, 90 *Journals*, 973 *Sentinels*, 30 *Heralds*, and 322 miscellaneous.

Correspondence.

MISSOURI.—Third Church of Christ, Scientist, in Kansas City, is preparing to build a seventy-five thousand dollar edifice; Moberly has completed a church building and is using it, while at Maryville a large residence has been purchased and remodeled for church use. At Aurora, Butler, Chillicothe, Columbia, Hannibal, Trenton, and Webb City new societies are flourishing, while throughout the state are scattered many little groups of Christian Scientists who meet from week to week to read the Lesson-Sermon outlined in the Christian Science Bible Lessons, published quarterly.—*St. Louis Star.*

HERMOSA BEACH, CAL.—First Church of Christ, Scientist, of Redondo Beach, held its opening services on June 8, in the new edifice located on 317 South Broadway. The structure has just been completed at a cost of five thousand dollars and is among the attractive buildings of this beach.

Hermosa Beach Review.

FORTUNA, CAL.—Thursday evening, June 5, the board of directors of First Church of Christ, Scientist, Fortuna, met, with others, to lay the corner-stone for the Christian Science church.—*Correspondence.*

THE LECTURES.

HAMILTON, BERMUDA.

For the first time in the annals of the Christian Science Society in Bermuda, a public exposition of the aims, methods, and ideals of Science was given in the Mechanics hall, when Prof. Hermann S. Hering delivered an eloquent lecture. The large hall was crowded, and the deep interest of the entire audience was apparent. Eugene C. Pearman presided, and opened the proceedings in the following words:—

I welcome you on behalf of the Bermuda Christian Science Society and thank you for your presence tonight. The lecturer of the evening has made a special voyage to Bermuda to deliver this lecture, and it is extremely gratifying to have so good an attendance to greet him. During the past nine or ten years, since I have been interested in the study of Christian Science, it has seemed to me that throughout all time of which we have any historical record, there have been occasions when, in the face of what were apparently overwhelming material conditions, men and women have achieved a victory over those circumstances. Moses, Elijah, Daniel, and many others in the Old Testament records, and Christ Jesus and his disciples and followers in the New Testament account, proved time and time again the supremacy of spiritual power over material resistance.

The greatest exponent and demonstrator of this power was without question Christ Jesus, and among the countless blessings which his life and resurrection and ascension bestowed upon mankind was the light which he threw on the Science of being. It was he who first laid down exact rules by which men may have access to the loving Father and claim the power and protection of omnipotence. It was likewise he who gave that great and never to be forgotten promise that those who were willing to lay aside self and strike out into the path which he laid bare for men, who would love God supremely and others as themselves, should be able to prove the power of God to be omnipotent, as he did.

When we look carefully into the record of those who have been able to claim these proofs of God's power, it is unreasonable to conclude that these results were obtained through mere chance; and yet we have no definite description of the methods used. The work which Christian Science is accomplishing today is that of teaching men how they may adopt into their experience rules of thought and life which will enable them to approach more nearly the results obtained by our great Master and his disciples.

Royal Gazette.

SALT LAKE CITY, UTAH.

Judge Clifford P. Smith lectured on Christian Science to an immense audience in the Salt Lake theater. He was introduced by the first reader, Alfred G. Potts, who said:—

If you and I were to take a comprehensive survey of our lives, a bird's-eye view we will say, and were to trace all the motives and influences that have brought us down to the place where we now stand, and then if we were to think very clearly and very truly about what we found, we would discover that the most powerful influence in our lives is the life of Jesus of Nazareth. It is true that this does not appear to be so on the surface, and it is necessary to go below the outward appearance of things to find that it is so. You will say, perhaps, that you know very little about Jesus of Nazareth, and that anyhow your business is the strongest factor in your life. But is it? What are you working hard for if it is not that you hope some day to achieve a certain measure of freedom from work? and how about the pleasure with which you look forward to your vacation? Yes, this longing for freedom is but the echo of his words, "Consider the ravens: for they neither sow nor reap; which neither have storehouse nor barn; and God feedeth them."

Again, you may say that sickness is the most potent factor in your life right now, but there must be a hope that the health which he dispensed so lavishly is still available, else why are you here this afternoon? It is not necessary for me to multiply illustrations, although I might go through the whole gamut of human experience and find the answer for every human problem in his life and teachings. It is true today as it was nineteen centuries ago, that the only way we shall ever attain the ideals and hopes we long for is in the way the Master taught, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added." Then the condition precedent to that attainment must also be complied with. "If any man will come after me, let him deny himself, and take up his cross, and follow me." There is nothing there to imply that a mere observance of rites and ceremonies is sufficient or that it is possible for some one else to do the work for us.

Christian Scientists are made humbly and profoundly grateful as they learn that the teachings of the Master are entirely practical and available today for the overcoming of every human ill. A great many specifics for the cure of physical, social, and political ills are being offered for our acceptance, but it remains true that, as Paul said, "there is none other name under heaven given among men, whereby we must be saved," than that of Jesus the Christ. So it is no new thing that Christian Science brings to us, but a new light on an old story.—*Salt Lake Tribune.*

PHILADELPHIA, PA.

Before a profoundly attentive and interested audience of about fifty-six hundred people, which packed the Metropolitan opera house, Virgil O. Strickler delivered a lecture on Christian Science. Even with this record-breaking audience there were over two thousand turned away who were unable to obtain admission. The speaker was introduced by John F. Braun, who said:—

When our Master wandered over the hills of Judea and through the streets of Jerusalem, he strove by word and deed to change many of the then prevalent ideas, trying ever to lead men's thoughts to a greater reliance on God's power, to trust Him to do, not something, but everything for man. If the Master were here today in the flesh, he would undoubtedly change many of our ideas and inaugurate many social and political reforms. Judging him by the records found in the New Testament, he would undoubtedly again introduce spiritual healing into the Christian church. To what extent would the Christian church of Philadelphia welcome this innovation? Christ's commands were specific, and they read: "Preach the gospel;" "Heal the sick." My thought goes back in retrospection to that Christian church founded in Philadelphia, in Asia Minor, by the apostle Paul. That church healed the sick by prayer, of course, as did the early church for three hundred years. Would the Christian church in Philadelphia, Pennsylvania, welcome Paul and his spiritual healing with open arms? If so, then it should lend a ready ear to the lecture of today, because this new-old method is again in our midst in this new Philadelphia. It is especially fitting that in this city an important meeting be held to convey to our fellow townsmen something about that Christ-power which wipes out both sin and sickness.

Correspondence.

LOS ANGELES, CAL.

The remarks of Hollis J. Backus in introducing Willis F. Gross, who lectured on Christian Science in Third Church edifice under the auspices of the Christian Science churches of Los Angeles, were in part as follows:—

Pilate's question, "What is truth?" has been reiterated by every human heart. In vain has mankind sought for this answer in some "ism" or some "ology." These have all failed, for the reason that nothing but the absolute truth can

Digitized by Google

satisfy the desire to know God. In response to this human yearning, needless is it to say of Him who doeth all things well, that God gave Christian Science to the world when the world was ready for it. That time was when the fires of the Inquisition had ceased to burn; when the embers of Salem witchcraft no longer smoldered; when in our own generation human slavery was abolished. That time was when persecution for righteousness' sake no longer took the form of physical violence; when to preach and to practise primitive Christianity in very deed, with signs following, no longer required one to take one's life in one's hands. Then God gave the world Christian Science, and He gave it through one who yielded her heart and mind to the guidance of God. For proof of its divine origin, Christian Science asks but an impartial hearing; it asks to be accepted on its merits only, to be judged by its fruits.

Correspondence.

CHICAGO, ILL.

Judge Clifford P. Smith, lecturing for the eleven churches of Christ, Scientist, at the Auditorium theater, was introduced by Howard O. Sprogle as follows:—

It is well for us to be here this afternoon. The subject of Christian Science is one which engages the attention of intelligent people throughout the world. Its avowed adherents are numbered by the hundreds of thousands, while it has challenged the attention of many millions more. Indeed, it would be difficult to find, at least in the English-speaking world, an intelligent man or woman to whom it is unknown. The presence of this great audience attests the interest in it in this city. No one, I assume, would venture to assert that Chicago is not an intelligent community; at least, he would hardly venture the assertion in this presence. In this connection it may be a significant fact that there are more Christian Science churches in Chicago than in any other city in the world. It would seem that in the most progressive centers (I do not speak in a political sense), where people reach out after and assimilate new and advanced thought, the great truths of Christian Science have been most readily accepted. Christian Science is a fact, a serious fact, and is very generally so recognized. Long since it was abandoned as a subject of jest. Its wonderful healing powers have come to be acknowledged. It is pre-eminently a reclamation and conservation service, its subjects being, not land and forest, but men and women.

It is not my purpose to discuss the teachings of Christian Science; that is the province of our distinguished guest. While impressions regarding it are so widely diffused, it is a strange thing that so little is known by the world at large of its actual character. It is regarded by most people merely as a curative agency, and they fail to realize its vaster promise, the hope it holds forth for the redemption of mankind from the clouds of sin and fear, for the regeneration of humanity, for the lifting from the race its sense of inevitable doom, for making this world a brighter, happier place for God's children to dwell in,—this is the promise, the call, the work of Christian Science and of Christian Scientists.—*Correspondence.*

TOMAH, WIS.

A lecture on Christian Science was delivered by Bliss Knapp. He was introduced by George Anderson, who said in part,—

There is evidence in Tomah, as there is everywhere, of a growing recognition that, after all, everything taken into consideration, religion is the one supreme thing in this life. But religion, in order satisfactorily to exercise such domination, must be of a character which brings signs following. It must make its appeal to any man through its utility in practical application to every phase of his daily living; for religion, naturally, is the expression of a man's aspirations and assurances.

Since the beginning of time, from the very nature of things, God has ever revealed Himself to men through man. The Scriptures upon which Christianity is based, consist of such revelations, made first through the prophets and later through the Messiah, in whom the Word, made flesh, was most expressly revealed. In the light of these revelations the world today is considering a new revelation,—the revelation of Christian Science.—*Tomah Journal.*

BEDFORD, ENGLAND.

Bicknell Young lectured on Christian Science in the Town hall. He was introduced by Capt. H. Swire, R.N., who said in part,—

With regard to the subject of this lecture, I may point out that, as we are here to listen, so is Mr. Young here to instruct; and I have only to add that, as a beneficiary of Christian Science, I gladly and gratefully acknowledge its beneficent ministrations, as I have frequently testified, and shall continue to testify in greater detail at the appropriate time and place. I would here call attention to the overwhelming evidence, available to all who seek it, that Christian Science is bringing health and happiness to hundreds, to thousands, yes, to hundreds of thousands of people. Personally I find in its daily study my greatest happiness.

Correspondence.

MOSCOW, IDAHO.

William R. Rathvon delivered a lecture on Christian Science at Eggan's hall to a large audience. He was introduced by Attorney Frank L. Moore, who said in part,—

The object of religion has always been the same,—the development or upbuilding of spiritual men. It remained for the nineteenth century to produce a prophet in the person of Mrs. Eddy, to read and interpret God's law as applicable to the physical as well as the spiritual being of man. She teaches that God must be acknowledged as supreme in the physical realm as well as in the spiritual, and upon this truth she founded the Christian Science church.

Star-Mirror.

ASHLAND, OHIO.

Col. C. L. Yearick in introducing Frank H. Leonard, who lectured on Christian Science, said in part,—

The remarkable progress of Christian Science compels our attention. Although not a Christian Scientist, I realize that when a religious movement, without any great spectacular, fanatical campaign, in the face of the fiercest opposition, can grow in numbers and, what is more, in strength and influence, as Christian Science has done, we cannot dismiss it simply by calling it unorthodox. There must be some good in it; it must possess some strong appeal; and certainly it is worthy of our best consideration.

TESTIMONIES OF HEALING.

My heart overflows with love to God, and gratitude to our faithful Leader, Mrs. Eddy, for the blessings I have received through an understanding of God as Love, made possible by the truth demonstrated in Christian Science.

In early life my health was not good, and as the years went by I became very ill, often being confined to bed for weeks, and was almost constantly under the care of physicians. Finally I was told I could not live six months unless an operation were performed and an abnormal growth removed. I had had two operations, both considered less dangerous than the one now contemplated; but I had a horror of the suffering attending such ordeals and could not willingly consent to another. Again changing doctors, I was treated for some months, occasionally feeling better, but never receiving any permanent relief. As time went on my illness seemed to be more severe, and I would have attacks of heart trouble, when stimulants were resorted to as the only relief. The spine, too, became affected, and again an operation was proposed, to remove the lower joints. My stomach gave me much trouble, and great care had to be taken as to my diet.

At this time Christian Science was brought to my attention by our daughter, who had received help through treatment and had seen many demonstrations of its power over error. I went rather reluctantly to a practitioner, but felt relief after the first visit. I was given nine treatments in all, some of them being absent, and was healed. My old troubles are no more, and with the understanding gained by the study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, we can gladly go on to victory over all error, daily growing in grace and in the knowledge of divine Truth. Our little grandchild was also healed of acute lung trouble when the help of physicians seemed unavailing.

These wonderful demonstrations of the power of God to hëal, in our family, have all been within the past year. For the great spiritual uplift I cannot in words express my thankfulness to God, and my gratitude to Mrs. Eddy for having made possible an understanding of man's relationship to his creator, God, good.

MRS. S. MCCUE SMITH, St. Elmo, Tenn.

To say that I am grateful for what Christian Science has done for me, only faintly expresses my feelings. The psalmist sang, "Bless the Lord, O my soul: and all that is within me, bless his holy name;" and I can readily echo these sentiments, for I have indeed realized that He "giveth to all men liberally, and upbraideth not." Since knowing the truth which makes free, such joy and freedom have come to me that I feel I am in a larger world, and that I have taken a fresh lease of life.

Formerly my life did not by any means reach up to my ideal of what it should be. God seemed far off to me, and my faith, being void of understanding, did not bring answers to prayer; therefore I mistrusted the Bible promises, not realizing that the lack was on my part. My health began to fail, and I was a great sufferer for some years. After trying various remedies recommended by seven doctors, and having had three hospital experiences, and an operation in 1909 for ovarian trouble, inward chronic ulceration, and what was said to be a malignant growth, I was still no better, but rather worse. In 1910 I was ordered to a second operation. Feeling weary of life and suffering, and knowing that there was little hope of recovery, I readily listened to the dear friend who first told me of Christian Science and gave me a copy of the *Journal,* which I read most eagerly.

Stimulated by this new sense of Truth, I got up, dressed myself, unknown to any one, and took a car to the Christian Science reading-room, so eager was I to hear more of this healing power. Had it not been for the assuring words of comfort and help received from those in attendance, I should probably have yielded to the advice of the doctors. Repeating my visit in three days, I found the same loving words of help awaiting me there, and I returned home feeling fully convinced that the healing could be mine. Theirs is indeed a glorious work, and great is their reward, here and now.

The healing work had begun, and with the help of a *kind* practitioner I was soon perfectly well, free from *all pain,* and I have remained so, for "He doeth all things *well.*" What joy to be free from pain and fear of operations and death! Yes, and to know God as divine Love! I am still seeking earnestly to know more and more of this great truth. It is now my one wish so to live that I may help others. For me "old things" have indeed passed away, and "all things" have become new. Many minor problems have been cleared up, and the Bible is a vastly different book. I could not tell all the help this knowledge has been to me in my daily life. I have been able to leave off my glasses, which I had worn for seven years. I can now "run, and not be weary;" and "walk, and not faint." I am deeply grateful to our Leader, Mrs. Eddy, and thankful that I ever heard of Christian Science.

MRS. K. HALL, Woodseats, Sheffield, England.

I am pleased to add that my wife has been perfectly healed of the very dreadful malady from which she suffered so *long,* and that without medical treatment of any kind, for which I am truly thankful to God.

FRED HALL, Woodseats, Sheffield, England.

The few times that I have given my testimony at a Christian Science meeting I have found that it met the need of some seeker, even though it fell short of what *I wished* to express. I therefore send out this *little message, hoping* that it may be read by some one who needs it.

For nearly twelve years we have had the blessings of Christian Science in our home. The sickness of our eldest child was the immediate cause of my taking up the study, although I had previously looked into it from a religious standpoint. I had been hungering for spiritual food since my early girlhood, and had taken much interest in many philosophies and religions, especially the different sects of the Christian religion. I finally landed in the Unitarian faith, this being the one to which I felt I could honestly adhere. I rested there, trusting that in the great beyond I should find the light. Having had some talk on Christian Science with a friend, and after having tried to understand the text-book, I noticed one Sunday in the morning paper that the subject of the sermon at the Christian Science church was "Truth." I went to hear what the Scientists knew about Truth, and what impressed me most about the service was the impersonal nature of the sermon, which appealed to me very strongly.

Soon after this we decided to try the treatment for the eldest child, as our latest medical venture had again proved unavailing. She had suffered all her young life from nervous and stomach trouble, and I, with the care of her and a younger child, was on the verge of collapse. She was starving for something she could digest in a material sense, and I was suffering the same way mentally. In a week's time she was eating of everything we ate, even meat, which before seemed impossible. She is now a well and happy young girl. I myself took two more weeks' treatment because I felt I needed it, and immediately put my newly acquired knowledge into practise by overcoming a sense of chafed skin in the younger child. Since then Christian Science has been our only remedy for discordant conditions of all kinds, physical and mental. A most wonderful demonstration of the power of Christian Science was also made at the birth of our boy three years later, the condition being extremely unfavorable from a physician's point of view.

Digitized by Google

My spiritual need is being met daily, and indeed I am most grateful for the knowledge of Truth which enables us to begin here and now to live according to the precepts and example of Jesus, and to teach our children to obey the truth instead of only the person. The *Quarterly* Lesson-Sermons give us a systematic study of the Bible and unfold its spiritual meaning, which is the true meaning and is our daily bread.

At first I was prejudiced against the continual mention of Mrs. Eddy's name in connection with Science and Health, but I soon saw that to be thoroughly honest we must give credit where credit is due, and every day I am learning to appreciate more fully the scope of the apostle's wonderful message, "He that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?" That is, if we withhold gratitude to our earthly benefactors, the channels through whom good is brought to us, how can we be grateful to God, as we often profess to be?

MRS. LOUISE K. EPPICH, Denver, Col.

For the many blessings received during the last eight years that I have been studying Christian Science, I wish to express my gratitude to God for having been so lovingly helped "on the way." I became interested in it through the healing of a young violinist of what was termed "player's paralysis," which kept him from playing for two years. Christian Science was brought to the notice of his family and treatment was started. Two months later the young man was able to go back to his music perfectly healed. This demonstration led me to think, and I began to study the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I soon found out what was meant by Jesus' words, "The truth shall make you free." It was the truth which made this young man free, and with my little understanding of it I was able to make my first demonstration. My mother rose one morning with a very bad headache and dizziness, for which she was about to go to bed; but as it was unusual for her to be ill it caused no little anxiety. I thought this would be a splendid chance to prove Christian Science, so I started to work the best I knew how, and to our great surprise she was instantaneously healed.

I have been healed of many physical ills, and would like to tell of one of them, which was a most painful felon on my thumb. I tried to overcome the attack of error myself, but the suffering was too intense. It went on for a night and a day, when I decided to call up a practitioner. I did not know what the trouble was at the time, and could only telephone the practitioner that I had a most painful and very much swollen thumb. Half an hour after calling for help the pain stopped suddenly. It was like awaking out of a dream. Words are inadequate to express my gratitude for this quick relief. At that time there were two men in the office who had suffered from the same ailment. Their thumbs had big scars where the bone had been scraped, and one had the last joint taken off entirely. Both had suffered for days and were unable to sleep, besides going through painful operations. What a contrast between the treatment in the old way and in the Christian Science way! I lost only one night's rest and my thumb nail, which soon grew on again, and only a few hours from my work.

In my present occupation as a salesman, to which I thought I could never go back because of a strong dislike for it, I have found Christian Science of the greatest help where fear and my sense of personal responsibility hindered. I have also found that all honest work is God's business, and that in it there can be no such thing as failure. There is no place where God, good, is not, and as a result I never have to fear as to results not being good.

These are only a few of the many helps and demonstrations which Christian Science has brought to me; but they do not begin to compare with the spiritual blessings, the peace of mind, the hope and faith, the better understanding of the Bible, the destruction of sin, fear, and anger, and a strong tendency to criticize. I am more ready to forgive, and I try to see the real man separate from all error in my thoughts of others. With these first steps in Truth I begin to see more of the infinite God who is all-power and all Love. As my sense of error is uncovered through the teachings of Christian Science, I see the realities of Spirit. For all these blessings I am indeed grateful to our dear Leader, Mrs. Eddy. Let the work of truth go on.

ORIEN F. NARVESON, Chicago, Ill.

At least twenty-five years ago Christian Science was very lovingly talked to me by one who knew, one who had been healed from long invalidism. It would seem as if this were slow progress to have advanced no farther than can be seen by my failures; but what a blessed journey it has been to look back upon! Ten years I sought the truth, but the last fifteen have brought constant growth in the understanding of the Love that heals. Many demonstrations have been made for me by others, but I can see that in the last five years I am surely learning to work out my own salvation, to see how by earnest effort I can realize joyousness, health, unselfishness, confidence, and courage for myself, and how I can give these same treasures, the truths of being, to others.

The happiest thing to record is the lifting of the burden of fear which I had placed upon my only child. So long as this fear clutched at my heart when the hoarse cough sounded in the night, these colds continued to come frequently; but even then, the mental work having been done, the child never seemed for a moment conscious of discomfort, and this showed me where the remedy should be sought. I worked as never before to eliminate my fear, and by repeating the word of Truth until the realization became clear, the ailment departed. It is now two years during which he has been entirely free. Severe attacks of stomach trouble, temper, fevers, etc., have also been healed immediately. When he was born there seemed to be such a storm of criticism and hatred aroused in my circle of friends, as the result of opposition to Science, that the conditions appeared difficult to meet; but the work done for me held my family loyal to my wishes in my hour of need, though they were sure I was dying. I was thus prevented from being overwhelmed by doctors and nurses and so left free to turn to God alone; therefore the outcome was triumphant. Love protected mother and babe as we tried to follow in the path made plain nineteen hundred years ago. How thankful I am that nothing can turn one back who really starts on this glorious way; no seeming failures or tragedies of life can prevent our going forward. No matter how delayed our demonstrations, we must advance if we are truthfully doing our work and constantly keeping at it.

These things I know for the truth because I have proved them for myself, and no one can take this knowledge from me. All sophistry and subtleties of argument are not for me, for this simple statement is evident truth and logically provable by any one,—God is Love, and God is All.

GRACE FLETCHER KING, Detroit, Mich.

For many years I was a student of the Bible and an active worker in the church, but I was always in poor health and believed that God sent sickness to His children to prove to them His love, for the Bible says, "Whom the Lord loveth he chasteneth." I worked on and my health got no better, but I felt that God wanted me to do greater work for Him than the work at home, so I prepared to be a foreign missionary. When I had the college study and part of the medical study completed, I was in a very bad condition financially, and could read very little on account of weak eyes. I was taking seven kinds of medicine for stomach,

Digitized by Google

bowel, and heart trouble, the latter said to be organic, and with continual pain in my head and side I thought I had no friend anywhere. I studied medicine to learn of a way to cure my many ailments, and I worked in religion to save myself from eternal torture.

My need was great in these many respects, and I wondered if there was a way of delivery for me. Yes, when I was fully ready, Christian Science found me. My physical healing was slow, but the change could be noticed from week to week. I was very anxious to follow the instructions of my practitioner, so I stopped taking medicine at once. Then I studied the text-book carefully, and soon saw that Science and Health would teach me the way to know God, the author of all harmony.

In a year and a half my financial condition was what I had long wished it to be; I could also eat all kinds of food; while I found help and inspiration in the Bible and the Christian Science literature, and all whom I met seemed to be friends. The fear of eternal torment has left me, and I feel thankful to God for Mrs. Eddy's discovery of this truth. The daily work in Christian Science proves God to be what He really is. In Science and Health we read that "God is natural good, and is represented only by the idea of goodness; while evil should be regarded as unnatural, because it is opposed to the nature of Spirit, God" (p. 119). What more did I need, and what but the truth as here stated has healed me?

The fear that I would be disliked by some because I am a Christian Scientist has entirely left me. My parents, as well as everybody else, seem to be pleasanter than ever. In my school I find Christian Science very useful, for the work is agreeable and interesting now, while before it seemed hard and unpleasant. I am glad that there is a way to be happy and peaceful now and forevermore. It is my desire to be a faithful student of Christian Science and to live the life outlined in the Bible as understood in Science and Health.—JOHN W. BOEHR, Henderson, Neb.

Before relating the following experience, I would like to quote from page 390 of "Science and Health with Key to the Scriptures" by Mrs. Eddy: "When the first symptoms of disease appear, dispute the testimony of the material senses with divine Science. Let your higher sense of justice destroy the false process of mortal opinions which you name law, and then you will not be confined to a sick-room nor laid upon a bed of suffering in payment of the last farthing, the last penalty demanded by error."

Late one afternoon I was suddenly taken ill, having all the symptoms of a severe attack of lung trouble, these symptoms being similar in every respect to those of a like attack a few years previous, before I became interested in Christian Science, at which time, under *materia medica*, I was confined to bed three weeks, was in the house six weeks, and coughed for three months. This time, being alone in the house, I telephoned for a friend, a Christian Scientist, to come and spend the night with me. It was two hours before she came, but from the first feeling of illness I began to read our text-book, "Science and Health with Key to the Scriptures," and to apply the understanding of God which it gave me. When she arrived, I remained up for some time, talking of the things of God, and although the symptoms seemed not to abate in the least, I had risen in thought sufficiently to feel fear disappearing, and when my friend offered to sit up in order to be near me, I fearlessly refused. During the early part of the night my rest was much disturbed and my temperature was high, but in the intervals between naps I kept on working to realize the allness of God.

Some time between midnight and daybreak I awoke in a profuse perspiration, the fever having been entirely overcome. In the morning I was unable to arise, owing to a sense of extreme weakness, whereupon I asked that the Lesson-Sermon for the week be read aloud. When the reading was finished, I felt refreshed, strong, and eager to get up and go out to breakfast. (We were taking meals out at that time.) Although for two days my breathing was much affected, and the trouble seeming to be centered in the lower part of the right lung, I was in no way hampered, going out and enjoying three meals each day, performing all daily duties freely, including the singing of a difficult solo twice on the following Sunday, which day was the third after I had been taken ill.

This is but one of many proofs which have been *mine of* the efficacy of Christian Science in healing, *and I have* spoken especially of this to show how necessary it is to "meet the incipient stages of disease" (Science and Health, p. 390). I have also been healed of a severe condition of the eyes, of acute stomach trouble, the annual occurrence of a throat ailment, and have individually experienced the binding up of a broken heart through the light which has come to me by the earnest study of the Christian Science text-book.

I am grateful to Mrs. Eddy for the opportunity of learning that God and His infinite manifestations are All, and am striving to live my gratitude by realizing and reflecting the Mind "which was also in Christ Jesus."

MARCIA EDDY STOWE, New York, N. Y.

[Translated from the German.]

As the past year has advanced I have looked back and felt like expressing my deep gratitude for the good it brought me, more especially for the long-desired German translation of our text-book, "Science and Health with Key to the Scriptures." During this year I have also experienced Truth's healing power, for through the consciousness of man's oneness with God I have recovered my right of perfect eyesight. The eye trouble dated back to my childhood days, when I was told that it was a case of hereditary weakness, a sort of family legacy. Through the use of *material* means it became possible for me to wear medium strong glasses, but sorrow, disease, and their supposed concomitants had such a detrimental effect that I became unable to read even with these.

At that time a dear Scientist remarked to me *that in* God, Truth, there is no weakness, that God is all-power. I immediately began to work along the lines of divine Science, wherein all good is spiritual, and in about four months' time I was able to sew without using glasses, and six weeks later to read. This glorious proof of man's oneness with God meant a great deal to me in the way of understanding Mind's perfection. I would also like to give thanks for the thorough healing of a stomach trouble of thirteen years' standing. Nine months after the healing of another trouble (see *Der Herold der Christian Science* for March, 1911), I realized one day that I had had no stomach trouble for quite a while, and in a rather doubtful attitude of mind I wondered whether this ill had been healed along with the other. The very same day the old pain manifested itself, but upon my request treatment was taken up by a Christian Science practitioner in Stuttgart, and continued for about a fortnight, and since that time, two years ago, I have been completely healed of the trouble and of the fear of it. Praise be to God!

FRAU FRIDA SCHLOZ, Neuhausen a. d. Fildern, Germany.

I want to express my appreciation of the many helpful testimonies which I am permitted to read in the *Sentinel*. In the search for a surer basis for practical Christian living I came to Christian Science, and it was not long before I learned that I had found a sure guide. I was in comparatively good health, and did not at first think much of physical healing, but I suddenly found that my eyes were healed of a sense of defective vision through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. Since that time, several years ago, I have had many convincingly clear demonstrations of God's allness.

Digitized by Google

An acute attack of rheumatism was cured in a few days; a live nerve was extracted from a tooth without pain; at one time a severe cold was vanquished quickly; and a bad eruption, said to have been caused by poison oak, was routed in the same manner. Many minor ills, which in the old thought would have been nursed and made much of, have been speedily put out of consciousness.

Best of all, however, is the daily exercise of right thinking. Christian Science is teaching me to think in a more orderly and harmonious way, and I am grateful beyond expression for such practical teaching, which explains the Christ-method of healing. That I may do my share in bringing this truth to others, is my daily prayer.

LILLIAN N. LANGE, Portland, Ore.

I cannot find words with which to express my gratitude for what Christian Science has done for me. I was delicate all my life, never knew a well day. In my infancy the doctors had said I would never be well, nor would I be able to do without eye-glasses; in fact, I could hardly see across the room without them.

Two years ago I learned of Christian Science. I called on a practitioner for treatment, and to my joy I was healed of all my distresses, including biliousness, a throat trouble in the worst form, a chronic bowel disorder, rheumatism, headaches, etc. Now I can walk any distance without fatigue. I have had several teeth extracted with very little suffering, for I telephoned the practitioner to treat me. Formerly I would suffer several days and be very sick as the result of such an experience. I have also been healed of nervousness, and of a nasal growth, which disappeared a year ago. I am, in fact, a new woman, and now life seems well worth living. I can do any amount of housework and not feel tired. Later I was healed of hemorrhage from the bowels, from which I suffered every three or four months for a year. My healing has been permanent.

I am indeed grateful for the many blessings I have received through the knowledge of Christian Science, and I thank God every day for the revelation of this truth through our dear Leader, Mrs. Eddy.

MRS. MARTHA C. FISHER, St. Louis, Mo.

I am a lad of seventeen, and two years ago, when I was told of Christian Science, I went to the church, and what I heard there was so much to my liking that I have attended regularly ever since. I have been wonderfully helped many times, in cases of fever, bilious trouble, etc. Not long ago I contracted a bad cold which seemed to affect my lungs. One of the family who opposed Christian Science wanted a doctor, but I insisted on having a practitioner, and in less than a week I was able to return to school, although my illness was very serious from a material point of view.

Words cannot express how glad I am for this beautiful truth that has come to me so early in life. I am thankful to God, and grateful to our dear Leader, Mrs. Eddy.

OLIVER WILKES FISHER, St. Louis, Mo.

For two days I had suffered from an old ailment, namely, ovarian trouble, but I started to attend a Christian Science lecture. I reached Music hall with great difficulty; with every step came a sharp pain, but the speaker dwelt on the real man of God's creating, who is made in His image and likeness, and who therefore partakes of His nature, and who is spiritual, and at this point in the lecture I was healed. I feel sure that the healing is permanent.

MRS. M. A. WILSON, Newark, N. J.

The purposes of the Almighty are perfect and must prevail, though we erring mortals may fail accurately to perceive them in advance.—LINCOLN.

FROM OUR EXCHANGES.

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth.*]

What does the message command to us here today? The building of a highway; a road by which the people may travel to a completer realization of the kingdom of God. The existing ways are plainly insufficient. The old well-worn ways of religion are deserted. Nothing can disguise the fact that the old paths are no longer frequented. Whether in matters of thought or practise, an enormous change has come over our age, and is ever more widely manifesting itself in the defection of vast masses of the people from the beliefs and the guidance which contented our fathers. This may be regarded as an apostasy from the one hope of the world, and strenuous efforts may be made, by repairing the roads and erecting new signposts, to attract pilgrims back again. But very few would be found willing to identify these ancient roadways with the way of life, while it is a matter of history that humanity never returns to walk again a way it has once forsaken.

It is a commonplace also, that the old roads are hopelessly divided. The unhappy divisions of religious bodies are a standing confusion to the people and a complete refutation of all reliability. If all these roads lead to the same place, then some of them cannot go very straight, and there must be great waste and useless competition in keeping up so many of them. No doubt there are those who declare that only one of these roads is the right one, while others will half-heartedly claim that a variety in roads is a thing in itself desirable. But religion is essentially unifying, and this diversity shows that the present ways are not constructed on purely religious principles.

But even those which exist are so indistinct in their outline, and so wavering and uncertain in their direction, that few can be persuaded to entrust themselves upon them; for the fact is, the old ways of religion give us very little or no direction for the present condition of the modern thought. What is chiefly wanted today in a religion, is the recovery of a simple guiding instinct which will prove powerful enough and universal enough to knit all classes and nations together in a common aim, which will bring to the humblest mind a solvent of all heart problems, and will find a way out of the intolerable class division and industrial confusion of our times. It may be replied that the old paths are sufficient for this. If they are, then they are not clear, either to those who walk them or to those who refuse them. Who can maintain that Christianity, as taught by the confused and warring authorities of our times, offers anything that can be understood by the people, or is powerful enough in times of crisis to sway the folk to the ways of God?

Such a religion we must have, or be lost in the wilderness, for one other thing is clear,—that without religion man cannot exist.

[*The Continent.*]

In the church and in related lines of social service one can find everywhere excellent men who are indeed doing good in the world, but not nearly so much good as their native capacities make them capable of, nor the good which their first enthusiastic service in active life promised. And the reason for their falling short, when you come to look into it, is very plain. The trouble is not, as usually assumed, that these men have lost in maturity the fire and force of youth, but simply that they are now well thought of and comfortable in what they are doing, and they dread losing prestige or prosperity if they should try something new. So the successful man keeps on doing the old thing in which he has won reputation and a livelihood, the thing he knows he can do because he has done it. Yet all the while some other better thing is calling to him, knocking at the door of his heart and conscience; and it is a fine, brave, noble,

Digitized by Google

inspiring thing which he right well knows that somebody ought to do. Yet he will not try it; he might "lose out."

Still, in the depths of his soul he knows that if it was not for jeopardizing what he has already gained, if he was out on the ground and had to start new in life, he would be plunging into that greater service like a crusader. It is nothing but his success which holds him back. This is a condition by no means peculiar to the ministry of the church. It works everywhere. But just because the ministry is the one calling where the summons to service should be strongest, it is plainer to see in that vocation than anywhere else how success "doth make cowards of us all." Hence it is not invidious to turn there for illustration.

[*The Universalist Leader.*]

To undertake to tabulate a social or ethical code from the Bible is as unwise as it has been to tabulate the theological creeds. The Bible is a book of religion. It is the record of a people's search for righteousness and for God. All its lights and all its shadows belong to that age-long struggle. That it is optimistic, prophetic, is witness to the unconquerable moral idealism of Israel. Its faith is a vision, a hope, a dream, an aspiration. It is not a dogma, or a program which lures Israel on, ever on. It is deep calling unto deep. It is spirit speaking to spirit. It is the testimony of God to things unrealized.

At the center of the Bible we are in the presence of a world process. It is a spiritual process, but it holds Israel in the hollow of its hand. Here is but one act in the divine drama, but we become aware that all that has gone before and all that will come after is a part of the story. This is why the Bible is immortal. It is the record of an immortal longing and desire. It describes in philosophy, in song, in parable, it portrays in prophecy and apocalyptic vision, the search of man for good and for God. Until that search is ended in a world victory as vast as the world process which moves toward it, we shall linger over the story of a people who set that goal, and lifted that hope above the tumult of the world.

[*The Christian Work and Evangelist.*]

The religion of the modern man! You may ask, "Is not religion the same yesterday, today, and forever, and is not the religion of the man of today the same as the religion of the man of yesterday?" The religious impulse is always the same. The hunger for righteousness and the impulse toward God, which constitute the kernel of religion, are the same in every generation; but each generation, if it is alive and growing, must make for itself new thought forms for the expression of this eternal religious impulse, must translate its religious experience into terms of its own thought and life, must adopt new methods and higher ideals for the application of the principles of religion to the needs and problems it confronts. So it is quite right for us to speak of the "religion of the modern man." The simple fact is, that we have been ushered into an altogether different world from that in which our fathers dwelt. We are living in a new and vastly larger universe. There have come into this modern age new view-points, new perspectives, new conceptions of truth, new emphasis on old truths.

[*Zion's Herald.*]

Zeal is an excellent thing, if it be the product of high moral motives, and directed by an intelligent plan to useful ends. The Word of God, which contains many exhortations to fervency in spirit and diligence in business, advises us that our zeal should be "according to knowledge."

[*The Standard.*]

The trouble with the pulpit of today is not so much the higher as the drier criticism. Congregations are thirsting for living water.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been *translated* into the German language and printed as a *special edition* with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal*, printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been published in pamphlet form, and is ready for distribution. Thirty-two pages and cover.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

These pamphlets are for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 103 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science: containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each, twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the Blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 85 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ .05	$ .06	$ .07
Twenty-five copies . .	1.00	1.15	1.30
Fifty copies . . .	1.80	2.05	2.40
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913; XIIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

ITEMS OF INTEREST.

National.

New Hampshire, through its attorney-general, has presented conditions which, if enforceable, may seriously imperil the purchase by the government of forest lands for conservation. Under the terms set forth, the federal government must surrender to the state not only the title of all public waters, but in addition the right of access thereto, together with the "right and power to grant any public franchise" upon the reserve. The effect of this would be to let the federal government pay the bills and give to the state or to the water-power companies the heaviest revenue-producing natural resources. This attempt will be firmly resisted by the administration.

The interstate commerce commission has ordered all common-carrier telephone companies to furnish, by Oct. 1, a detailed statement of their organization and equipment as well as their physical and financial operation. This is the first order of the commission since the formal beginning of the telephone investigation. As soon as practicable the commission will hold public hearings in various parts of the country, at which testimony will be taken as to the rates and operating methods of such companies as come within the jurisdiction of the commission.

Governor Miller of Delaware has appointed commissioners to confer with similar commissions appointed by the governors of Maine, Vermont, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, New Jersey, and Maryland, to draft uniform laws regulating the operation of motor vehicles in these states. The Delaware commission will report its findings to the Legislature in 1915.

An important change in the parcel post service went into effect Aug. 15, increasing the weight of packages that may be sent short distances, and decreasing the rates on packages delivered within a few miles of the post-office where they were mailed. Previously the weight limit has been eleven pounds, but hereafter the post-office department will carry packages that weigh as high as twenty pounds for delivery within the second zone.

The destruction of the last dike in the Pacific section of the Panama canal, between the Miraflores locks and the ocean, will take place about Aug. 25. This will establish uninterrupted water communication for vessels of light draft between Miraflores and the Pacific.

The total amount of excavation from the Panama canal in July was 3,241,968 cubic yards as against 2,659,424 cubic yards in June. Concrete laid in July totaled 17,568 cubic yards as against 32,642 cubic yards in the previous month.

Governor Sulzer of New York has been impeached by the New York Legislature.

International.

The New South Wales government, in pursuance of their policy of closer settlement, are building a railway between Wyalong and Lake Cudgellico in the Northern Riverina, which will open up a vast area of arable land for agricultural purposes. Within the vicinity of the line there are 2,037,500 acres of excellent land. The railway will traverse seventy miles of the finest wheat country, with an average annual rainfall of eighteen and one half inches. Altogether there are about six million acres of crown lands in this territory suitable for wheat growing, provided railway communication can be established.

More than twenty million acres of land in the state of Tamaulipas, Mexico, have been listed preparatory to dividing the different tracts into lots of one hundred to two hundred acres and selling them to the poorer people on long time and at low prices. This work is being performed by what is known as the agrarian commission, appointed by the Carranza or constitutionalist provisional government. The owners of the land are not being consulted in the matter of thus disposing of their respective properties.

The peace treaty between the Balkan states was signed at Bucharest Sunday morning, Aug. 10. It provides that the Roumanian army shall evacuate Bulgarian territory in fifteen days after its signature, and the Servian and Greek armies in three days. It also provides for arbitration by Belgium, Holland, or Switzerland, in the event of a disagreement over the delimitation of the new frontier. Bulgaria engages in the treaty to begin demobilization immediately.

The foreign affairs committee of the Chamber of Deputies of the Argentine Confederation has reported in favor of the ratification of the agreements reached by the Fourth Pan-American Congress of 1910, obligating the republics of America to submit to arbitration all pecuniary claims which they are unable to settle amicably through diplomatic exchanges, and to protect copyrights on literary, scientific, and artistic works and on trade-marks.

France last week gave back to Russia the great bronze bell that was taken from the cathedral at Sebastopol and brought to France as part of the spoils of the Crimean war. Since then it has been in one of the towers of the cathedral of Notre Dame in Paris. The bell, which weighs upwards of three tons, was formally presented by a representative of the French ministry of fine arts to the Russian ambassador. It will shortly be sent to St. Petersburg.

The Norwegian Storthing has voted by 84 ayes to 34 noes that a concession be granted to the English Aura Company, which had applied for permission to undertake works regulating some of the waterfalls in Romsdalen, one of the most mountainous as it is one of the most beautiful valleys in Norway, in order to utilize the water-power there.

Mr. Lloyd-George, during a speech on the finance bill in the House of Commons, gave grave warning to Europe in the course of a passionate attack upon the development of armaments. The nations, he declared, were scaring one another to death, and in no country was there a party which dared face the unpopularity of making a change or accepting the responsibility of undertaking a reduction.

A Belgium syndicate has signed with the Chinese minister of communications an agreement for a loan of fifty million dollars at 5 per cent interest in connection with the new railroad to be constructed in the provinces of Shansi and Szechuen. The cabinet approved the transaction, which, however, has not yet been submitted to the Parliament.

The result of the census made in Italy in 1911 has just been published by the government. It shows a total population of 34,671,377, and illiterates constitute 38 per cent of it. The region that gives the smallest percentage of illiterates is Piedmont, with 11 per cent, while the maximum is reached in Calabria, with 70 per cent.

The strenuous fight over the three years' French military service bill has recommenced, but it is now transferred to the budget discussions, and an effort is to be made to oppose the granting of the necessary means for giving practical effect to the new military law.

The British Parliament was prorogued on the 15th, and will not reconvene until February next year unless something extraordinary happens.

Italy will take part in the Panama-Pacific exposition and has appropriated two million lire for the purpose. Great Britain thus far has declined to take part.

Industrial and Commercial.

The new self-righting flying apparatus invented by Lieut. J. W. Dunne, a retired British army officer, underwent successful tests on the Aerodrome at Villacoublay, France, last week. From time to time the aviator removed his hands from the levers and held them above his head, to show the automatic equilibrium of the machine, which retained a perfect level even when it encountered eddies, air-pockets, or squalls. The aeroplane is a biplane, shaped something like an open-winged sparrow, or the letter V.

A conference has been held between treasury officials and bankers of the central West regarding the distribution of government deposits to assist in moving the crops. The fifty million dollars of federal funds about to be deposited will be increased to one hundred and fifty million dollars if necessary.

Development of the East Boston water front to make available one hundred and seventy acres of flats for manufacturing and transportation facilities is proposed by the directors of the port of Boston as the proper way to spend the remaining part of the nine million-dollar appropriation.

In the fiscal year of 1913 ending June 30 the United States used approximately eight billion pounds of sugar. Of this great quantity, fully one half was imported from foreign countries, one fourth came from the nation's island possessions, and the remainder was produced at home.

The New York, New Haven & Hartford railroad is making preliminary borings for data for the new four-track bridge which it will build over the Thames river at New London, Conn., at a cost of about four million dollars.

A union station costing three million dollars is to be erected at Dallas, Texas. The construction of terminal tracks will cost two million more.

It is estimated that fifty thousand persons are out of employment in Berlin, Germany.

Internal revenue from all sources for the fiscal year 1912-13 totals $344,424,453.85.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

A LAW TO ONE'S SELF.

M. G. KAINS, M.S.

ONE of the most eloquent and significant passages in the Old Testament is found in the twenty-second chapter of Job. It begins at the twenty-first verse, "Acquaint now thyself with him [God], and be at peace: thereby good shall come unto thee." Then there is outlined what the "good" shall be. The seeker after Truth shall be "built up," his iniquity shall be "put away;" he shall "lay up gold as dust, and . . . as the stones of the brooks;" he shall have the defense of the Almighty, to whom he shall make his prayer with the certainty of being heard; and as the climax we find this declaration: "Thou shalt also decree a thing, and it shall be established unto thee: and the light shall shine upon thy ways."

Here is more than a prophecy; it is a law,—a law always too little understood until our day. Though countless Christians have believed the preceding verse, which reads, "Thou shalt make thy prayer unto him [God], and he shall hear thee, and thou shalt pay thy vows," and though they have striven to live up to what they firmly believed to be the purport of these words, and have prayed earnestly, and have had their prayers answered more or less definitely in many cases, yet very, very few until recently have known what to make of the declaration about the establishment of the "decree."

The statement cannot be understood except in the true way; and the true way seems to be at variance with the supplicating practise that has been so popularly believed to be the only way of realizing God's presence and power. Not until the advent of Christian Science has this passage had definite significance, except perhaps to the minds of a few spiritually enlightened individuals who have not left any tangible record of their way of decreeing, or proofs that the text was found to be scientifically true and effective in their time, and therefore likely to be true also in this day and age. Without Christian Science it has no explication.

In "Miscellaneous Writings" (p. 12) Mrs. Eddy iterates the sense of this verse in the declaration that "every man and woman should be today a law to himself, herself,—a law of loyalty to Jesus' Sermon on the Mount." But what is it to be a law to one's self? In the popular sense it is to defy the moral or legal code of the land, to live at variance with the dictates of society, to disregard the rights and opinions of others. In Christian Science, however, as Mrs. Eddy uses it in the passage quoted, it means the most definite, distinct, and undeviating adherence to the higher law of God as presented by Christ Jesus on the basis of spiritual understanding, the only basis upon which God can be worshiped "in spirit and in truth" and man be accorded his full rights and privileges as a child of God. In this sense it is certainly a defiance to the so-called laws of the carnal or mortal mind, which in itself is "enmity against God;" but obedience to spiritual law is the whole purport of the Bible, and it is therefore constructive of spiritual living.

To be a law to one's self on this basis, is to have an understanding of God which will not stop with mere honorable dealings with our fellow men (a natural and necessary consequence of the understanding), nor will it be content with worshiping God in a perfunctory or supplicatory sort of way. No, it will not stop short of the possession and expression of both the apprehension of the significance of the text quoted and the comprehension which will enable us to "decree a thing" and see it effectually "established" unto us in such ways as the healing of the sick, the positive abandonment of sin, the suppression of false appetites, and the indulgence of various passions and vices; in a word, in bringing harmony out of discord through the assertion and manifestation of the integrity and power of Truth in us. In Psalms we read: "I will declare the decree: the Lord hath said unto me, Thou art my Son; this day have I begotten thee." What other decree could compare with the declaration of sonship in God, as spiritually and scientifically understood?

In order to "decree a thing" and have it "established," or, as we say, to "be a law to ourselves," we must truly understand God, at least in some measure. We must know, rather than merely believe, that God is omniscient, omnipotent, omnipresent, and omniactive, in one word infinite, and therefore perfect. We must know that a perfect creator could not make an imperfect creation, and that therefore any apparent imperfection is only apparent, not actual or real, but that the really perfect exists in spite of the seeming. Hence, by understandingly declaring for the perfection of any specific part of God's creation, we will be decreeing a true thing in accordance with God's law, and therefore the "decree" must necessarily be "established" because it is in harmony with this reality and law.

In support of this contention we have only to look at the countless cases of healing performed through the ministration of Christian Science. Every practitioner and every student of Christian Science who performs these modern miracles, either for himself or for others, demonstrates the true significance of the text, for each one "decrees" the truth and establishes it. Each one knows that, as our Leader says, "the sick are not healed merely by declaring there is no sickness, but by knowing that there is none" (Science and Health, p. 447) in God's creation. And as the sick are healed and the sinful are reformed, the student or the practitioner realizes the significance of the closing words spoken to Job in the verse quoted, "The light shall shine upon thy ways."

As each "decree" becomes "established," the conviction will grow that "power belongeth unto God," and that whenever we declare anything in harmony with God's law and are thoroughly persuaded in our own minds concerning the truth which we think or speak, we may certainly look for our declaratory prayers to be answered. Therefore, no matter how strong the testimony of the material senses may be, no matter how many people may believe in certain inharmonious conditions, we can intelligently deny such testimony, affirm the truth, and establish it. "The more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love" (Science and Health, p. 410).

PERSONALITY OF GOD.

ALFRED FARLOW.

THEOLOGIANS have sometimes raised the objection that Christian Science denies the personality of God. Nevertheless, the declaration of His infinite personality is the major premise of every Christian Science syllogism, and he who accepts it needs only to be consistent therewith to endorse all that Christian Science teaches.

Mrs. Eddy has written extensively on this subject and has left no doubt as to her understanding respecting it. Not the least significant of her explanations is that found in "Rudimental Divine Science" (p. 1), where she says, "The word *person* affords a large margin for misapprehension, as well as definition." She then proceeds to enumerate the various meanings of the word which are given by lexicographers; as, for example, "'a living soul; a self-conscious being; a moral agent; especially, a living human being, a corporeal man'" (p. 2).

It is evident that none of these definitions can be correctly applied to Deity, and the important question is this, Which of these terms, if any, may be fittingly used, and who is to be the judge as to the correctness of any given appellative? One cannot intelligently choose a definition of God from the dictionary unless he himself has a demonstrably true knowledge of Him, and who, we may ask, has the authority to define Deity? The importance of such a knowledge is expressed in the words of the Master, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Here the Saviour sets forth in unmistakable terms the fact that the eternity and substantiality of being, for which all religionists seek, is to be obtained only through the understanding of God and His manifestation. On another occasion, when imparting a lesson in the rudiments of divine Science to the woman of Samaria, the Master said that God is "Spirit," and thus he gave a standard and authoritative definition of Deity.

Again on page 2 of "Rudimental Divine Science" Mrs. Eddy writes, "God is personal, if by *person* is meant infinite Spirit." While recognizing the inadequacy of the word personal, she expresses her preference for the word individual, since it is less confusing. If, however, the word is applied to Deity, it should be properly defined. Without doubt the nature of the personality of God is misunderstood by many, and if this term is to be used with reference to the Supreme Being at all, it should be employed with its deific rather than its human meaning. Those who take issue with the teaching of Christian Science regarding the personality of God, should be explicit in defining their own sense of such personality in order that their criticism may be intelligent and just.

It is useless to quibble over the technical meaning of words. What we need, and what Christian Science teaches, is a demonstrable understanding of the divine nature. We should first settle the question as to what God is, and then seek for and use those terms which most exactly describe this being. The Century dictionary refers to two "conceptions" of God, which are designated, first, as theistic, "in which God is regarded as a personal moral being, distinct from the universe," and second, as pantheistic, in which God is regarded as "identified with the universe." Thus, by implication, it defines the personality of God as a being who is distinct from the universe, and this in opposition to the pantheistic belief that God is identical therewith, although it attempts no explanation of the essence of the divine personality. Christian Science accords with this conception of the personality of God, and is therefore properly classified as "theism" and as opposed to "pantheism."

Lexicographers refer to the word person as having originated from the Latin "*per*, through, and *sonare*, to sound," but as far as we have been able to discover, they do not show distinctly how the word finally came to be applied to a being. The Century dictionary gives "*personare*, sound through, resound, make a sound on a musical instrument," and also "*persona*, a mask for actors." Here one might speculate that the word person originally meant the presentation of an inward individuality, through a particular outward manifestation, and hence that the original meaning of the word person as applied to a being referred to one individuality as distinctive from another. The Latin terms from which the word originates give us only the one point, namely, that person refers to a distinctive individuality. It gives us no information whatever as to the nature of the individuality, whether applied to God or man. The Century gives "self-conscious being" as one definition of person. It does not, however, confine its meaning to this definition, but simply names one of the current uses of the term, while, in keeping with other lexicons, it also defines the word person as a human being. Thus we may note that the dictionary gives us no distinctive definition of the personality of God, and no final or restrictive definition of the word person. If, therefore, the term person is to be applied to Deity, a proper definition of the term should accompany its usage. The lexicographical definition of person as "self-conscious being" may be intelligently applied to Deity, but it should be accompanied with other terms and definitions in order that we may express exactly and comprehensively the nature and essence of God.

In Christian thought the word God is universally associated with the word good, which thus names a characteristic of Deity, and in Christian Science good is used as a synonym for Deity, a fitting name for the Supreme Being. The term infinite Spirit is also used to define the divine nature. The Scriptures declare that "in him [God] we live, and move, and have our being," and thus they teach that God is the Life of man, that the cause of all being is divine Mind. The Scriptures make the further declaration that "God is love," and that "Spirit is truth;" hence, it is proper to say that the personality of God is infinite Spirit, Life, Truth, Love, good. Christian Science further defines God as Mind, and this Mind as self-conscious being; but the being of God is infinite, hence, God is All. It is this understanding of God which heals sin and sickness in Christian Science.

As God existed before the word person, we should first inquire, What is God? and this alone can answer questions as to the personality of God. If a given term is to be applied to Deity, it must convey a meaning which is synonymous with the term God. God will still be good, Spirit, Life, Truth, Love, whatever we may name His individuality, or whether we name it at all.

"BE STILL, AND KNOW."

KATE W. BUCK.

SOMETIMES, in attending Christian Science services, a vague desire has formulated itself in the writer's mind that the same rule which prevails in Quaker meetings as to silence preceding service might be established here. The need has been felt so often that perhaps this thought has occurred to others also, hence the hint; for each follower of the faith which sets free, craves above all things else the most effective and helpful results from every service. To many, the quiet hour so necessary to those who have learned the way in Christian Science, is not always easy to find at home, especially on Sunday morning. Perhaps they go to church early, in order that they may be still, thus getting into that receptive mental attitude to which alone the greatest good can come. That the quiet they seek should be disturbed in any way, brings a sense of disappointment, especially as the scraps of conversation are about all sorts of things, and they do not usually come from the stranger who may be within our gates.

Digitized by Google

The comradeship existing among Scientists, the joy with which they love to chat with one another, bubbles forth on all occasions, and it is something to rejoice over. Having a value, helpfulness, and delight all its own, it also has a place in the time and opportunity after church service, when friend gladly meets friend. Each individual who seeks help from a Christian Science service, desiring it in all its fulness, generously wishes it quite as much for every one attending that service, particularly for those who may be present for the first time. Knowing himself the value of the good received, he is eager to have every one else "taste and see."

But would not a brief time of quiet preparation for the service bring greater and better results to every one present? In the Scientist it would certainly conduce to that receptivity of thought which allows the word of God to be spoken with power; while to the stranger it would bring a sense of peace, reverence, and harmony, a realization that he is literally in the house of God, a place where for a time at least all material intimations are shut out. To escape from these very things, and find rest and quiet, may have been the special reason for his coming; then let him not be disappointed. May not "a cup of cold water in Christ's name" (Science and Health, p. 570) be given right here?

It is solely through the writer's own needs in this particular that she has come to realize the needs of others. It is the sincere desire of every Christian Scientist to act well his part, and by having attention called to this need and giving earnest thought to it, the quiet preceding service, so greatly to be desired, will be readily gained. Great as is the good already resulting from our services, even greater good would be experienced if each one there sought, from the moment he seated himself within the church, to be truly alive to the command, "Be still, and know that I am God." Seeking with all their hearts, and therefore finding, there would assuredly come the joyous realization, "Lo, I am with you alway," and the admonition, "Watch and pray."

GROWTH.

ARTHUR CHAMBERLAIN.

SINCE God and His idea are perfect, how can there be any room or opportunity for growth? is a question which seems to perplex some students of Christian Science. The confusion of thought which gives rise to this query apparently comes from two causes: first, a failure to differentiate between Principle and idea, and the human sense of existence; second, to distinguish between perfection as an end and perfection as a means. Mrs. Eddy makes this clear when she says: "Time has not yet reached eternity, immortality, complete reality. . . . All things will continue to disappear, until perfection appears and reality is reached" (Science and Health, p. 353).

God is infinite; in His infinitude all growth is forever included and forever present in the eternal now. It is impossible for God to develop or to unfold to Himself aught of which He is not conscious, since He is eternally conscious of all that is and that can be, even Himself forever reflected in His ideas. To say, however, that no sense of growth can come to our concept of God, is to fall into the error that the student is again and again warned against in Science and Health, wherein Mrs. Eddy has repeatedly pointed out the distinction that must be observed between divine Principle and the human concept of good. To the student of Science and Health it becomes overwhelmingly evident that the likeness of the perfect, spiritual man to God, is a likeness in quality, not in quantity (see Science and Health, p. 361); hence it must be the quality of God's knowledge, which quality is spiritual, and not the quantity of God's knowledge, which quantity is infinite, that the spiritual man reflects. Growth must go on until, as Paul says, "we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

When we consider that infinity is endless because it is eternal, we see that no idea of God can ever come to the end of its unfoldment; only God is capable of compassing infinity, of possessing an eternal, present consciousness of His own infinitude. It behooves us all to turn away, definitely and forever, from the age-old concept which regards finish and perfection as implying a stopping, a cessation of any sort. "Give her the glory of going on, and still to be," wrote Tennyson of virtue, and perfection is the sum of all virtues.

Is it possible that we are yet in bondage to the worn-out belief that for God to "finish" His work, implies that He constructed a time-world, once non-existent, and therefore bound eventually to slip back into nothingness, to be the expression of His eternal infinitude? We must give up the concept which presents eternity merely as endless duration, and realize that eternity implies the endless duration of God's infinite unfoldment of His ideas, if we are to be rid of a purely mechanical theory of being and are to replace it with being as the eternal expression of the living Truth.

"But," some one may object, "when we are at last rid of all error, will not that be the end? Shall we not enter into eternal rest?" The end of error, yes! But let us not imitate the woman who anticipated a heaven in which she was "going to do nothing forever and ever," a concept which logically implies annihilation. Rest we shall, but our Leader tells us that "God rests in action" (Science and Health, p. 519), and so shall we. "If in this life only we have hope in Christ," Paul declares, "we are of all men most miserable;" and we may well say that if with the end of error comes the cessation of our sense of the unfoldment of good, which is our spiritual growth, then we may well be "of all men most miserable" at the prospect of eternal stagnation.

"But," the critic may further object, "according to your argument God Himself would suffer from eternal ennui, since He eternally knows all." Have we forgotten, then, that God is Love, and that Love is unselfish? God's ceaseless impartation of Himself to man, what can this be but His eternal bliss? a bliss, let us remember, that His ideas forever share, since they reflect, each in his measure, God's infinite impartation of Himself. For us, perfection implies eternal progress, which is growth, and is synonymous therewith.

Who would dream of saying to a child, laboriously stumbling through his first finger-exercises on the piano: "My dear, when once you have learned to play without making mistakes, that is the end; music can hold no more for you"? One can easily fancy a great musician, sure of his technique, freed long ago from even the fear of a blunder, saying in hushed tones: "My utmost triumph is at best but a step in the revelation of that vast realm of harmony which music forever includes, and a glorious prophecy of the joy that awaits me in its eternal unfoldment." What is our perfection but the free, unhindered capacity for unending spiritual growth, as "we all," in the language of the apostle, "with open face beholding as in a glass the glory of the Lord, are changed into the same image from glory to glory"?

HUMAN SYMPATHY.

HORTENSE L. WHEELER.

UNTIL we come to know the difference between human sympathy and divine compassion, the expression of pity seems to be our highest conception of Christly affection; but it was not pity, it was love and understanding which chided Peter for his lack of faith and bade him walk on the waves, thereby saving him from the result of his fears. It is the same kind of love and understanding which the Christian Scientist of today extends to his neighbor in time of trouble, and it is this alone, and not human sympathy, which saves him. This is the helping hand which all humanity would

Digitized by Google

gladly grasp in preference to that of mere sympathy, were mankind willing to see the remedy for human suffering.

Having come to know the relation of man to his Maker, the Christian Scientist does not judge by false appearances, and having seen the futility of human sympathy to accomplish any lasting good, he has erased from his consciousness all belief in its necessity or helpfulness, and therefore does not violate his trust in and his love for God by offering mere human sympathy to his brother; rather does he encourage him to walk the wave, knowing "the nothingness of evil and the allness of God" (Science and Health, p. 563), and understanding man's dominion over all things.

Human sympathy unsupported by divine Truth never eased a single pain, eradicated one evil thought, or gave more than a passing solace to sorrow; while the understanding of the power of God to heal all disease and destroy all suffering, has freed thousands from bondage, and also reformed sinners. With this comprehension comes also the knowledge that the sense of affliction and pain is self-imposed and self-prolonged, and the follower of Christ Jesus who has gained an understanding of Christian Science seeks less and less the expression of that sympathy which comes from a belief in disease and acknowledgment of its reality.

Through a lack of comprehension and unwillingness to understand Truth, there are those who criticize the Christian Scientist's apparent lack of sympathy, deeming the outward evidence of condolence more satisfying than the indwelling spirit of Love to ease pain and sorrow; but to the Christian Scientist, pity, which is mainly material, has been replaced by the redemptive Love that points out the way through which a brother gains freedom from disease and sorrow. Error, ignorant of the truth, cringes and fawns to gain sympathy and recognition from mortals, but the most that can be said for human sympathy is, that it appeals to self-pity, and temporarily assuages grief, all the while giving assent to the claims of error; while the application and demonstration of Truth and Love proves the falsity of these claims, and thus brings in abiding harmony.

"PEACEMAKERS."

S. A. BEDDING.

BEFORE the word peacemaker was illumined by the light of Truth as demonstrated in Christian Science, the idea seemed to be that a peacemaker was one who sought to bring about amicable relations between persons, countries, or communities; but on studying, from the standpoint of divine Science, the beatitude in which it is given prominence, the depth of its meaning is more fully and clearly seen and is more far-reaching than at first appears. The text reads: "Blessed are the peacemakers: for they shall be called the children of God."

The word peace, as defined by Webster, signifies freedom from agitation, disturbance from the passions, as from fear, terror, anger, anxiety, or the like, quietness of mind, tranquillity, calmness, quiet of conscience, heavenly rest, the happiness of heaven, harmony, concord. From this it follows that, in Science, a peacemaker is one who makes peace by the application of divine Love in the destruction of fear, terror, anxiety, worry, etc., and in this way demonstrates normal conditions, the manifestation of tranquillity, calmness of mind, quiet of conscience, etc., and this, primarily, in his own individual consciousness.

In the same way that God is not cognizant of evil, so the Christian Scientist, not being conscious of inharmony, by his very freedom from fear, terror, and anxiety becomes a peacemaker, or a maker of peace in the highest sense of the word; that is, having cleared the belief of any discord from his own consciousness, he knows the unreality of every claim of evil, and thus radiates the spiritual sense of peace into the surrounding atmosphere. He therefore has a right to be called, and indeed is, a member of God's household, a child of God. The true peacemaker is such because, through his consciousness of the power of divine Love and his knowledge of man's relationship to God as His image and likeness, he demonstrates the power of Love, the destruction in his own consciousness of all agitation, fear, anger, etc., and the result is happiness, heavenly rest.

It follows that one who essays to call himself a *Christian* Scientist must be a peacemaker, knowing that "whatever blesses one blesses all" (Science and Health, p. 260), and that all conditions, both within the immediate range of his influence and those farther removed, must respond to the action of divine Love which is manifested through him as a child of God.

HAPPINESS.

VERE BAILLIEU.

TRUE happiness is understood only when false belief has been hushed into its original silence and Truth realized has been demonstrated. It is that peace which abideth in the consciousness of omnipresent good, which sees through the limitations of sense and lays hold on that which is substantial, which is eternal. He who on the threshold of Christianity is finding true happiness, does not condemn those who seek pleasure in a temporary sense. Rather does he rejoice, however, that he is finding that with which he may bless his brother, for happiness is the light of Love reflected unceasingly, glowing in the dark corners of every-day life, and blessing all, because, as our Leader tells us, "it is unselfish; therefore it cannot exist alone, but requires all mankind to share it" (Science and Health, p. 57).

To be happy is always to be faithful over the little things. It is never to be mesmerized by the sense of self, but to listen, always with that quietness of sense which may hear God speak. It is to reflect Love and God's judgment, when to mortal sense no one understands and every one misjudges. Then is there left nothing to fear, nothing to hate, for with us Love is All-in-all, and we must know that our joy may be full.

Happiness is a psalm of praise finding expression in cheerfulness and kindly deeds. Truth calls the poor human heart, struggling with its false sense of responsibility and care, to the dawn of spiritual understanding and *perfect joy*, dispelling the visions of the night, and voicing that presence the fulness whereof is Love.

[Written for the *Sentinel*.]

"HE FEEDETH AMONG THE LILIES."

FRANCES A. HALDANE.

WHY feed upon the bread of sorrow,
The bitter griefs, the memories of the past,
When here and now, today and each tomorrow,
Christ giveth thee fresh food to break thy fast?

Why shouldst thou, looking back forever,
Long ceaselessly for that which might have been,
When hope and faith and every true endeavor
Will furnish forth a table yet unseen?

Why wilt thou drink a poisoned fountain,
Or stagnant waters of some salt dead sea?
Seek thou the springs upon the mountain;
Turn thou, and quaff Truth's purity!

Why in dim, ancient forests dally
Amid the phantom fears that haunt the gloom?
See how Love's sunshine fills the valley,
And pure and perfect thoughts like lilies bloom!

SELECTED ARTICLES.

[Frederick Dixon in *Birkenhead News*, Birkenhead, England.]

In the course of your report of an address by Prebendary Webster, there occurs a reference to Christian Science in which it is classed with theosophy and spiritualism as a strange new cult. First, will you permit me to point out that there is absolutely no resemblance between Christian Science and either theosophy or spiritualism, a fact of which most theosophists and spiritualists are perfectly aware. What to me is curious in the address is the idea that there is anything strange in Christian Science. It shows the extraordinary limitations which the world has placed upon the plain words of the gospels, that an orthodox minister should regard as strange the teaching that the words of Jesus of Nazareth meant what he said and not something entirely different.

Christian Science aims to make the teaching of the gospels as practical in the twentieth century as it was in the first. The command of the first century was to "preach the gospel" and "heal the sick." In this way the healing of the sick was made the corollary to the preaching of the gospel. It was even something more than this, for the ability to heal the sick naturally became the test of the accuracy of the presentation of the Principle. Jesus declared that the world should know the truth, and the truth would make it free; and as if to put his meaning beyond any misconception whatever, he declared that those who believed in him would be able to do the works he did. Obviously those who believed in him understood the truth he taught, and it was their understanding of this truth which was to be demonstrated in their ability to repeat the "signs following." To put it quite clearly, the healing of Jesus was to be regarded as no supernatural power exercised by an individual, but simply as the object-lesson in proof of a man's understanding of the truth.

It is this teaching which Christian Scientists have accepted, and there is surely nothing strange in Mrs. Eddy's insistence on the simple meaning of the sayings of Jesus. What is strange is, that for centuries men should have been engaged in trying to find an explanation of the text of the gospels which would excuse them for accepting part of the divine command, that of preaching the gospel, and omitting the other part, that of healing the sick. It would be almost impossible to exaggerate the ingenuity which has been brought to bear on certain Bible texts in order to prove that they mean something different from their obvious and clear significance. Not once, but again and again in the gospels, Jesus, without any qualification of time or place, insisted that those who believed in his teaching would be able to repeat his demonstrations. And this was actually inevitable, since his teaching was the absolute truth.

There is nothing more scientific in the world than absolute truth, and for this very reason it is capable of demonstration. There is a quite common phrase in the New Testament which is unfortunately invariably mistranslated. It is the expression which is always rendered "knowledge of God," but which should, of course, always be rendered, full, exact, or scientific knowledge of God. A scientific knowledge of God is a knowledge of absolute Truth, and this knowledge of absolute Truth is capable, without question, of demonstration. If the demonstration of it is weak, it is simply owing to the fact that those who are attempting the demonstration have not succeeded in walking closely enough in the footsteps of Jesus the Christ. Mrs. Eddy puts this very clearly on page 40 of "Miscellaneous Writings," when she says: "The reason that the same results follow not in every case, is that the student does not in every case possess sufficiently the Christ-spirit and its power to cast out the disease. The Founder of Christian Science teaches her students that they must possess the spirit of Truth and Love, must gain the power over sin in themselves, or they cannot be instantaneous healers."

[H. Cornell Wilson in *Watertown* (N. Y.) *Standard*.]

The pastor of a local church proposed the question, by way of introduction to his sermon, "Is Christian Science Christian?" His answer to the question, as reported in the *Standard*, leaves the reader in no doubt whatever as to his views on the subject. As the opinion expressed is a personal one, and fails to represent the mature judgment of a very considerable population in other countries as well as here, I will ask your permission to state briefly wherein Christian Science differs from this gentleman's mistaken concept of it. Before doing this, however, I would like to cite brief extracts from opinions by other ministers approving of Christian Science.

One who has spent thirty-four years in the ministry, and has been well and favorably known in a prominent denomination, writes: "I have been kindly and divinely led into the borderland of a fuller sense of Life, Truth, and Love. To me Mrs. Eddy's message is the renaissance of Christianity, a return to the simplicity of Jesus' teaching and work, and through this rebirth I have gained an understanding of God which has illumined the teaching of Scripture and interpreted the vital truth of primitive Christianity." A pastor representing the same denomination as our critic, is reported as saying in a recent public statement: "There is so much good in the teachings of Christian Science that much might well be adopted by other religions. The works of Christian healing are as clearly a part of the commission of Christianity as is the preaching." These at any rate consider that Christian Science is Christian. There are also many others engaged in active religious work, as carried on by other denominations, who either through experience or careful investigation have changed their prejudiced views of Christian Science, having discovered it to be what it is, namely, the scientific Christianity proclaimed in the life and practise of Jesus the Christ.

To misunderstand the purpose of Christian Science often brings about a misinterpretation of its results. For instance, it may not be generally known that the physical healing associated with Christian Science, and fully credited by our critic, is incidental to, a result of, the spiritual regeneration that is the object of all its effort. Christian Science is not a system of mental healing, as the term is ordinarily applied; it is essentially and primarily a religion. On this point Mrs. Eddy says (Science and Health, p. 150): "The mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin, to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

Our critic, having failed to grasp this and other important points necessary to an understanding of Christian Science, claims that "suggestion," or "auto-suggestion,"—hypnotism, in fact,—accounts for its works of healing. Thus the effort is made, but in vain, to place Christian Science on the plane occupied by many systems of mental healing (a number of which he has mentioned) where results depend upon the control of one human mind or will over another. This method of control, as our critic has pointed out, may be employed for an evil purpose as readily as for a good one. It constitutes, according to Jesus, a "kingdom divided against itself" which "shall not stand." The same charge was brought against the Master. The Pharisees declared that he cast out devils—referring specifically to his healing of the man "blind and dumb"—by Beelzebub. To this charge he replied, "If I by Beelzebub cast out devils, by whom do your children cast them out? . . . But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you."

The difference between Christian Science practise and all forms of mesmerism—suggestion or hypnotism—is that one who employs mental suggestion generally believes thor-

Digitized by Google

oughly in the reality of disease, while trying to change his patient's belief regarding it; whereas the Christian Science practitioner understands the unreality of disease, and frees his patient from fear and false belief by knowing that, as Mrs. Eddy has said (Science and Health, p. 335), "reality is spiritual, harmonious, immutable, immortal, divine, eternal. Nothing unspiritual can be real, harmonious, or eternal. Sin, sickness, and mortality are the suppositional antipodes of Spirit, and must be contradictions of reality."

Healing *per se* is most certainly not the sole gage by which Christianity is measured, as the gentleman states. A reasonable study of the New Testament reveals, however, that Christianity as exemplified in the life of Christ Jesus and his accredited followers, unquestionably includes healing the sick. Did he not say, speaking to those who should believe in him, "The works that I do shall he do also"? James holds that "faith without works is dead." Without doubt the works Jesus demanded were of the kind he himself was doing, as any Christian must admit. The message Jesus sent to John the Baptist, detailing his works of healing as a proof of his mission, should settle this question. There is no justification, so far as Christian Scientists can learn, for separating the requirement to preach the gospel from the remainder of Jesus' command, which reads, "Heal the sick, cleanse the lepers, raise the dead, cast out devils."

Had our critic understood the important distinction Christian Science makes between man in the image and likeness of God, and the counterfeit, the material or carnal sense of man, he would not have chosen from the Bible and Mrs. Eddy's writings the passages he did for the purpose of comparison. Paul declares that the "natural" or carnally minded "man receiveth not the things of the Spirit of God: . . . neither can he know them, because they are spiritually discerned." The real man, Mrs. Eddy insists, is spiritual and sinless, and he is the image and likeness of God, of divine Mind. The supposititious counterfeit of this man is the material, human being, the image and likeness of the carnal mind, "conceived in sin and brought forth in iniquity." It is of the image and likeness of God that Mrs. Eddy is speaking in the passage referring to man quoted from her writings; it is of the carnal man that Jesus is speaking in the passages our critic quoted from the Bible. When Jesus said, "Ye are of your father the devil, and the lusts of your father ye will do," he was referring to the carnal man, whom Mrs. Eddy calls mortal man; when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect," he was referring to spiritual man, whom Mrs. Eddy terms the real man. In resorting to the comparisons he has used, our critic could hardly have proved more conclusively his misunderstanding of the teachings of Christian Science.

[Ora S. Drewry in *Cincinnati* (Ohio) *Post.*]

In your delightful editorial of a few days ago on "Singing at Your Work," the kindly reference to Christian Scientists is to be commended and appreciated. You say that as a group they seem more patient, tranquil, and even-tempered than an equal number of other folk selected at random. These virtues you attribute to the force of will-power. Please permit a brief correction of this misapprehension. Christian Scientists eschew the use of human will-power. They know God as the source, the origin, the substance of all that really is or can be. As the sun is the central source of all the light and heat of which we have practical experience, so God, as the Scriptures declare, giveth life and breath and all things to man. By virtue of this real sonship as the image and likeness of God, man expresses or reflects the attributes of God, just as the ray of light coming out from the sun has nothing within itself, but expresses or reflects the light and heat of the sun. The Master, the great Exemplar of all Christianity, said, "I can of mine own self do nothing." In other words, It is the Father that worketh through me.

Though all the world were flooded with the glorious light of the sun, we would sit in darkened chambers unless we were to let the sunlight in. Understanding, or knowing the truth about God, as the Master put it, is the open door through which the divine attributes, the patience, the tranquillity, the even temper of which you speak, flow into the hearts of men and radiate from their lives.

[Editorial in *Morning Telegraph*, New York, N. Y.]

Prompted perhaps by physicians, the coroner at Yonkers announced Friday that he would make an investigation of the death and treatment of Edward Whitney. What is there to investigate? The boy died at the home of his parents, Mr. and Mrs. William V. Whitney, of tuberculosis, and had been under treatment by a Christian Scientist. Two of his brothers had died of the malady, and he became ill with it eight months ago. His brothers had been treated by doctors from the time they became ill until they passed away, and Edward Whitney realized how futile were their efforts; wherefore he declared that he wished a Christian Science healer to treat him. His life was prolonged nearly a year. And now that he is dead the coroner begins an investigation. Again it may be asked, What is there to investigate? Is there a physician in all the land who will declare that he can cure this disease? There is not, and yet when a Christian Scientist attempts to cure a consumptive person, doctors raise their voices in protest, and if there is a death, willing coroners begin an inquiry.

H. Cornell Wilson of the Christian Science committee on publication, writing of the Whitney case, points out that while two relatives of the Whitney boy died of tuberculosis in Yonkers, there was no investigation. They were under doctors' care, and they died! Nothing was said or done about that. Last year in Yonkers one hundred and twenty persons died of tuberculosis, all of them presumably under the care of doctors, and not one case was inquired into by the coroner or any one else. When the hundred and twenty-first death occurred, and it was learned that the patient was under Christian Science treatment, then the coroner became busy and an inquiry was started. Mr. Wilson says: "A large number of persons in this state have been healed of tuberculosis by Christian Science, in many cases after doctors had expressed grave doubts as to their recovery. This is evidence to show that Christian Science is at least entitled to as much consideration as is accorded to medicine with all its admitted failures."

Christian Science does not rack the body of the sick man with poisonous drugs; it does not assume a solemn smug look in the presence of the ill. It brings hope and faith and a cheerful optimism into the sick-room, and it makes persons well sometimes where physicians fail. When doctors can effect cures, it will be time for them to wage war on Christian Science. But inasumch as they can guarantee nothing in the way of bodily health, they should hold their peace, they and their assistants.

[Charles E. Jarvis in *B'nai B'rith Messenger*, Los Angeles, Cal.]

Christian Science "points to the revelation of Immanuel 'God with us,'—the sovereign ever-present, delivering the children of men from every ill 'that flesh is heir to'" (Science and Health, p. 107); and as we apply its teachings to our human perplexities and problems, we realize that the God of Abraham, Isaac, and Jacob, the same God that led the children of Israel safely through the Red sea, that delivered the Hebrew children from the fiery furnace and protected Daniel from the fury of the lions, is just as able here and now to redeem His children from sin, sickness, and death. Think you that it was merely a passing fancy that enabled Moses, Elijah, and Elisha to perform their mighty works? Moreover, if Christian Science was simply a fad or a fancy, could it have withstood the attacks from pulpit and press with which it has been assailed for over forty

Digitized by Google

years? Those who have turned to Christian Science for help after all other means have failed, and have been healed mentally, morally, and physically, realize that "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear," and they are convinced that the teaching which has brought this realization is both logical and consistent.

Christian Science does not "refuse to recognize dual concepts," as asserted by our critic; on the contrary, it is upon just this basis that Christian Science heals, by replacing the wrong concept with the correct one. If one has gone through life believing that two and two make five, and has resisted every effort to change that belief, and all his undertakings have come to naught as a result thereof, when he finally admits that possibly the fault is within himself, abandons his former method of calculation and applies the correct theory, he at once realizes that he has all along been entertaining the false concept, and he is now in position to work out his problems intelligently, with the aid of a rule which is unfailing because of its exactness.

The Christian Science practitioner recognizes that there is misery and woe in the world which can be relieved. Having tasted of the benign and healing influences of Christian Science, it becomes his very natural desire to help others; but only as he acknowledges God as the healer can he succeed. Any one attempting this work from any other standpoint, with mercenary or ulterior motives, signally fails, and is not a Christian Science practitioner.

[John W. Harwood in *Blackpool* (England) *Times*.]

To take away from Christianity its healing would be entirely in opposition to our Saviour's command. Take away the records of healing in the gospels, and there would be very little left. Jesus' command was never simply to preach the gospel. When he sent out the seventy disciples, he told them, into whatsoever city they entered, to heal the sick that were therein, and to say unto them, "The kingdom of God is come nigh unto you;" and to the same seventy he said, "Carry neither purse, nor scrip, nor shoes: . . . for the laborer is worthy of his hire." In the face of this, the critic's statement that "no Bible healers ever took money for their services" does not seem to hold good. Christian Science is proving itself to be in accordance with the teachings of Jesus, for it is redeeming mankind morally, and, as a result, eliminating disease. People are tired of words without deeds, preaching without practise. St. James said, "Faith, if it hath not works, is dead, being alone." Before launching out to attack those who are attempting to follow the Master in all his commands, critics should be quite certain of their own ground.

The critic asks, "Why could not Christian Science keep to America?" It is big enough, intimates our critic. Although America is big, yet this Science, a demonstrable knowledge of Christ, which emanates from the divine Mind, is too big and too good even for America alone to retain. That which reveals the infinitude, omnipotence, omnipresence, and omniscience of God, good, hence the nothingness, the impotence, of evil, could never be limited in any way in its loving, purifying, healing, and redeeming ministrations; no, not even by such attacks as these.

Our critic disagrees with the teaching of Christian Science respecting its definition of God. If this teaching was not different from so-called orthodox teaching, it would be attended by no better results. Most decidedly Christian Science teaches that God is not a person in any anthropomorphic sense. The definition as given in Science and Health by Mrs. Eddy (p. 465) is as follows: "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love." Deducing from the allness of God, good, as expressed by these synonyms, the nothingness or unreality of evil (sin, disease, and all the works of the flesh included), our critic again objects. How strange it is that those wholly occupied in the attempt to overcome evil, should cling so tenaciously to the belief in its reality, for if evil were true or real, it would be eternal and could not be destroyed.

Diseases in Jesus' time were often termed devils. In one instance, where a woman who was bowed together and could in no wise lift herself up, a condition which would probably be called rheumatism nowadays, Jesus said she had been bound by Satan, "lo, these eighteen years." In his definition of devil, evil, or Satan, Jesus said he was "a liar and the father" of lies,—"there is no truth in him." This is the attitude of Christian Science toward evil; therefore when it relegates all evil into the realm of falsity or illusion, it is simply following Jesus' example. He said, "Ye shall know the truth, and the truth shall make you free." Mrs. Eddy says in Science and Health (p. 135): "The same power which heals sin heals also sickness. This is 'the beauty of holiness,' that when Truth heals the sick, it casts out evils, and when Truth casts out the evil called disease, it heals the sick. When Christ cast out the devil of dumbness 'it came to pass, when the devil was gone out, the dumb spake.'" Is there any hypnotic suggestion about this method?

Jesus proved that physical laws, so called, are not God's laws, hence not true or real, when he annulled them by healing the sick, feeding the multitude, raising the dead, stilling the tempest, walking on the water, annihilating both time and space, and it was not Mrs. Eddy, but Jesus who said, "He that believeth on me [understands my teaching], the works that I do shall he do also." The signs which are to follow them that believe, as stated in St. Mark's gospel, include the casting out of devils (false beliefs) and the healing of the sick. If the critic will attend the Wednesday evening meetings of the Christian Science church in Egerton road, he will find it crowded with people who have been redeemed from sin and healed of disease and who publicly testify to the fact. Can the church to which he belongs show such results? If not, he is left without excuse for launching out to attack those who are endeavoring to follow Christ in the way of his appointing.

[John W. Doorly in *Blackpool* (England) *Gazette News*.]

Christian Science teaches that there is but one Mind or cause, whom men call God, and that true thoughts or good thoughts are expressions of this Mind and originated in this Mind, and not in a material brain. The material brain is that which judges according to the evidence of the five material senses, and can only conceive of being as material and finite. St. Paul rebukes the thoughts of this so-called brain and the evidence of material sense when he declares that "eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him." Christian Scientists understand that St. Paul was only declaring that the kingdom of heaven, or being in its true state, could not be understood through the material senses, because material sense, or the false sense of being, was the only evil. St. Paul points out how these things can be understood when he declares in the next verse, "But God hath revealed them unto us by his Spirit." To a Christian Scientist, therefore, Mind, and not material brain, thinks whatever is good and true.

Your correspondent will recognize that this material brain gets out of order and thinks all kinds of things, and yet if God had made it, it would be "the same yesterday, and today, and forever," as the Scriptures declare. The Christian Scientist's way of salvation is right thinking, but this right thinking is in spite of the material brain, or the false evidence of material sense, and is based on reason and revelation. Does this correspondent suppose that it was the action of a material brain that enabled the Galilean fisherman Peter to raise the dead? The thinking that occurs in a material brain is a human belief based on matter, and is really what men call hell. Christian Science takes men out of this hell by teaching them what true thinking or knowing is.

EDITORIAL

"BE THOU CLEAN."

IT sometimes happens that persons who have tried in vain to be healed through medical treatment, perhaps at much expense and with much suffering because of the means employed, and who have as a last resort turned to Christian Science, cherish a strong sense of resentment not only toward the system which had failed to relieve them from their ills, but also toward those through whom it had been employed. This should not be, and every wise practitioner to whom such a patient comes will do all he can to correct this condition of thought, knowing full well that only as hatred gives place to love, and resentment to compassion, will the healing be accomplished. Mrs. Eddy, on page 444 of Science and Health, very clearly states what the attitude of Christian Scientists should be toward those who fail to accept her teachings. She writes, "If ecclesiastical sects or medical schools turn a deaf ear to the teachings of Christian Science, then part from these opponents as did Abraham when he parted from Lot, and say in thy heart: 'Let there be no strife, I pray thee, between me and thee, and between my herdmen and thy herdmen; for we be brethren,'" and the spirit of this saying should govern her every follower.

This does not mean, however, that Christian Scientists are to try to mingle Spirit and matter, a spiritual method of healing and one which is wholly material. To attempt this would be as unwise and useless as to attempt to mingle any other opposites and expect harmonious results. "There is but one way to heaven, harmony," Mrs. Eddy tells us, "and Christ in divine Science shows us this way. It is to know no other reality—to have no other consciousness of life—than good, God and His reflection, and to rise superior to the so-called pain and pleasure of the senses" (Science and Health, p. 242). Patiently, lovingly, and faithfully the practitioner must labor to uncover the erroneous thinking of his patient, then show him that to cherish thoughts of enmity against another is not only wrong in itself, but that he is really doing an injustice to a profession which, however diverse in its views, nevertheless has for its object the amelioration of suffering, and the majority of its members give themselves to the duties of their chosen calling with a commendable spirit of devotion and self-sacrifice.

The practitioner must, however, be clear in his own realization that there can be no compromise between truth and error, must see that he who turns to God for healing and salvation has no part or lot in the system from whose cerements he is struggling to free himself. The Master's command to those who witnessed his freeing of Lazarus from the swathings of sense which bound him was, "Loose him, and let him go," and the faithful Christian Science practitioner will strive to free his patient not only from every thought of bitterness or hatred, but from every least dependence upon aught but the power of Truth to save him from the ills of the flesh; teach him how literally to obey the Master's command to take no thought for this mortal body that has been dosed and drugged and dieted and manipulated all these weary years.

God is ever-present, omnipotent Truth and Love, and the sooner the Christian Scientist, be he practitioner or patient, apprehends the pertinence of Mrs. Eddy's admonition, "Keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them" (Pamphlet, What Our Leader Says), the sooner shall we hear again the instantaneous response to the sufferer's appeal: "I will; be thou clean."

ARCHIBALD MCLELLAN.

MODERATION.

THE dictionaries describe a moderate man as one who is "not extreme, excessive;" as one who is "temperate, calm, reasonable, gentle;" and St. Paul says, "Let your moderation be known unto all men." Temperance, a synonym for moderation, is one of the transitional qualities mentioned on page 115 of Science and Health and is linked to meekness, which indicates that we are not to make our own views a criterion for others in the demonstration of Christian Science.

Christ Jesus said that people would come from the east, the west, the north, and the south to "sit down in the kingdom of God." These words mean much more than their geographical significance would imply, and point to the widely different conditions of human experience from which mortals are led to find their way to the realm of Truth and of harmony. Thus we find among the ranks of Christian Scientists people whose past experiences, social, intellectual, religious and non-religious, may still be seen as factors to be considered in the working out of their problems; and while the truth makes no weak concessions to error, it shows that the demands of Principle must be looked to rather than any one's opinion as to how fast another should "grasp the ultimate of spiritual perfection" (Science and Health, p. 254). The great Teacher made this very clear when he said that one should get the beam out of his own eye before attempting to remove the mote from that of a neighbor, and yet he emphasized the fact that both of these obstructions to perfect vision must be taken away.

In studying Jesus' parables we see that he took human conditions exactly as he found them, and then showed the marvelous results which follow when the influence of the leaven of Truth is felt. If we take the story of the prodigal son, we have simply a sad picture of mortal experience. The belief in the fall of man was no doubt held by most of Jesus' listeners, and with the utmost moderation, and almost entire avoidance of theological dogma, he showed what Truth can do when one awakens from the riotous dream of life in matter, with its false pleasures and equally false pains and penalties.

It is beautiful to contemplate in this parable the rapid progress of the one who "came to himself," his sweet humility and grateful acceptance of the good things which so fittingly typify the bestowals of divine Love; but, on the other hand, we have presented the bitter and censorious thought which has nothing but condemnation for the returning wanderer. Both of these are very human types, but high above them towers the ideal fatherhood which, like Science, "knows no lapse from nor return to harmony, but holds the divine order or spiritual law, in which God and all that He creates are perfect and eternal, to have remained unchanged in its eternal history" (Science and Health, p. 471).

We may grant for the sake of the argument the belief of a sick or sinful mortal, but should never yield one jot or tittle of the might and majesty of divine Love and divine law, though with the utmost moderation we press its high demands upon the attention of others, since, like Paul, one is constrained to say, "Not as though I had already attained." Paul, who counsels moderation, also prayer and thanksgiving, declares that then will follow "the peace of God, which passeth all understanding." Those who had the privilege of a close acquaintance with our revered Leader could not help remarking the fidelity with which she presented the demands of Principle, and at the same time the moderation which she showed in guiding her followers, both as to their individual unfoldment and their relations with those whose religious and medical views differed so widely from the teachings of Christian Science.

If we are ever uncertain as to the just and proper course to pursue, we have the teaching and example of Christ Jesus, and the inspired counsel of our Leader, who showed us how

Digitized by Google

these could be followed with fidelity of purpose and moderation of spirit, whatever the demand of the age in which we live, and thus we shall be, to use Longfellow's words,—

Serene, and resolute, and still,
And calm, and self-possessed.

ANNIE M. KNOTT.

THE CHRIST-COMING.

MORTAL sense is gregarious; it loves to live in the mass as well as to think in platitudes. It is habitually predisposed to consider the life-problem as a world-problem, rather than a personal problem, and thus to live without rather than within. How manifest this is today in that love of glare and blare which leads to urban congestion and the astonishing increase and patronage of places of cheap amusement, where novel and ingenious means of sense excitation feed and nourish the disposition to run with the multitude into forgetfulness of the individual task and the individual need!

This instinct has always had to do with the existent thought of human redemption, and with the method of bringing it about. The unit of desire and aspiration among all peoples has been a family, a clan, a nation. How marked this was in the Hebrew race! In reading the Old Testament one is impressed with the prominence, the extent of the rule, of the tribal consciousness. Here pride and aspiration and hope were always in conjunction. Upon this field the Messiah was to appear as the leader of a great spectacular triumph, and the chief offense of Christ Jesus to his own people inhered in the fact that he did not fall in with this expectation. His continuous appeal to the individual, his localization of struggle and triumph, the establishment of God's kingdom in the human heart, not only brought his countrymen disappointment, it excited their anger. To most of them he was altogether lacking in patriotism, loyalty to the great national issue, and they therefore cried out, "Away with him." The one thing that made him most trying and unacceptable was his insistence upon that thought of the human problem which is reemphasized by Mrs. Eddy when she says, "The suppositional warfare between truth and error is only the mental conflict between the evidence of the spiritual senses and the testimony of the material senses, and this warfare between the Spirit and flesh will settle all questions through faith in and the understanding of divine Love" (Science and Health, p. 288).

That the Jewish sense of the Messianic appearing and leadership remained to affect Christian teaching in no inconsiderable degree, is seen in the thought which seems to have obtained with the disciples as to the Lord's second coming. Jesus' words, "Then shall they see the Son of man coming in a cloud with power and great glory," were manifestly interpreted by some with a literalness which begot a sense of human redemption which is in marked contrast with that conveyed by the "great voice" heard by St. John in Patmos, saying, "Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me." Whatever else the Master's declarations may mean as to his future kingdom, the heart of his second coming, as he made clear, and as Christian Science teaches, is the apprehension and rule of the Christ-idea in individual consciousness. The phenomena of this experience, when it becomes universal, may be fittingly described in all the color and movement of oriental symbolism, but the basic fact is always an individual event.

This fixing of attention upon the Christ-consciousness as the basis and means of every grace and gain for the individual, and as well of every advance and achievement for humanity, is one of the most distinctive and eventful results of Mrs. Eddy's life-work. Christ Jesus covered the whole ground and process of world-redemption in his story of the prodigal, his talk with the rich young man, etc. The appeal was direct to the individual, and there was no escaping it, and Christian Scientists have been made to feel that they are thus personally addressed and must meet the issue alone with God. The attainment by each of the Mind that was in Christ Jesus, is the substance and experience of salvation.

The appearing of Christ Jesus was for a unique purpose and demonstration, of which he said, "It is finished." The second is to be as universal as humanity, the event of every life. It is "the forever coming of Christ, the advanced appearing of Truth, which casts out error and heals the sick" (Science and Health, p. 230). He who receives this teaching is both illumined and inspired. He has entered the "holy place" of spiritual apprehension.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

GETTYSBURG, PA.—There being no Christian Science organization at Gettysburg, the operation of temporary Christian Science reading-rooms, in connection with the recent semicentennial and reunion, was conducted under the auspices of the state committee on publication. Two commodious parlors in the heart of the town were engaged, and supplied with all of Mrs. Eddy's works and the publications of The Christian Science Publishing Society. The ceremonial days of the reunion were July 1 to 4 inclusive, but the reading-rooms were open from noon on Friday, June 27, until noon on Saturday, July 5. During these eight days approximately sixty-four hundred copies of *The Christian Science Monitor* were given out, or an average of eight hundred per day, the number increasing from one hundred and eighty-three the first day to seventeen hundred the last day. Most of these papers were taken voluntarily by persons who stopped at the reading-room windows, where *Journals, Sentinels, Heralds*, and pamphlets were also exhibited for free distribution. The *Monitors* not distributed to visitors at the rooms were taken to the great camp by automobile and passed out among the veterans. Eight hundred pamphlets were given out at the rooms, in addition to about three hundred and thirty copies of the periodicals.

There were many expressions of approval of the Christian Science literature, and appreciation of the opportunity to obtain it under such circumstances. A veteran to whom a *Monitor* was given at the camp, ran in to his tent-mates exclaiming, "Boys, here's the best paper in the world!" A clergyman stopped at the reading-room window and asked if he might have a *Monitor*, saying he had heard of it but had not seen it. He returned for the next day's issue with a complimentary remark as to the excellence of the paper. One of two clergymen who came into the rooms said he was a regular subscriber to the *Monitor*. Not a few of those who stopped to get literature voiced a desire to know more about Christian Science, and some inquired where the textbook could be obtained in their home communities.

Correspondence.

MELBOURNE, AUSTRALIA.—During the past year there has been a marked change in the attitude of the local press toward Christian Science. Antagonism has been less bitter, and when it has appeared in the Melbourne dailies it has been veiled rather than pronounced. Attacks by denominational papers have been fewer and they have been modified in virulence, although in three cases the privilege of reply in these papers has been denied. Throughout the year the committee has had gratifying evidences of growing interest in the subject, arising out of press attack and reply; and the recent platform addresses to suburban audiences by a Melbourne preacher, also the threatened pamphlet which a leading denominational body announces in its assembly report as having in contemplation for circulation, are not without significance. Eventually it will doubtless be recognized by antagonists that such attacks serve only to advertise Christian Science for good in the very circles where the opposite result is aimed at.—*Report of Committee on Publication.*

THE LECTURES.

WICHITA FALLS, TEXAS.

A large gathering at the Lydia Margaret theater heard Francis J. Fluno, M.D., expound the truths upon which Christian Science is based. Dr. Fluno was introduced by Orville Bullington of this city, who said in part,—

I have not been fortunate enough to become associated with the Scientists or any other church as a communicant, and I am less familiar with the doctrines of the Christian Scientists than of any other of our many religious organizations; but I do not hold to the opinion that a knowledge of any religious institution is essential in order to appreciate the effects of its work in the world. It has been written that "the tree is known by his fruits," and it is from this fundamental truth as a premise that I have reached the conclusion that the Church of Christ, Scientist, is entirely worthy of the important position which it occupies before the world today, and that the wonderful growth and expansion of this church during the last few years could not have come about but for the fact that its doctrines were based upon fundamental truth.

In no other denomination have I been able to observe greater fidelity to the great truths that go toward making right living possible, than in this church. The very foundation-stone of any church, as I understand it, should be a thorough knowledge by its members of the teachings of Christ, and the superstructure erected upon such foundation, an intelligent and rational application of such knowledge. If this be a correct standard, then certainly the membership of this church can pass muster with that of any other church; for I believe the result of good citizenship and right living attained by the membership of this church could not have been attained except by studious observance of this rule.

In all charitable and humanitarian enterprises I have observed the members of this church in the fore, working for the betterment and uplift of their fellows; and these things are the things that count. What the world needs today, more than ever before perhaps, is truth rather than theory, deeds rather than dogmas, and devotion to right rather than doctrines. The great effort of the people is to get away from the technical, theoretical, and superstitious in theology as well as other matters. To command the attention of the world, any institution may produce results. This you have done and are doing every day, and it is a hopeful sign of the times that religious intolerance is becoming the exception rather than the rule; and no better evidence of this fact can be shown than that this congregation this afternoon is composed largely of those who are not followers of the faith to be presented by the lecturer, and who are here to listen and to learn.—*Wichita Times.*

PORTSMOUTH, ENGLAND.

A lecture on Christian Science was given by Bicknell Young at the Portland hall. The lecturer was introduced by Major Bridge, who said that he felt it a privilege to do anything whatever to advance that great cause. Formerly, like most people, he ridiculed the idea of a millennium, but now he was persuaded that through Christian Science the millennium was indubitably approaching. Formerly, as a staff officer, holding a responsible position, when discussing the merits of any question, he always weighed the evidence for and against. Applying that process to Christian Science, he found that all the evidence was to be put in the scale in its favor and nothing whatever on the other side. It was characterized by good will and love for all men. By its aid he had seen his nearest and dearest literally snatched out of the clutches of death at a moment when help seemed impossible. He had seen the drunkard reclaimed and converted into a useful and self-respecting member of society, he had seen stupidity replaced by intelligence, and vice by virtue. At one time he was an ambitious man, but now he would not give up his knowledge of Christian Science for all the wealth and honor that earth had to give.

Correspondence.

BROOKLYN, N. Y.

A lecture on Christian Science was given in First Church of Christ, Scientist, by Judge Clifford P. Smith, who was greeted by an audience that tested the capacity of the large auditorium. Judge Russell Benedict of the supreme court introduced Judge Smith, saying in part,—

Friends, Christian Science is not a new religion. In its essence it is as old as Christianity itself; it is primitive Christianity. Many people, even today, in this country, think Christian Science is a novelty. They think that it has modified and changed other forms of religion, if not the very Bible itself. Some people even think that it has gone so far as to deify the one who discovered and put it in form, Mrs. Eddy; and there are many other popular misconceptions and erroneous ideas concerning Christian Science; and one has only to read articles which are published from time to time in the newspapers—the press of the country—to observe how little many people still know about what Christian Science is.

Now, it is the purpose of the Christian Science church to correct as speedily as possible these erroneous misconceptions and mistaken opinions as to what Christian Science means, and the method which the church has adopted to bring that result about is from time to time, in the various cities and towns and villages of the country, to give lectures through those who have prepared themselves by diligent study and reading to show what Christian Science really teaches, and to set people right in their view and understanding of Christian Science.—*Brooklyn Eagle.*

LIMON, COL.

The Limon auditorium was well filled to hear the lecture on Christian Science by Clarence C. Eaton. The introductory remarks of P. O. Hedlund, register of the United States land office at Hugo, Col., were as follows:—

I am sure we have all gathered here tonight seeking happiness, but with possibly as many different ways of seeking as there are people here. What is happiness, and what is the right way to attain it? First, happiness is contentment, joy, harmony. Possibly every one has some object in view on which he spends many anxious thoughts, and feels that when this object has been attained happiness will be his and he can rest, thinking that he will then be content; but how often have we striven for some material thing which we felt would bring us happiness, and found, when our object was attained, that happiness, true happiness, was still a fleeting vision just ahead, and with hope ever new we decided that it was something else which would bring us the longed-for joy. But, my friends, if it is wealth, power, praise, or anything material and fleeting that we are striving for, it will only momentarily satisfy, and after a life spent in the search we can at last only exclaim, "All is vanity." If we seek the truth and love of the one true God, we can then hope that the joy attained will not be fleeting, but will last forever. The small band of Christian Scientists in Limon who have been meeting for about two years, first in homes and for the past year in a public hall, feel that their conception of God will bring the happiness we are all striving for, and they have arranged with one to speak to you this evening, one who is in every way fitted to explain what they believe and why they believe it.—*Correspondence.*

TRENTON, N. J.

Virgil O. Strickler lectured for First Church of Christ, Scientist, at Taylor opera house, before a large and attentive audience. He was introduced by Edmund C. Hill, who spoke in part as follows:—

It is the custom of the Christian Scientists, and I think it a very pretty custom, to invite a non-communicant, a member of another faith, to introduce the speaker, and I am here for that purpose. It is quite unnecessary for me to make any extended remarks; I am unable to expound its doctrines, and I would not if I could offer any criticisms. I may be pardoned, however, if I mention two traits that I have noticed among the Christian Scientists with whom I have come in contact. First, they seem to avoid saying unkind things of any one; and second, they seem to be always cheerful, getting a great deal of happiness out of their faith; and any religion, or phase of religion, that produces these traits in its members, is well worthy of examination.—*Correspondence.*

HARVARD UNIVERSITY, CAMBRIDGE, MASS.

A lecture on Christian Science which was delivered by Judge Clifford P. Smith in Peabody hall, Phillips Brooks house, Cambridge, under the auspices of the Christian Science Society of Harvard University, was well attended by the students. The introductory remarks by Alfred Herberich, president of the society, were as follows:—

No doubt it is fair to assume that the subject of Christian Science is new to very few, if to any, of you who are gathered here tonight. To those who have studied its teachings the term Christian Science means all that the name clearly implies—a scientific Christianity; for they have found it to be a religion in which the teachings of our Master, Christ Jesus, are successfully applied to all the problems, large or small, of daily life, and they are proving the truth of our Master's statement, "He that believeth on me, the works that I do shall he do also." In other words, the message of Christian Science is one of present salvation, a message of freedom now from all ills, all sin, and all fear.

Through her wisdom and because of her love for mankind, Mrs. Eddy, the Discoverer and Founder of Christian Science, established a board of lectureship, that the world might through this avenue, as well as through many others, learn more of this great healing and saving truth. We are fortunate in having with us tonight a member of this board, and one who, because of his wide experience, is well qualified to speak to us on the subject of Christian Science.

Correspondence.

MEDFORD, ORE.

Prof. U. S. Collins, superintendent of the city schools, in introducing William R. Rathvon, who lectured on Christian Science, said:—

This congregation of men and women here assembled demonstrates the intelligence and thought of the citizens of Medford, all intent upon a candid investigation of the intellectual and scientific equipoise of Christian Science. The speaker of this evening is here to cast rays of sunshine upon our pathway and to add to the joy and sweetness of our life; to talk to those who are or are not satisfied, and to those who deem it within the range of human possibility that there is a light in reserve which may shine with a sublimer splendor and crown with a tenderer love man's appreciation of the infinite fatherhood of God and His way to man.

Inherited religious beliefs, the opinions of our fathers, make it difficult to present new phases of religion to the world, but the questioning of such beliefs has made the world brighter and ourselves happier. There would not have been a Presbyterian church had John Calvin not questioned the beliefs of his fathers; if Martin Luther had not raised his powerful and eloquent voice in opposition to the beliefs and practises of his ancestors, the world would never have enjoyed the glory of the Reformation; the Methodist circuit-rider would never have gladdened the hearts of the humble homes of England and the United States of America if the Wesleys had not turned aside from the beliefs and teachings of their ancestors. All honor to such intellectual integrity and praise to their moral courage, in the light of today and not in the mere pride of ancestral opinion.

With attentive ears and hearts open for the thoughts which will be presented on this occasion, I have the honor to introduce the lecturer of the evening.—*Correspondence.*

HAGERSTOWN, MD.

An audience which filled the Court hall heard Frank H. Leonard on the subject of Christian Science. D. C. Gilbert, introducing the lecturer, said in part,—

Christian Scientists not only believe, but know through demonstration, that the teachings and commands of Jesus of Nazareth were not intended for those living in the first and second centuries alone, but for all God's children and for all time. Christianity as taught, lived, and demonstrated by Peter, James, John, and others, when it came in contact with Greek philosophy and other material forces, lost its lofty concept and declined during a long period of darkness through materialism, rivalries in commercial enterprise, and the satisfying of personal and selfish ambitions. It was not until about the middle of the nineteenth century that Christian Science turned us face about from materialism to the true relationship of God to man.—*Hagerstown Globe.*

YONKERS, N. Y.

An audience of about five hundred listened to a lecture on Christian Science by William D. McCrackan, M.A., in the Public Library hall. He was introduced by H. Cornell Wilson, committee on publication for New York, who said:—

Christian Science is voicing a message. It has come in the fulness of time to speak with understanding in terms of Spirit, and to be heard. Christian Science is establishing thought with irresistible logic on the basic teaching of the Scriptures, which is, that God is Spirit and All-in-all. But, you may say, what has this to do with me; what has this to do with the man on the street, so to speak? Just this: it does for you and me, whoever we may be, precisely what Jesus proved it would do. It healed every inharmonious condition he confronted. "The works that I do shall he do also," was his promise to him who would believe on his words, the words concerning which he said, "They are spirit, and they are life." The works already performed through Christian Science give assurance that all untoward experiences common to mankind will give way completely to spiritual understanding in proportion as we gain and apply it.

TESTIMONIES OF HEALING.

Christian Science came actively into my experience four and a half years ago, came as an answer to what seemed a blind prayer for light; but the cry brought a response. It may have been that the recognition of the futility of all material aids made room in my consciousness for the ever-present light of Love and Truth, for I had then been several months in a surgical hospital, where I had undergone five severe operations at one time. During seven years of invalidism I had had many other operations, in fact, an almost unbelievable number; twelve being performed during a period of thirteen months. The case was said to be so exceedingly complicated, and the symptoms so varied, that each specialist to whom it was taken—and they were many—seemed justified in diagnosing it as directly in his line, and operating accordingly. With loving gratitude I state that in almost every instance I am confident that these physicians made an earnest effort to relieve my suffering, but until the last five operations were performed I steadily grew worse, and gradually the buoyant hope which had long sustained me gave place to a pitiful resignation. They had also resorted to the constant giving of opiates to allay the suffering, believing there was nothing further to be done; and I accepted the drugs with a deadened sense of their disastrous results, simply craving a little ease from the suffering.

The five operations which I have mentioned were performed in the last stages of my illness and after several physicians had given up the case as hopeless; and they were undertaken with the honest conviction that it was all that could be done at the time to save my life. For this sincere effort I have a deep sense of gratitude. The conditions in view of which these operations were performed, seemed bettered thereby, but I had lost all ability to struggle for strength, and day by day I grew weaker and more hopeless. One often hears this strange anomaly, namely, that the operation was successful, but the patient did not recover. At this time I was greatly wasted, was utterly sleepless, and was addicted to the drug habit through the use of opiates during many long months of suffering. This alone would seem, humanly speaking, a stupendous condition to meet, indeed almost beyond the pale of human endeavor, and with the addition of physical weakness, I counted my recovery an impossible effort.

After some weeks there came a day, such a day as those alone who have experienced it can appreciate, when every vestige of hope died within me; when with great effort I wrote a letter to my family, believing it would be the last one I should ever pen. I recall, as if it were this day, turning to my nurse and saying, "Pray as you have never prayed before, for there is no longer any earthly help for me." I well remember her expression, which bespoke the conviction that I had stated the truth. I then prayed as I had never prayed before,—not for recovery, since I was tired of praying for that, but for light, just light to see my way; and, as we read in the Bible, God said, "Let there be light: and there was light." The following morning I received two letters, both advising a trial of Christian Science in this extremity, and one was from a friend from whom I had not heard in ten years.

I shall never forget my emotion when I received these letters. Never for one instant did I doubt that this was a direct answer to prayer, but I felt the more emotion in that Christian Science had been recommended to me many times, and I had ever regarded the advice in the light of an insult, for I deemed that Christian Science was only for those who thought they were ill but were not. Now, however, above all else, I desired to follow what I felt to be a guiding Providence. But how to accomplish it I knew not,—how to leave the hospital. I wrote a few words to a friend, with the strength of my new-born hope, asking her to procure the services of a Christian Science practitioner, expressing it as my deep desire, and adding that I would make every effort in my power to leave the hospital. I then appealed to the surgeon, telling him that I feared I should never recover while there, and begged to be taken to my home, a distance of about eighty-five miles. He regarded my request in the light of a joke; said that I would be taking my life in my hands by such an act. I asked if he really believed I would ever recover. He said he did not know, but that if I did, it would be at least two years before I would be able to be about at all as a normal person.

It is useless to dwell upon the struggle I made to leave that hospital. It could have been nothing but divine strength which conquered all opposition and brought me the following day to my home town. From the time the work in Christian Science began, I steadily improved; day by day I gained strength and courage and hope. Almost immediately I lost the pitiful fear which had so long bound me. I knew I would live, aye, and be well and strong again. No language could express the joyful exhilaration of those days. In three months' time I was able to walk everywhere, and to run up and down stairs. During these weeks I studied our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, with greater fervor than I had ever felt in any other study. Many times before, I had listlessly turned over its pages, reading a little here and there and pronouncing it wholly inconsistent. At this time, however, it seemed illuminated, and I never felt surer of anything than that it was a divine revelation to humanity. I would add that it is its splendid consistency which ever since has so especially appealed to me. So much for the fallibility of human opinion!

From that time to this, Christian Science has been to me an ever-increasing light. It has healed my diseases; it has comforted in sorrow, and it is uncovering, hence overcoming, evil in my consciousness. I would add that all of my troubles were not immediately overcome; some have taken a long time to conquer, but I am even grateful for this, as I believe it has made me work the more diligently. This I know, however, as it has been proved for me, and I have in a measure proved it for myself: there is no sickness too severe for Love's ministrations; there is no sorrow too deep, no environment too afflictive for Truth's overcoming. I wish also to testify that in two instances the conditions benefited by the last operations, returned, but have been entirely overcome in Christian Science.

The same truth which has so splendidly healed me, physically and mentally, has brought a far richer blessing. It has so illumined the Scriptures as to make them indeed "a lamp unto my feet, and a light unto my path." It has given me a concept of God as Love—"universal, eternal, divine Love, which changeth not and causeth no evil, disease, nor death" (Science and Health, p. 140). "Who is so great a God as our God?"

To our dear Leader, Mrs. Eddy, who was accounted worthy to be the messenger of Truth to this age, I have a debt of gratitude which can best be expressed in the consistent, earnest effort to reflect this truth in thought, word, and deed, thus glorifying the message, Christian Science, for it is alone through every precept of its teaching that we learn how to glorify God rightly.

ANNE ARCHBOLD MILLER, South Bend, Ind.

It is with love and gratitude that I wish to tell of my marvelous healing in Christian Science. Four years ago, when I first took up the study of Science, I was a physical wreck, the most serious trouble being nervous exhaustion in its worst form. I also suffered from chronic stomach and bowel trouble, besides neuralgia and other complaints. I have, however, been healed of all through the study of Christian Science, and in many instances the help was instantaneous. I cannot find words to express the love and

Digitized by Google

thankfulness that I have toward God, or my gratitude to our dear Leader, Mrs. Eddy, whose teachings have helped me out of darkness into light, out of sorrow into peace and joy. It is such a comfort to know that God is an ever-present help to those who trust in Him.

I am, however, more grateful for the spiritual uplift than for the physical healing. Christian Science is teaching me how to live and how to help others of my family to understand the Science of being. My two boys have had many healings, for which I am very thankful. One was in the case of an ulcerated tooth, which was entirely healed in a few hours. My youngest son has been changed from a very delicate boy into a healthy and hardy one, who turns to God in every time of need. For all of this I am deeply grateful, and my prayer is that I may prove myself worthy of all these blessings.

MRS. IDA E. BREWSTER, Auburn, N. Y.

I cannot yet call myself a Christian Scientist, but hope to be. It has been only a few months since I have given the matter any consideration, but in that time I have experienced a demonstration, which I give with the wish that it may benefit others. From childhood my eyes had given me much trouble, and for several years I was not able to use them sufficiently to go to school. Later, by the aid of glasses, I was enabled to read and acquire an education, but my eyes continued to cause me more or less trouble and I was obliged to wear glasses constantly.

Somewhat recently we called a Christian Science practitioner for our little daughter, and I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. Later, while at my desk, the thought occurred to me that I should try the treatment for my eyes also. I began by removing the glasses for a few minutes at a time, and while at work repeated what passages I could recall from the Bible and the text-book. This was kept up for over a week without any result, but one morning, when leaving the house to go to work, the thought came to me, Why trust God for fifteen minutes a day and then rely on artificial means the rest of the time? Why not rely entirely on God's promises, or entirely on matter, for there is no use to experiment with Truth. Either God is all powerful or He is not. I felt that I should take Him at His word, and I did! I left my glasses at home, and have never had the slightest need for them since, and can see better than I ever did with them, for I can read the finest of print by artificial light without making my eyes tired. I might add that in my editorial work I am obliged to use my eyes constantly during the day, and frequently more or less at night. I am certainly very grateful, and hope this testimonial will enable some other person to rely wholly upon God in all things.

GEORGE M. LEE, West Hoboken, N. J.

It is over four years since I became interested in Christian Science, and thanks to our heavenly Father, I have been shown the way to health and happiness. I hope I shall let my light so shine as to prove myself worthy to be called a child of God. At the time I became interested in this teaching, I was greatly troubled with headaches, supposed to come from other ailments. I was visiting a neighbor who was a Christian Scientist, and she offered me a couple of *Sentinels* to read. I accepted them to keep from wounding her feelings, thinking at the time that I would not read them, as I was not in favor of what I thought Christian Science to be; but as soon as I arrived home I began to read through curiosity, and I became so interested that I read them through. I went back the same evening to exchange them for others, and that night I discovered that the headache had vanished. I must state that I was healed as I received the truth contained in the *Christian Science Sentinel*. The next morning I borrowed a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I drank long and deeply from that well of living water; and it has brought me health, happiness, and the peace that passeth understanding.

This is only one of innumerable proofs which I have had of the healing power of divine Love, and for all my blessings I give praise to Him in whom "we live, and move, and have our being." I am grateful to Mrs. Eddy for Christian Science, as it has brought me out of darkness into light.

MRS. IVA ADAMS, Ringgold, Texas.

[Translated from the German.]

An overwhelming sense of gratitude impels me to tell of the many blessings I have received through Christian Science. I had been suffering with an abdominal complaint for years, and had become very nervous, so that life often seemed a burden, and I could only imperfectly attend to the duties of a large household. Even though at times there was improvement, the fear stayed with me that I might have a return of the trouble, and this made me unhappy and worried; besides, the improvement was never of long duration. As I had heard of Christian Science through friends several years previous to this, I began to work earnestly along these lines, with the faithful assistance of a practitioner, whereupon there was a marked improvement in my condition. The ailments gradually disappeared, and I have not experienced any nervous trouble for about two years. I am no longer afraid of overexertion, as I know that God is my strength, and that He does not punish us for duties which we have performed.

Grateful though I am for the physical healing, I am still more so for the transformation which has taken place within me. From a dissatisfied, unhappy woman, before whom the cares of life would tower up like insurmountable heights, I have become a contented person, and have come to realize through the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and through the understanding of the Bible gained thereby, the omnipotence of God, good, and the unreality of evil; and I know that all evil may be overcome through a better knowledge of God as Love. I have also experienced the great joy of having my husband and four children with me; they have all been helped through Christian Science in times of sickness. I am very grateful for having been able on various occasions to help others, and my greatest desire is to be fitted to work in the vineyard of the Lord.

It was a great help to us to have services and meetings in a small circle at our home, and since we are not all familiar with the English language, we are the more grateful for *Der Herold der Christian Science* and the smaller German publications which are constantly coming to us, as well as for the translation of the text-book, which shows us, and makes us recognize with utmost gratitude, our great Leader's desire to furnish us with what we need.

FRAU ELISABETH HILEFELD, Schwerin in Mecklenburg, Germany.

I first heard of Christian Science in 1903, and as I was a constant sufferer I was persuaded by friends to go to a practitioner. In the first treatment I was relieved of a bowel disorder, and during two weeks' treatment I laid aside glasses which had been worn for over three years, after I had been told by specialists that I would always have to use them. This trouble was supposedly hereditary, as my father was almost blind for twenty years and my mother had weak eyes; so I did not ask the practitioner for help for this condition, and did not then understand how I could be healed. Besides this healing, I grew much stronger, could eat anything that was set before me, and did not suffer afterward.

My healing of other troubles was slow, for which I am

Digitized by Google

now grateful. An ear difficulty of long standing yielded five years ago, and through the prayerful study of the Bible and Science and Health, with the Lesson-Sermons, I am daily gaining, both physically and spiritually. I am very thankful for all my healings, but more than all else for the change of thought and the spiritual uplift. Through this truth I am a less selfish and more lovable woman. In April, 1911, I came to western Kansas from Chicago, where I greatly enjoyed church privileges. Here I have no Christian Science friends and no church privileges, as I live on a farm and care for motherless children, doing work to which I have never been accustomed, as I had been a dressmaker. At times the way has seemed dark, but Christian Science has been all in all to me. I am grateful for the *Monitor* and for all the Christian Science literature. The periodicals have brought sunlight and joy into this far-away place.

Great peace has come to me in being able to read and tell of this beautiful truth to others. All I am and all I have I owe to Christian Science. I am thankful to God, and also grateful to Mrs. Eddy for this truth, which has not only healed and freed me, but has brought health and joy to many a sick and sorrowful one. My daily prayer is that I may draw nearer to God, and reflect more love to my fellow men.

ANNA M. VARBLE, Monument, Kan.

Christian Science came to my attention when I was a very unhappy woman, as well as a very discontented one; but this condition has been replaced by happiness and contentment through the study and understanding of "Science and Health with Key to the Scriptures" by Mrs. Eddy. First, I was healed of chronic nervousness. Later, I had a severe burn, caused by pouring boiling grease on my hand and arm. I treated myself at once; and though some blisters appeared, I was able to rest all night and continue with my work the next day, the evidence of the burn soon disappearing. I am grateful for these demonstrations, and many other blessings, and I trust I shall be able in a measure to express this gratitude for our Leader's patient work for humanity.—MARY VANDEVEDER, Denver, Col.

Some time ago I had an attack of pain in my back, and after a week of distress and fear, when all material means had failed, I asked for help in Christian Science. The practitioner began to treat me in the morning, and by night I was able to stand erect, sit down, and rise from my chair with comparative ease. In three days I was completely healed, and my back has not troubled me since. I am seventy-four years old and consider myself a well man. I am reading Science and Health, and am deeply thankful to God for all that Mrs. Eddy's book teaches, and for the healing, which in my case was through absent treatment.

HENRY SAUNDERS, Providence, R. I.

I am deeply grateful for Christian Science, not alone for the physical healing, but for the spiritual uplift. Through the study of "Science and Health with Key to the Scriptures," I have received the understanding of the allness of God, everpresent, omnipotent, the only power. Christian Science has proved to be a most wonderful help in time of trial and tribulation. Through the passing on of my husband, my duties became many and my responsibilities great, but Truth has been my constant guide, and has proven a most wonderful help in my manifold duties, trust in God giving me that sweet peace "which passeth all understanding," which the world cannot give. I desire to abide in this sense of Truth, therefore I must let, not the human will, but the will of the Father be fulfilled in me.

Christian Science has given me a glimpse of the glorious liberty of the children of God, freedom from all error, for Christ, Truth, has set me free. This is our divine birthright, for "where the Spirit of the Lord is, there is liberty;" and Christian Science unfurls the flag of liberty, which waves over all nations and bids us all welcome to this fountain of Truth and Love.—MRS. F. DETERDING, St. Louis, Mo.

[Translated from the German.]

It is with a sense of joy and gratitude that I wish to add my testimony of healing through Christian Science. I had been suffering for several years with a stomach and heart trouble, also from a nervous condition, to which later on was added an abdominal complaint. The physicians, having tried different methods of cure, were at a loss to suggest a remedy which might be conducive to the healing of my ills, and finally declared that I should go to a watering-place. This being impossible for me, however, I made up my mind to submit to an operation. At that time my attention was called to Christian Science and I availed myself of the help extended, with the result that a sense of perfect health has come to me. I give thanks to God for showing me through loving people the way to truth—the truth which freed me from error's thraldom, so that now I "taste and see that the Lord is good."

ELFRIEDE WESTERHOFF, Kump, Westphalia, Germany.

I have always enjoyed going to church, but was not able to go often, as my invalidism was the cause of many unkind-ing and disagreeable remarks being brought to my ears, and so I would sometimes wait until I was very hungry for the word of God before I had courage to go to church again. I was in this hungry state of mind one Sunday morning when a neighbor asked me if I was going to the Christian Science church; if so, we would go together. I had never been to this church before, and the Scripture reading was in process when we arrived. These were the words which greeted me: "I was an hungred, and ye gave me meat." When this reading from the twenty-fifth chapter of St. Matthew was finished, the Lesson-Sermon followed, and it sounded so good, so very good, to me!

On returning home I tried to remember what had been read, but could only recollect that the Lesson had been taken from the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy. This made me want the book, even though I could not read it, for at that time I could only read in the Primer; so I borrowed it, then looked and looked for a sentence that I could read, before I found this: "God is All-in-all. God is good. Good is Mind" (Science and Health, p. 113). Then I remembered that some one had told me the Bible taught that God created man in His own image and likeness, and without realizing it I kept thinking that if God is Mind, then He knows all things, and if man is His image and likeness, then man can read. These thoughts kept running through my mind from ten o'clock in the morning until four in the afternoon, when I took up the books again and found that I could read without difficulty in both the Bible and Science and Health. In this way I was taught to read by the great Teacher.

I am very grateful to Mrs. Eddy for her discovery that God is Mind, and that Mind's power to teach is as great today as in the time of the prophets.

MISS STELLA MCKIBBEN, Topeka, Kan.

It is with heartfelt gratitude that I testify to having been permitted by divine Providence to witness the dawn of conscious knowledge in my daughter, and to having seen her read comprehensively the Bible and Science and Health, which but a few hours before would have been an impossibility, because the years of invalidism had prevented me from educating her. Although at first she was quite unwilling to try to read from any other page, for some time she has been reading with fluency anything which may interest her. Many other blessings have been brought to

Digitized by Google

us through Christian Science, one of which was my own healing of a so-called organic disorder of many years' standing. The healing came to me while I was reading the Lesson-Sermon on "Spirit," and to my great joy I found that it was instantaneous and permanent.

For the spiritual uplift, the accentuated beauty of the Scripture, and the realization of the present possibility of experiencing the healing power of Truth in this age, through the pure and exalted life of our beloved Leader, Mrs. Eddy, I am most grateful to God.

MRS. CORA MCKIBBEN, Topeka, Kan.

I wish to testify to the truth of this wonderful manifestation of scientific education. This line of demonstration is of particular interest to me, as I have been a school teacher for years, both before and after knowing something of Christian Science. Many proofs of the power of Truth to educate were given me in my own experience in teaching, but of all I have known this experience of Miss McKibben's gives the most conclusive evidence, and is also the most wonderful transcending of mortal mind methods, as Truth's ways are higher than the ways of mortal mind for accomplishing anything.—MRS. EFFIE HYDE EVANS, Topeka, Kan.

Several years ago I had a severe attack of what is known as sunstroke, which left my head in a bad condition. Noises troubled me very much, and at times there seemed to be a terrible pressure on my head. I then had treatment from a Christian Science practitioner, and I have experienced no trouble since; I have also been relieved of rheumatism and an ulcerated tooth, through Christian Science.

A. H. EMANUEL, Oceanpark, Cal.

[Written for the *Sentinel*.]

THE PILGRIM.

BESSIE RUTHERFORD TWIGG.

His banner over me is Love,
And daily on my way I prove
  The sureness of His leading;
A cloak invisible it is,
In which through midst of enemies
  I pass unseen, unheeding.

When burning sands before me spread,
A canopy of green o'erhead,
  It moveth with my going;
So every desert place is made
An Elim spot of grateful shade
  And living water flowing.

When wintry winds blow keen and chill
I swiftly speed o'er dale and hill,
  And sing as onward faring,
For naught unkindly, naught of cold,
Can penetrate one shelt'ring fold
  That 'speaks His heavenly caring.

By night a coverlet, it lies
About me under alien skies
  While I am sweetly sleeping,
I know that through His loving grace
The wild becomes a "secret place,"—
  And I am in His keeping.

And so, through all my pilgrimage
Let lightnings dart or tempest rage,
  I follow where He guideth,—
I journey to that city fair
Which hath foundations, over there
  Where Love divine abideth.

FROM OUR EXCHANGES.

[*The Outlook.*]

Heaven is not a place to be had for the asking; it is not a reward to be given even by the hand of God; its gates do not open as an easy refuge for those who are escaping from their sins. It is profoundly significant, though it has been often missed by theologians, that the loving Christ who laid down his life for men promises to deliver them from their sins, not from the consequences of their sins. . . . To find one's way into heaven out of harmony with its spirit would be to bring one's self face to face with the whole infidelity of one's life, with violated laws, blighted hopes, lost opportunities, neglected privileges. There will be no need of any other judgment than the judgment of one's conscience in the day when every man will face the secrets of his own heart. Heaven, which is bliss to those who can bear the awful light of its purity, would be torture to those to whom it would be one terrible reproach.

[Rev. G. Stanley Russell, M.A., in *The Christian Commonwealth*.]

Never regard your church roll or your balance-sheet as the final test of your church's success; to aim at mere additions to the membership, or mere contributions to the funds, is to be guilty of judging Christ by the world's standard instead of the world by Christ's. I am in line with the apostles when I say that money, and even converts, are by-products of the spiritual machinery. The thing to aim at, the objective to set before you, is not either of these; it is to secure that amid self-getting and self-pleasing the church shall stand through each of her members for self-giving and self-dedication; that amid the war and lust and sin around them Christ's people shall be perpetual witnesses to the fact that at the center of all true living are the ideals and principles of the cross; that over and above the petty allegiances to which men bow, there is ever the spiritual lordship of Jesus Christ. If that attracts, well and good; if the heroism, the purity, and the beauty of the evangel draw the crowd and fill the coffers, so much the better; but if it does not, if it arouses hostility, if it is everywhere a sign that is spoken against, that is no evidence that you must alter your message, lower your flag, or throw overboard any of your cargo; it is only a call to you to take your place in the prophetic succession, to become mocked at and a laughing-stock, but through it all to go on bearing your witness to the spiritual and the eternal, irrespective of whether it seems to win its way into men's hearts and lives or not.

[*The Christian Work and Evangelist.*]

Begin to read the Bible with no preconceived theories of inspiration or revelation. Approach it with a perfectly unbiased mind, as if you had never heard of it before, if you will, and as one simply seeking truth for life, and see what happens. If one reads the Bible in this way, he will find certain great truths of religion emerging on every page, in spite of all seeming contradictions and regardless of any theory of inspiration. He will also find, in spite of occasional divergent views, that there is ultimately a unity in the message of this book or collection of books—for the Bible consists of sixty-six books of as many dates—that is so outstanding that all divergencies from this unity sink into insignificance; and he will soon find himself believing, beyond all doubt, that this unity is the sure word of God.

What is this unity? In brief, it is as follows: Back of creation, underneath all being, pervading all life, in all processes, is a personal being who is called God. "In the beginning God," is the universal testimony of this whole wonderful book, and all history is but the unfolding of His will. Then he will find that in spite of occasional passages, —and they are very few, and grow less and less frequent as the books progress,—this God bears upon His heart the welfare of His children, and has love and good will toward

Digitized by Google

them. . . . The passages which make God a Moloch, simply reflect a feeling which revelation is aiming to displace with every advancing year, until in the prophets it almost disappears, and in the New Testament is absolutely obliterated in the Father who so loved the world that He "sent his only begotten Son" to save it to Himself. Then the reader will discover that every book in this Bible reiterates on every page that God speaks to men, declaring to them His will, taking them into His confidence, calling them to share in His redemptive work, assuring them of His love, calming all their fears, and revealing to men the way of life eternal. No matter what occasional word may seem to jar, the great and all-pervading message of this book is God; God is Love, and God has spoken and still speaks to men.

[*The Standard.*]

Prophets! The prophets of the Old Testament and the moral leadership of today, whether in the ministry or without it, have essentially the same task. It is theirs to interpret the universe in terms of God. To translate current events and relate them to the whole sweep of the divine movement of human history, is a task given not only to an Amos or an Isaiah, but to scores and hundreds of obscurer men—in the twentieth century after as well as in the eighth century before Christ—who perform for a smaller circle of people what has been done by the greater men for the multitudes. The prophet of today is not alone. Bearing witness with him is the long line of the noble company of prophets and apostles who in every age have been privileged to be bearers of God's message to men.

[*The Pacific Baptist.*]

"Blessed are the pure in heart: for they shall see God." The Jews believed that God would be apprehended through ceremonial cleansings or outward purity. Jesus declared that through inward purity alone could God be known. They were not to wait for a visible kingdom where God or His representative should sit upon a material throne, but they were so to purify the life within that God might be seen anywhere at any time. Moses on Mt. Horeb is the world's greatest example of this principle. He saw God and heard Him speak in the burning bush, because his life was pure and the burden of his life's mission was tugging at his heart-strings.

[*New-Church Messenger.*]

The prejudice against a new revelation will subside as it is realized that an important need is thus met. When a need is felt, there is dissatisfaction with former conditions. And with a widening outlook, it is seen that new opportunities are arising to give better results than those which were before experienced. The time has fled when incomplete definitions of faith will satisfy. Now, truth is as wide as the universe. A revelation of truth, to be complete, must cover all the ground upon which instruction is necessary.

[*The Christian Register.*]

We say that devoutly repeating the Apostles' creed is no such mark of the Christian as carrying out in life the apostles' spirit. The same is true of any form of faith or believing. We could say Christianity is not a doctrine, but a life, and leave the truth as hopelessly tied up in utterance as is the repetition of the Nicene creed by one whose Christianity ends with it.

[*The Universalist Leader.*]

If Christendom is ever reunited, it will be in some manner which will provide for spiritual liberty, else on the morrow we shall start again upon a new and greater Reformation than any that Christian history has witnessed. There is a great hunger in us all for the greater fellowship of the disciples of Jesus.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works of Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been translated into German ("Die Christliche Wissenschaft: Eine Religion der Liebe"), and is now printed in pamphlet form and ready for distribution. Forty pages and cover. This lecture was recently published in English, and both editions are on sale at prices of the regular pamphlets as shown on the opposite page.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal*, printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

Digitized by Google

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

The Hons. J. S. Williams and Clarence Ousley, members of the American commission to study rural cooperation in Europe, in their report to the Governor, the directors of the Agricultural and Mechanical College, and the officers of the Farmers' Union of Texas, advise the creation of a cotton warehouse system under state regulation and the establishment of a bureau of cotton information. In discussing the cotton problems they declare that preventable loss in the marketing amounts to from four to five dollars a bale, or from twenty to twenty-five million dollars a year, in the Texas crop alone. This can be saved, the report asserts, by a system of warehouses, which is described in detail. Briefly, they recommend: Local corporations, chartered under a general law, for the maintenance of warehouses for the storage, grading, and weighing of cotton and other farm products; provision by law for the sale of the bonds of local warehouse corporations by making the state the custodian of funds of stockholders and the trustee of the corporation's assets and earnings for the security of the bonds; creation of a state warehouse commission, consisting of three competent men empowered to prescribe rules for the sampling, grading, and weighing of the products, to the end that they may be graded and sold under scrupulous state regulation.

Deposits from the government fifty million-dollar treasury fund to aid crop movements will be made in two equal allotments in southern states in August and September. While all deposits may be recalled without notice, the department plans to recall 25 per cent on each of the following dates,—Dec. 15, Jan. 15, 1914, Feb. 15, and March 1. The banks will pay 2 per cent interest and all expenses. Deposits are to be made to national banks in principal cities, and are to be used in relieving stringency. The banks receiving the money are expected to lend to the smaller banks at a reasonable interest rate. Security is to be in government, state, municipal, and other bonds, and in commercial paper which is approved by a securities committee of district clearing-houses, the secretary of the treasury naming one member of each committee.

Col. George W. Goethals, chairman of the isthmian canal commission and chief engineer of the Panama canal, has accepted the honorary presidency of the International Engineering Congress, which will be held in connection with the Panama-Pacific exposition from Sept. 20 to 25, 1915. The exposition officials have communicated with some eighty thousand engineers in all parts of the world, with a view of having them visit San Francisco in 1915. The Congress will be conducted under the combined auspices of the American Society of Civil Engineers, the American Institute of Mechanical Engineers, the American Society of Mechanical Engineers, the American Institute of Electrical Engineers, and the Society of Naval Architects and Marine Engineers.

Thousands of volunteer road builders marched forth from every county in western Missouri on the 20th to become a part of Governor Major's force of three hundred and fifty thousand which, in response to his proclamation, began a two days' campaign that is expected to add one million dollars in betterments to the public highways of the state. Eight thousand state road overseers have for weeks been assembling equipment and laying out the work to be done, so that every squad of men might be put to work without delay or confusion. Every city, town, and hamlet was represented in the movement, and in farming districts nearly every able-bodied man enlisted.

As a result of a survey of light surface fires in pine timber, the following facts have been verified by the United States department of agriculture: A surface fire fells from one to three merchantable trees per acre, by eating out basal fire scars; it makes fire scars at the base of 42 per cent, or nearly one half, of all the merchantable yellow pines; it actually burns to death more than three per cent of the trees; that is, they are killed by the heat of the light surface fire at their bases. Of the mature trees, therefore, more than one half of the total stand suffer more or less damage.

John Lind, who personally represented President Wilson of the United States in trying to aid a solution of the unsettled conditions in Mexico, was duly received and presented his proposals. These were taken under consideration, but were rejected. They were: first, complete cessation of hostilities; second, that President Huerta resign in favor of a president *ad interim;* third, the fixing of an early date for the presidential elections; fourth, that General Huerta should not be a candidate for the presidency.

Twenty chiefs of state and national highway departments will personally take part in discussing ways and means of constructing and maintaining highways according to every known method and under all conditions, at the sessions to be held in Washington, D. C., under the auspices of the American Highway Association, which is looked upon as the national clearing-house for the organized road movement of America.

Membership of the Boston Y. M. C. A. is expected to reach the six thousand mark by the time the new one million-dollar building is formally opened. From the present enrolment in the educational department it is expected that there will be over four thousand students in the various schools by the 1st of November.

The interior department at Washington has specified four hundred and twelve thousand acres in the drier eastern portion of Oregon for entry in homestead allotments of three hundred and twenty acres.

International.

The prime minister of England received a deputation recently at the House of Commons on the subject of the proposed tunnel under the channel between France and England. Arthur Fell, M.P., introduced the deputation and presented a memorial to the prime minister signed by nearly one hundred members of Parliament, urging the government to withdraw their veto on the scheme. Mr. Fell said that the movement in the House in favor of the tunnel scheme was a spontaneous and non-partizan one. Many officers of the army who were formerly opposed to the construction of a tunnel now supported it. Many of the former objections to the scheme could no longer be put forward. Friendship with France had stood the test of ninety-eight years under varying conditions, and the construction of a tunnel would still further cement that friendship. The French government was known to favor it, and the French prime minister had given a most explicit statement on the matter. The construction of a double tunnel would cost about sixteen million pounds.

The Brazilian minister of public works has approved the plans and estimates for the construction of the irrigation dam Malta, municipality of Angicos, state of Rio Grande do Norte. In order to promote agricultural development in connection with its irrigation policy in the states of Ceara, Piauhy, and Parahyba, the federal government through the irrigation works department has elaborated plans for two great wagon roads. Both roads are planned to tap districts comprised within the activities of the irrigation department. They will supplement the numerous roads surveyed in all of the northern states.

Industrial and Commercial.

The public service commission of Massachusetts will give a public hearing in September on the question of burning oil instead of coal in the locomotives of the New York, New Haven & Hartford railroad in the Cape Cod district. Under the new railroad law the commission can order this change if it desires. This move comes from the state forestry department. There always is danger of forest fires on the cape, and there have been an unusually large number of fires this summer, owing to the dryness of vegetation, and it is found that most of the fires are set by sparks from locomotives.

A great advance has been made in Africa in cotton growing. Exports have increased in the last seven years from one million six hundred thousand pounds to four million six hundred thousand pounds. In the East African protectorate the exports had risen from forty-six thousand to three hundred and sixty-six thousand pounds; in Uganda, from ninety-six thousand to nearly twelve million pounds; in Nyassa they have increased from seven hundred and seventy-six thousand to two million two hundred and seventy-six thousand pounds.

Harvesting operations are under way in various parts of central Alberta. Reports received indicate that the grain crop throughout the province will be the largest ever gathered. Its farm value is placed at from fifty-three to fifty-five million dollars, as compared with fifty-one million dollars in 1912. The three transcontinental railroads operating in this district have completed arrangements to supply sufficient equipment to move the crops without delay.

The Pennsylvania Railroad Company is going to make an experiment in the quick-lunch-on-wheels business. A steel passenger car is being fitted up and equipped for this service. The company will try it out on trains that do not carry dining cars, believing that it will answer a long-felt need. The car is intended to cater to the wishes and tastes of the traveling public who do not wish an elaborate meal en route.

The White Mountain Freezer Company of Nashua, N. H., has bought a large tract of timber land in Amherst with over one million five hundred thousand feet of standing timber. The lumber will be cut this coming winter and worked up into staves.

The value of oil-stones, including hones, whetstones and scythe-stones, produced in the United States in 1912, according to figures compiled by the United States geographical survey, amounted to $232,218.

The olive crop, which will probably be double that of 1912, will bring one million six hundred thousand dollars to California this year, according to present estimates.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"RESIST" AND "RESIST NOT."

IRVING C. TOMLINSON, M.A.

THERE are two seemingly conflicting commands in the New Testament which it is important for us to understand in order that we may enjoy the health and peace which follow adherence to their strict behests. Christ Jesus commands us that we "resist not evil," while James counsels us to "resist the devil, and he will flee" from us. Mrs. Eddy comprehends both of these when she counsels us to "meet every adverse circumstance as its master" (Science and Health, p. 419), bravely and persistently insisting upon the allness of God, good, and the nothingness of evil.

The words of Jesus, "Resist not him that is evil" (Rev. Ver.), may be taken to mean, Have no contention with the evil-minded. It is essential, for those who would progress in the truth, not to dispute with others concerning their religion. Those who are not ready to hear the word gladly, are seldom ready for any discussion upon the subject; therefore the tendency to debate Christian Science with a contentious opponent is something to be carefully avoided. To "resist not evil" is also to have a confidence in the truth that destroys belief in evil. He who resists not evil is one who is not afraid of it. Definitely to struggle against something is often to give to the supposititious something a semblance of reality. We know that error is no part of man's true inheritance; therefore, because it is not wise to contend with evil-doers, and since we should have all confidence in Truth, Jesus declares, "Resist not evil."

As a part of our work in Christian Science there is nothing more important than this command of James to "resist the devil," and we are taught how to do this successfully and with beneficent results. If understood, these words will be seen to conflict in no wise with the commands of the Master. When working in mathematics, it is normal and natural for the mathematician to resist an error in his problem; never for an instant does he accept a mistake for the truth. Likewise in each problem which comes before us, we are to resist the mistake, or error, by immediately knowing the truth. Before sickness of every kind the wide-awake Scientist can only know its untruth and unreality. God never made it, therefore it does not exist. Disease is no part of Mind or Mind's creation, therefore man as the idea of Mind is not afflicted with it.

There are numerous helps for one who would resist evil of every nature. "The scientific statement of being" (Science and Health, p. 468) is given us for this purpose. Every page of our text-book, rightly understood, offers a sword and shield with which to resist all that is unlike God. To realize the truth of such declarations as, "This belief totters to its falling before the battle-axe of Science," and "Be firm in your understanding that the divine Mind governs" (pp. 389, 393), is to put on a stout armor for spiritual warfare. What a panoply of strength is found in the Psalms, in the books of the prophets, and above all, in the words of the Master! The practise of committing to memory passages that uplift and strengthen, is one to be cultivated and adhered to, for it is written, "He sent his word, and healed them, and delivered them from their destructions."

It is especially needful to be on the alert to resist attempted encroachments of fear, ignorance, or sin, and it is a constant safeguard to have in our thought passages from the Bible and the Christian Science text-book. If fear or sin in any form is manifest, one should immediately "flee as a bird" to his mountain and meditate upon the strengthening and uplifting word. It is an inspiration to turn to the story of Joseph and read that when his brethren, in fear, prayed for forgiveness for their sin against him, he bade them fear not, saying, "As for you, ye thought evil against me; but God meant it [the sequent experience] unto good." More than all do we remember how steadily Christ Jesus held to an unswerving faith in good and constantly proved its presence and power. Surely we do know that "the Lord God omnipotent reigneth."

The Concordance to Science and Health is an invaluable assistant in equipping one to resist evil, and it should therefore be in the possession of every Christian Scientist. Every passage on Love, Life, courage, patience, resistance, etc., is there tabulated, and is at once available to him who would successfully resist the devil; and the scientific understanding of these words of truth will certainly put evil to rout. Likewise, the articles and testimonies in the *Sentinel* and *Journal,* in their statements of truth and grateful acknowledgment of benefits received, are valuable aids in this good work of overcoming evil.

If we would be true to the teachings of Christian Science, if we would be undisturbed by the problems of life which confront us, and would have abiding peace even under trying conditions, we must heed the words of the Master. Trusting Truth, we will avoid the contentious spirit and "resist not evil." On the other hand, to be free from contamination by error, to preserve untouched our divine heritage of health, we should act upon the counsel of James to "resist the devil," as we are taught in Christian Science. Having done well our part in both these directions, we shall find that evil of every form and nature will flee from us.

HEALTH.

JULIA WARNER MICHAEL.

ON page 120 of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we find this definition: "Health is not a condition of matter, but of Mind; nor can the material senses bear reliable testimony on the subject of health." What a revelation is contained in this simple but profound statement! Mind being God, we must then admit that health is not a man-made or man-sustained state of existence, but a divine fact, unchangeable, perfect, and eternal. The phrases "your health," "my health," and "his health" thus become obsolete because untrue, and mankind awakens to the one God-made, ever-abiding, spiritual health in which all creation forever exists.

This understanding comes with sweet assurance of peace and confidence to him who is struggling with the contrary

Digitized by Google

testimony of the false physical senses on this subject. They would have him believe that health is a personal possession, dependent upon physical organs and functions; an exceedingly variable condition of matter over which man has an extremely limited control. They would have him believe in healths many, good, medium, and bad; in an improving or a declining health. They suggest a loss of health today or its recovery tomorrow by the use of drug, operation, exercise, and diet, when there is but one perfect health, like the divine giver, "the same yesterday, and today, and forever."

When one accepts the true view of health, he is relieved from fear, worry, anxiety, and uncertainty about the future. He moves through business, pleasure, labor, and rest with an abiding consciousness of unchanging good, knowing that neither lungs, heart, liver, nerves, stomach, food, weather, nor mortal mind control his health, and hence they cannot limit or destroy it. Health is a concomitant of Spirit, Mind, God, never in or of matter, nor at its mercy. Let us then cease to consider our bodies in connection with health, for such consideration is lost time. Let us rather earnestly seek for that Mind which was in Christ Jesus, and as we find it we will also attain its ever-attendant condition, perfect health and harmony.

To the Christ-mind health was and is an ever-present, divine reality, in which man forever exists, of which we all are to partake, and before which all false evidence disappears as surely and resistlessly as darkness disappears at the coming of light. It is high time that the false human beliefs and anticipations respecting disease and decrepitude should give place to the scientific knowledge of God's "saving health among all nations." Man does not possess a health of his own; he forever reflects the one perfect, spiritual health, divinely ordained and sustained.

DREAMS DISPELLED.

ISRAEL GITTELSON.

It seems that the word "dream" is derived from an Icelandic word which means "to harm, hurt, try to hurt." It also stands for whatever is fanciful and unreal, and in Christian Science it may be said to represent the illusive nature of mortal existence. I have read many opinions on this subject, but none have proved satisfactory, though one writer comes to a close analogy when he says that "a dream is like a running clock without hands; it indicates nothing, it means nothing." To the sleeper, however, a dream is real, and it is obvious that this sleep dream is symbolic, and is paralleled with the mortal dream. Mrs. Eddy says in Science and Health (p. 530): "The dream has no reality, no intelligence, no mind; therefore the dreamer and dream are one, for neither is true nor real."

Some time ago I dreamed I was visiting Russia, and as I landed on its border a soldier seized me by the arm, saying in good English, "You are my prisoner!" I had never seen him before, nor did I ever hear of a Russian soldier speaking English (no more so than Eve's serpent could speak Hebrew). I had an American pass, which he disregarded and insisted that I was a subject of Russia, although I had emigrated to America forty years previous when a child. I felt his tight grip on my arm, and the fear and suffering were so real that I actually shed tears. Nothing would persuade him to release me, and as he was pushing me forcibly into a cell I awoke. Oh, how thankful I was to God that this was only a dream! But it kept me thinking until I concluded that the mortal conception of matter and suffering, pain and sin, is just such a dream,—full of nothingness,—and that the only remedy is to awaken to the truth, to awake into that higher state of spiritual consciousness where there are neither sleeping dreams nor waking dreams, where all is light, all is Truth, all is perfection; therefore all is harmony, peace, and health.

In "Miscellaneous Writings" (p. 28) Mrs. Eddy writes: "In proportion as mortals turn from this mortal and material dream, to the true sense of reality, everlasting Life will be found to be the only Life." A realization of this fact brings peace and abiding progress. Jacob's dream was symbolic of his desire to rise higher in the scale of being, and he awoke from it to a higher state of consciousness, to see that material gain is unreal, and that God is All-in-all. So we read in Genesis, that Jacob on awaking exclaimed: "Surely the Lord is in this place; and I knew it not." Pharaoh's dream was real to him while he was in it, and it is the same with mortal dreamers, who do not stop to reason that the real man, the image and likeness of God, cannot suffer, sin, or die. The Christian Scientist who is a faithful student of Mrs. Eddy's text-book and its teachings, who is awake, and who guards the avenues to his thought, will gain harmony and peace.

Let every one who argues for the reality of mortal existence compare the sleeping dream with his mortal sense of life, and see how close is the analogy between them. To the inebriate the snakes which he sees coiling around him are as real as sin and disease are to others, but to the Christian Scientist neither is real, they are non-existent. This understanding I have gained since coming into Christian Science, and I freely acknowledge that up to that time I was dreaming my existence away in discord and unbelief. I was raised in the orthodox Jewish faith, but this teaching failed to explain life or reality to me. Since I began to study the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, an awakening conception of what man is, and man's unity with God, good, has unfolded.—"Whereas I was blind, now I see."

I am thankful to acknowledge this great blessing which is awakening me and unfolding the truth through my daily study. The seeming contradictions in the Bible, which I read in the original, are being made clear to me through Science and Health, for which I owe her unbounded gratitude.

WORKING FROM THE MODEL.

MARTYN JOHNSON.

CHRISTIAN SCIENCE is today appealing to an increasing number of men and women, not alone because of its ability to heal physical disorders, but because it offers a practical and effective basis on which to live happier and more efficient lives. Its teaching contains no appeal to the emotions, none to human sentimentality, none to pride of intellect. It can only interest those who are honestly and straightforwardly striving to know the truth about God and their fellow men. It is only as we are continuously honest in our thinking, and consequently in action, that progress is made in Christian Science study. So surely as we are honest with ourselves, we get our result. It is this demonstrable, scientific exactness of the teaching which appeals especially to men.

In Christian Science we learn that a direct relationship exists between God, "the eternal and infinite Spirit, creator and sovereign of the universe" (Webster), and man, "the spiritual image and likeness of God" (Science and Health, p. 591). This relationship is the logical and immutable one of cause and effect. The entire problem of human thought and endeavor is to discover and realize perfection. This quest has been the inspiration of human progress in every direction, material or spiritual. Wherever the history of the human race has been recorded, it has been merely the story of the desire innate in the human breast for self-realization, for fulfilment, for eliminating individual imperfection.

Christian Science at the start reveals to us an absolute standard of perfection, "God and man" (Science and Health, p. 470). Thus, with a definite ideal of perfection before us, our problem is merely one of application. How can we most effectually realize and express the ideal, here and now, in

Digitized by Google

every-day experience? Worship, with true Scientists, is not a matter of attending church services, nor of assenting to an abstract truth, but of practise. It is a daily and hourly endeavor to correct thought and action until they coincide with the Christ-ideal.

Critics who fail to grasp the statement that man is in the image and likeness of God, point out that men sin, suffer, and die. Christian Science does not teach that mortal men and women are perfect. Just as human theories have an element of error and never express absolute truth, so mortals are but imperfect expressions of man in the image and likeness of God. But the recognition of the ideal man gives us a concrete model, a pattern along the lines of which we may improve our individual characters.

On page 248 of Science and Health, Mrs. Eddy uses the figure of a sculptor and his model to show how mortals may work to realize the true concept. We know that the artist strives to reproduce in his copy those qualities which make his model beautiful. But the beginner makes sad work of the copy, because not only is his eye untrained to discern the niceties of proportion in his model, but his hand is lacking in skill to reproduce the lines he sees. The ability to make a beautiful copy of the model comes only with study and practise. The novice must so study his model, must so train his eye to ideal proportions, that as he meets with various types of character he will immediately recognize wherein they diverge from the ideal. But such study alone is not enough. He must make innumerable sketches of his model until his hand is so skilful that it instinctively reproduces the harmonies of its proportion. Then he makes what we are pleased to call a perfect drawing.

The student of Christian Science is doing exactly the same thing. He studies the perfect model, the divine idea, until he is so acquainted with it that he immediately perceives wherein mortals fall short of perfection. In this way he sees clearly the error to be corrected. But this perception of the ideal is useless unless he is all the while at work correcting his own thoughts and actions, striving to express truthfully its perfection. Thus is man manifested in the image and likeness of God. As the artist eventually gains an instinct for correct line and proportion, and so becomes spontaneous in his touch, so the Scientist gains an unfailing sense of harmony; he works out of a sense of fear and limitation. At first, conscious of his lack of skill, he is limited by mere ignorance. Practise educates him, until fear and the sense of limitation are forgotten and he works with freedom and joy.

Thus Christian Science gives to all of us, whoever or whatever we are, a practical working standard of perfection. With this in mind we are prepared to recognize and correct error, wherever it occurs in human intercourse and experience.

LESSON FROM THE MOUNTAINS.

A. DICKSON.

OFTEN have I watched the dull gray mists among the mountains, some heavy and thick, covering the entire range and wholly obscuring it from view, others stretching here and there, the peaks looming through where they are broken, and yet others as merely a light vapor, the strong background being easily seen behind them; but however far the mists may spread, however thick they may appear to be, still we know that behind them the mountains stand unchanged; we do not need to see them to know they are there. On viewing these mists, we never assume that they are greater or stronger than the mountains because they hide them from our view, and we know that as soon as the sun shines they will clear away and disclose the hills in all their strength and grandeur.

What a beautiful lesson this brings us! How often between us and our mountain, divine Principle, there come the mists of error, trying to obscure and hide from us the steadfastness of its power! Are we always ready to affirm that just as surely as the sun will clear the mist from the mountain, so will the realization of the truth clear the mists of error from our consciousness and reveal omnipotent, divine Love? If we are ready with Truth's affirmations and apply them, as taught by Mrs. Eddy in Christian Science, the mists of error will be driven away and the outstanding mountains of everlasting Life, Truth, and Love will be realized, the mountains which have been standing through all the centuries, steadfast and immovable, although often so seemingly obscured by the mists of sin, sickness, and death. Mortal mind could never pierce these mists, but through the spiritual discernment of our Leader they are being swept away and the mountain tops are revealed to us, strong, steadfast, and sure in Christian Science.

MIND'S ADVANCING CONQUEST.

HARRY FRANKLIN PORTER.

THE history of mankind is the history of the overcoming of material limitation: first, men learned to make fire and thus conquered climate; they then learned to sail and thus to command the sea; then to avail themselves of the energy of gases, or rarefied matter, and thus to shoulder on mechanical power the burden of work and to break down all barriers of terrestrial distance, on the sea and under the sea, on top of the earth and underneath, from the arctics to the tropics and from the occident to the orient. Then began a further onslaught on time and distance in the harnessing of that most subtle and mysterious of material forces, electricity, which gave men first transmission of thought by wire, and within the present decade without any apparent material medium.

Thus has the great, round earth grown smaller, and the nations of the earth been brought into closer and closer union, until today the ignorance bred of isolation and the prejudice bred of ignorance, from which unnumbered human discords have come, are fast being disannulled, and the song, "On earth peace, good will toward men," sung by the angelic choir of old, is becoming the watchword of progress. Now the conquest of the realms above the earth has begun, and already man's fancy has attempted to compass the end and ultimate. Some say aerial navigation will never become practical,—but these are few in this age of wonders; others declare that men will move in the upper space as rapidly as they now move on the earth; still others, more imaginative, more prophetic in their insight, predict that it will be possible to move as fast as the earth itself revolves, in other words, a thousand miles an hour. How—by what practical means—it remains for the future to disclose.

All real progress, since the dawn of time, has been by way of overcoming, removing, disannulling limitation. Startling as the wonders of today may seem in comparison with the triumphs of the past, they are but humble precursors of the wonders to be. The present awkward attempts to soar will seem as the feeble flutterings of the fledgling to the strong, majestic flight of the eagle. Indeed, this simile is woefully inadequate to express the vast difference inevitable between the present and the future; for mankind's ultimate flight will partake little of the bird likeness, marvelous as this bird flight now seems. Aviologists have long sought, but in vain, to reach a satisfactory explanation of the performance of certain species of birds on their migratory journeys; how for days and days enormous flocks of feathery life will glide along at high speed and at great heights apparently without appreciable effort. The only adequate explanation essayed, and it is afforded no counterpart in the experience of natural scientists, is that these creatures, deemed by man so vastly his inferior in thought-power, have in some manner acquired the ability to induce levitation; that is, to

Digitized by Google

control or neutralize the influence of gravitation. Here, then, is a cue to the future of human progress, but the real solution of the problem lies in man's learning to understand the potency that holds the earth in its orbit and guides "Arcturus with his sons."

A short time ago, the wizard Edison, in an interview pregnant with prophecy, declared: "A new force in nature will be discovered by which many things not now understood will be explained. We unfortunately have only five senses; if we had eight, we would know more." Just what Edison had in mind is of course a matter of speculation; but in the logical order of events it would appear that the secret of gravitation, or interatomic force, would be the next of nature's breastworks to fall before the onslaught of inventive genius, and with steam and electricity take its place hereafter as a servant, not a master, of mortal destiny.

As the true sense of man's dominion is attained, new methods and means of navigating the heights above will be developed, which will be at the mercy of neither wind nor wing. These will be greater, grander, mightier far than any present conception of man's power to rule; and in comparison with them the present-day means of locomotion by land and sea will appear clumsy and mean, and our present-day laudable but infantile attempts to fly appear ludicrous and futile. As thought is spiritually uplifted, then will man say to the proud wave, "Be still!" and it will obey; and time and space will be found no longer an impediment to progress upward and onward out of and beyond the pale of the flesh, the fetters of materiality, and so-called physical force.

As prophesied by Mrs. Eddy, the sovereignty of that infinite Mind which was manifest in Christ Jesus when he rose superior to every so-called material law and condition, and which is revealed anew in the demonstrations of Christian Science, is sure to overcome, subjugate, nullify every seeming limitation and opposite; to dominate absolutely, imperatively, finally, all things and all persons. Then will real civilization have been attained! Then will man appear, and be found to be pure, perfect, forever unlimited, coexistent and eternal with the great "Father of lights" Himself!

"ALL LIVE UNTO HIM."

FLORENCE WHISKIN.

To the earnest student of Christian Science nothing is more striking than the way in which statements in the Bible are illumined as the understanding begins to unfold. An example of this is the reply of Jesus to the Sadducees, related in the twentieth chapter of St. Luke's gospel. Even the literal meaning of the text which tells us that God "is not a God of the dead, but of the living: for all live unto him," has breathed comfort to countless numbers who believed in the "shadow of death," but Jesus says, "He [God] is not a God of the dead, but of the living," words which in the light of a new wisdom mean very much more than this. First of all, who are the dead? To this it may be answered that they are those wrapped in the sleep of material sense, in the sense of sin, in the belief of mortality; but Christian Science tells us that in reality there are no such, that there is no material sense, no consciousness of sin, sickness, or death, "for all live unto him." What is it to live? It is "to be spiritually minded," says St. Paul; it is to be "quickened by the Spirit;" it is to be conscious only of joy, power, purity, love, activity, immortality.

The text now stands out as a scientific statement: "All live unto him." Paul says that we "live, and move, and have our being" in God; that is, for God, by God, in God, to God. That we do not recognize this to be so in our intercourse with our fellow men, does not alter the fact; it is a childish mistake. A scientific statement, we know, can be proved, and we should turn St. Paul's admonition to the Romans into daily and hourly practise and reckon ourselves and others to be "alive unto God."

To any one tempted to believe in the reality of indolence, inactivity, inertia of any kind, the words come with a ringing, "Be of good cheer"! Mind's ideas always reflect inexhaustible energy, infinite Life, as Jesus, the master Christian, said of those who reach the full understanding of spiritual being, "Neither can they die any more: for they are equal unto the angels; and are the children of God, being the children of the resurrection."

RENEWED STRENGTH.

WM. J. MC CLOSKEY.

I AM grateful for the fact that Christian Science has enabled me to meet successfully every condition, both mental and physical, that so far has confronted me since I have accepted its teachings. A recent blizzard having enabled me to make such a demonstration of the power of the truth over material conditions, I feel that others, especially workers, may be interested in the statement of my experiences.

As an employee of the Pennsylvania railroad I was called out with many others to shovel snow along the line. I found myself one Sunday morning on board a work-train, bound for Philadelphia, with about a hundred and fifty sturdy railroaders, and here was the proposition which appeared to my human sense. I was to be out an unlimited number of hours, to shovel an unlimited amount of snow, in company with a lot of men seemingly with an unlimited amount of endurance and training for such work. Now as I weighed a great deal less than any of the other men it can readily be seen that I appeared to be up against a hard problem. How was I to do my share of this labor to which I had not been accustomed? The shovel felt to my untrained arms, as a load in itself, without the addition of the snow it would hold. I knew that of myself I was not equal to the work in hand, so I turned to Principle, as revealed in Christian Science, for help. I reasoned that this work was necessary and proper to do, and that as man lives, moves, and has his being in God, He would give me strength enough to do the work, and that I was working with God. With this assurance in mind I felt perfectly confident that I would be equal to the occasion.

As we approached Philadelphia we found that the storm had been very much more severe there than at home. We were, finally, completely blocked with a number of passenger-trains, some thirty miles from the city. We all jumped from our train into snow which reached almost to our waists, waded to the station, and shoveled the platforms clean. Meanwhile another gang of men had opened the line, so we were able to proceed slowly toward the city, stopping, however, at every station to shovel the platforms clear of snow. We worked throughout the night, and finally reached West Philadelphia about nine o'clock Monday morning. I did not feel tired or exhausted when this unusual work was finished. Some of my acquaintances among the men said that they were surprised at the way I worked and kept at it to the finish.

When I realized how complete was the blockade, I felt that there would be no milk-trains into the city, consequently many little ones would go hungry. So I felt that every shovelful of snow cleared away meant a supply of milk that much the sooner, for some hungry child. I also felt that after all, we were but children of a larger growth, —all children in the loving care of God. As I toiled on in the snow, thinking of the many children who share His goodness, like the psalmist my mouth was "filled with laughter," and my lips with rejoicing that I was deemed worthy to be called for such service.

SELECTED ARTICLES.

[Frederick Dixon in *Kentish Express*, Ashford, England.]

I have to thank Mr. W. R. Rose for the courtesy of his allusion to my earlier letter. At the same time, will you permit me to point out that he is simply engaged in enforcing the whole of my argument, that the sole reply of sectarianism to anything new is always a half-angry, half-frightened cry of "Heresy!" and that is exactly why I quoted the saying of a brilliant bishop of the Church of England, unfortunately a little hackneyed today by usage, to the effect that "orthodoxy is my doxy, heterodoxy is the other fellow's doxy." Strangely enough, immediately the heretic has become orthodox, he has proceeded to treat all other heretics as he was once treated. His argument, that is to say, has been the time-honored one of abuse and persecution. As a result, we have seen that magnificent saying, "See how Christians love one another," used by the agnostic with a sarcastic reference to the records of Christendom which it is impossible to question or dispute. Presumably, the anticipation of this was one of the things which led Christ Jesus to demand practise as well as preaching from his followers. He knew perfectly well how easy preaching often could be, and yet how difficult practise always is. To the command to "preach the gospel," therefore, he added the corollary to "heal the sick," and if I may say so again, at the risk of being tedious, he, and no other than he, made the power to repeat his works the test of a man's Christianity, so that undoubtedly a man may claim to be a Christian in the exact proportion in which he repeats those works.

Mrs. Eddy, accepting the teaching of Jesus totally and not fragmentarily, as a scientific revelation and not merely as a rule of philosophical ethics, demanded that the members of the Christian Science church should prove their faith by their works, so as to show that that faith was not dead. When the critics of Christian Science give up the futile habit of centuries, and instead of writing letters to the papers to shout "Heresy!" give a little more active proof that they are right and a little less acrimonious assertion that their opponents are wrong, they will impress humanity considerably more than they are doing at the present time.

Finally, will you permit me to say that the failure of the Vicar of Tenterden to attempt to explain the quotations he professes to have made from Mrs. Eddy's works, scarcely needs comment. He quoted Mrs. Eddy in the pulpit, and, in order that there might be no mistake about it, he quoted her, in inverted commas, in his *Parish Magazine*. When asked for his authority for these quotations, he relapses into silence. I will tell your readers that nobody is to be found who has ever heard of these quotations, and therefore there is only one honorable course for him to pursue, and that is, if he cannot produce his authority for them, to own that they were manufactured. I think his parishioners, in common with the enormous number of people throughout not only the county of Kent, but the world, who have by this time become acquainted with his utterances, will expect him to take one course or the other.

[Marie Hartmann in *Eenheid*, The Hague, Holland. (Translation.)]

It is not alone a special quality of Christian Science that "this teaching demands (or rather, that is a result of this teaching), but the forsaking of that which is not in accordance with its views." Every perception of truth necessarily obliges one to forsake what he comes to know as inaccurate or untrue on the point in question. Christian Science reveals God, divine Mind, as the only, omnipotent, omnipresent, and omniscient cause, and man as His idea. The acceptance of the Christ, of this saving Truth, results not alone in breaking away from old companions, but in abandoning all wrong thinking.

I do not consider it so commendable as the writer in your paper seems to regard it, that after having found in a new teaching a clearer and better idea of God, one should return to his former church organization; for it could be nothing but a seeming, an outward return, since it is not possible to remain morally or spiritually united with that which one has outgrown. The moment one becomes convinced of the truth which another movement teaches, the ties binding him to his former church are severed; the leaving of the church is only an outward affirmation of this severance. By learning to know as much as possible of the truth which makes free, man becomes conscious of his unity with God, and this enables him to help others find the way to harmony. Therefore a Christian Scientist joins that church which reveals to him the truth most clearly and fully.

Christian Science is not a creation of Mrs. Eddy; it is the knowledge of God, and therefore it is as eternal as God Himself. Mrs. Eddy was pure enough and spiritual enough to be able to see that truth, and to perceive that the laws through which God works are eternal and unchangeable, and therefore demonstrable for all who understand them. Christian Science demands of its followers an individual understanding of God and of His law of perfection; it points the way to this attainment, but it teaches that everybody must do his own part and walk in this way, because one's salvation cannot be worked out by somebody else. Christian Science does not teach us to follow what Mrs. Eddy or what others say, but to obey that which one has learned to be true.

[Charles K. Skinner in *The Berrien Springs* (Mich.) *Era*.]

A recent clerical critic tells us that "Christian Scientists are not Christians." He is only one of the many who have come to scoff, but remain to pray, and afterward to learn what constitutes a Christian. Doubtless he will remember that Jesus laid down but one rule by which his followers should be known, and that was that they should do the same works which he did. He said, "He that believeth on me, the works that I do shall he do also," and further, "If ye love me, keep my commandments." Is it the mark of a Christian to misrepresent other workers? St. Paul wrote, "Therefore thou art inexcusable, O man, whosoever thou art that judgest: for wherein thou judgest another, thou condemnest thyself; for thou that judgest doest the same things."

We are told that "Christian Scientists deny God." This is a mistake. On page 497 of Science and Health are these words: "We acknowledge and adore one supreme and infinite God." We are also told that "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love" (p. 465). The gentleman objects to God as "Principle," but the authorized definitions of the word are, "Beginning, original cause, origin, source." Will he tell us what the objection could be to recognizing God as the "beginning," or "great First Cause"? St. John says, "In the beginning was the Word, . . . and the Word was God."

If the really sincere investigator of Christian Science will read the text-book, "Science and Health with Key to the Scriptures," from the view-point of its author, viz., God as the creator of the spiritual man and universe, all seeming obstacles will melt away. The Scriptures inform us that "God is a Spirit," and that He created man in His image and likeness. If this is true, the man of God's creating is spiritual and not mortal, and Mrs. Eddy's references to man all through the text-book will be found to be logical. Christian Science teaches that the spiritual creation described in the first chapter of Genesis is one that honors God, that He made all, and saw that "it was very good." No theologian up to the present time has been able to reconcile the record of the creation of mortal man with that of the spiritual man as both being creations of God.

Again, it is said that "Christian Science denies the divinity of Christ." This also is a mistake. No lay reader, much less a minister, could be excused for failing to notice the distinction that the Master himself made between the human

Digitized by Google

Jesus and the spiritual Christ. Of the first he said, "I can of mine own self do nothing;" "The Father that dwelleth in me, he doeth the works." At another time he said, "Why callest thou me good?" On the contrary, when speaking of the Christ he said, "I and my Father are one." And again, "Before Abraham was, I am." The teaching of Christian Science coincides precisely with the above. On page 473 of Science and Health we read, "Jesus is the human man, and Christ is the divine idea; hence the duality of Jesus the Christ." Our critic next tells us, by quoting the reference to Jesus' experience in the tomb, that Christian Science denies the need of food. On page 254 of the text-book he might have read, "To stop eating, drinking, or being clothed materially before the spiritual facts of existence are gained step by step, is not legitimate."

The gentleman is disturbed at the statement in Science and Health that "miracles are impossible in Science" (p. 83), and yet there is nothing strange about it. Science, according to the authorities, is systematized knowledge, acknowledged truths. To the great Master his works were supremely natural because he understood the Principle by which they were done, and he knew that the operation of that divine Principle was the same in one instance as in others. To the materialist, looking only to matter for cause and effect, the healing of the sick, the raising of the dead, the turning of the water into wine, and the walking on the water, were marvels or miracles, and it was doubtless from this material thought of the people concerning them that the record reads miracle. Again, if his deeds were miracles which he alone could perform, why did Jesus say, "He that believeth on me, the works that I do shall he do also"?

We are told that the reference to the devil as being impersonal evil is "all wrong." Has our critic ever seen a personal devil with the cloven feet and horns, or has he ever known any one who has seen him? Will he tell us how it would be possible to cast seven such persons out of Mary Magdalene? Is it not more reasonable to understand that these were seven evil thoughts controlling her which Jesus cast out, and are not these the devils by which mankind is constantly being tempted and assailed? What did the Master mean when he said, "That which cometh out of the man, that defileth the man. For . . . out of the heart of men, proceed evil thoughts, adulteries, . . . murders, thefts, . . . wickedness, deceit, . . . all these evil things come from within, and defile the man." Are not these the devils? They certainly are not devils with horns.

We are next told that "Christian Science says sin does not exist." In more than a thousand places in the text-book are warnings against sin in its various forms. It does not teach that sin and disease are unreal to the human sense; in fact the very opposite is true. On pages 390, 391, we read: "Suffer no claim of sin or of sickness to grow upon the thought." "Suffering for your own sins will cease in proportion as the sin ceases." The critic says he has "been in four different states, and in but one small place has he found such foolish people as in Berrien Springs." One can only wonder how and when he managed to miss on his travels so many happy, clever, and intelligent people. In his own state there are over forty Christian Science churches and societies, with an attendance of from twenty-five to five hundred each, and in over two hundred other places are societies in embryo. Every other state has a similar record. In every country on the globe, from Maine to far-off Egypt, are flourishing societies.

"Christian Scientists do not believe in a final judgment," is the next objection. Christian Science teaches that judgment comes hourly and daily into the consciousness of all, but whether we are willing to recognize and accept it is another thing. The time for the final experience "knoweth no man, . . . neither the Son, but the Father." The Scriptures further say, "Every knee shall bow to me, and every tongue shall confess to God." This means constant progression until the demand, "Be ye therefore perfect" is finally obeyed. Contrary to the critic, Christian Science does not teach that God's creation is a part of Himself; such a position would be pantheistic. It does teach that God's ideas are all reflections of His thought, but individual and spiritual. Neither is the material effect of poison to mortal sense denied, as is claimed. This is fully explained in the text-book. While the after effects of deadly poisons taken by accident have been counteracted by Christian Science many times, the suggestion of the critic to feed arsenic to horses is on a par with that of the tempter to Jesus, and the reply must be the same as in his case.

"Scientists claim we do not die," is the next criticism. It makes all the difference what is understood by "we." Christian Science teaches that man does not die, because he is God's image, and the critic should stick to his text if he quotes Scripture as authority. Christian Science does not claim that a mortal is man, but rather a counterfeit of him. Jesus said, "Whosoever . . . believeth [understandeth] in me shall never die." Now right here may we ask, Is it not better to take the Master's sayings from the spiritual side, as he intended, than to quibble and strain for the literal and material sense? Jesus proved his teaching by passing through the experience of death and realizing the birthright of dominion given to man in the creation, and thus presenting himself before his disciples with the same body as before.

In closing, I will quote from a sermon by a prominent orthodox clergyman of Los Angeles, Cal.: "Christian Science is the religion of spirituality, optimism, good health, and success, because it rests upon the fundamental verity that God is All and God is Love. Physical health, moral victory, and spiritual illumination follow inevitably from the realization of this primary truth. To bring men to the consciousness of their spiritual sonship and of the divine perfection, is the work of Christian Science, and that is why the gates of hell shall not prevail against it." Christian Science has no quarrel with any other organization that is trying to elevate mankind, and bears no false witness against its neighbor. Mrs. Eddy once said, "I love the orthodox church, and in time the orthodox church will love Christian Science" (Miscellaneous Writings, p. 111).

[Charles E. Jarvis in *Los Angeles* (Cal.) *Examiner.*]

In a recent contribution to your editorial page entitled "Mind and Health," from Prof. Garrett P. Serviss, the writer takes the position held by many, that disease is the result of fear or imagination; and in this we agree with him. Mrs. Eddy tells us on page 411 of her book, "Science and Health with Key to the Scriptures," that "the procuring cause and foundation of all sickness is fear, ignorance, or sin. Disease is always induced by a false sense mentally entertained, not destroyed. Disease is an image of thought externalized. The mental state is called a material state. Whatever is cherished in mortal mind as the physical condition is imaged forth on the body." When Professor Serviss indicates that the same human mind whence emanates the fear, can cure the result of its own vagaries, we shall have to part company with the gentleman. And when he goes further and classifies Christian Science with so-called mind-healing through concentration, blind faith, or will-power, the situation calls for correction.

The sum total of human misery is the result of wrong thinking, the product of the mortal mind, or carnal mind, which, we are told, "is enmity against God," and it is as impossible for this human mind to correct its own errors as it is for a fountain to send forth sweet water and bitter, or the fig tree to bear olive berries. Therefore, every so-called metaphysical system attributing any ability to heal to the human will, suggestion, or other mortal phenomena, is antithetical to Christian Science. Briefly speaking, Christian Science is a religion which teaches absolute reliance upon God, "who forgiveth all thine iniquities; who healeth

Digitized by Google

all thy diseases;" the religion taught and practised by Christ Jesus, who promised his followers that a knowledge of the truth should make us free.

When Jesus was doing his greatest work among the people, healing the sick, restoring sight to the blind, causing the lame to walk, the dumb to speak, the skeptics of that age were quite as critical as they are today, and on one memorable occasion charged him with employing evil means in his ministrations. His answer as given in the twelfth chapter of Matthew is as timely today as when uttered by the Master: "And Jesus knew their thoughts, and said unto them, Every kingdom divided against itself is brought to desolation; and every city or house divided against itself shall not stand: and if Satan cast out Satan, he is divided against himself; how shall then his kingdom stand? And if I by Beelzebub cast out devils, by whom do your children cast them out? therefore they shall be your judges. But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you."

Paul said, "Let this mind be in you, which was also in Christ Jesus," and the Master said, "I can of mine own self do nothing: as I hear, I judge: and my judgment is just; because I seek not mine own will, but the will of the Father which hath sent me." By this it is quite evident that Jesus did not employ hypnotic suggestion, mesmerism, or will-power. It was his understanding of spiritual law, or the power of the divine Mind over the false human sense, which enabled Jesus to perform his wondrous works, and today, through Christian Science, mankind is learning that a knowledge of this law is attainable here and now.

[Arthur H. Swank in *The Evening Sun*, Baltimore, Md.]

I have read and studied carefully an article signed with the initials "E. A. F.," which purports to be an attack on Christian Science and Christian Science practitioners. As a matter of fact, it is neither. The entire letter is merely one person's views about what he thinks Christian Science is and what he thinks Christian Science practitioners stand for. Mere opinion is valueless in determining the truth about any subject. For many years my own opinions led me to be even more violent in denouncing Christian Science and its healing and saving methods than our friend has deemed it wise to do. But about five years ago I suddenly remembered that it was utterly impossible to learn the truth about any subject from its enemies, and immediately I purchased the text-book of Christian Science. There is only one, and it is called "Science and Health with Key to the Scriptures" by Mrs. Eddy. This book can be procured at the public library in your city gratis. In no other way can the absolute truth about genuine Christian Science be gained.

It is an interesting and astounding fact that for nearly a half century Christian Science has been meeting and replying to letters and articles similar to the one in a recent issue, and today Christian Science is the fastest growing religious organization in the world.

[John W. Harwood in *Oldham* (England) *Chronicle*.]

In a recent issue, under "Talks for a Quiet Hour," by the Rev. A. J. Waldron, Christian Science is mentioned as a new cult. It is referred to as teaching strange and weird things. Christian Science is, however, a reiteration of the teachings of Jesus, and the proof of this statement is seen in the healing of the sick and the sinning, of which there is abundant evidence in this present time; and this is what Jesus said should follow "them that believe." People are tired of creed and dogma. Words without deeds, preaching without practise, like clouds without rain, no longer satisfy. Jesus was asked, "What shall I do to inherit eternal life?" Comes the reply, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind." Now Christian Science teaches that in order to love God, and thereby inherit eternal life, we must know Him, for again Jesus said, "This is life eternal, that they might know thee the only true God," and it is because Christian Science reveals the true idea of God, as infinite good, all-power, all-presence, that the seeming presence and power of evil, disease, sin, death, is eliminated from human experience. There is surely nothing weird or strange about this.

In the Preface of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we read (p. xi), "The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation." This text-book can be borrowed free of charge from any of the Christian Science reading-rooms.

[Henry Deutsch in *Minneapolis* (Minn.) *Tribune*.]

"Science and Health with Key to the Scriptures" by Mrs. Eddy is just what it is designated by her, the text-book of Christian Science, which elucidates her teachings and contains in the "Key to the Scriptures" her interpretation of the spiritual thought expressed in the teachings of the Scriptures. Christian Scientists have just one Bible, the same Bible adopted and used by all Protestant Christian denominations, and the Authorized Version is the one used in the church services and in the homes of Christian Scientists. Mrs. Eddy never designated her text-book as a Bible, nor have Christian Scientists. She claimed and proved that her interpretation of the Bible, as expounded in the text-book, has brought a spiritual light which has enabled her followers to exemplify in a marked and large degree both the letter and the spirit of the precise teachings of Jesus in their entirety, for she demanded of her followers, as did he, that they should not only "preach the gospel," but "heal the sick." It may be called, if you choose, a commentary on the Bible, but was never designated as the Bible, or expected to take the place of it.

Mrs. Eddy taught that man has but one Father-Mother, and that one God, omnipresent and omniscient, infinite Life, Truth, Spirit, Love. Christian Scientists acknowledge toward Mrs. Eddy the relation of faithful followers of a revered Leader in whose life they find a clear exemplification of an honest, sincere, earnest, and successful effort to walk in the footsteps of the Master. Christian Scientists today recognize no leadership but that of Truth, and on this there can be no division. In the life of Mrs. Eddy they apprehend the earnest effort to lead her followers in the pathway of the Christ. In the example of her life and the spirit of her teachings, Christian Scientists are glad to acknowledge a leadership toward the higher things of Spirit.

[Herbert M. Beck in *Herald and Democrat*, Siloam Springs, Ark.]

Christian Science is the religion of Jesus Christ, because it is founded upon and exemplifies his word and works; because in so doing, it heals both sin and sickness by one and the same spiritual method; because it gives God all power and presence and glory, and as the Science is understood and applied, it increasingly reveals the paucity, poverty, and impotence of sin and sorrow; because it relies upon neither the wit nor the wisdom of any man (or woman), but upon the divine and unchangeable things of God, which may be known among men, every man for himself, here and now.

Mrs. Eddy was good and capable enough to discover these facts, or rediscover them, and good and capable enough to give them to all mankind in her book "Science and Health with Key to the Scriptures." It is the study of this book, together with the inspired word of the Bible, that has brought the sunshine of gladness into the hearts of many good as well as bad people, and has made them better; and they are all willing, if necessary, to testify, out of their gladness and gratitude to God, for the uplift they have received.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE CALL OF TRUTH.

Our Master, when questioned as to which was the greatest or most important of the commandments, declared that "all the law and the prophets" were included in the commandment to love God supremely and one's neighbor as himself. In other words, he who loves God with the understanding, with all his heart, mind, and strength, will perforce keep all the commandments, since he will have no time or desire to do aught but the will of God, the will which Christ Jesus came to do and which he exemplified in his service to mankind. Paul had grasped the spirit of this teaching when he wrote to the Hebrews: "Let us hold fast the profession of our faith without wavering; (for he is faithful that promised;) and let us consider one another to provoke unto love and to good works."

In like manner the Preacher sums up man's duty to the creator in his counsel to "fear God, and keep his commandments;" and the call today is no less imperative, but it demands, as Mrs. Eddy points out (Science and Health, p. 3), "absolute consecration of thought, energy, and desire." Nor should it be forgotten that none are exempt from this call to service, and that it is to works rather than to professions of faith. As followers of the Master we are unfaithful to our trust if we fail in our duty to God or to our fellows through any lack on our part to discern and to do the right. If we are honestly striving to do the will of God, we shall not hesitate to obey even at the cost of dislodging and casting out the idols of self-will, self-love, hatred, and envy, to whose behests we have, though unconsciously, bent the knee.

"The guerdon of meritorious faith or trustworthiness," Mrs. Eddy writes, "rests on being willing to work alone with God and for Him,—willing to suffer patiently for error until all error is destroyed and His rod and His staff comfort you" (Miscellaneous Writings, p. 118). To know the right and adhere to it at any cost is never easy, but we of today can scarcely appreciate the bitter experiences through which our Leader was called to pass, when she literally stood and worked "alone with God," with the hosts of theology, medicine, and the press arrayed against her; yet she emerged triumphant because she knew, through the works of healing she had been privileged to do, that she was being obedient to the higher law, obeying God rather than man, and that the "signs following" were the proofs that she had been walking with God and so had naught to fear from the condemnation of men.

Today, thanks to the tireless labors of our Leader, Christian Science has won acceptance even at the hands of many of its old-time critics, and its future rests upon the faithfulness of its professed followers in the demonstration of its teachings. We can never be grateful enough for the less thorny path made possible for us through Mrs. Eddy's obedience and self-sacrifice, but the need is all the greater that we watch and pray daily lest we enter into temptation. Error is more subtle in its method of attack, but it is still to be reckoned with. The call to greater consecration, to purer, nobler lives, was never more urgent to every follower of Christ, Truth, and in the proportion that we set aside every thought of self and place foremost our duty to God and to our fellows, in that proportion shall we see the cause which stands before the public today as the life-work of our revered Leader, go forward in its mission to mankind until it shall sweep the world for God.

Archibald McLellan.

"MY STRENGTH."

The dominant sense of mortal experience is that of inadequacy, weakness. The ever-echoing world-cry is a call for help. Over against this there is set forth in all the Scriptures the infinity of spiritual strength, and Christian Science may be defined as the statement and practical proof of the present availability of this strength. "Obedience to Truth," writes Mrs. Eddy, "gives man power and strength" (Science and Health, p. 183), and this thought pervades all her teaching.

To his disciples Jesus said, "I give unto you power over all the power of the enemy;" and elsewhere, in explanation of the nature of this dynamic endowment, he says, "Unto you it is given to know the mysteries [the vital truths] of the kingdom of God." Their sufficiency was to be determined by their knowledge of Spirit, their consciousness of good.

That many of the prophets and sages had a lively sense of this truth is unquestioned, and David speaks for them in that marvelous sentence of the twenty-seventh psalm, "The Lord is the strength of my life," while Isaiah hints at the metaphysics of this knowing, when he says, "In quietness and in confidence shall be your strength." On the other hand, that these ancient worthies often expected the divine power to be exhibited through the use of material means, seems equally apparent, though they were certainly far in advance of the great body of the people both of that day and of this. They had divined the inner meaning of the word of the Lord to Zerubbabel, saying, "Not by might, nor by power, but by my spirit, saith the Lord of hosts."

In both words and works Christ Jesus taught that strength is the activity of Truth absolutely controlling materiality, while wholly free from any contact or association with it, and in keeping therewith Christian Science rebukes the prevailing belief of mankind. As the Jewish faith and hope were centered in the might of a militant Messiah, so present Christian thought, for the most part, is centered in the belief of life and strength in matter, which is regarded as the means for the divine manifestation. In the presence of a great mogul engine, men instinctively say and think, "How tremendously strong!" Yet it is clear that this monster has no strength whatever, but on the contrary that *its hugeness* is a dead weight upon the force which must move *it with its* train, and we are thus led to see that the location of *strength* in the machine is a fallacy. This belief in the might of materiality is practically universal, it is the colossal untruth which the Science of being comes to disclose and thus destroy. This is the keystone of Mrs. Eddy's contention, that escape from the bondage of materiality is found only as the metaphysical teaching of Christ Jesus is apprehended. "Mind alone," she writes, "enlarges and empowers man;" "Rise in the strength of Spirit to resist all that is unlike good" (Science and Health, pp. 199, 393).

The world is pitifully enslaved today by the mesmeric thought of the power of brain and muscle, of arms and armaments, and the spell is not broken so long as men believe in material strength. Herein lies the weakness of scholastic theology, the strength of Christian Science. The lesson brought home so dramatically to Gideon is to be learned by us all, and how much this learning signifies to one's efficiency and peace, many a Christian Scientist can tell. When the declaration, "God is my strength," is no longer a theory, but has become a realization of the availability of that truth which has proved "mighty through God to the pulling down of strong holds," then life has taken on an entirely new meaning, the individual has gained an inspired understanding of that most wonderful self-assertion of the Master at the grave of Lazarus, "Father, I thank thee . . . I knew that thou hearest me always." This is one of the many beatitudes of Christian Science, "Blessed is the man whose strength is in thee."

John B. Willis.

"THE SPIRIT OF PROPHECY."

IN the nineteenth chapter of Revelation we read that an angel said to John, "The testimony of Jesus is the spirit of prophecy." These words are very significant, and remind us that there have been many and varied attempts to interpret prophecy from a material view-point, when its true meaning can be gained only as spiritual sense reveals the great facts of existence and shows the eternal working together of all things for good according to that divine purpose, which can never be thwarted by mortal ignorance or obstinacy.

On page 593 of Science and Health Mrs. Eddy defines prophet as "a spiritual seer; disappearance of material sense before the conscious facts of spiritual Truth." This definition should be kept in mind, also the words concerning "the spirit of prophecy," as we read the Bible and endeavor to grasp its deeper meanings, especially as we study the Lesson-Sermon. If we fail to find therein the vital truth which heals and purifies, uplifts and tranquilizes, it is because we are holding to a material and temporal interpretation of the inspired word. Paul warned the early Christians against this mistake, as we read in his second epistle to the Corinthians, where he says of his fellow countrymen: "Their minds were blinded: for until this day remaineth the same veil [as in Moses' time] untaken away in the reading of the old testament; which veil is done away in Christ."

There are found in the Old Testament many warnings of impending evil, which have been called by some commentators "doom songs," and few have seen that these, when spiritually understood, all point to the destruction of error. With these prophecies may be classed Jesus' utterances as found in the twenty-fourth chapter of Matthew and the twenty-first of Luke, and indeed the closing statements of the Sermon on the Mount as well. The latter tell us that the winds and the floods of mortal experience will assail the just and the unjust alike, with this tremendous difference as to the final result,—the house built upon the rock, the Truth which was the foundation of the Master's words and works, this mental abode will remain unshaken by the storm and stress of mortal belief and unbelief, proving the perfect security of him who dwells in "the secret place of the most High."

In the chapters of Matthew and Luke above indicated, we find that nothing which rests upon material belief will stand the process pointed to in these words: "Yet once more I shake not the earth only, but also heaven." Even the material concept of heaven as a place, rather than a condition of holiness and harmony, must yield to this mighty shaking which comes when the winds of God blow. One thing is sure, the gospel preached and practised by Christ Jesus and his apostles must be declared among all nations, a prediction which is being fast fulfilled through the healing ministry of Christian Science. We are also told that, strangely enough, "all the tribes of the earth" shall "mourn," not rejoice, when they see "the sign of the Son of man," or the signs which the Master said should "follow them that believe," and this because they do not know the Father as the Life of all that really lives. Those who do know keep close to the Christ-teaching, as illumed for them in Christian Science, watching and praying that they may escape the things which come to pass on the plane of mortal belief, taking heed to themselves that neither the pleasures nor the "cares of this life" shall cause them to lose sight of the vital issue, the preservation of the healing truth in all its purity and power.

Our revered Leader tells us, as did the Master, that "the breaking up of material beliefs may seem to be famine and pestilence, want and woe, sin, sickness, and death, which assume new phases until their nothingness appears" (Science and Health, p. 96). She adds that "these disturbances will continue until the end of error," but on the same page we find the assurance, "Love will finally mark the hour of harmony." This is surely "the spirit of prophecy," and coincides with the promise to him "that endureth to the end." Thank God! error has an end, while Truth is from everlasting to everlasting, healing, blessing, inspiring today, even as when the Master said, "Your redemption draweth nigh."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

BIRMINGHAM, ALA.—To see from ten to twenty, and sometimes more, prisoners listening intently to the Christian Science services held in the county jail; to hear their voices unite in singing "Shepherd, show me how to go," and other familiar Christian Science hymns; to note the earnestness displayed in going over the Lesson-Sermons, the almost pathetic avidity with which the teachings of Jesus as exemplified by the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, are received,—would indeed be a revelation to many persons. Several copies of Science and Health, Hymnals, Bibles, *Quarterlies,* etc., have been furnished the inmates of the jail, and a yearly subscription to *The Christian Science Monitor* has been paid for; copies of the *Sentinel* and the *Journal* are also supplied at frequent intervals, all of which are heartily welcomed, and passed from one to another of the men.

The Christian Science church of Birmingham, under whose auspices these services are held, is truly carrying out the injunction of the Wayshower to carry the true gospel to the poor and the needy, the humble and the suffering, the highways and the byways, even into the prisons. More than one demonstration of the healing power of the truth has been made in the jail, and the whole moral atmosphere seems to have undergone a change for the better.

Correspondence.

OTTAWA, CANADA.—The corner-stone of the new church edifice of First Church of Christ, Scientist, in Ottawa, the capital of the Dominion of Canada, was laid on July 7, 1913. The members of the board of directors represented the church members, and the ceremony took place at 5:30 a.m. The copper box, sealed within the corner-stone, contains a copy of the Bible, a complete set of the works of Mrs. Eddy, current copies of the Christian Science periodicals, a list of the children and teachers of the Sunday school, and a short history of the Ottawa church. The books were the gift of the children of the Sunday school.—*Correspondence.*

LEBANON, N. H.—Rooms in Lincoln block have been leased by First Church of Christ, Scientist, for a term of years. They are being renovated and fitted up for use, and will probably be occupied early in August. The main room will be used as an auditorium for the Sunday morning and Wednesday evening services, and the smaller room in the rear for a reading-room. During their occupancy the rooms will be designated as Christian Science hall and reading-room.—*The Granite State Free Press.*

THE HAGUE, HOLLAND.—First Church of Christ, Scientist, has opened new reading-rooms at Noordeinde 94a. The rooms, which are situated on one of the principal streets in the shopping and business center, are attractively furnished, and the members trust they will prove a great help in the spreading of the Christian Science teachings.

Correspondence.

WEST PALM BEACH, FLA.—The members of First Church of Christ, Scientist, met at the corner of Poinsettia street and Hibiscus avenue June 30, at six o'clock, for the purpose of laying the corner-stone of their new church edifice. The work on this church is progressing rapidly.

The Tropical Sun.

THE LECTURES.

OAKLAND, CAL.

William R. Rathvon delivered two lectures on Christian Science under the auspices of First Church of Christ, Scientist. At the first, Macdonough theater was crowded to the doors, a large number being seated on the stage. There were more than two thousand people present, who gave close attention to the lecture. In introducing the speaker, ex-Mayor John L. Davies said in part,—

It makes but little difference to the followers of Mrs. Eddy what the general public believes about the teachings of this most remarkable woman of this century. We must admit that the cause of humanity has been greatly strengthened by the reforms that have come to the homes of hundreds of thousands of men and women who have been healed of sin, disease, poverty, fear, and intemperance through her teachings. I might ask the Christian Scientists who are present this evening what it was that induced them to investigate Christian Science, and I venture to say that two thirds of them would answer, "We were healed mentally and physically."

Any one who has carefully read the life and works of this pure-minded woman cannot but sympathize with her in the desperate struggle and opposition she had to contend with, endeavoring to establish a religion which would follow in the footsteps of the divine Master and Teacher of men, who said on many occasions, "By their fruits ye shall know them;" also, "Ye shall know the truth, and the truth shall make you free." She lived to see this truth established in every part of the civilized world; she lived to see the board of lectureship established, which sent the speaker of the evening to the far West to show us the way; she lived to establish the cleanest daily newspaper the world has ever seen. *The Christian Science Monitor* of Boston is an inspiration to all who read it. No sensations, no scandals, can ever be found in this great newspaper left by her to her followers.

The second lecture was delivered in the church edifice at Franklin and 17th streets, and every available seat in the church was occupied, while many stood during the lecture. Elmer McBurney, former president of First Church, in introducing Mr. Rathvon, said in part,—

In this age Christian Science is teaching men that their liberty, their freedom from sin, sickness, and death, depends on their willingness to know the truth about God. We are here tonight to find a better acquaintance with God than we have ever known, a better understanding of the healing interpretation of His word.—*Correspondence.*

CLEVELAND, OHIO.

A lecture on Christian Science by Bliss Knapp was given at the Hippodrome. The introductory remarks of Wayne C. Jones, first reader of First Church of Christ, Scientist, under whose auspices the lecture was held, were as follows:—

To the shepherds of old on the Judean hills the angel message, "Glory to God in the highest, and on earth peace, good will toward men," proclaimed the coming of the Saviour, Jesus of Nazareth, whose mission was to free mankind from the bondage of sickness, sin, and death. Jesus' life-work revealed man's unity with God; he taught sublime truths, and his understanding of divine law enabled him to heal the sick, cast out evil, and raise the dead, and to his followers he said, "These signs shall follow them that believe." Today, through the gospel of Christian Science, we witness the second coming of Christ, Truth, with its ministry of love lifting human consciousness out of the beliefs of sickness and sin, fear and superstition, confirming the words of the Master when he said, "He that believeth on me, the works that I do shall he do also." The teachings of Christian Science are in accordance with spiritual law, giving us a practical scientific knowledge of God which enables us to do the works that Christ Jesus said we should do through his name. The experience of thousands all over the world testifies to the healing efficacy of Christian Science, proving that the word of God is no less able to heal today than it was centuries ago.—*Correspondence.*

UNIVERSITY OF MICHIGAN, ANN ARBOR

Judge Clifford P. Smith delivered a lecture on Christian Science in Sarah Caswell Angell hall. The lecturer was introduced by Leonard J. Gringhuis, president of the Christian Science society of the University of Michigan, who said:—

Thousands of people in all parts of the world are giving thanks to God for Christian Science; for through it they have been healed from all ills, as well as from sin and sickness. They have found Christian Science to be a demonstrable religion, a practical religion, one that they can use every day of the week and every minute of the day. Christian Science teaches that God is infinite, that He fills all space, that He is not afar off, but is always present; and because God is always present, Christian Scientists have found Him an ever-present help.—*Correspondence.*

FRANKLIN, MASS.

In the presence of a large audience in Odd Fellows' hall, Frank S. Leonard gave a most interesting lecture on Christian Science. He was presented to the audience by Will S. Johnson, who said in part,—

We are all seekers after the truth, the truth that Jesus taught, and which he said would make men free. Christian Scientists believe that a revelation of this truth has come to this day and generation, and if we may judge of their faith by their works, both spiritual and physical, then indeed truth has come anew to mankind. All fair-minded and well-informed individuals admit that Mrs. Eddy has formulated and established a wonderful system of metaphysical healing; also that there is a growing and impelling desire among a multitude of people for further knowledge regarding the basic principles and power of Christian Science.

Woonsocket (R. I.) Call.

NEW YORK, N. Y.

Rev. William P. McKenzie, lecturing in Fifth Church on Christian Science, was introduced by H. Cornell Wilson, who said in part,—

It may prove of interest to you to know that in the course of my experience in Christian Science I, like a number of others, was asked by Mrs. Eddy to assist in her home in relieving her of numerous and pressing details which were crowding upon her time and attention as the great movement of which she was the Discoverer and Founder continued to grow and spread throughout the world. It was therefore the privilege of those who were called to serve the cause by helping Mrs. Eddy in this minor way to witness her reliance upon God, as she brought her spiritual and scientific understanding of Christianity to bear upon the problems daily confronting her.

One might spend much time telling of the sweetness, the tenderness, and motherliness of this dear woman. Much time might be devoted to relating facts concerning her wonderful grasp on the world's problems and her ability to deal with them wisely and lovingly. Still more time could be consumed in picturing the majesty of one who, under the government of God, was leading this world-wide movement of Christian Science. But it is not concerning these that I

Digitized by Google

wish to tell. I would like to mention a particular daily incident which greatly impressed me. It was this: Mrs. Eddy began her day by summoning about her the members of her household, and in a manifest spirit of meekness, prayer, and confidence, she turned to the Word of God for the day's directing. Taking the Bible in her hands, she would open it seemingly at random, after a silent prayer to God for spiritual light and understanding, and there in the light of spiritual intelligence get divine direction, counsel, courage, strength, and assurance, the like of which I had never before even dreamed. Her help, it was plain, was all from God.—*Correspondence.*

BRIXTON, ENGLAND.

A crowded and influential meeting in connection with the Brixton Christian Science Society was held at Raleigh hall, Saltoun road, to hear an address from Bicknell Young. This was the first public lecture arranged by the local society, and it proved most successful. Mr. H. Benner, in opening the proceedings, said in part, that Mr. Young really needed no introduction, but he should like to be permitted to say that he believed firmly that the teachings of Christian Science were the truth, that truth which liberated humanity from the slavery of sin and from all the evils which followed, without any exception whatever; that it was the teaching of Jesus Christ and his apostles which his followers were commanded to carry out. Jesus and his apostles proclaimed and practised the truth, which Christian Science called upon every one in this age to do. History taught them that humanity had generally failed to recognize its benefactors. As they looked back over the past, they remembered that those great reformers who had appeared in the world had been frequently opposed, in fact, persecuted, and their teachings misunderstood. He need only refer them to the eleventh chapter of Hebrews, to the story of the gospels, the Acts of the Apostles, and the history of the Protestant Reformation. That misunderstanding and opposition had been due altogether to misapprehension of the teachings and ignorance of the aims of the reformers. Christian Science had not escaped that ordeal. The Discoverer of Christian Science and its teachings had been subjected to opposition and misunderstandings, as the result of ignorance. Mrs. Eddy wisely formed a board of lecturers, whose business it was to give a clear exposition of the teachings of Christian Science, so that misapprehensions might be removed, and opposition born of ignorance disarmed.

Clapham Observer.

DES MOINES, IOWA.

A large and attentive audience filled the Berchel theater on the occasion of the semiannual lecture given under the auspices of the local Christian Science church. Mr. I. M. Earle presided, and in introducing the lecturer, Clarence C. Eaton, said in part,—

Nothing in the history of mankind is more interesting than the story of religion. In the crumbling ruins of the earlier civilizations we find the broken temples of dimly remembered or forgotten gods. From his own experience of happiness or harm to him, the primitive man naturally deduced the existence of rival powers of good and evil, or of a supreme power both good and evil, and religion was naturally a form of worship or sacrifice to propitiate such powers or power, and thus avert calamity, present or future. Differences of belief in the identity, number, or form of such powers, and the proper manner of worship, arose and grew into creeds and dogmas, but the belief in the rival forces of good and evil underlay them all, and each successive growth of creed and dogma only served to fetter the thoughts of bolder minds and stifle the doubts born of wider knowledge.

No one doubts that according to their light and training there were many conscientious men, in the days of the great Master, among those who criticized his associations, deplored his alleged desecration of the Sabbath, and crucified him for blasphemy. His greatest offense was his disregard for custom and dogma, and his laying down, as the supreme and only test of all things, religious or otherwise, "By their fruits ye shall know them." Irrespective of names or creeds or methods, whatever in a great sense and in the long run has added to the happiness of humanity, is good; whatever has added to the burden of human misery is evil. There is no other standard of measurement than that given by the Master.

We come tonight to listen to one who claims to represent a new-old religion, new as the latest thought, old as primitive Christianity; a religion that believes the supreme and only power is good, that all intelligence is divine, and that immediately underneath are the everlasting arms.

Register and Leader.

EAST ST. LOUIS, ILL.

Virgil O. Strickler lectured on Christian Science to a large and attentive audience at the church edifice, Washington place and Summit avenue. He was introduced by Homer T. Stephens, local agent of the New York Central lines, whose remarks were in part as follows:—

Christian Science understood satisfies, and it supplies that explanation of the Bible which so many fail to receive from the study of other religions. Christ Jesus said, "I am the way, the truth, and the life." It is simply to demonstrate this divine truth, as voiced by the Saviour, that Christian Science has come; and it has proven the Wayshower's words to be true in thousands upon thousands of cases of healing from sin and disease.—*Correspondence.*

LECTURES TO BE DELIVERED.

Alamosa, Col.—Bicknell Young, Oliver theater, Sept. 9.
Belmont, N. Y.—Virgil O. Strickler, City hall, 8 p.m., Sept. 8.
Decatur, Mich.—Virgil O. Strickler, Town hall, 8 p.m., Sept. 12.
Denver, Col. (Second Church).—Bicknell Young, Church edifice, South Grant street and Bayaud avenue, 8 p.m., Sept. 11 and 12.
Harrogate, Yorkshire, England.—Col. William E. Fell, the Kursaal, 3:15 p.m., Sept. 21.
Jonesville, Mich.—Virgil O. Strickler, Theater, 8 p.m., Sept. 11.
Lisbon, N. H.—Virgil O. Strickler, Lisbon opera house, 8 p.m., Sept. 2.
Long Beach, Cal.—Clarence W. Chadwick, Church edifice, 440 Elm avenue, 8 p.m., Sept. 5.
Minneapolis and St. Paul, Minn. (joint lecture).—Bicknell Young, St. Paul auditorium, Sept. 5.
Monrovia, Cal.—Clarence W. Chadwick, Greek theater, High school building, 8 p.m., Sept. 4.
North Yakima, Wash.—Francis J. Fluno, M.D., Masonic hall, 8 p.m., Sept. 11.
Oakland, Cal. (First Church).—Clarence W. Chadwick, Macdonough theater, 8 p.m., Sept. 11.

TESTIMONIES OF HEALING.

I feel it a duty to contribute my testimony to the enlightening and healing potency of Christian Science. I did not become interested in it through physical healing, but solely for the spiritual benefit; and because of its irresistible appeal through clear and lucid expositions and incontestable logic in dealing with the subject of religious truths, this teaching first gained and has since held my attention. It might, however, be well to state that I did receive some physical benefits from the study. I had sundry ailments, but none that would be considered of a serious character, which I had come to look upon as unavoidable accompaniments of human experience. For one of these I had sought skilled medical advice and was promised a cure, which, however, did not follow the treatment, and as a result of this experience my faith in doctors and in medicine was greatly diminished.

Christian Science was first presented to me rather crudely, and I coolly turned it aside, but shortly afterward it was my good fortune to read some of the authorized literature, and I quickly discovered that it was a subject of great moment. After reading one article in the *Sentinel* my interest was so aroused that I immediately purchased a copy of Science and Health and devoted from one to five hours daily to its study, with the result that in a few weeks I found that all the physical disorders had disappeared and I did not know when they went. Any inharmonies of a physical nature which have since arisen have been readily overcome, and I now understand that it was the truth entering my consciousness through earnest study which at first so quickly destroyed the physical ills.

As before stated, the greatest benefit which Science has brought to me is of a mental and spiritual nature. Ordinarily one might have judged me as having no cares, but I engaged in many a conflict with the various temperamental idiosyncrasies of human disposition. Circumstances and environment seemed against me, and the growing realization that the world might prove too much for me to conquer, perhaps even in a limited way, was generating a mental torture which it would be difficult to describe. From early childhood I can remember wishing that I knew the truth. One experience at the age of nine stands out vividly. After viewing the silent face of a dear companion of my own age, I was for days in a miserably depressed state of mind, my thought many times rehearsing the wish that we might just "speak the word" and heal, as we were taught in Sunday school that Jesus did. How wonderful yet how desirable it would be for us to do this! Later, experience with the world and with the recognized forms of theology taught me not to expect such a thing. Little did I dream then, and during the intervening years in which this wish frequently revoiced its lament, that there was already a teaching extant which made available to human consciousness the same power that Jesus had used, and that what revolved in my youthful mind was a distinct prophecy of what I would later come to realize in practical experience.

So when Christian Science with its angel chorus sang its soothing melodies into my waiting thought, I drank freely of the spirit of "on earth peace, good will toward men." My mental condition might be likened to that of a child lost in a wilderness, apparently helpless, and not knowing in which direction to turn for a pathway out, when after long wanderings and with sore feet and weary heart he all unexpectedly comes upon the doorsteps of his own home. Imagine the relief, the tears of pure gratitude and joy! I can remember being so full of happiness that at times I could not talk, and in going along the street, amid the noisy rattle of the traffic, I have been oblivious to it all, and fairly drank in the healing balm from the fountains of divine Love. Inspiration and aspiration mingled in a pure stream, and in the sweet moments during the first few years of my awakening there was borne into one human consciousness the ideals of eternal Truth. Consecration and concentration, consistency and persistency, obedience and courage, took form in a new field of endeavor, and ever since that time my thought has clung "steadfastly to the enduring, the good, and the true" (Science and Health, p. 261).

In a business way the fetters of belief in limitation began to loosen, and my progress was steady up to the time when I was offered a position which would give my faculties an opportunity for full and untrammeled expression. At this juncture, and within a few moments after concluding to accept the position, I had an interesting mental and spiritual illumination in which "the influx of light was sudden" (Science and Health, p. 47), and out of which in sweet, inaudible tones, the "still small voice" pressed home with wonderful force its injunction, "Choose you this day whom ye will serve." Two days in my room, wrestling in personal sense, brought me to a point where this call meant all of my time to planting in the Master's vineyard prevailed, and for nearly six years now I have had the blessed privilege of devoting my entire time to showing weary mortals the freedom of man in God's image, a privilege that can be appreciated only by those who have engaged in a like work.

When the perception which distinguishes truth from error, as viewed in Christian Science, awakens human consciousness, then begins the mental work of eliminating the errors of false belief which have for so long been mistaken for man, and which are the source of the enslavement of the human race; and then it is that we admit into our consciousness the elements of the Christ-mind which reflect God and reveal the man of God's creating, free and perfect.

The result of many blessings received necessarily awakens a reverent regard for and sincere appreciation of the noble character whose exalted mission it has been to show mankind a sure and safe way to complete salvation. With the finger of inspiration Mrs. Eddy has transcribed upon the human heart that sweeter music with which posterity will sing its way to freedom. How could the faculties find more profitable employment than to enter upon a journey every step of which is interesting, and one which leads to the haven of divine Love! What Christian Science has to say to the pilgrims of this earth is that there is "balm in Gilead," and that they should come up higher.

JOS. W. REYNOLDS, Omaha, Neb.

I have long had a desire to tell what Christian Science has done for me and mine, and after reading an article in the *Journal*, I saw my duty plainer than ever, so I am giving my first testimony. I have known of Christian Science for twelve years, and have received help through it from time to time; but I did not become sufficiently interested to study it until a little over four years ago, when visiting a sister. At this time my daughter, then four years old, was healed of a severe attack of illness. The practitioner explained Christian Science so simply, and what little I grasped gave me such peace of mind, that I determined to study and know more about this truth. Since then we have never taken any medicine.

My understanding came slowly. For two years I did not know any Scientists, and as we lived ten miles from a Christian Science church, I could not attend services often. When discord appeared, our trouble was always met by calling on a practitioner. Two years ago, three others here became interested in Christian Science, and we started to meet at one of the homes on Thursday afternoon, to read the week's Lesson-Sermon. Since then several have joined us, and now we meet on Sunday morning and conduct the services as in the branch churches.

My son, when two years old, was poisoned by putting in his mouth some brass which had been exposed to the weather. He seemed to be very ill, but this trouble was overcome through the help of a practitioner. I feel very

Digitized by Google

thankful to God for this demonstration, for I believe our boy would not be with us now had we not known of Christian Science.

Throat trouble, croup, and many other ailments have been healed. I thank God for all these blessings, and I am grateful to Mrs. Eddy for showing us the way to Life, Truth, and Love. My daily prayer is to become unselfish, so that I can manifest more of this wonderful truth.

MRS. FRED HUMPHREY, Carpinteria, Cal.

It is a heart filled with gratitude which leads me to acknowledge through the medium of the *Sentinel* the great blessings that have come to me through Christian Science. For fifteen years I was broken down in health, not knowing what it was to feel well for a single day. I suffered terribly from headaches, often being confined to bed for days at a time, and was a martyr to a throat affection. I was unable for years to lead any kind of an active life, as the slightest exertion would exhaust me. I tried one doctor after another and took the remedies prescribed, also traveled from one place to another, thinking that a change of climate would benefit me; but any benefit which I received was of short duration.

Some four years ago, when everything seemed to fail me and I was confined to bed with no prospect of getting any help, I was asked by a sister who had taken up Christian Science, if I would give it a trial. It has been truly said that "man's extremity is God's opportunity," so I readily consented, and a practitioner was called. Some three treatments were given and a severe attack of throat trouble was healed. After a week's treatment, and the reading of "Science and Health with Key to the Scriptures," I was able to be up and around; while in less than ten days I took a nine-mile walk without feeling any sense of fatigue, something I had been unable to do for years. I also discarded glasses, which had been prescribed by an eye specialist in order to relieve my headaches, and I have never used them since.

From a physical, mental, and financial wreck, I have been lifted by the application of Christian Science to that place in experience "where fetters fall and the rights of man are fully known and acknowledged" (Science and Health, p. 227), an experience I had never hoped for before coming into this wonderful truth. Words fail me properly to express my gratitude to God for what this beautiful teaching has done for me and for my loved ones. My daily prayer is that I may become a true follower of Christian Science.

J. ANDERSON, Vancouver, British Columbia.

I have felt for some time that I should testify to the benefits I have received through Christian Science. The Bible says, "Let the redeemed of the Lord say so." I have certainly been redeemed from sorrow, fear, self-pity, selfishness, worry, a sense of lack, and also from many other sins. Then, too, I have been healed of physical ills, although I have not had many of these to bear. In this connection the Bible story of the children of Israel and their bondage to the Egyptians is recalled with great force, and it seems plain to me that any thought to which we give power is our ruler, that will not let us go so long as we believe that this error has power to hold us back. The only way to wake up out of this belief is to know that God is the only power; and the only way we can know this, and prove it, is to study Christian Science, together with the Bible, and then as we gain in understanding and realize what God is and what man is, we are allowed to go. Christ, Truth, parts the waves of error, that we may walk through and be free.

I have been reading the Christian Science literature for over three years, and I feel and know that I have never lived before, and although to mortal sense I have lost all those in the flesh who were dear to me, I never feel alone, because I have a sense of God as my constant companion, and I can truthfully say that I never was so happy in my life as I have been during these last three years. My daily prayer is for wisdom and understanding, and my gratitude for Christian Science, and thankfulness to our dear Leader, is beyond expression.—JESSIE MOFFAT, Indianapolis, Ind.

[Translated from the German.]

I give this testimony with a sense of deep gratitude. In the spring of 1911 I was suddenly taken ill with an intestinal trouble and cramps in the stomach. I was unable to partake of any food and lost flesh perceptibly. The physicians whom I consulted diagnosed the case as a serious affection of the stomach, which extended to the intestines and caused unbearable pain. The one whom I consulted last expressed the intention of operating at once, as in his opinion I could not possibly survive in this condition. However, as he did not vouch for my living through the operation, when inquired of by my relatives, I decided that I would not submit to it.

But "man's extremity is God's opportunity." At that time (July, 1911) I heard of Christian Science and applied to a practitioner in Berlin for treatment. Absent treatment was given for ten or eleven weeks, apart from which I only had the instruction afforded me through the reading of *Der Herold der Christian Science* and the letters from the practitioner. The pain gradually ceased, appetite and digestion became normal, and I increased in weight considerably. In spite of the physicians' assertion to the contrary, I was well in three months' time without having resorted to the operation, and little by little I regained the strength which I had lost. Today I am stronger and in better health than formerly, and I thank God from the depths of my heart for all these blessings, and am grateful to Mrs. Eddy for having explained to us anew the teaching of Jesus.

FRAU EMILIE FOTH, Pasewalk, Pomerania, Germany.

Six years ago I came in touch with Christian Science through the healing of a friend. I had always had difficulty in hearing, and was generally in a very delicate condition. I knew scarcely anything about Christian Science, but I thought if it could help another person it could surely help me. The deafness has greatly lessened, and besides this I have been healed of much suffering, as well as of an acute attack of rheumatism. For one thing and another I have had treatment for months, and my healing has come slowly; but I have not been sorry for this, indeed I have been glad, for it has been a constant stimulus to greater effort toward spiritual growth, and has called for unceasing study and work, which I so sorely needed. I was often discouraged and despondent, for it seemed as if the healing would never come, and I also indulged in self-condemnation; but since I have seen so clearly that to yield to depression is simply selfishness, I have never again suffered from it.

When Christian Science found me, my one aim was pleasure-seeking; but with the so-called pleasures had come so much unhappiness and wrong-doing that Christian Science, with the spiritual living which it entails, came to me like a foretaste of heaven, for I was hungry and thirsty for it, and I turned to it like a tired child who goes to its mother's arms. I did not, however, immediately grasp and understand the teachings of "Science and Health with Key to the Scriptures" by Mrs. Eddy; in fact, for two years I read the Lesson-Sermon daily, understanding very little of it; but I persevered, with the hope that it would bring healing, and possibly happiness, and then I thought I would never need to read it again. But before the healing came, the wonderful truth found in Christian Science, which brings such unspeakable peace, became clear, and now to me the Word of God, the Bible as understood in Christian Science, is my very life, and I can truly say, "Whom have I in heaven but thee? and there is none upon earth that I desire beside thee."

Digitized by Google

I have received class instruction, which has been invaluable. Christian Science has brought me great contentment, and has given me trustfulness and patience. Formerly, when I wakened in the morning, I would try desperately to fall back into sleep, thus seeking oblivion from unhappiness, but now I waken to the joy of living. I try daily to reflect the divine Love, and also to render absolute obedience, which is the great essential to spiritual growth. I have many times had to say, "Not my will, but thine, be done;" but after each struggle there has been such peace and joy that I now strive to know only the one will in every detail.

Words avail little in expressing gratitude to Mrs. Eddy for having lived so selfless and spiritual a life that she was able to discover Christian Science and give it to the world, but living avails much; and I am therefore trying to live my life as God would have me live it, and do the work that God gives me to do.—SADIE J. SKINNER, Westfield, N. Y.

In Christian Science I have found health and happiness, for by it I have gained the true concept of God. It came as a revelation to me, offering a reasonable and practical concept of man's relation to God, and it has become a great comfort, both in healing and in business problems.

For a number of years I had suffered greatly with stomach trouble, and other disorders which are supposed to go with it. Then I applied to a Christian Science practitioner for treatment, and through the understanding of God as revealed to us in "Science and Health with Key to the Scriptures," I received almost instant relief. My wife has also been greatly benefited in reading Science and Health, and joins with me in expressing thanks to God, and gratitude to Mrs. Eddy, whose teachings enable us to find the truth.—JOHN S. LEHMAN, Bloomington, Ill.

I wish to express my gratitude for the great blessings which have come to me through Christian Science. Burdened with doubt and fear, I sought physical healing for chronic bronchitis of many years' standing. It was accompanied by most severe headaches and sleeplessness, which medicines and change of climate gradually failed to relieve, till there seemed nothing before me but the life of an invalid. With a very few treatments, however, I knew I had found not only a cure for bodily ills, but what was infinitely more satisfying I had found a God who could be worshiped intelligently, a heavenly Father who was not far off from His children, but always at hand in every need. Many other ailments passed away in addition to those for which I sought relief, and today I am rejoicing in an abundance of health and strength.

No words can express the happiness which has come into my life through the study of Christian Science. It transforms the days and gives a purpose to life, and supplies work for renewed energies, as we learn that these unnumbered blessings are for all, and that God will use us to bring this knowledge to others. I can truly say, "He hath put a new song in my mouth, even praise unto our God."

MRS. CLAUDE ROWAN IRISH, Denver, Col.

On the 18th of March last year I heard from a Jewish friend about the blessings of Christian Science, and I then resolved to give it a fair trial. As a result, this year has been the happiest of my life. For some years I had given up all faith in God and my health was not very good. In 1905 I lost my husband and my mother, and had many other troubles. Two years later I had a complete breakdown and was taken to a private asylum, where I stayed for eleven months. After that I had to go two summers to a sanitarium for nervous cases, and then felt better than ever before. Sick headache, which had been my companion from early childhood, was nearly cured; but I always had to think about my food, and never partook of anything but vegetables.

In this state Science found me. I believed that if I did anything contrary to the doctor's orders I would have to go to the asylum, so I lived in constant dread; but now I know that God is Love, and "perfect love casteth out fear." I feel very happy and always protected by Love, and comforted by the reflection of Love by my dear fellow Scientists, which reflection first attracted me and led me to try to find the truth, for these Scientists lived what they preached. Every one of them has helped me in some way, and so has the Christian Science literature. I take this opportunity to thank God, as well as our dear Leader, that I know Him as the giver of all good and perfect gifts.

MRS. ANNA LYRHOLM, Göteborg, Sweden.

I would like to relate a few of my experiences since I came into Christian Science. About ten years ago I was given some literature to read, and it appealed to me as voicing the truth, especially in regard to one with whom I was little acquainted at that time,—namely, myself. It did not seem as though it could be I, but when I looked over my past life I saw a man of the world, sinning unconsciously. I did not, however, get vexed at this discovery, but continued to read and reason. I finally bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, which wonderfully assisted me. On page 8 I read: "We should examine ourselves and learn what is the affection and purpose of the heart, for in this way only can we learn what we honestly are;" and also on page 5: "Sorrow for wrongdoing is but one step toward reform and the very easiest step. The next and great step required by wisdom is the test of our sincerity,—namely, reformation." I will not try to enumerate all the reforms that have taken place; but will mention that the tobacco habit yielded slowly. I thought I had it cast out, but the door was left open and it came back. I had reasoned that there was no harm in its use, and continued in that thought until I discovered that my youthful son was smoking. At this point my first impulse was to criticize him severely for being so foolish, when wisdom demanded of me to know why it was foolish for one to indulge in a bad habit and not for another; so I went right to work, using only Christian Science, and in a very few days half of us were reformed. This was about eight years ago, and I have had no desire for tobacco since. I often wonder how any one can say that these reforms are unchristian or opposed to the laws of health.

My health for ten years has been all that I could ask. I have used only Christian Science for its preservation and am well satisfied. I am convinced that the law of God is the true basis of health; but we must know God aright and live the truth. It was through Mrs. Eddy that my Bible was brought down off the shelf, after several years' repose thereon, and made my daily companion. Words cannot express the love and gratitude I owe that good woman for my experience in Christian Science. If I were asked today what I most desired, I would answer, More of the light of Christian Science. Best of all is the understanding I am gaining from day to day of the works that Jesus the Christ did while on earth. I am often asked if I can do as he did, and I answer, No; but the truth is not to blame! I cannot telegraph; many can. I cannot even run an engine, but I could learn. Jesus said, "Ye shall know the truth, and the truth shall make you free." He also said that those who believed on him should do the works that he did. I do not believe Jesus ever asked an impossible thing of his followers. I did not come to Christian Science for physical healing, but by "reason and revelation" (Science and Health, p. 110). It was about two years before I could harmonize myself with the "scientific statement of being" found on page 468 of Science and Health. I can understand today that it was the truth during all that time, but I could not see it. With the psalmist I can say, "Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men!"—FRANK E. CURRIER, Silver Creek, N. Y.

Digitized by Google

After having a great deal of trouble with my throat, in August, 1911, I had my tonsils removed. The two doctors told me that I would be up and back to work in three or four days, but by the fourth day I could not move in the bed, let alone being up and at work; in fact, I could not make a sound above a whisper, and I could neither smell nor taste. I had pains all over my body, which made it impossible for me to move or turn over on my side. The doctors said that I had acute lung trouble, and something the matter with my larynx.

A friend who is a Christian Scientist came to see me at the end of the week. I told her that I knew I was not getting any better and that I wanted Science help. She had interested me in Christian Science the winter before, but I had given it up in the summer; still, I knew a little of the truth and thirsted for more. She told me I could have help if the family were willing. When I said that I wanted a practitioner, my sister with whom my mother and I live, thought I had better keep on with the doctors, though my mother was willing to grant my request; but I saw that I could not have the help I wanted. My other sister came to see me, and I had her get a copy of Science and Health and bring it to me. I began to read, and by the end of the second week, with the knowledge thus gained, I was somewhat better, so the doctors were dismissed on the next Monday. On Tuesday I got up and went down-stairs, that being the first time I had been up and about for two weeks. I kept reading every day, and by Sunday I was feeling so well I went to see my other sister.

The following Wednesday, not being able to talk and being still very weak, I made up my mind to have treatment, so I went to a practitioner for help and began to improve immediately. The pains in my body left me entirely; I gained strength, an appetite, the sense of smell and taste, and my voice became natural. I also gained in weight very quickly.

I am thankful that I am still young enough to go to Sunday school, and I am more than grateful for the understanding and knowledge of the one true God which I have gained through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

CHARLENE BUTLER, Denver, Col.

[Translated from the German.]

Words fail to express my gratitude for the help which I have experienced through Christian Science. For many years I suffered with rheumatism and bowel complaint. None of the remedies which were used relieved me of the dreadful pain, and in June, 1912, I became so ill that I gave up all hope of recovery; but I was to experience for myself the truth of the saying that "man's extremity is God's opportunity."

I heard of Christian Science and turned to it with a sense of great trust. I was completely healed of the old complaint, and give thanks to God from the depth of my heart for all the blessings which have come to me. I am also grateful to Mrs. Eddy for having been led in the way of Truth.—FRIEDRICH BRUNE, Kump, Westphalia, Germany.

I wish to express my gratitude for all that Christian Science has done for me. About a year ago I was healed of bronchitis and pleurisy, when two doctors had failed to help me. I got immediate relief in Christian Science and was able to sleep a night without coughing, something I had been unable to do for six weeks. I am also grateful for the spiritual uplift, and for the desire to read the Bible which has come to me through the understanding I have gained by reading it with "Science and Health with Key to the Scriptures" by Mrs. Eddy. I am indeed thankful to God for this wonderful truth which makes free.

AGNES M. HILL, Los Angeles, Cal.

FROM OUR EXCHANGES.

[Rev. John Albert Eby as reported in *Los Angeles* (Cal.) *Tribune*.]

"I am the resurrection, and the life." These comforting words of Jesus to a sorrowing woman at the grave of a loved brother have been a source of more comfort to those sorrowing in like circumstances than all the words ever spoken by the lips of the world from that day to this. They have been a supreme consolation because they are the words of Jesus, and he spoke with authority. Not a single word he spoke ever failed for one moment. Then why should we not believe these? He here recognizes the power of what we call death; and yet he refuses to grant it final authority or power. To us death is a great mystery; but so is life a mystery. It was not a mystery to Jesus; he knew it from the beginning, and regarded it as an enemy. In order to calm our fears and excite our hope, he liked to speak of it as sleep; and that is true in a certain sense. But it is foolish for one to tremble and quake with fear as if death still had supreme power in the world and in eternity. Death has been conquered. It is time to quit our death fears and begin our life victories. If you want better health, think more of health and less of sickness; plan more for health and less for sickness. If you want life, put the emphasis on life. Jesus Christ said he was life; what matters it, then, who is death? Life is greater than death any time; how much more so when Jesus has taken our very life and enfolded it about himself! Death cannot approach.

Life is a relative term. There is life that is mere animal existence; then there is life that has a grade of higher intelligence, but cannot see the future life nor accept its possibilities; but the life that Jesus Christ is, is the essence of life. It is life without death, righteousness without sin, health without sickness, victory without defeat. After all, the tremendously big word in the Christian's vocabulary is "Life." The bread, the water, the shepherd, the way, the truth, the vine,—all speak words of life. This life stands over against hunger, thirst, darkness, sterility, faintness, and every other foe of life.

[Rev. H. S. McClelland, B.A., B.D., in *The Christian Commonwealth*.]

The generation in which we live, the masses, I mean, who live outside all organized religious influence, are more strongly influenced by the principles of Christianity, in spite of their acceptance of the doctrines of modern science, than the people of any previous age. Has the social life of England ever been more deeply infused than it is today by the spirit of that Christianity, with the form of which it will seemingly have nothing to do? If that is true, and I am sure it is true, the vessel of Christianity will right itself again and ride triumphant through the storm. But the men who are destined by the eternal Spirit to guide her into more peaceful waters, must themselves be inspired by the same courageous spirit that Peter possessed, who laid aside the cherished belief of his childhood when he found it to be out of harmony with his wider knowledge of the world, and declared: "Of a truth I perceive that God is no respecter of persons: but in every nation he that feareth him, and worketh righteousness, is accepted with him." May God send such men to the rescue of His church, and may He send them soon!

[*The Universalist Leader*.]

With what persistence of faith has the world watched for the coming of the Christ! Many have thought of it as the second coming, and they have watched the heavens with eagerness, and they have looked to see the transformation of the earth when he did come, a transforming which should come from without and be spectacular and radical, and behold, he has been coming all through the centuries, and will continue to come through the centuries yet to be, until all shall know him, from the least unto the greatest. But

Digitized by Google

while he has been constantly coming, we have not always been making ready for the welcome on our part; we have not been unlike the Jews of old, who wanted him to come in the way they expected or not to come at all. We today quite as much want our own Christ, the Christ of our notion, of our selfishness, rather than the Christ we and the world may need.

It was foolish, we think, when men were looking into the heaven for this coming, when they made it a thing apart from daily life; and hardly less foolish is it in this day when men of moderate intelligence and still more moderate spiritual vision, create a kingdom of their own to which they confidently expect him to fit himself, and save he do that, they will none of him! The Christ is coming to every human soul as soon as the soul will receive him, and through the souls transformed by him, will he transform the world.

[*The Christian World.*]

To gain the honest love of our fellows, by our own honest love for them; a love which shows in our frank, humble recognition of their worth,—the worth of the meanest of them,—which shows in genuine service for their betterment; a love which is not satisfied till we have shared with our fellows the best in us, and which leaves behind it an example to be followed, a memory to be revered,—these, and these only, are the values that are worth their price. To have grasped this law of the price is to have grasped the meaning of Christ, of his living and his dying. It is the heart of Christianity.

To be a Christian, in the only real sense of that, is to live in the daily consciousness of all that is involved in this question of price. It will make us so eager for the true values, so indifferent to all else. When we remember that all we have is at the cost of some others, of their labor, often of their pain, how deep will be our gratitude to them; how eager our desire to repay! This feeling will make us angry with much of our civilization. So many of our fellows are paying too much.

[*The Christian Work and Evangelist.*]

One of our difficulties in realizing the nearness and intimacy of God has been our localizing Him in space and thinking of Him as a sort of great big man sitting on a throne, judging heaven and earth. But we are beginning to think more in the terms of Jesus' word, "God is Spirit." God is immanent. That is, He is not a magnified man dwelling in a place, but He is present in all His universe. . . . Now, if God is Spirit, present everywhere as Soul of the universe which is His body, it is easier to think of Him in terms of intimacy,—as residing in our own pure hearts, for that matter, just as Paul believed Christ was in him.

[*The Christian Register.*]

The analogy of a mount as a figure of perfect living has misled us into thinking of the elevation as having this main characteristic of physical elevation, isolation, privilege, remoteness, endowment. "High" is a bad word to represent living on the mount, when the essence of it is not getting above the world, but in keeping fine realities in the world. This kind of height cannot be gained save by keeping down among the common things of life. The fallacy of monasticism clings to many other sorts of exclusiveness.

[*Zion's Herald.*]

Many individuals are dogmatic beyond any reason, because they think they see more than they do actually behold, —it may be in the realm of science, art, or mayhap theology. Our perceptive powers need training and rectification in all directions, and in more senses than one we need to pray for ourselves that prayer, "Lord, open our eyes that we may see!"

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been translated into German ("Die Christliche Wissenschaft: Eine Religion der Liebe"), and is now printed in pamphlet form and ready for distribution. Forty pages and cover. This lecture was recently published in English, and both editions are on sale at prices of the regular pamphlets as shown on the opposite page.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal*, printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.
